
EMERY'S REAPER AND MOWER COMBINED.—THE MOWER.

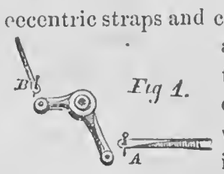
THE accompanying engravings represent the general construction and principal details of an invention of H. L. EMERY, of Albany, of a Reaping and Mowing Machine, combined in one. Its main features will appear from the cuts and description. As will readily be seen, it is provided with a driver's seat and wheels, independent of the machine itself, but attached by hinges in such a manner as to allow an easy action and adjustment, while this method does away entirely with all the side draft.

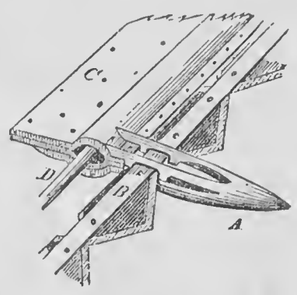
The machine itself is provided with a large main wheel, being about forty inches in diameter and eight inches face, with the necessary projections on its surface. This wheel is cast with an internal gearing at one side of the spokes, the teeth of which are protected from dirt and strengthened by a deep flange of nearly three inches. This flange is represented by that part of the cut bearing the words "*Mower and Reaper. Combined.*" The main frame is suspended from this wheel, by means of adjustable pinion boxes, the boxes being hung inside of hangers attached to the frame itself. By applying a kind of wrench to the box, (which projects far enough beyond the hangers, and is made square,) it may be turned; thus by the action of its teeth on the corresponding teeth on the hanger, the frame itself is raised or lowered to any desired point, where it is confined by a simple iron key.

A small pinion is placed inside of this large wheel at the forward part, and its shaft confined to the under side of the frame itself, this shaft extending far enough outside to receive an eccentric close up to the frame.

The motion of the cutters is obtained by eccentric straps and connecting rod, passing along the outside of the frame to the fore end, where it connects with an elbow or knee iron, as shown at A, in fig. 1. This elbow extends its other end through to the front of the main frame, as seen at B, and is confined in position by a heavy, substantial bed-plate of iron. The end of the cutter bar itself, connecting with the elbow at B, has its motion simply and directly from the main wheel, all parts working constantly in line, giving a stroke of eight inches by the eccentric, and each end of the elbow being eight inches from its centre of motion, causes on either end a deflection of but five-eights of an inch beyond a straight centre line. At the same time, the cutters have as much velocity as the best reapers and mowers in use. They make but half the reverses or vibrations, and require less than half the weight of cutter bar and connections of either of them, while it is equally strong.

*Fig 1.*





This cut represents a transverse section of the wrought-iron cutter beam, with a section of the cutter bar, cutters, and dividers. B represents the cutter bar, to which the steel blades are attached on its under side, the bevel of the blades being upon the upper side and sickle edge. These blades also extend back to the cutter bar, but not to a point as forward. The edges of this rear part are same as forward the cutter bar, and serve to cut and clear all the "clog" or fibre which may possibly escape the forward cut and get drawn into the dividers. D represents a section of the crank axle, which extends through the hollow beam, and supports its outer end. C represents the double plate hollow beam, with attachments.—A represents the divider, showing the openings and guides through which the cutters pass. This divider is made very true, with sharp corners, over which the cutters pass, forming a perfect shears-cutting action.—These dividers are wider than on most other machines, thus protecting the cutters from being injured by stones getting between them, (the space being but two inches,) and compressing the grass or grain into a more dense body while being cut.

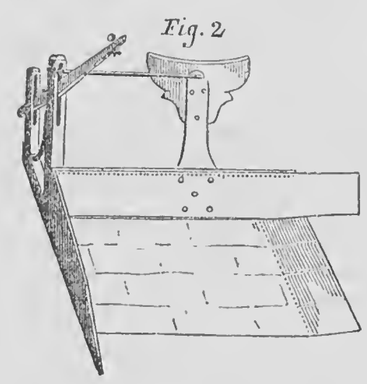
These cutters and dividers are not dissimilar to those used by the first premium mowing machine at the late trial by the State Society, with the exception that the divider is made to fit round the under side of the wrought iron cutter beam, the beam itself being made of two plates of wrought iron rolled into a sort of trough with their concave faces placed together, and then firmly riveted, thus forming a hollow beam. An enlarged but imperfect representation of the divider is shown in fig. 3.

*Fig. 3.*

Through this hollow beam a shaft is passed, and at its extreme end this shaft is turned at right angles to the rear of the beam about two feet, and a wheel attached to its rear end to support the outer end of the beam. At the inner end of this shaft is attached a sort of crank or lever about two feet long, extending forward towards the driver's seat, with a leather strap or chain attached to it. This strap, passing upwards and over a shieve, extends along the large lever to the driver's seat, and passing another shieve, and is then attached to the foot board of the driver. This main lever, which is seen passing the driver's seat, is made permanent to the machine itself, and is kept in its desired position or elevation by means of an upright post beside the seat, with a series of catches and latch, operated by the driver's foot, so that while the person is raising the lever with his hand, with his foot he loosens or confines it where he desires.

Therefore, while he raises the lever, lifting by it the side of the machine directly in rear of himself the strap or chain is drawn over the shieves, and the end of the wrench lever is raised sufficiently to turn the crank shaft which extends through the cutter beam and by this being turned, the wheel at the outer end becoming a fulcrum on the ground, the beam itself must be raised at its outer end so as to remain a uniform elevation of its whole cutting front from the ground.

*Fig. 2*



The apron itself is shown with its fixtures in fig. 2, detached. It is made of a strong frame work and light covering of wood and tin. The T standard at its back is a breast-work to protect and support the raker, who stands erect, face forward, directly behind it. The delivery is at one side, and has a slight elevation above the cutters, about one and a half inches, and is over four feet wide. A reel may be used at pleasure, and is always sold with the machine. The reel is driven by a pulley on the main wheel shaft—the band passing below the apron to the front side, where it passes upward to and over a pulley on the reel shaft. The band and pulley have been omitted by the engraver, although in his sketch made from the machine.

## THE AGRICULTURAL PRESS.

### Training Steers.

WE give another article on this subject, from a practical correspondent of the *Cultivator:*

This is the great thing to teach them—that resistance is useless, and getting away an impossibility.

Turn your steers intended for mates, into a barn floor well littered, and close the door. Be sure that they cannot get off from the floor by jumping into the bay, or find any means of egress, until you are ready to turn them out. Have your yoke, a chain and if at hand a pole, or cart or sled tongue.—Then quietly, without loud words, go patiently to work. The steers will soon find they cannot get away, and without any lengthened resistance, will suffer themselves to be approached, handled, and yoked. Then teach them the meaning of the words and phrases to be used—to haw, or gee, &c, at the word. Hook and unhook the chain, and teach them to turn with the pole or tongue between them. It is strange how much can be accomplished in a few hours by a man who will work in this way patiently without scaring the steers, or getting angry at them or abusing them.

A long whip should be used, made of a withe some eight feet long, and a short, light lash, from one to two feet in length.

Never turn steers into a yard or pasture with the yoke on. Give them to understand that when the yoke is on, they are to be subject to a master, until it is taken off. Never feed them in the yoke, unless it be a nubbin of corn from the hand, or something of the kind.

Any man who is fit to break steers, will get a yoke *handy* in two lessons as above, of half a day each. But they must learn to lay out their strength by degrees; and the best way to do this is to work them with other cattle, in the middle or behind. This is a very good course to pursue, perhaps as good as any. Those who have tried it fairly and faithfully, always break their steers in this way. Two years old is young enough to commence the process; and when commenced, let it be carried out by yoking, driving, and working every day, if possible, for some succeeding weeks.

After all, few rules can be given which will be of any use, unless a man has the *will* to study the instincts of his animals; the *wish* to find out the instincts, and the *common sense* to treat them as animals governed by instinct. J.

### How to Produce the Potatoe Rot.

Mr. JOEL BLEW, of Md., contributes two articles to the *Christian Advocate and Journal*, on "the culture and disease of potatoes." We have seen many articles on preventing the rot, and for a change, will give one on the means of *producing* it:

To bring the rot on the potato takes me about three years, if I start right. I take fine healthy mercer potatoes, and, to be sure of that, I cut them in two with a smooth, very sharp, thin knife; then look at them on the cut surface through the best magnifying glass. If all is right it will look like a white frost upon a smooth surface when the sun begins to shine upon it. The water-bladders and air-cells appearing regular in size and shape. The water from the cut bladders will appear very clean, clear, and extremely thin; it will nearly cover the air-cells, and look like the sweat upon an infant's face. The first year I will give them the *dropsy*. To do this I plant them during a wet time, in a deep furrow, cut thro' stiff clay in low land. I put a good deal of rich hog manure in them, and cover with clay clods; I take good care that the furrow is nearly "water-tight." When the July rains fall and fill up the furrow the air, sun, manure, surrounding earth, and the growing potatoes draw off from the whole mass of water all its healthy, nourishing properties; the remaining water stagnates, and, acting upon the rich manure, forms a turbid, poisonous liquid that chokes up the fine vessels that convey water into the bladders.—This deranges the growth and brings on *dropsy*. When I dig them, to see if I have done my work well, I cut them in two, look at them through the same glass, and if the cut surface looks like melting ice and snow about the stable door, the water from the cut bladders a little yellow and slightly frothy, and I can then see a ring inside on the cut surface a little darker than the other part, I am then fully convinced that it is a genuine case of dropsy.

The second year I plant these dropsical potatoes in the above-described way, and some may take the HEART DISEASE; some an affection of the *kidneys*, and the rest are pretty sure to take the CONSUMPTION. In July the vines will look sickly and yellow near the top, and an inch to an inch and a half up the vine from the ground little greenish balls, from the size of a squirrel shot to a pea will have grown out of the vine. The poor sick potato in bed below, sick at heart, rejecting the food that surrounds it, is unable to nourish its offspring, the vine. The poor vine, forced to subsist on unnatural food, looks like a poor sickly child. I take up said sick potato; it is sure to look dropsical, and of a dull muddy color. I place it in boiling water until it will separate; in its centre is a dark substance that appears to the naked eye like a nutmeg, often much darker. I then look at it through the glass, and it looks exactly like fine sponge; ten thousand distinct holes are seen leading from the surface to the centre. I then cut it in two, and apply the glass, and it looks exactly like a hog's liver that is putrid;—it looks truly sickening. This I call the heart-disease.

I dig the next hill, take the potato up in my hand, look over it carefully; I find spots of the skin dead, about as large as a dime; the diseased spot feels a little like a piece of dry tobacco. I put that potato into cold water for 24 hours, then, with a slight push of the thumb, the rotten flesh comes out, generally about as large as a small thimble; it looks like the matter from a ripe boil, and smells quite as badly. I have sometimes found four of these spots in one potato; but generally only one or two. This I will call an affection of the *kidney*. The next one I think has what we call a "hollow heart." I put it in boiling water until I can break it in two; I find a hollow place; it looks as if the kernel of a peach seed had been taken out. The superfice of the cavity is in color like ground coffee. The flesh which surrounds this cavity is "clammy," and much more compact than it should be. It is quite as indigestible as the skin of a tomato; I have known it to lie in a delicate stomach from four to seven hours, and then comes off looking exactly as it did when eaten.

My next patient looks pretty well to the naked eye; I only see a few small dark specks in it, as if a family of insects had taken their dinner out of it weeks ago. The specks are hard, black, and vary in size from a clover-seed to the head of a pin. It "sounds well." I wash it clean; when dry, cut out a small piece, put the piece in a good microscope, (skin up,) look at it, and see at once that the circulating fluid, acting upon the *pigment* (coloring substance) between the inner and outer skin is in active exercise. I then cut it in two, look at the cut surface through the glass, see only a little slight derangement: some few air-cells

dried up, some water-bladders empty. Fine fellow! he has passed through the dropsy in a very unhealthy climate—"fallen among theives," lain in bed with diseased companions, and now bids fair to "raise up a large family." This is a rare case; indeed few such cases occurred in any potato hospital where I have practiced.

But here we have a genuine case of *consumption*. The pigment (or colouring substance) has lost all its vitality; it is dead, and shows the inner or outer skin, as a wafer shows between two pieces of glass. The bladders and air-cells are irregular in size and shape, and many of them are dried up; the potato cuts hard, and breaks before the knife like a water-melon rind. I am now through my second year. I expect but few that I have treated for the kidney disease will live until spring, but all that do survive I will plant, with the false heart, the hollow heart, and the consumption, as above described, and in August or September the rot will show that I have "done it."

### Manure Cellars.

This subject is attracting deserved attention, and many inquiries are made about their construction and management. On the latter we copy below from the *Country Gentleman*:

A great mistake is often committed in the management of manure cellars. The manure is permitted to accumulate unmixed, except with such small portions of straw, plaster, &c., as may be used in sprinkling the stable floors, but which prove wholly insufficient to prevent the rising of the steam and odors, "like a gross fog Bœtian" through every crack and crevice into the apartments above. Very perfect and tight floors will indeed exclude them, but will not preserve the valuable portions of the manure, like mixing the whole mass into an inodorous compost. Plaster or gypsum, with water, contributes to retain the ammonia, and is useful on the land to a certain extent; and pulverized charcoal is excellent for the same purpose. But for the common purposes of farmers, for using on a large scale, nothing is equal to dried mould, truf, and swamp muck or peat. Enough of these materials should be carted into the manure cellar, or under some contiguous shelter, to form a mass at least equal to the whole of the manure from the stables. If well dried by remaining there a long time they will not only act chemically in retaining the ammonia of the dung, but they will also act to a very great extent mechanically, in absorbing all the liquid portions. They should be applied in thin successive layers as the manure is gradually deposited. Many farmers have a large portion of their fences fixed so as not to be moved, the borders of which, after a time, by escaping cultivation, become rich with vegetable matter. No better use can be made of the turf in these fence borders than mixing into compost. Where peat exists within convenient distance, it may be drawn to great advantage during the winter season.

### Contagiousness of Glanders.

We find the following credited to the *Farmer's Journal*:

With the view of shedding light upon the important question of the contagiousness of glandors, we would submit the following deductions from facts brought forth by our own experience.

1. That farcy and glanders, which constitute the same disease, are propagable through the medium of stabling, and this we believe to be the more usual way in which the disease is communicated from horse to horse.

2. That infected stabling may harbor and retain the infection for months, or even years; and though by thoroughly cleansing and making use of certain disinfecting means, the contagion may probably be destroyed, it would not perhaps be wise to occupy such stables *immediately* after such supposed or alleged disinfection.

4. That the virus (or poison of glanders) may lie for months in a state of incubation in the horse's constitution, before the disease breaks out. We have had the most indubitable evidence of its lurking in one horse's system for the space of fifteen weeks.

5. That when a stud or stable of horses becomes contaminated, the disease often makes fearful ravages among them before it quits them; and it is only after a period of several months' exemption from all diseases of the kind that a clean bill of health can be safely rendered.

Illinois State Agricultural Society.—A State Agricultural Society has been established in Illinois, and the following persons chosen officers for the current year:

President—James N. Brown, Sangamon county.

Vice Presidents—Jno. A. Kennicott, Cook county; J. E. McClum, McLean county; Smith Fry, Perry county; Michael Collins, Adams county; Francis Arenz, Cass county; H. B. Johns, Platt county; C. W. Webster, Marion county; and Ichebaugh Mitchell, Wayne county.

Recording Secretary—Paschal P. Enos, Sangamon county.

Corresponding Secretary—Bronson Murray, La Salle county.

Take care of the Orchard.—The orchard to be productive of good fair fruit, requires to be fed as much as does a field of grain. The soil of each requires that the substances abstracted by the crops shall be restored. The soil should be kept clean, and open to the meliorating influence of the sun, the dews, the rain and the air. The bark of the trees should be kept in a healthful condition by scraping, when necessary, and by alkaline washing.

# Orchard and Garden.

### ATTEND TO YOUR HOT-BEDS.

In the Eastern and Middle States, the weather is generally very unsettled during this month—sometimes dry, cold and winter-like—at others, cold and wet, with severe storms of snow, rain and hail, accompanied with high winds. Now unless you that have them attend well unto your hot-beds, your labor, thus far, in construction, will prove plantless in season for transplanting.

You should not suffer the snow that falls upon the hot-bed lights to remain there for any length of time, for it will chill the tender plants—or prior to this, the germinating seeds.

You should by raising the glass covers let your beds have fresh air daily, if the external temperature will allow. Refresh them occasionally with water—on sunny days—and about mid-day. It may be necessary to cover these beds sometimes with blankets or mats, or straw in order to protect them from the inclemency of the weather. These should be removed as soon as possible—for the good of the germinating seeds and growing plants.

Some construct hot-beds not only for propagating early plants, to be transplanted into the garden just so soon as the season will allow, but for maturing early cucumbers and some other vegetables for the table. While few will deem it worth while to do the lattor, many should do the former. Because by so doing they can have fit for use, many varieties of garden vegetables, weeks earlier than if they wait for the season without the aid of hot-bed preparations for transplanting.

A good kitchen garden should be the pride of every farmer. There is no one but what may have this luxury if he really desires it, and will seasonably prepare for it. Seek for the early varieties of garden seeds—such as have been tried and approved—plant them just as early as you think it will do, in well prepared soil—and with proper care and attention you will most assuredly reap in due time.

It is time to mature your plans for your garden the coming season if you have not already done so. Time enough yet to make your hot-beds for propagating plants. The plan of constructing them has been given.

W.

### GIRDLED TREES.—HOW TO SAVE THEM.

Eds. Rural:—In No. 164 of your paper, Mr. Wright, of Brighton, asks how to save half a dozen apple trees badly barked by swine. The following plan has been tried with success.

Take scions of last year's growth, cut them of the right length and flatten the ends, and then raise the bark of the tree above and below the girdled part and insert the scions, about two inches apart around the tree. If near the ground, bank up with earth; if too high for this, plaster with wax or clay and tie a sheet of coarse paper around to prevent too great exposure to the air.—R. N. Y., *Maple Hill, N. Y.*

### GRAPE VINES.—PRUNING.

If you have not pruned your vines, no time is to be lost. Select some cold day, when the ground is frozen, the deeper the better; at such a time they will seldom bleed, but we have known the sap to run freely, when the weather was warm and the ground not frozen, in Febuary. If after pruning the sap should run from the end of the vine, sharpon the end and stick on a potato as large as a hen's egg, and it generally stops it. Cultivators differ much as to the mode of pruning, each one thinking his mode the best. We prefer to cut off about half of the last year's growth, train the larger branches horizontally, and the smaller ones upright to a trellis prepared for the purpose.

If you wish to propagate any by cuttings, save the cuttings in the same manner as directed for scions, cutting them into pieces of three buds each, plant early in the spring in an obliquo position, covering two buds, and nearly up to the third bud; sprinkle some saw-dust over the end to protect it from the sun. We advise, however, for those who wish to cultivate the grape in a garden, to purchase of some nurseryman of reputation a well rooted vine, of two or more years growth of choice variety, adapted to our climate. And the Isabella is such an one, and a good grape, and hardy. Having provided such a standard vine, you can easily increase by layers, which we consider better and more safe, as cuttings do not generally do well.

We hope the time is not far distant, when every garden will be furnished with the vines, in sufficient numbers to supply the family. The vine can be easily cultivated as the apple or peach, and occupy no more space, and in small gardens it may be trained to a fence, or side of a building, although a trellis is preferable.—*Mich. Farmer.*

It is better to sit down with honor, than to attend the changes of an inconsistent fortune.

# Mechanic Arts, &c.

### LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending February 22, 1853.

Hezekiah Bradford and Elish Fitzgerald, of New York, N. Y., for improved apparatus for separating ores or other substances of different specific gravities.

Alex'r. A. Croll, of London, England, for improvement in gas metres.

Wm. H. Johnson, of Greenville, Mass., assignor to Wm. G. Bates, of Westfield, Mass., for improvement in sewing machines.

Alpheus Kimball, of Fitchburgh, Mass., for improvement in scythe fastenings.

Wm. S. Lacon, of Great Yarmouth, England, for improvements in suspending, lowering and liberating ships' boats. Patented in England, Feb. 23, 1853.

James Moreland, of Adrian, Mich., for improvement in mortising machines.

Amos B. Taylor, of Mystic, Conn., and Stephen Wilcox, Jr., of Westerly, R. I., for improvement in cut-off motion for looms.

Lauren Ward, (Admr. of Richard Ward, dec'd,) Jerome B. Hubbell and Hart C. Hubbell, of Naugatuck, Conn., for improvement in machines for turning irregular forms.

DESIGN.

Alex'r. Edmunds, of Mt. Pulaski, Ill., for design for a cradle.

### ROSIN OIL.

During a recent visit at New York we accepted the invitation of Messrs. Pond and Hitchcock, 56 Water street, to view their Oil manufactory at Brooklyn. Their works have been erected for making oil from rosin, a process very little known in this country, though sometime in use in England. We are unable to give a description of the process, more than that it is a distillation by the agency of steam which evolves an oil nearly colorless, pure and limpid, and not congealed by cold. At the same time there is gathered what is known as "the spirits," and a refuse known as asphaltum. This latter product is used for painting ships' bottoms, coarse hardware, out-buildings and fences, answering an excellent purpose. From another grade of the refuse is manufactured a grease for wagons, machinery, and heavy bearings, which is recommended as being every way superior to tallow, lard or oil.—In England it has been used to great satisfaction on cars and locomotives, with boxes arranged to serve as reservoirs, from which the grease is discharged as required by the heat of the axles. Thus arranged a car could be safely run from Albany to Buffalo without danger of being overheated.

The spirits are used by some persons in the manufacture of a "burning fluid" sold under the name of "rosin oil," which is, if possible, as we are assured by the manufacturers, more inflammable and unsafe than any of the "fluids" in general use. The rosin oil in its pure state might be burned with safety, but no lamp has yet been tested in which it can be used on account of the black smoke arising from its burning.

From the rosin oil is made, by a mixture of pure sperm oil, a compound much in use as a lubricator in the cotton and woolen mills and in machines, not only in England but to some extent in the United States. It has been pronounced by competent judges and engineers, for many purposes superior to pure sperm. The prepared oil has been used in preparing wool for manufacturing, and in the best manufactories in the world is pronounced superior to any other oil used. Experiments in this State have proved that it can be successfully employed on wools from which all alkali has been removed, and that when thus prepared the wool spins better than when the sperm is used. This is an important subject to manufacturers as this oil can be purchased at about half the price of good sperm. We have the statements here given from authority which with us would be unquestionable, and would like to hear further of well matured experiments testing its practical value.

From the rosin oil is manufactured a "tanner's oil" which is used with good satisfaction. It has also been applied to many other uses not necessary to detail. The constantly diminishing crop of whales, and the consequent cost of the best oils renders any reliable substitute of the utmost importance to the community.

An improved car-seat has been invented by William M. Warren, of Watertown, Conn., who has taken measures to secure a patent. By this plan a person may adjust the seat in a moment of time, so as to make it convenient sleeping on, merely by raising a hinged back which is attached to another fixed back—the car-seat being hung on pivots, so that it can be more or less depressed as the movable back is raised.

The largest bell in the spire of St. Stephen's Cathedral in Vienna, is composed of 180 cannons, which were taken from the Turks when they were repulsed from the walls of the city in 1683, and weighs 38,000 pounds!

### SPRING MATTRESSES.

The Spring Mattress is well known as an attempt by means of spiral springs to combine the advantages of a mattress with the luxurious, yielding softness and comfort of the feather bed. To sleep on feathers is unhealthy, from the fact that they are too warm and enervate the sleeper as a warm bath would do. At the same time there is something delicious in sinking into the downy mass of an old-fashioned bed, which the modern sanitary ideas may condemn, but cannot banish from mind. The ordinary spring mattress is but a poor attempt to reproduce this luxury without its objectionable features, and indeed nothing can do it perfectly; but we have examined an article of recent French invention, which is very ingenious, much superior to the ordinary spring mattress.

The springs are made of copper wire, set upon iron slats which are fixed at the bottom of an iron frame. At the top the springs, instead of being connected together by wooden slats, rudely fastened, as is the case in the ordinary spring mattress, are united by smaller spirals, also of copper wire, which cross the mattress from side to side, and from end to end, connecting the several ranges of springs in each direction, and giving the most equal elasticity and yieldingness possible to every part. So firmly are the springs fastened that it is not necessary to envelop the mattress in a tick; it has no cover and offers no retreat for vermin. A thin mattress of hair or moss upon it, is all that is necessary.—*N. Y. Tribune*

### THE PACIFIC RAILROAD.

The grandest idea of our time is the union of the Atlantic and Pacific Oceans by a chain of Railroad stretching through the heart of our Republic. We speak of this as a work to be commenced, but in fact it is already half completed. From the Kennebec almost if not quite to the Mississippi, there is already a chain of Railroads, with parallels and spurs on every side; it will soon be extended at this end to both Quebec and Halifax; it will radiate to Lake Superior, to Charleston, S. C., to Nashville and St. Louis. There are about 2,000 miles between the Mississippi and the Pacific, which private enterprise cannot be expected to build, without public aid; and these, when completed, will place every populous or considerable portion of the Atlantic slope in direct communication by rail, with the Pacific, through the great highway between Europe on the one side and Western America, Australia, Japan, China and the wealth of the Indies on the other. Were the Railroad completed, our finer Teas and Spices would reach us by way of the Rocky Mountains, while the Flour and Meat of our western Prairies would (at least for the present) find a far better market on the Pacific than Europe or New-England has ever proffered it. The building of our Pacific Railroad will exert a greater and more beneficent influence on the progress and fortunes of the Race than all the battles fought since the days of Nimrod. Its completion is the noblest idea of our age, and, whoever may be so fortunate as to realize it, and however serious the objections to some features of his plan, we shall not hesitate to express our gratitude to Asa Whitney for his labors and sacrifices in elucidating and commending.—*N. Y. Tribune*

### IMPROVED SPIKE MACHINE.

Measures to secure a patent for an improved Spike Machine, have been taken by John R. Richardson, James Westerman, and Ebenezer Wilder, of North Castle, Penn.

In this machine the inventors employ an original mode of forming the point of the spike, which they accomplish by means of rollers attached to slides, and working on adjustable beds, so that by placing the beds in a more or less oblique relation to the spike, a shorter or longer point is given to the latter by the pressure of the roller.—To relieve the ends of the jaws from the pressure of the spike head, so that they can separate freely, it is proposed to give the header a return motion before the jaws are parted. There is also an efficient plan for holding the rod which forms the spike material whilst the requisite length is being cut off. The working parts of the machine are all moved by a shaft carrying five cams, so placed as to properly time the several operations of cutting, heading, and pointing.—The initial process is to pass a rod of iron through a loop, and upon an under die, whilst a gauge regulates the length, when a knife cuts off the piece, the holder and under die securely holding it in the meanwhile. The piece of iron is then pressed between the two jaws and the upper die, which is intended to press upon the spike, and directly over the rollers which are now advanced until they come nearly or quite in contact.—The header is moved instantaneously with the roller carriages until, having executed its duty, it recedes a little, and the spike being now completed is allowed to escape.—*Scientific American.*

A freight train travelling at the rate of twenty-four miles an hour, requires on a level 546 2-8 yards to come to a stop, and 79½ seconds of time. A passenger train at the rate of 45 miles the hour cannot be brought up in less than 779 yards, but takes rather less time, only 68 seconds. Two trains, therefore, approaching each other at a speed of twenty-four miles the hour, will experience a collision, if the brakes are not brought to bear when they are about 1100 yards, or nearly two-thirds of a mile asunder.

It would require several horses to draw all the strings of a piano-forte to concert pitch, the strain upon them, when in perfect tune, being about seven tons.

### WATER PROOF PAINTS.

We suppose, that all paints are water proof, to a certain degree, for the oil of which they are composed in part, repels water. If, however, a paint is required to turn or repel water merely, it should have a heavy body, as painters say, or in other words, there should be substance enough to resist the water, when it comes in considerable abundance.

The Ohio Farmer, while speaking of this subject, recommends tar as a good substitute for linseed oil as an ingredient for water proof paint. In the old colony, it used to be a custom, (and perhaps it is so now,) to take tar, and add a certain proportion of rosin to it. Melt them in a kettle, and when the heat has made them quite thin, add a quantity of Spanish brown, and then, after stirring these ingredients intimately together, apply them while hot, by means of a "pitch mop" to the roofs of buildings. We do not know the proper proportions of the ingredients, in making this species of paint, but after it had hardened or dried, it not only prevented water from soaking into the shingles, but it preserved them for years.

The writer in the Ohio Farmer says, that common tar, or coal tar, may be made thin with spirits of turpentine.

Let this be used instead of linseed oil to form the body; add fine earthy matter, such as dried clay, or soft burnt bricks ground fine in a plaster mill.

The soft shaly slates of different colors, also answer a good purpose when finely pulverised, to form the body of the paint. For the coarsest kind of work, dry fine sandy loam may be used as a body.

Any of these earthy bodies, when made sufficiently fine, can be used to good purpose in painting either with the tar mixture or the oil. Plastered walls on the outside of buildings, may be thus rendered water proof and lasting, by using the above cheap paints, and after one or two coats, it will take but a small quantity of oil paints with lead, to make a finish with a single coat of any desired color. Wherever a surface thus rendered impervious by this cheap means, is painted over with oil and lead, a single coat upon the surface, instead of being absorbed, will dry in a thin tough film on the surface, and be more effective than three coats of the same paint, put upon an unprepared surface, which like that of common woodwork absorbs the oil from the lead.—*Maine Farmer.*

### NEW USE OF MILK.

A novel discovery has recently been made, which is likely to effect a revolution in the milk trade. In consequence of the advance in the price of olive oil, from £40 per ton to £70, the manufacturers of woollen cloths, who use this oil in large quantities, have found out that necessity is the mother of invention. One of them in the neighborhood of Thurlstone, near Penistone, tried whether milk mixed with oil would not answer the purpose. The experiment exceeded his most sanguine expectations, the mixture being far better for the purpose than olive oil alone. The consequence has been, that milk has advanced to 1s. 4d. per gallon in the neighborhood of some of the woollen cloth mills, and cows are being bought up in all directions. There was a brisk sale at Penistone market on Thursday, everything going off at excellent prices.—*London News.*

Prussian blue is extensively manufactured in Philadelphia by burning old shoes, &c.

# Domestic Economy.

### CURE FOR RHEUMATISM.

Some one—who forgot to attach his sign manual—writing me from Hanover, Pa., for Squash seed, adds a recipe for the Rheumatism which he highly recommends. Not having seen it before I will give it the benefit of the Rural's circulation, for the good of the afflicted.

"With one pint of Spr. Turpentine, thoroughly mix one ounce Barbadoes Tar. Rub the parts afflicted well with it, by a hot fire before retiring, for three successive nights; then omit three nights, when make the application again; and in like manner the third time, when ordinary cases will yield."

It is easy to be tried and no harm can come from the use. T. E. W.

Light Bread.—Here is a new way of making light bread, which we hit upon by mere accident at first, but now never try any other way, as we consider this bread equal to that raised by yeast of any kind. Make up the bread by using soda, sour milk, and a little shortening, just as if for biscuit, and let your bread stand in a warm place for several hours, to rise. I rub the soda in the flour, then the shortning of which a small quantity will do, and add butter-milk until the whole is wet up. If the milk is very sour of course more soda is necessary; if now, a small portion will do.—*Baltimore Sun.*

Recipe for Cocoa-nut Pie.—Take *one* Cocoa-nut, having extracted the milk by opening two of the eyes at one end, which must be preserved as it is used in mixture. Crack the *shell carefully*, and pare off the dark rind. Grate the white meat on a coarse grater. Add 2 Shanghai eggs; ½ pint of *cows* milk; piece of butter size of nutmeg; all the cocoa-nut milk; 1 nutmeg; sugar to suit taste; essence lemon do. This mixture will form a custard which, baked on a crust, gives you a delicious pie.—*Le Roy Gazette.*

# Educational.

Written for the Rural New-Yorker.

## THE TWO SCHOOL BOYS;

### OR, IDLENESS AND INDUSTRY CONTRASTED.

BY L. D. WHITING.

"WELL, George, are you going to school to-day," asked Henry Barnard of George Brown, on the morning of the commencement of a new term of school.

"No," replied George, "I am not going till next week. I want to wait till they are *regulated* before I go. One can't learn much the first week. Henry are you going to attend Bill Idleman's party next Wednesday?"

"No, I would not stay from school for anybody's party. I wish to commence school at the beginning, so as to get *well regulated*. My chores and my lessons are enough to take my whole attention, and I think they are of more consequence than mere pleasure. Besides, I think this is one of Bill Idleman's tricks to draw away the boys from school, and for one, I don't mean to be caught in his trap. Come, George, let us give up vanities, when they interfere with education."

"Oh fie, Henry,—what is one day or one week's schooling? I sometimes go to school a whole term without learning anything, and I reckon I shan't miss this week much, if I do stay out. Besides, Tom Loafer says that a knowledge of the world, is worth more than a knowledge of books; and that he learned more at one ball, than he ever learned at school in his life. *Manners*, Henry, are of more consequence than '*Jografy.*'"

"I think, George, we shall learn full as good manners at school, as we should by associating with either Bill Idleman or Tom Loafer. They both swear, smoke cigars, drink whiskey, use vulgar language, chew tobacco, and fight; and these are not the *kind* of manners I want to learn."

"Well, Henry, you may go to school, and I will go to the party. I'll go to school when I've nothing else to do. It's a stupid place, anyhow."

This brief conversation between these two village boys, is quite an index to their present character, and their future destiny.—Henry Barnard was the son of a laboring man, possessed of but little of this world's goods, but that little was freely expended in the proper education of his family. Long winter evenings were devoted to home instruction. Teachers, schools and education were always spoken of in terms of respect. Their minds were thus prepared for receiving instruction at school. The teacher's admonitions and warnings were duly heeded; his advice and directions were faithfully followed. Under the genial and harmonious influence of school and home, Henry Barnard gradually developed some of the noblest qualities of the human mind.

He was habitually respectful to his teachers and superiors, courteous to his companions, and kind to those in distress. He never disgraced himself by telling a falsehood, or using profane or vulgar words. By steady application, he stood among the foremost in his classes, and his early and constant taste for reading, had stored his mind with a great variety of useful information. He was not wholly indifferent to the sports of youth, but he always endeavored to manage so as not to let them interfere with the improvement of his mind. Saturdays and other vacation days were chosen to do his necessary labors, that he might attend school uninterrupted. By this systematic and orderly arrangement of his time, he not only enjoyed all the benefits of school, but also found abundant time for recreation and amusement.

George Brown was the youngest son of a hard-working mechanic. His older brothers were brought up in habits of industry and economy, but somehow George always wore the best clothes, and did the least work. Sometimes when George had nearly run out of pocket change, his father would *hire* him to do some small jobs; but even then, the sight of a crowd of men or boys in the street, would be such a temptation, that George would throw aside his work, and be among them in half a twinkling.

But George should not be called lazy. He would walk miles to a "*chevarie*," or curry and clean any gentleman's horse for the sake of riding it to drink. George was somewhat peculiar in the manifestation of his social qualities. His associates were either ignorant and low-minded men, or boys somewhat younger than himself. What slanders, tricks and vulgarities, he could pick up among the former, were always faithfully taught to the boys.

When there was no crowd or excitement around, he would generally be found listlessly sunning himself on the boxes around the store doors, or lounging on the counters.—If there was no rafile, horse-race or turkey shoot to attend, he would sometimes venture to a public lecture,—provided it was not so crowded but that he could slink away into some distant corner, where he could have a seat wholly to himself to lounge upon, and plenty of room to whittle, and so far from the orderly portion of the congregation, that he could whisper and laugh unobserved.

Mr. Brown very much desired his son George to go to school, but he did not like to drive him off. He said, "constraint injures the mind." So he waited with all patience, term after term, indulging the hope that the spirit of improvement would soon move George to go to school of his own accord. At one time, by granting him some especial indulgences, and buying him a new suit of clothes and a whole sett of new books, he succeeded in starting him to school, and it really seemed for a few days that George was going to learn. The teacher paid him extra attention, hoping to permanently change his taste, and implant a desire for knowledge.

But it was all lost labor. The discipline of school was so different from that free and easy life in the street,—sitting or standing so much harder than lounging—and the taste and sentiments of the teacher so different from what he had been in the habit of hearing, that our hero really felt out of his element. The atmosphere of books oppressed him, and without waiting to get *acclimated* to this, he sought relief among his former associates. They greeted him with a hearty welcome, and listened with approbation to his complaints against the teacher. He accused the teacher of partiality, because Henry Barnard and some others learned faster than himself. After a few weeks attendance off and on, he concluded not to go any more till after the holidays; and when those festive days had passed, he gave up coming till the next term, as he said, "he could not learn much during the piece of the term that *was* left."

About this time, one of the village physicians, who by his skill had acquired an extensive practice, was looking about him for a worthy lad to enter his office and study his profession. Henry Barnard was the chosen one. His manners, habits, principles, industry and attainments, recommended him for the station;—and finally so endeared him to his worthy patron, that he gave him superior advantages, and when he had completed his studies, took him as a partner in his practice. The good habits and correct principles implanted in youth, in manhood yielded their appropriate and abundant fruits. We take our leave of Henry Barnard, a distinguished member of the medical profession, an honored citizen, endeared to all by his good qualities and faithful services.

A few more words will trace the history of George Brown, Henry's early companion, up to the same period. We left him dissatisfied with school. His teachers never seemed to learn him anything. Younger girls and boys would get ahead of him, and he would then rail at the teacher's partiality. He finally became a sworn enemy to books, teachers and schools. He avoided all company, where useful information was sought or dispensed; and continued to associate with men low in the scale of intelligence and morals, or with boys so much younger than himself that he could easily assume a leadership.

But his favorite companions were a horse and a gun. True, he was never able to become absolute owner of a horse, but then he was abundantly compensated for this lack, by the kindness of others. Lawyer Brooks and Dr. Barnard often allowed him to ride their horses, fully equipped, through the streets, in consideration of his services as groom. But somehow he became the *owner* of a gun. Without a gun, George's chief talents would have remained dormant. Not that he was a very sure shot, but then, he was always on hand and always ready to shoot. He was one of the main pillars of all the "turkey shoots," far and near. He never was backward about shooting because the chances were against him. What were a few dimes in his pocket? He never found any use for money, only to pay for his chance to shoot, and to buy his tobacco; and he could at any time replenish his purse to the amount of fifty cents or a dollar, by doing small jobs of work for his father. At turkey shoots, he always persevered till he got a turkey, but generally paid enough for his chances to have purchased two. As soon as this was accomplished, he made tracks straight for home, and made a free gift of his game to his mother, as he said, "his father was getting old, and it was no more than right he should support the family!"

George still continued to associate with boys. As one sett grew up to years of understanding, he would gradually withdraw from their company, and choose a younger. Thus several generations of the village boys had enjoyed the benefit of his instruction. By common consent, George still continued to live with his father, who was as industrious and indulgent as ever. Although George has voted the *regular ticket* at the annual elections for more than twenty times, yet neither he nor his father appear to be conscious that he has yet attained his twenty first year.

EUGENIE, EMPRESS OF FRANCE.

As much is said, written and published concerning the recently-installed Empress EUGENIE—Mrs. NAPOLEON III.—we give her portrait and genealogy. The above is a copy of the only portrait we have seen—that given in the "London Illustrated News." If it is correct, the original is not over-beautiful, according to our standard of female beauty—but that is a matter of taste, about which people differ materially.

THE Duchess of MONTIJO's grandfather, (great-grandfather of the Empress.) Mr. KIRKPATRICK, of Conheath, Dumfrieshire, Scotland, was a gentleman of large landed property. Her father, Mr. WM. KIRKPATRICK, was British Consul at Malaga, for many years, and there married the only daughter of Baron GREVENEE. He had three daughters; and the eldest, MARIA, married Count MONTIJO, father of the Empress, who belonged to one of the most ancient of the noble houses of Spain. He was a grandee of the first class, and fought bravely under the standard of France, in the Peninsular war. The Count died in 1839, when Md'lle. EUGENIE was twelve years of age. The true *sangre azul* of the great DE GUZMAN, who defended Tarifa, in 1282, flows in her veins. The first Count de Teba was created about 1492, by FERDINAND and ISABELLA, for his gallant conduct before Granada.

Md'lle. MONTIJO was born in Grenada, in the year 1827. She possesses considerable personal attractions, but more in the style of English than Spanish beauty. Her complexion is extremely fair—her features are regular, and yet full of expression, and her manners winning in the extreme. Her education is superior to that of Spanish ladies in general, and she is said to be what the French call *spirituelle*.

# Natural History.

### THE STRENGTH OF INSECTS.

IN a volume published by Van Voorst, on the Natural History of Animals, several illustrations are given of the super-herculean strength with which the commonest insects are endowed.

The common flea, as every one knows, will, without much apparent effort, jump two hundred times its own length, and several grasshoppers and locusts are said to be able to perform leaps quite as wonderful.—In the case of the insect they scarcely excite our notice; but if a man were coolly to take a standing leap of three hundred and eighty odd yards, which would be an equivalent exertion of muscular power, perhaps our admirers of athletic sports might be rather startled at such a performance.

Again, for a man to run ten miles within the hour would be admitted to be a tolerably good display of pedestrianism; but what are we to say to the little fly observed by Mr. Denisle, "so minute as almost to be invisible," which ran nearly six inches in a second, and in that space was calculated to have made one thousand and eighty steps? This, according to the calculation of Kirby and Spence, is as if a man whose steps measured only two feet, should run at the incredible rate of twenty miles in a minute. Equally surprising are the instances of insect strength given by Mr. Newport.

The great stag beetle, which tears off the bark from the roots and branches of trees, has been known to gnaw a hole, an inch in diameter, through the side of an iron canister in which it was confined, and on which the marks of its jaws were distinctly visible.

The common beetle can, without injury, support and even raise great weights, and make its way beneath almost any amount of pressure. In order to put the strength of this insect-Atlas to the test, experiments have been made which prove that it is able to sustain and escape from beneath a load of from twenty to thirty ounces, a prodigious burden when it is remembered that the insect itself does not weigh as many grains; in fact, once more taking man as a standard of comparison, it is as though a person of ordinary size should raise and get from under a weight of between forty and fifty tons.

---

To know a man, observe how he *wins* his object rather than how he loses it; for when we fail, our pride supports; when we succeed, it betrays us.

### HIGHWAY OF THE OCEAN.

AN article in Chambers Journal, entitled "Steam around the Cape," contains the following explanatory remarks:

Persons who do not pay special attention to nautical matters, are likely enough to suppose, that considering the large number of vessels at sea, the surface of the great ocean must be dotted over, almost in every part, with the sails of the countless fleet.—This, however, is not the case; the ocean, like the land, has its frequented highways and its wide regions of loneliness. If an observer, furnished with a forty-Herschell-telescope power of vision, could be elevated to a height great enough to give him a view of the whole Atlantic, he would be struck by beholding hundreds of vessels following one another upon certain lines along a very irregular course, while over a large portion of the surface not a sail would be visible.—Thus he would see the ships which leave this country for the Cape or India, pursue at the first a south-westerly course until they reached the neighborhood of Madeira, then keep more directly to the south, at a safe distance from the African coast, until they crossed the line; then stretch away again to the southwest, in the direction of South America, till they gain the zone of westerly winds; and finally, making a rather sharp turn into those winds, go bowling along before them to the eastward till they arrive at the Cape, or else, if so directed, pass to the southward of it. On the return voyage a similar circuitous route is pursued, although the courses are in some extent reversed, the widest circuit, or deviation from the direct line being made in the northern, instead of the southern hemisphere. In the extensive spaces on either side of these frequented routes, few vessels will be seen. Here and there an African trader might occasionally be perceived, dodging from port to port; or a slaver scudding swiftly across the ocean,—perhaps with a royal cruiser following steadily upon her track, like a fierce blood-hound in pursuit.

# Sunday Reading.

### SONNET.—A PRAYER FOR PEACE.

Thou who of old upon the waves up-piled
Wert wildly with thy trembling followers tossed,
And unto mortal eyes when all seemed lost,
A word didst speak and they were calm and mild—
Oh! look in pity on thy erring child!
Speak thou once more, and let thy soothing voice
Give peace and rest, and bid his soul rejoice—
Calming the tumult of the tempest wild.
His little bark so frail, in mercy guide
Through every storm-o'er Life's tempestuous sea,
Be thou his ALL, and may no earthly strife
His spirit ever from the GOD divine,
That when 'tis over he at last may be
Moored in the heaven of eternal life.—B.

For the Rural New-Yorker.

### NOT LOST.

TIRED of viewing the many highly wrought productions of art and uncommon developments of nature, I turned my back upon one of our annual State Fairs to seek my lodgings. My pathway led me through a city in the immediate neighborhood of that where the festival was held, of which I had heard very little, but which I found even more interesting to visit than that I had just left, where was congregated such a mass of living, moving humanity. 'Twas the city of the dead! The burial ground, where all, sooner or later, are destined to rest. As I entered its shaded walks a feeling came over me, not of superstitious fear but of reverence, of respect for that GOD who sustains me and who has given and taken the lives of so many human beings.—To me it seemed impossible that any other feeling could here find place in the heart, save that of reverential and adoring love for our Father in Heaven.

I wandered amid this forest of monuments to the departed, some of which, in proud grandeur seemed to mark the spot where slept the once wealthy or great, until I stood before a plain marble slab, on the top of which was represented a half-rolled manuscript on which was engraved the simple words, "NOT LOST." Like an electric shock to my very soul, was the reading of these words. It seemed as if I were standing on consecrated ground, almost within the gates of paradise. The shrubbery about me was beautiful, not a cloud obscured the sky, not a sound broke the stillness, and for the moment I could almost have imagined that I had suddenly exchanged this earth for a home among the immortals. NOT LAST! what would not I give, for the blest assurance those little words contain. And yet how easily obtained. It is but to follow and obey the precious Saviour. How small the price, how great the boon! W. H. G.

Hornby, Steuben Co., N. Y., 1853.

### THE WISDOM OF THE IGNORANT.

SOME short time ago I spent a very pleasant evening in the study of a brother in the ministry. Some facts we had both been reading in the Watchman and Reflector, led us into a conversation on the striking remarks of a religious kind, which are often made by the most ignorant persons who "come to the knowledge of the truth." He told me that a few years since he traveled in the south, and on one evening preached to a congregation where he was a perfect stranger. When he came out of the pulpit, among others who seemed greatly interested in the sermon, was an old man, a slave, who was not a little eulogistic relative to the new minister and his sermon; my friend checked him somewhat by saying, that he should bless the great Master for the message, rather than the messenger, for that, after all, unassisted by the Holy Spirit, he was a poor creature. "Ah, massa," said the poor old slave; "ah, massa, never mind about being poor, so long as you have got such a rich father." Noble sentiment! What doctor of divinity could have uttered a better?

Another fact he heard about this old man. It seems that he was much respected where he lived, and was always permitted to talk about his religion to whom he pleased.—His *one* subject was the love of Jesus Christ. One day some person said to him, "Well, you are always talking about Jesus Christ. Which would you rather do, go to heaven and never see Christ, or go to hell to be with him forever." The old man for a moment seemed astonished at the impiety of the inquirer, but thinking a little, he replied, "Ah, massa, there can be no hell where Jesus Christ is."—*Watchman and Reflector.*

---

THE DREAM OF LIFE.—How few of us at the close of life can say, "I have filled and occupied the position to which I looked forward when a boy!" In the onward progress of life, how often, in some stray moment of thought and reflection, do we not find ourselves inquiring, "Is this as I hoped—have I enacted my dream?" And the answer is, invariably—no! We look forward in childhood—and only look forward—without reflection. We build up gorgeous palaces, we sketch a career of life all gold and sunshine—what are they, and where are they, when years sober us?

---

THE most valuable part of every man's education is that which he receives from himself; especially when the active energy of his character makes ample amends for the want of a more finished course of study.

# Miscellaneous.

## THE WORKING-MEN.

BY CARLOS D. STUART.

THE noblest men I know on earth,
Are men whose hands are brown with toil.
Who, back'd by no ancestral graves,
Hew down the wood and till the soil,
And win thereby a prouder name
Than follows Kings or Warrior's fame.

The working-men, whate'er their task,
Who carve the stone or bear the hod,
They wear upon their honest brows
The royal stamp and seal of God;
And worthir are their drops of sweat,
Than diamonds in a coronet.

God bless the noble working-men!
Who rear the cities of the plain,
Who dig the mines and build the ships,
And drive the commerce of the Main—
God bless them, for their swarthy hands
Have wrought the glory of all lands.

For the Rural New-Yorker.

## WORK ON.

WORK, yes, work on, ardently, earnestly, energetically. We have all a work to do, requiring every moment of the short span of our earthly existence. All Human progress is achieved by toil. See the lasting monuments which it has erected! Work is interwoven with our being—it is the destiny of life—aye our life itself. "It is the condition which God has imposed upon us in every situation in life. There is nothing worth having which can be had without it." It is our strength, our wealth, and our happiness. Industry is the guardian angel of our land. It is the indissoluble bond which binds together in a common brotherhood, man with man, society with society, high with low, state with state, and nation with nation. Civilization itself is but another name for labor. Slowly and arduously it advanced at first, until by rapid strides it has reached its present elevation and dignity.

Work, mentally and physically is the moving spring of every new invention, or astounding discovery, whether useful or beautiful. The cultivated intellect, enchaining us with its eloquence, the sinewy arm, the ruddy glow of health which mantles the cheek, all bear the impress of work. The world no longer recognizes *nobility* but in the worker. Fame smiles her approval not upon the idler lolling in the luxury of wealth acquired by the sweat and toil of ancestry, or extorted by usury from the poor and unfortunate. No! honest toil is receiving the recompense so justly her due. Mankind are no longer judged by the quality of their apparel; for though the diamond be roughly encased, "A man's a man for a' that."

Work is not only the duty of life, but the perfection of its enjoyment. It subdues the passions and vices which idleness engenders. If the young were early habituated to useful employment, how much less of immorality would insidiously creep into their minds. It produces a self respect, and a self dependence which elevates man far above the level upon which indolence places him; the consciousness within himself of genuine worth—of not having lived in vain.

B. A. M'N.

## CONTENTMENT.

A LITTLE PARABLE FROM THE GERMAN.

IT happened once, on a hot summer's day, that I was standing near a well, when a little bird flew down seeking water. There was, indeed, a large trough near the well, but it was empty, and I grieved for a moment to think that the little creature must go away thirsty; but it settled upon the edge of the trough, bent its little head downwards, then raised it again, spread its wings and soared away, singing; its thirst was appeased. I walked up to the trough, and there in the stonework I saw a little hole about the size of a wren's egg. The water held there had been a source of revival and refreshment; it had found enough for the present and desired no more. This is contentment.

Again, I stood by a lovley sweet-smelling flower, and there came a bee humming and sucking; and it chose the flower for its field of sweets. But the flower had no honey.—This I knew, for it had no nectary. What, then, thought I, will the bee do? It came buzzing out of the cup to take a further flight; but as it came up it spied the stamens full of golden farina, good for making the wax, and it rolled its little legs against them till they looked like yellow hose, as the bee-keepers say; and then, thus heavily laden, flew away home. Then I said, "Thou earnest seeking honey, and finding none, hast been satisfied with wax and hath stored it for thy house that thy labor might not be in vain. Thou likewise shall be to me a lesson of contentment."

The night is far spent—the dark night of trouble—that sometimes threatened to close around us, but the day is at hand: even in the night there were stars, and I have looked on them, and been comforted; for as one set I could always see another rise, and each was as a lamp showing me somewhat of the depth of the riches both of the wisdom and the knowledge of God.

LAY by a good store of patience, but be sure and put it where you can find it.

## INFLUENCE OF CITIES.

IT is a very common practice among moralists, to inveigh against the evils and wickedness of great cities; to represent them as a kind of excrescence upon the body politic, tolerated simply because they cannot be removed, and permitted to exist like some hereditary disease which cannot be eradicated. They look upon the concentrated wickedness of men, which of course gathers strength and intenseness from that very concentration, and attribute its existence to men dwelling in crowds. They compare the protection of property in the country, with the hazards of its theft and spoliation in the town, and attribute it to the difference of morality in the aggregate of citizens. The dweller of a remote inland district, who never felt the necessity of a lock upon his granary, or door, and who sleeps securely without the aid of bolt or bar, comes to town and is astonished to find his city cousin is compelled to carry a latch key, and keep his front door bolted in the open day. He meets police officers at street corners during all hours of the day and night, whose argus eyes are upon the movements of the crowd. He sees a wretched inebriate staggering along the walk, or an unprincipled profligate pursuing his career of profanity and vice: he observes ill looking hags and miserable ragged children overhauling the ashes and sweepings of the shops; he sees wealth and poverty, superciliousness and humility, surfeited abundance and pinching want, joyous hilarity and sorrowing lamentation, mingling in an ever-flowing tide; and contrasting all this with the quiet, peaceful, and comparative moral purity of his own secluded neighborhood, exclaims—"God made the country, but man made the town!"

Yet, for all these evils, which it must be acknowledged exist in the city, there is a counterbalancing good. The wickedness, the crime, and the poverty which congregate within its walls, are not generated there. The streams of pollution that pour in from all quarters, bring into the great receptacle the worst characters of all the surrounding agrestic regions, as the great ocean receives the waters of the plains. But the current which brings in the worst, brings in also the best men. Energy, activity, intelligence and virtue also congregate, and unite in the production of great and beneficent results. Individual effort, and insulated human action is comparatively nothing. The united exertion of a thousand intelligences and a thousand hands is necessary to push on any great enterprise; and this concentration of energies can only be effected by a concentration of individuals. Most of the productions of the arts, most of the discoveries in science, most of the means made use of for the progress of civilization, are obtained from communities of men.

Such a superiority, however, is not innate. The city obtains its intellectual as well as physical life from *country* sources; and if the source of supply was cut off would in the end become extinct. In the city the means of development and expansion, the facilities for acquisition, and the opportunity to become distinguished, hold out strong inducements to the active, energetic and aspiring, and hence the great, the wise and the ambitious, the orator, the politician, the scientific man and the philosopher, meet as at a common focus. The city also holds out facilities for the practice of unlawful and immoral pursuits and pleasures; and as a consequence, the worst classes of society are likewise attracted thither, and thus many of the country towns are drained of the worst members of society. Neither the one class or the other are the necessary production of the locality, but are concentrated from a large space of country over which the city exercises a metropolitan control.

Balancing the good and evil influences of cities upon the interests of humanity, it would be found that so far from being an excrescence upon the body politic, civilization itself could not exist without them.—*Boston Journal.*

## ABOUT COURTING.

THERE is something in the idea of courting which causes an indescribable thrill.—We have just read the following account of how the ladies do up these things in Rome, and which may offer them some useful hints:

A Roman lady who takes a liking to a foreigner does not cast her eyes down when he looks at her, but fixes them upon him long, and with evident pleasure—nay, she gazes at him alone, whenever she meets him in company, at church, at the theatre, or in her walks. She will say, without ceremony, to a friend of the young man,—"Tell that gentleman I like him. If the man of her choice feels the like sentiment, and asks, "Are you fond of me?" she replies with the utmost frankness, "Yes my dear."

There, that is coming to the point at once, and not going round about with blushes and simpering, and finally get out "no," when yes is intended. What is the use of making such a stammering and stuttering about it when one is overjoyed with pleasure.

The ladies of Rome do not seem to be at all troubled with any undue restraints of delicacy and modesty. They say what they think, and act accordingly. On the contrary, our American ladies are so modest and bashful, that they let all the good opportunities slip through their fingers while they are blushing behind a fan. They would not for the world let a young man suppose they cared anything about him, though they might be dying with love. Now we think it best to split the difference. The Roman ladies go rather too fast, and American ladies a little too slow? Our advice is that you take for your "platform" the "compromise," and unite the two Medium ground is generally safe. But don't forget time is flying.

## THE WASHINGTON FAMILY AT DINNER.

Dr. M'WHIRR's forthcoming autobiography contains the following passage. Dr. M'WHIRR was the teacher of the academy at Alexandria, which two of General Washington's nephews attended:

At the dinner-table, Mrs. Washington sat at the head, and Major Washington at the foot. The General sat next Mrs. Washington on her left. He called upon me to ask a blessing before meat. When the cloth was about to be removed, he returned thanks himself. Mrs. Washington, with a smile, said, "My dear, you forgot that you had a clergyman dining with you to-day." With equal pleasantness he replied, "My dear, I wish clergymen, and all men, to know that I am not a *graceless* man." I was frequently at Mount Vernon, and saw him frequently at Alexandria; nor did I ever see any person, whatever might be his character or standing, who was not sensibly awed by his presence, and by the impressions of his greatness. The vivacity and grace of Mrs. Washington relieved visitors of some of that feeling af awe and restraint which possessed them. He was uniformly grave, and smiled but seldom; but always agreeable. His favorite subject of conversation was agriculture, and he scrupulously avoided, general society, topics connected with politics, or the war, or his own personal actions. As all the world knows, he was most regular in his habits. He went into his study, it is said, about four o'clock in the morning.—He continued there till breakfast, which he took with his family, and then visited his plantations. He returned at noon, and his dinner hour was three o'clock. He was then open to the calls of his friends, and to the society of visitors. No one acquainted with his habits thought of calling upon General Washington in the morning. He took the liveliest interest in our academy, and in the cause of education generally, and uniformly attended our exhibitions.

## BOOTS AND POTATOES

THE following little incident happened way up west, and is graphically told by the Green Bay *Advocate.*

We never could have thought that so homely a combination of things as "boots and potatoes," could suggest a subject for a passing newspaper paragraph, or a delicate picture in human life; but it really is so, and happens in this wise. On the road the other day, going at a slapping pace with horses and cutter, a girl by the way-side asked us to take her in. She was very thinly clad for so cold a day, and had a pair of man's boots, filled with potatoes. So, finding she had three long miles to travel in that cold weather, we made a place for her and her freight, and before she left us, she told us in her childish simplicity how she had traveled three miles to get her father's boots mended, and was just returning; how her grandmother was very ill, and the shoemaker had sent her some potatoes; all about her being thirteen years old, and the only one in the family who had been kindly spared in health to take care of her father, brothers and grandmother, who had all been sick; about the cattle destroying their little crops, and how glad grandmother would be to get the potatoes; how her father was to start to-morrow with the oxen on a long journey, to bring home a sick brother; and how she wished father had such nice horses and such a warm sleigh to bring him home with.

We set her down at the crossings of a road near her home, and drove on, thinking how her arrival with those mended boots for father and those potatoes for poor sick grandmother, would be a grander thing than the triumphal entrees of queens or kings. And when the shades of night began to fall, that sober little face and slight form was still before us; but the face seemed brighter, almost dazzling,—the faded and scanty dress was transformed into robes of white, and it seemed to us that we had "entertained an angel unawares?

## LOOKING TROUBLED.

THERE is a good deal of truth, somewhat roughly expressed, in the following paragraph. People who give themselves a habit of looking troubled, in the hope of exciting sympathy, will do well to lay it to heart:

"If every pain and care we feel
Could burn upon our brow,
How many hearts would move to heal
That strive to crush us now."

Don't you believe it! They'd run from you, as if you had the plague; you couldn't see the tails of their coats as they disappeared round the nearest corner. "Write your brow" with any thing else but your "troubles," if you dont want to be left *solus.* You've no idea how "good people" will pity you when you tell your doleful ditty!—They'll "pray for you," and give you advice by the bushel, "feel for you,"—every where but in their pocket-books—and wind up by telling you "to trust in Provideace," to all of which, you feel very much like replying as the old lady did, (who found herself spinning down hill, "will-he nill-he,") "*I trusted in Providence till the tackling broke!*" Now let *me* tell you—just go to work and hew out a path for yourself; get your head above water, and then *snap your fingers in their pharasaical faces!* Never ask a favor till you are drawing your last breath, and never forget one if you find a generous soul on terra firma. "Write your own troubles on your brow!" That man was either a knave, or what was worse, a *fool.* I suppose he called himself a poet; all I have to say is, it's high time the city authorities *took away his "license."*

To be happy is a blessed state; and that every man may have, if he pleases.

# For the Ladies.

[Written for Moore's Rural New-Yorker.]

## LILLA MINE.*

How I loved thee, Lilla mine,
All those winning ways of thine—
Eyes of mildest, brightest blue,
Hair of golden, sunny hue,
Sparkling, dancing in the light,
Like a fairy vision bright—
Voice so sweet I cannot tell,
But I loved them all too well.

Dearly, closely, Lilla mine,
Round this heart thou didst entwine—
Guarded wast thou, with a fear
Lest some harm or danger near,
Trembling, hoping, for I knew
Love for thee too fondly grew:
First-born, light and life of home,
Idol soon thou didst become.

But an angel came one day,
Bore my cherished one away—
Took my only darling one,
Left me in my grief alone;
Lone and drear the household hearth,
Gone, all sound of joy or mirth,
And my heart felt torn by years,
Old I grew in bitter tears.

Sad, they laid her, Lilla mine,
'Neath the green and twining vine—
Lilies pure above her head,
Roses white around her bed—
Her fair form beneath the sod,
Her sweet spirit gone to God;
And the bud I treasur'd here
Blossom'd in a Heavenly sphere.

Years have flitted swiftly by,
Still I feel her ever nigh;
If I gaze upon the skies,
Look I on her love-lit eyes—
When the wind doth gently blow,
Hear I then her voice so low;
Oft to me in dreams at night
Comes she in her robes of light.

Thou wilt never, Lilla mine,
Leave that angel-home of thine;
Never wilt thou come to me,
Dearest I shall go to thee;
Wilt thou guide my footsteps o'er,
'Till I reach that happy shore?
Shall I meet that smile of thine,
Loved and lost one, Lilla mine?

Rochester, February, 1853. AZILE.

* LILLA, only daughter of D. D. T. and A. E. MOORE,—died September 5, 1847, aged 1 year and 22 days.

For the Rural New-Yorker.

## THE TRUE POSITION OF WOMAN.

BY A FARMER'S WIFE.

THIS subject is one on which much ink has been shed, the effect of which in many cases has been to "darken counsel by words without knowledge" and much sensible advice has also been given in the right direction. The subject of woman's true position, has been presented to my mind with an interest never before felt, by witnessing the novel attitude assumed by females in the late Temperance movement at Albany.

That the advancement of the cause of Temperance is a good object, none will be disposed to deny. Woman in this cause has availed herself of her "right's to address grave Legislators in person, and *demand* of them, the passage of a law for the suppression of the sale of intoxicating liquors; nay more, to make drunkenness a cause for divorce, or else to give woman the right of voting, making her eligible to hold any office, and exercise the law-making power equally with men. I have not "Mrs. STANTON'S address" before me, but if I recollect aright, it contemplated making "drunkenness in *man*" a cause for divorce. When asking this at the hands of the Legislature, why not give them an equal chance to free themselves and children from the fallen wife whose intemperance makes the home doubly desolate? On this feature in the address I am not disposed to dilate, as it met opposition from some of the speakers on the occasion to which I have alluded.

That women should petition the Legislature to adopt some measures to free them from the evils inflicted by the monster Intemperance, is perfectly right and proper; and if the tens of thousands of the miserable victims of this vice could utter a universal wail that should reach the ears and hearts of every man engaged in the traffic in ardent spirits, then might we hope for freedom from this great social curse. In bringing about "a consummation so devoutedly to be wished," is it necessary that females should "mount the rostrum?" or is it likely that Logislators would pay more attention to a petition brought in person, than if sent by the legal representative?—Though courtesy and curiosity moved them to suspend their rules, and listen respectfully, as far as outward bearing was concerned, to the harangues of females in semi-male attire, think you a proper regard for our sex was heightened by an exhibition in which they would have blushed to see their our wives and daughters engaged?

Until the physical laws are suspended it appears to me to be perfectly preposterous for woman to place herself, voluntarily, in the front of the battle of life. Often, too often, is she placed there by the force of circumstances, and when placed there by such force, if she fights her battles with the proper weapons, she will always receive the sympathies and support of those of the other sex, whose friendship is worth possessing. The great and the good, among men, are at this moment striving for the real elevation of our sex, not to the "Speaker's desk" or the "Presidential chair," but to a moral and intellectual standard by which we shall be enabled to discharge a high and holy duty, almost entirely intrusted to us by that Omniscient Wisdom that gave to woman a condition of being, that eminently qualifies her for the care and training of the infant, the weak, the helpless and distressed of all ages and conditions; and yet, the helpmeet, the adviser, the consoler, and, I had almost said, the guide of man. Let us to whom so much is given, be careful lest we transcend the limits of that "wisdom" which "is justified of her children."

Do those who advocate the right of woman to vote, ever seriously consider the endless confusion and trouble that might arise out of the exercise of differences in political opinions, perhaps honestly held by husband and wife? How, few wives could peacefully and gracefully buckle on the armor of political strife. How I would like to know, is the mother of a family to perform her natural duties toward them, and lead in an electioneering campaign? for women must have leaders, and are ambitious as well as men. While woman is engaged in the turmoil of public life, will not some wolf creep into her unprotected fold, and destroy the tender lambs? Intemperance still stalks abroad, and while she has been canvassing the State and lecturing against this vice, how can she know that the husband, son, or brother, who has missed the wife, the mother, or the sister, whose smiles were wont to gladden the cheerful hearth, has not sought a substitute among companions who have already pressed the wine-cup to their yielding lips, and chained them to the car of a Demon more fatal to their moral well-being than the wheels of Juggurnant, to the lives of his prostrate victims? While the mother is abroad, how can she feel sure that the daughters of her cherished affection are secure from the insidious advances of those destroyers of female purity and happiness that stalk abroad undismayed in every community?

Those of my sex who can assume a half-masculine dress, harangue a mixed multitude, and receive their "bravos" without a blush, may accuse me of possessing antiquated notions. If to think that such a position is an improper and unbecoming one for "maid or matron" to place herself in, is an antiquated prejudice, I plead guilty to the charge.

At the opening meeting of the "Woman's Temperance Convention," Mrs. FOWLER, of New York, read a discourse on the subject. Could I have read that paper by my own fireside, or have heard Mrs. FOWLER read it in a company of females only, I certainly should have enjoyed so beautiful a production. As was observed by one of the speakers on that occasion, "we women are more accustomed to the use of the tongue than the pen." Could this remark with justice be reversed, I think we should be in a fairer way to see some of the more reasonable wishes realized of those who are making pilgrimages to "Womens' Rights Conventions."

With the numberless facilities that now exist for disseminating opinions on any subject, could not these female reformers reach thousands by their pens, where tens listen to their verbal appeals? and if their arguments are sound, any reflecting mind would be more likely to ponder and be convinced by their reasoning if read, than if heard under the excitement produced by the novelty of the female voice on a public stage. Let not American women complain of a too limited sphere while they are capable of using those endowments with which a beneficent Father has invested them. The field of female usefulness is much broader than has hitherto been occupied, and it is in the power of woman, without improper arrogance or display, to show to the world by the fruits of her labors that she is worthy and capable of standing by the side of man, encouraging and strengthening him in every good work and resolve. May we more earnestly endeavor to be like her of whom the "wise man" has said—"She openeth her mouth with wisdom, and in her tongue is the law of kindness. Her children rise up and call her blessed; her husband also, and he praiseth her."

TRUTHFULNESS is a corner stone in character, and if it is not firmly laid in youth, there will ever after be a weak spot in the foundation.

SOME ladies will forgive silliness; but none ill manners. And there are but few capable of judging of your learning or genius; but all of your behavior.

THE love of the beautiful and the true, like the dew drop in the heart of the crystal, remains forever clear and limpid in the inmost shrine of the heart.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, MARCH 5, 1853.

### PUBLISHER'S NOTICES.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is ordered.

☞ ADVERTISEMENTS must be brief, appropriate to the objects of the paper, and accompanied with the cash.

☞ SEE Terms, Premium List, &c., on last page.

ADDITIONS TO CLUBS—Are still in order. Having but few back numbers, agents and others can order additions to Clubs at $1 per copy from 1st of March or April to end of the year and volume. New Clubs, or single subscribers, can begin 1st February, March, or at date of subscribing.

### A Week in New England.

To thousands of the inhabitants of the Middle and Western States, New England is the Mecca of their hearts. With faces every day turned toward the east, it is an era in their lives when, pilgrim-like, they can visit the land of their forefathers. Gathering a feeling of reverence from the history of the past, and the little traditions of the olden time, New England, to an American, possesses more interest than any other portion of our favored country. At the conclusion of the annual meeting of the State Agricultural Society, we turned our face Boston-ward, via. the Hudson River Railroad. It is a pleasant route, flitting along the bank of the noble Hudson, darting thro' and beneath the ponderous masses of rock, or looking with wonder and awe at the lofty points of the "Highlands," Farm-houses, villas, suburban residences; and quiet thriving villages and cities, dot the way, adding interest to the varied landscape. It is a novelty, too, this going into the great metropolis by the land route, noting the increasing compactness of the buildings, and coming gradually to the uoise and bustle of a great city.

Passing New York, we made way eastward by the New York and New Haven train, along the coast of Long Island Sound. The way is studded with villages, and in summer must have a very pleasant appearance. At Bridgeport we had a good view of Iranistan, the residence of one who has been styled the prince of humbugs, merely, as we view it, because he has been most successful in catering to the tastes of the people, who seem to prefer the shadow to the substance, and always give marked preference for the things that can amuse, over those that are capable of imparting instruction. This is true in amusements, lectures, literature, and we fear too true in the circle knowu as "our best society."

Arriving at the "City of Elms" we chose the route by New London, still keeping along the coast—never having enjoyed the privilege of passing through the ancient towns of Connecticut.—In an agricultural view, the appearance is forbidding, hillocks, rocks and little arms of the sea occupying much of the surface where it seems hardly possible for good crops to grow. The farmers are frugal aud industrious, and we observed many of them gathering sea weed to enrich their lands. These weeds or grasses, of various kinds are abundant along the coast. We believe they possess considerable value as fertilizers, containing potash, soda, lime, magnesia, chlorine of sodium, phosphate of lime and sulphuric acid, in considerable quantities. This manure is most esteemed for root crops and fruit trees. At New London our attention was attracted by a monument on the opposite side of the river, erected at the place where the traitor ARNOLD, with his British confederates, so brutally and wantonly spilled the blood of his old neighbors and friends. So severe was the conflict, that the blood, it is said, ran iu torrents down the hill, mingling with the water iu the harbor.

From New London, our route led through Stonington by railroad to Providence. This is a fine, well built city, the Capital of Rhode Island. We were much pleased with every thing with which we met while sojourning there. Manufactures flourish well, embracing tools, screws, hardware, wool and cottou. Every thing wore au appearance of prosperity. The Legislature were endeavoring to amend and perfect the liquor law, so as to meet the wishes of its friends, and be efficient in staying the destroyer, while in all points conforming to the Constitution. It is a working body, differing therein from too many legislatures. A brief sojourn at this place, and we passed on to Taunton. This is a very pleasaut, even beautiful village, the shire town of Bristol Co., and something over thirty miles from Boston. Taunton river, which pursues its tortuous course through the village, furnished much water power, in addition to which we found steam in use. The manufacture of locomotives is very extensive here, and turns out some of the best engines in use.—There are large copper works, turning out sheathing for vessels, bolts, rivets, and other copper ware. A large quantity of iron tools and shoo nails, are made here by machinery, which to appearance, possesses something akin to knowledge, such is the precision with which it works.

Leaving Taunton we visited the heavy iron and copper works at Canton, the boot manufactories at Stoughton, and spent a pleasant hour at the world-renowned shovel shops of OLIVER AMES & SONS, at North Eastern. This is not only the most extensive manufactory of the kind, but possesses a reputation for good shovels and spades, which no other has been able to command. Its history presents a most instructive example of the fruits of perseverance and well directed effort, in the building up from a small beginning, during the life time of the originator, one of the largest and best establishments in the world. The shops which we visited were beautiful and admirable structures, every way well adapted to the purpose. The main building is 500 feet long by some 50 wide, two stories high, filled with machinery and occupied with the most attentive and active workmen we have ever seen. The whole machinery is propelled by a steam engine, the boilers of which are heated from the forges in which the steel and iron are heated for working. These extensive shops were superintended by the proprietors in person, to which fact the tools are probably indebted for much of their excellence. They turn out some two hundred dozen a day, and are still unable to meet the demand. There are other shovels in abundance, but very few of them being as good, they do not diminish the demand for "Ames."

From this place we visited Boston, looked in upon the Senate and Representatives of the Old Bay State, spent an agreeable hour with friends BROWN, of the New England Farmer, and HOWARD, of the Boston Cultivator. Boston is rife with interest, not only as a thriving city, but as the theatre of many of the most thrilling scenes in our struggle for Independence. Columns, of interest to all, might be written of this locality, but lest our pen run riot, we desist. †

### Western Agricultural Journals.

IN our notice, a few weeks ago, of agricultural exchanges presenting new features, and others recently commenced, we unintentionally omitted mention of our Michigan and Indiana contemporaries. We ought to have said, as we now do, that

THE MICHIGAN FARMER commenced the new year with flying colors—improved in appearance, and as communicative as ever. Mr. ISHAM seems more industrious and spirited, since his return from abroad, than ever before—and, barring certain superfluous episodes relative to eastern papers, and his nearer neighbors, makes a very readable paper. Published monthly—32 pages octavo; $1 per annum. Address W. ISHAM, Detroit.

THE FARMER'S COMPANION.—This new monthly is apparently making good progress, and as we predicted in its outset, is destined to achieve a large measure of success. Instead of injuring the Mich. Farmer, the latter will be a better paper than before, and probably attain a larger circulation, while the Companion will accomplish a vast amount of good in keeping the "even tenor of its way," and devoting attention to legitimate subjects. It certainly deserves, what we cordially wish it, and all other western papers, substantial prosperity. For terms, &c., see next page.

THE WESTERN PLOW-BOY.—This is the title of a semi-monthly, commenced with the current year at Fort Wayne, Ind., by R. D. TURNER and J P. JENKS. The number before us is well-filled, and makes a creditable appearauce. The farmers of Indiana are making good progress, and should aid those who are helping to make their fortunes—first, their own agricultural journals, and *then* those published elsewhere. The PLOW-BOY is $1 a year; address as above.

THE NEW ADMINISTRATION assume the reins of Government this week. As this paper goes to press previous to the 4th, we are unable to give particulars relative to Gen. PIERCE'S inaugnration. His Inaugural Message, &c., will probably be received in time for our next paper. Meantime, the political journals will no doubt teem with treatises upon the new Pesident's doings, pro and con,—his manner of holding the "ribbons" of State, and so forth and so on; while numerous office holders will see the "hand-writing upon the wall," and more numerous expectants see what they will see—probably double. We may not be consulted in the matter, but if we were, we should vote to have a good many Post-masters "hold over." The idea of having gentlemen who are capable, honest, efficient, and moreover warm friends of the RURAL, "rotated" from office, is not agreeable to this deponent. Hence we suggest to Gen. PIERCE, or the new P. M. General, the propriety of staying the hand of "proscription!" In this case we go for *good men*, rather than (political) principles.

OUR HORTICULTURAL DEPARTMENT will hereafter receive greater attention. The success of the RURAL enables us to be more liberal in expenditures,—and, as promised in the outset, we shall improve both its contents and appearance, as the circulation of the paper increases. An experienced amateur horticulturist and florist will take charge of the department in a week or two—a gentleman qualified to speak understandingly, and who has no "axe to grind" in the horticultural line. We hope to render the columns devoted to Horticultural matters alone worth the subscription price of the paper, to any one interested in the culture of Fruits, Flowers, &c.

THAT MARK.—An earnest friend of the RURAL writes:—"Have you reached *that mark*—ten thousand? I hope so, and trust I have doue my share," etc.

Yes, thanks to yourself and like generous and active friends, we reached and passed *that* mark, long ago. But that's not our mark for *this* year—it is double the number. To give those interested some idea of the progress of the RURAL, we will add that our clerks reported, some two weeks ago, an INCREASE of *over five thousand subscribers* in two months, or since Christmas! We hope to add some three thousand more by the 1st of May, and shall if agents and other friends of the paper contiuue their efforts. Remember, reader, that every subscriber added to the list, increases our ability to furnish a better paper.

## Legislature of New York.

### Synopsis of Proceedings.

WEDNESDAY, Feb. 23.—*Senate.*—The Senate ordered to a third reading the bills to amend the general Steamship Act, and to provide for the education of destitute children.

*Assembly.*—In the Assembly a discussion of no value arose upon a petition against free tickets to members from Railroad Companies. The subject was refferred.

THURSDAY, Feb. 24.—*Senate.*—The bill increasing the stock of the Crystal Palace Company, and the Crystal Palace Police bill were passed. The General Saving's Bank bill was read a third time and passed by 19 to 6, after being so amended as to confine its operations in regard to Directors to Companies hereafter to be incorporated.

*Assembly.*—The Assembly passed several bills in Committee, and ordered them to a third reading.

FRIDAY, Feb. 25.—*Senate.*—The Senate passed the bill amending the charter of the Harlem Raiload. The Railway regulation bill was latitudiuously discussed, and recommitted.

*Assembly.*—Messrs. WEST and BURROUGHS spoke, on the Canal resolutions. Under the operation of the previous question, they were adopted without a count. The Crystal Palace Police bill, and the bill amending the act of its incorporation, were passed.

SATURDAY, Feb. 26.—*Senate.*—The Pacific Railway bill formed the main topic, and occupied the day.

*Assembly.*—A bill to regulate the hours of labor in manufactories was reported, and the bill to incorporate the new Williamsburgh Ferry passed. Some other business of minor importance followed, and the Assembly adjourned.

### Sales of Wool.

IN all the different markets there appears to be an unusual business in the transactions in wool, and at prices, too, which cannot fail to be remunerative to the producer. Unfortunately, most of this staple, last year, changed hands before the rise had commenced, consequently buyers and speculators shared most largely in the profits.—There appears to be no danger of low prices for the coming clip, and farmers who keep well posted, cannot fail of making good sales. Our fears are that the price will be too high for the permanent interest of manufacturers, and consequently for the interest of wool growers. We subjoin the prices indicated by recent sales in some of the principal cities.

NEW YORK WOOL MARKET.—There has been, both for foreign and domestic, a very active demand. The following list of prices embrace those which have been paid within the last six days:—American Saxony fleece, 56@62 cents per lb.; American, full blood Merino 50@56c.; American ½ and ¾ Merino 46@50c.; American, native and ¼ Merino 41@46c.; Superfine, pulled 45@59c.; No. 1, pulled 39@44c.

BOSTON.—Similar prices have been paid, with an active demand.

PHILADELPHIA.—The market has been more active, the demand being principally to go East, and the sales reach about 250,000 lbs., at very full, and in some instances, at unexpected rates, the firmness of holders at the close having a tendency to check sales. Among the transactions we notice 100,000 lbs. fino fleece at 60 cts.; 15,000 lbs. do. at 56c.; 50,000 lbs. do. at 62½c.; and 10,000 lbs. No. 1 pulled at 48c.; all on the usual terms. The stock of fleece is now very much reduced.

In Licking County, Ohio, the coming crop is being bought up at enormous prices. Full one-half of the clip has been bought at from 30 to 60, and some even as high as 63c. per pound.

The Cincinnati Gazette says:—"Throughout the country there is considerable excitement, and contracts have been made to a considerable extent for clips, at prices ranging from 45 to 65 cents, being full 50 per cent. above the opening rates of last season. The movements at this time are of course of a speculative character. Farmers, however, are realizing fine prices in advance of the maturity of the staple."

THE WEATHER.—There was a heavy fall of snow about the middle of the past week. This made good sleighing until Monday of the present week. Sunday night it began to storm a little, and Monday morning early it was raining, and continued through the day—the last day of old winter—destined to be referred to in coming years, as one of the mildest winters ever know in this locality. Cloudy this (Tuesday) morning aud warm—did not freeze any last night.—w.

TO ADVERTISERS.—We do not solicit advertisements; on the contrary we decliue many every week—preferring to fill the RURAL, mainly, with reading matter. Yet, as we cannot well refuse to insert brief and appropriate advertisements, we shall continue to accommodate as many friends as we can consistently. Remember that our terms are cash in advance—and that we wish each advertiser te *be short*, in order that others may have a hearing.

THE FARM of the late URI WEBSTER, of Lima, was advertised in our last number, to be sold at auctiou on the 24th of the present month. We are requested to state that, instead of the time above mentioned, the sale will be held eight days later—on the *second day of April*, at the same place announced in said advertisement.

CITY ELECTION.—As we write (Tuesday evening,) the Democrats are rejoicing over the election of city officers. Maj. JOHN WILLIAMS is elected Mayor by a large majority.

Buffalo, Syracuse and Utica are also Democratic.

## Congressional.

### Synopsis of Proceedings.

MONDAY, Feb. 21.—*Senate.*—The Pacific Railroad bill was amended by providing that the $25,000,000 appropriated, be expended exclusively in the construction of that portion of the road which runs within the territory of the United States, and it was adopted.

*House.*—More than seventy amendments to the Appropriation bill reported from the Committee of the Whole, were concurred in. The ones providing that neither the office of the Secretary of the Interior nor any of its business, except the Patent office, shall be located in the Patent office building, were among the number. Also, those giving $20,000 to the Washington Infirmary, $115,000 to the St. Louis Custom House, $87,745 to the Custom House at Louisville, $87,745 to that at Cincinnati, and $324,000 to that at New Orleans. The salary of the Superintendent of the Coast Survey was fixed at $6,000 per annum, and then the bill passed. Two private bills were disposed of, and the House adjourned.

TUESDAY, Feb. 22.—*Senate.*—The Senate passed a joint resolution extending to the first of June next, the period at the end of which the law for securing safety to passengers on steamboats shall go into effect. Several subjects were discussed, but no votes taken.

*House.*—Reciprocal Free Trade and the Indian Appropriation bill were used as a text for some considerable talk, and laid aside. They disagreed to some of the Senate's amendments to the West Point Acadamy bill, and adjourned.

WEDNESDAY, Feb. 23.—*Senate.*—The President elect notified the Senate of his acceptance, and a Committee was appointed to make arrangements for his inauguration. The Army Appropriation bill was taken up, and the day spent in its discussion.

*House.*—The House discussed the Reciprocal Trade and the Indian Appropriation bills, but took no action on either.

THURSDAY, Feb. 14.—*Senate.*—The debate on the Army bill was continued. On the bill establishing Reciprocal Free Trade with the British North American Provinces on certain conditions, the previous question was ordered. Mr. PHELPS offered an amendment, in Committee of the Whole, to the Indian Appropriation bill, appropriating $50,000 to open negotiations for extinguishing the Indian title in Nebraska, which was adopted. The bill making appropriations to carry the mails in ocean steamers and otherwise, was also passed. The Senate resolution was adopted for straightening the Southern boundary lines of the Naval Hospital, New York. The passage of a private bill and the Post Route bill concluded the business of the day.

FRIDAY, Feb. 25.—*Senate.*—The Army Appropriation bill was taken up, aud the pending amendments considered. Mr. WALKER'S Homestead amendment was lost, and Mr. CHASE'S original one for the survey of a route to the Pacific was adopted by a vote of 81 yeas to 16 nays. An amendment giving $100,000 to the true discoverer of Anæsthetic agents, whoever he shall prove to be, was adopted—26 to 23. An amendment providing for the construction of a wagon route to California, was adopted—25 to 23. An amendment giving $10,000 to purchase a site for the Western Military Asylum, was adopted.

*House.*—The Naval Appropriation bill led to a very interesting debate upon the subject of increasing the Navy, the repair of old vessels, &c., which ended in a batch of points of order, privilege, &c., during which the House exercised its privilege of adjournment.

SATURDAY, Feb. 26.—*Senate.*—In Senate the Military Appropriation bill passed, after which the Civil and Diplomatic Appropriation bill came up and was amended in many particulars. The mission to China was raised to the pull by one amendment, $20,000 appropriated for the expenses of a Turkish frigate to the World's Fair, and $70,000 to continue the Mexican Boundary Survey. The bill was then postponed, some private ones passed, and the Senate adjourned.

*House.*—The Navy bill was cousidered iu Committee of the Whole, and sundry amendments agreed to, when the bill was reported to the House.

### Rates of Postage.

IT is not easy to keep in mind the required amount of postage stamps on letters, &c., under the law now in force. The following is a convenient table:

*Letters*—

Each ¼ oz., under 3,000 miles, *prepaid*, 3c; *unpaid*, 5c.
" " over " " 5c; " 10c.

*All printed matter in general*—any where iu the United States—

First three ounces.....1c.
Each subsequent ounce.....1c.
If not prepaid, double these rates.

But—

*Newpapers and Periodicals*—paid quarterly or yearly in advance—

First three ounces.....¼c.
Each subsequent ounce.....1¼c.

And if weighing not over 1½ oz., in the State where published, ½ c. each, and weekly papers, in the county where published, *free*.

*Small newspapers and periodicals*—published monthly or oftener, and *Pamphlets* of 16 vo. pages or less—when sent in packages weighing at least 8 oz. prepaid, 1½c. an oz.

*Books*—bound or unbound—weighing not more than four pounds, may be sent by mail, for each ounce—

Under 3,000 miles.....*prepaid*, 1c; *unpaid*, 1½c.
Over " " ..... " 1½c; " 3c.
Fractions over a single rate, charged as one rate.

Periodicals iu the sense used as above, are publications issued once in three months or oftener.

Three cases of childern having been burned to death in New York and one in Boston, while left alone, are given in the latest papers.

## News Brebities.

—— The population of the Brazilian Empire is 5,200,000.

—— The English merchants are chartering Dutch and French ships for Australia.

—— The catalogue of the music in the British Museum fills sixty-seven folio volumes.

—— There is a pottery at Stanford, Conn., where they make 60,000 spittoons annually.

—— The temperature of Madeira, in January and February, is rarely lower than sixty degrees.

—— Military preparations are making with much activity in the War Department, in Vienna.

—— A steam propeller of 80 or 90 tons burthen will be put upon the Oswego canal next season.

—— Louis Napoleon's coronation cost the enormous sum of one million six hundred thousand dollars.

—— Remarkably mild weather seems to have been experienced in England of late, as well as in this country.

—— W. H. Seward has been selected to deliver the annual address before the Agricultural Society of Wisconsin.

—— There was a very heavy snow storm in Eastern Virginia on the 19th instant, the heaviest for many years.

—— A new Post Office has been established at "Patchin's Mills," Steuben Co., and Wm. Carr, Esq., appointed Post Master.

—— There is a woman on exhibition at Cincinnati, who weighs 764 pounds. "Most too much of a good thing."

——Chicago will be the depot of 2,821 miles of railroad, comprising ten trunk roads and twelve branches or extensions.

—— Speculations in building lots have become a mania in Cleveland, and prices and rents have gone up enormously.

—— The number of emigrants who sailed during the last year from the various ports of Great Britain, was 1,000 per day.

—— On the 1st of February there were 10,327 pupils on the rolls of twenty-one public schools in Boston. Pupils over 15,610.

—— The Buffalo Courier learns that Eastern capitalists are about to organize another bank in that city, with a capital of $200,000.

—— Two men have been sent to State prison four years, from Allegany county, for obstructing the railroad. The fiendish act was clearly proven.

—— The Corning Journal says that town has a population of 3,000 inhabitants. It shows an increase of 500 in the last eighteen months.

—— The inhabitants of the village of Ingersoll—a small village in the county of Oxford—have subscribed $84 for the establishment of a reading room.

—— The Syracuse and Utica Railroad Company have determined to build a direct track between the two cities. The capital required is $600,000.

—— The Oswego Times thinks that more wheat and lumber were discharged at that port last season than at any other Lake port in the United States.

—— The total sales of real estate in New York for the week ending Thursday evening, by six auctioneers, amounts to $1,470,000,—a small portion by private sale.

—— Our Western exchanges speak of a mortality among the swine on the Mississippi, which is supposed to be cholera. One Distillery at Carrollton, Ky., lost 600 hogs in ten days.

—— The Detroit Free Press says that one of the most commendable acts of the last legislature was an appropriation of $23,000 for the erection of a State Lunatic Asylum.

—— The celebrated "Rebellion Losses" question in Ca ada is nearly at rest forever. $360,000 of the claims has been already paid, aud but a small balance remains due.

—— Wisconsin, with a scarse and emigrant population, has a school and university fund of $850,000. aud an annual outlay for the instruction of her children, of $120,000.

—— Among the ladies of the palace to the new Empress of France, is the Barroness de Pierres, one of the daughters of Col. Thorn, the rich American who formerly resided in Paris.

—— The following altered bank notes are in circulation:—Eagle Bank, Rochester, 1's altered to 5's; Newark Bank. N. Y., 1's altered to 10's. Be careful—they are well done.

—— The Ericsson (caloric ship) is said to have worked nobly while at sea. Her consumption of fuel was under five tons in 24 hours. As to her rate of speed we gather no particulars.

——A "Hard Currency" County Treasury in Ohio receives Bank notes for taxes, but draws the specie from the Banks and pays all demauds against the county in the real "spelter."

—— The value of the imports to Sweden from the United States in 1851, was $890,000. The exports from Sweden to the United States in the same year, reached a value of $730,000.

—— The Post Master General of Canada, with the consent of the United States, has determined to appoint mail conductors to attend the English mail from the seaboard to the upper province.

—— Dickens' Household Words maintains that in seventy years we have but about fifteen for labor. He deducts the remainder for sleep, eating, amusements, &c. [Editors and printers excepted.]

—— The preliminary surveys for a railroad along the Cherry Valley turnpike have been accomplished, the company formed, and the necessary capital paid in.

—— The Secretary of the navy has recommended that the Naval Committee of the House, report a resolution directing the Department to contract with Mr. Ericsson for a caloric frigate of 2,000 tons.

—— The Common Council of Washington have passed resolutions highly complimentary to President Fillmore, and asking him to appoint a day for a public leave taking.

THE CABINET.—According to "the papers" Gen. PIERCE'S Cabinet is finally constructed as follows:

Wm. L. Marcy, N. Y.—Secretary of State.
James Guthrie, Ky.—Sec'y of the Treasury.
Jefferson Davis, Miss.—Sec'y of War.
James C. Dobbin, N. C.—Sec'y of the Navy.
Robt. McClelland, Mich.—Sec'y of the Interior.
James Campbell, Pa.—Postmaster General.
Caleb Cushing, Mass.—Attorney General.

☞ The present capital of the five railroad companies constituting the "Central Line," is $15,412,926. This is to be increased $600,000, for the construction of the straight line between Utica and Oneida.

# Literary Notices.

PLEASANT PAGES FOR YOUNG PEOPLE: or Book of Home Education and Entertainment. By S. PROUT NEWCOMBE. With numerous illustrations. Boston: Gould & Lincoln, 1853.

This is a reprint of an English book — a serial work on rather a novel plan. It is divided into twenty-six sections, one for each week, and each subdivided into six parts entitled "Monday, Tuesday," &c. This will give two or three pages for each week day, through six months. It is intended to be read to children, or by them, every morning. Ten minutes time will suffice for the daily lesson, and supply matter for thought for the day. It appears well suited to the object proposed — the less palatable bits of information being well disguised in the colloquial narrative method of administering them. For sale by SAGE & BRO.

CHAMBERS' REPOSITORY OF INSTRUCTIVE AND AMUSING PAPERS — with illustrations. Vol I. Boston: Gould & Lincoln.

This is a reprint of a work recently commenced by the Messrs. Chambers of Edinburgh, in a style similar to the "Miscellany," which maintained a circulation of more than eighty thousand copies in England, and nearly reached the same sale in this country. The present work is in fact a continuation of the "Miscellany," under a new name.—Arrangements have been made by the American publishers, by which they will issue the work simultaneously with the English edition, in two monthly 16 mo. volumes, of 260 pages each. Each volume is complete in itself, and for sale as above.

PUTNAM'S MONTHLY, for March, has articles on Japan; Robinson Crusoe's Island; Life in Havana; Bancroft; Greenough, the Sculptor; Mrs. Spears, a Heroine of the Revolution, and various other subjects of interest. This Magazine seems to fill a place not previously occupied, and is well worthy patronage. New York: G. P. Putnam & Co; $3 per year. DEWEY'S, Arcade Hall, Rochester.

BIBLIOTHECA SACRA and American Biblical Repository.—The January number of this excellent Quarterly, has been received, and contains the usual variety of able reviews, essays, &c. This work makes a volume at the end of the year of about 900 pages, of critical reading. $3 in advance. Published at Andover, Mass. L. WETHERELL, Rochester, agent.

THE NATIONAL MAGAZINE for March contains its usual excellent variety of reading and illustration "The Christianity required by the Times" is a well-reasoned article by the editor, in which he shows that the general inculcation of religious truth, without its specific application to public evils, is not a sufficient mission for the church.—Pauperism, intemperance, and many other evils, need sadly the energetic, reforming hand of religion. Carlton & Phillips New York; 96 pages, monthly: $2 per annum.

HARPER'S NEW MONTHLY MAGAZINE.—The March number of this popular Magazine has come to hand, containing much good reading matter.—Notes from the Copper Region, an illustrated article; NAPOLEON continued, by ABBOTT; and the Editor's Table, constitute the best of the present issue. DEWEY has it for 25 cents.

THE LONDON QUARTERLY REVIEW, for January, commences the ninety-second volume. This long established and sterling Quarterly needs no commendation — never failing in interest and instruction to its readers. New York: L. Scott & Co., publishers. DEWEY agent.

THE WESTERN LITERARY MESSENGER enters upon its XXth volume with a new energy, plainly perceivable in its improved typographical appearance, and the spirit and freshness of its literary contents. Success to the poet-editor, and his pet—the MESSENGER. Buffalo: Jewett, Thomas & Co., $1,50 per annum. 5 copies $5.

LECURES ON PHRENOLOGY.—The best practical phrenologist in the land — M. O. S. FOWLER, of New York—commenced a series of lectures on his favorite science, and kindred topics, at Corinthian Hall, on Tuesday last, and is to continue every evening for some two weeks. Rochesterians will govern themselves accordingly. For particulars see the daily prints.

EMIGRATION OF 1852.—The Annual Report of the Commissioners of Emigration states that the total number of vessels employed in conveying passengers to this port during the year 1852 was 2,190, and the whole number of passengers landed was 340,144. The emigration from Germany was the largest, amounting to 119,611; while from Ireland there were 118,131. The Germany emigration has more than doubled the average of preceding years, and embraces 48,718 more than in 1851; while the Irish have fallen off 45,119, or nearly one-quarter less in number than in 1851. The receipts of the Commissioners of Emigration during the year were $572,529, and the expenditures $569,516; leaving a balance of $2,812.—Since the organization of the Board, the expenditures for building, &c., have reached $300,000.—*New York Times.*

☞ The Bennington, (Vt.) State Banner says that the marble business in the north part of that county, is destined to be one of vast importance. Several large purchases by companies from Philadelphia have been concluded with individuals residing in Manchester and Dorset. These towns abound in marble quarries of the finest grade, which have never been accounted of any great value, until since the construction of the Western Vermont Railroad. Some persons in that section who were recently poor, are esteemed rich. They possess the "rocks."

THE PATRIOT WAR.—It may not be known to all who served in the sanguinary campaign of "*Pork and Beans*" during the Patriot emeute on the northern frontier in 1837, that they are entitled, under one of the recent "Land Bounty laws" to forty acres of Uncle Sam's domain. Considering the hardships, privations, and hair-breadth escapes of those tronblous times, this bounty is peculiarly expressive of the nation's gratitude.

# Foreign Intelligence.

## Arrival of the Arabia.

By the Arabia, we have Liverpool dates of the 12th ult. We give the most important items below:

An insurrection broke out at Milan on the 6th, and it was said that 300 of the insurgents had been slain by the soldiers. By the latest dispatches it appeared that the fighting had recommenced after the first suppression of it. A proclamation from Mazzini was placarded. He had been in Switzerland the month preceding. A proclamation, purporting to be from Kossuth to the Hungarians in Italy, had been published. The Morning Chronicle, of the 12th, says that a dispatch from Milan, "of a later date," reasserts that tranquility is quite restored; that more arrests have been made, and three persons shot—and that the citizens took no part in the *emeute*.

The Italian news has created great sensation in Paris. All other matters, dull, in France.

Omar Pasha has issued a proclamation, promising to the Montenegrins that he will respect their property if they will at once lay down their arms. Contradictory rumors prevail about the war. It is said that the mountaineers are not united.

# California News.

## Arrival of the United States.

THE steamship United States, Wm. C. Berry commander, arrived at New York on the 23d ult. with 250 passengers and $112,000 treasure.

The United States brings dates from Jamaica to Feb. 18, from Australia to Nov. 27. The British bark Larue, from Melbourne to Panama, brought 17 passengers, mostly Americans, who have all brought their "piles," and speak in the highest terms of the country.

No news of much importance from California. Provisious were cheaper. Mines were generally doing well.

Great excitement existed in California on account of the great number of robberies and murders by an organized gang of Mexicans. The Americans were retaliating.

A mass meeting had been held to take measures to exterminate the Mexican population from the country. All who refused to leave were to be shot down.

An old Indian chief at Frenchtown has been hung by a lynching party.

A heavy flood had occurred in the Utah country. The White valley was under water.

The health of the Isthmus remained good, and the roads across are rapidly improving.

# News Paragraphs.

☞ The Commercial Advertiser says,—"We learn from a creditable source that Madame Goldschmidt has signified her determination to pay another professional visit to this country. She will sing at various places in Germany during the present year, and the following season, will appear in Opera at London. She will appear in the U. S. and give Operas in all the principal cities, remaining here probably two or three years.

☞ The city Editor of the St. Louis Republican has discovered that whiskers and moustachios are to the human system what Ericsson's wire receiver is to his breathing machine, and that a person well provided with the hirsute adornments will require less oxygen from the atmosphere at each inhalation, as a portion of the heated air is retained in the capilliaries. That discovery ranks him among philosophers.

☞ At an oyster supper the other day, in Albany, there were present—one father, three daughters, one son, one mother, one brother, three grand-daughters, three sister-in-laws, one uncle, one brother-in-law, three aunts, four cousins, one wife, one nephew, one grand-son, three nieces, one husband, and three sisters. And yet, strange to say, there was only four persons present.

☞ Nine dollars will be the cost of the next summer's trip from N. York to Cincinnati. After the 1st of April the fare from N. York to Buffalo, on the Erie Road to Hornellsville, and thence on the Hornellsville and Attica, will be only five dollars. And it is announced that the Cincinnati, Dayton and Sandusky route to Buffalo will be only four dollars.

☞ The first sign that ever swung to the breeze in the city of Mexico, was that of a Yankee tailor, about twenty years ago, and it quite astonished the Mexicans, who don't use signs or expose any goods or chattels in their windows or at their doors. Over five hundred Americans now live and do business in that city.

☞ According to Mr. De Bow, the revenue of Japan amounts to $100,000,000 annually. The standing army of the Empire, in time of peace, is 120,000 men. The population is about 50,000,000. It is estimated that the trade of Japan with this country, if she opens her ports, will be worth more than $200,000,000 annually to us.

☞ Gen. Pierce, it appears, finds it more difficult to get a coachman than a Cabinet. It is now stated that Mr. Gear, of the Cambridge line of omnibuses, declines the appointment, as he will receive five dollars per month less than at present, and thinks the honor is not a sufficient equivalent for the difference.

☞ The receipts into the Treasury of California during the fiscal year, were $366,825. Expenditures, $987,849. Excess of expenditure $621,024. The Assembly have voted to remain in Vallijo the present session, and the Senate are expected to concur.

☞ The Louisiana Conference of the M. E. Church South, at its recent session reported a membership of 4,872 whites, and 4,790 colored.—Its missionary contributions amount to upwrads of $11,000—which is considearbly over $2 for every member wrthin its bounds.

☞ The Warsaw Western New Yorker learns that after the first of April passengers are to be carried from Buffalo to New York, by way of the Buffalo and New York City Road, and New York and Erie, for *five dollars*, instead of the present price, seven dollars and fifty cents.

☞ The State of Virginia has a claim upon the Government for the sum of $120,000, which was advanced by the State in 1790, towards the erection of the public buildings in Washington. Maryland also advanced a sum towards the same object, and has been fully reimbursed.

☞ The British Pacific Surveying expedition reports soundings to a depth greater than were previously obtained. At a position about midway between Tristan d'Acunna, and Cape Horn, they reached eight miles and three-quarters, or 7,706 fathoms.

# Market Intelligence.

RURAL NEW-YORKER OFFICE,
Rochester, March 2, 1853.

THE good sleighing and brisk business which was ushered in with the commencement of the present week, has yielded to the influence of a protracted thaw, which has placed business and snow on a downward scale. Our streets present a sorry aspect.

FLOUR.—Very little activity exists in the market. Transactions are light, and confined mostly to city trade.

GRAIN.—With the sleighing came quite a good show of country produce, from this and the adjoining counties.—Prices were brisk without a speculative tendency. Wheat sold as high as $1,10 for choice lots, the average being $1,-06@1,08. Corn, choice samples, brought 62@65c, and some is mentioned as high as 68c. Oats have been in good demand at 38@40c. Barley 63c.

SEEDS.—There is considerable demand for Clover seed. The current price is for June or medium $6@6,50. Large $7@7,50. Timothy seed is in request at $2,50@3, according to quality.

PEAS.—There is a demand for choice varieties for seed. Marrowfats, Early Kent, and the Canada Pea meet with ready sale. It is hardly possible to mention prices.

PROVISIONS.—There is no great change in the provision market. With a good supply, prices are maintained.

The prices of other marketable commodities may be known by reference to the corrected price list below.

**Rochester Wholesale Prices.**

| | | | |
|---|---|---|---|
| Flour, bbl. | $4,75@5,00 | Butter, lb. | 16@18c |

**Those Premiums.—To Agents and Others.**

MANY friends are already entitled to specific premiums in Books, etc., for obtaining subscribers to our present volume, and we are now forwarding (by express and mail) to those who have designated the works desired. But as several have requested us to publish a list of Agricultural Books, from which they could make a selection, we give below the titles and prices of such as we have recently procured. If any wish books not mentioned in this list, we will furnish them at the regular cash prices.

Johnston's Ag. Chemistry, $1.25; Boussingault's Rural Economy, $1,25; Downing's Fruits and Fruit Trees of America, $1.59; Amer. Fruit Culturist, by Thomas, $1,25; Dictionary of Gardening, by Johnson, $1.25; Farmer's Dictionary, by Gardner, $1,75; Farmer's Every-Day Book, by Blake, $2,50; The Complete Farmer and Gardener, by Fessenden, $1,25; Rural Architecture, by Allen, $1,25; Ladies Companion to the Flower Garden, by Mrs. Loudon, $1,25; American Flower Garden, by Buist, $1,25; American Farm Book, $1; The Kitchen Garden, by Buist, 75c.; Continental Agriculture, by Colman, $1; Scientific Agriculture, by Rodgers, $1; American Lady's System of Cookery, by Mrs. Crowen, $1,25.

Youatt on the Horse, by Randall, $1,50; Youatt and Martin on Cattle, by Stevens, $1,25; Randall's Sheep Husbandry, $1,25; Morrell's American Shepherd, $1; Canfield on Sheep, $1; Youatt on Sheep, 75 cts.; The Pig, by Youatt, 75 cts.; Clater and Youatt's Cattle Doctor, by Skinner, 50 cts.; American Veterinarian, by Cole, 50c.; The Dairyman's Manual, $1; Browne's Poultry Book, $1; Bennett's do., $1; Bee-Keepers Manual, $1; Townly on Bees, 38c.

The above works are all well bound, in muslin or leather, and mostly of late editions and finely illustrated.

The following works are bound in paper, pamphlet style, and furnished at 25 cents each:—Elements of Agriculture; Dana's Essay on Manures; Every Lady her own Flower Gardener; The American Kitchen Gardener; Amer. Bird Fancier; Amer. Rose Culturist; Pests of the Farm; The Horse; The Cow; The Hog; Domestic Fowls and Ornamental Poultry; The Hive and the Honey Bee.

We shall pre-pay the postage on books sent as premiums. Though this is more than was promised, we presume none of our friends will object!

**ENGLISH DORKINGS.**

FOR SALE—A fine flock of 13 fawn-colored Dorkings, viz:—Two hens received from the importer—age not known; bright active and healthy. One cock and three hens—20 months old. Three cocks and four pullets—8 months old

They are handsome shades of buff, or fawn-color; have rich double combs—yellow, or flesh-colored legs, with five claws on each foot. Price for the 13, if sold together, is $15. No charge for caging and delivery at the Express office. DAVID ELY,

Rochester, March 1, 1853. 69 So. Fitzhugh St.

A WESTERN FARMERS' PAPER!

**Farmers' Companion & Horticultural Gazette.**

PUBLISHED monthly, in Detroit, Mich., on 16 extra large octavo pages, with numerous superior ENGRAVINGS,—edited by C. FOX and C. BETTS; J. C. HOLMES, Horticultural Editors; LINUS COSE, Corresponding Editor,—is peculiarly devoted to the interests of Western Agriculture and Gardening. The rising interests of STOCK RAISING and WOOL GROWING, will be particularly attended to As the Editors are all practical men, and old residents in the West, they believe they can afford much valuable *practical* information, and assist materially their brother farmers in their business; especially those who have lately immigrated, or intend to do so.

PRICE, ONLY FIFTY CENTS A YEAR.

☞ The celebrated Prof. J. F. W. JOHNSTON, F. R. S. L. & E., the great Agricultural Chemist of England, has promised to contribute during the year.

Specimen numbers sent on application. A liberal commission to agents. Advertisements are confined to the cover, so as not to interfere with the reading.

Direct to CHAS. BETTS, Detroit, Mich.

**EMERY'S MOWER AND REAPER.**

THE subscriber, not only having made himself practically acquainted with the construction and working of all the successful machines of this class, but having made and successfully introduced several valuable improvements in some classes of agricultural machinery, which have already gained favorable and world-wide reputation and adoption, flatters himself that he has also made an improvement in the construction of a Mower and Reaper of equal if not greater merit, than any of his former improvements.

It will suffice to say, that while this is the most compact, light, simple, cheap, durable, easy working machine, it is at the same time, the most perfectly adjustable, and easily convertible into a Mower or Reaper, working as perfectly in either form as those of the best other kinds, whether simple or combined. The frame itself is so suspended upon the axis of the main wheel, as to be elevated and depressed at pleasure, so as to secure a horizontal or inclined (forward or back) position of the whole machine, at whatever elevation used, thus always having the cutting works in proper position.

In reaping, a reel is used, and the raker stands erect, face forward and directly behind the platform, with a support about him; the movable platform being on the same plane with the frame-work at the side of the discharge, and at the same time about two inches above the stubble. With the above introduction, and the diagrams to follow, together with those in this number of the Rural New-Yorker, the public will have before them several machines from which to make a selection before purchasing for the coming season, and at the same time know what they are purchasing, much better than to be guided alone by impracticably written and published reports of committees of public trials, and be enabled to purchase only such articles as have their practical as well as theoretical merits plainly pointed out, or if not so pointed, to purchase only of responsible manufacturers, who are willing to back their machines by their reputation and capital.

For further particulars concerning the Reaper and Mower above described address

HORACE L. EMERY, Albany, N. Y.

March, 1853.

☞ E. D. HALLOCK, No. 50 State street, Rochester, is the agent for Western New York, and will have one put up in running order in his store. Those in his vicinity wishing to obtain a Reaper and Mower, are requested to call and examine the merits of the above machine before purchasing elsewhere. 166tf

**NOTICE.**

WANTED, a young man, or one with a small family, who has had experience in farming and is competent to act as foreman on a large farm,—who is a good horseman and knows how to take care of a large stock, and can come well recommended. Also, two other good laboring men, with small families, and acquainted with farm work. Houses to let to accomodate two or three small families, and plenty of employment.

Call on or address the subscriber at Walworth, Wayne Co., N. Y. ELIAB YEOMANS.

Walworth, Feb. 21, 1853. 165w3*

**FARM FOR SALE.**

A SMALL Farm of twenty acres, under good cultivation. Seven acres fall plowing done; remainder corn-stubble and meadow; all feasible, good land: situated in East Penfield, eleven miles from Rochester, near the Free-will Baptist Church—pleasant and desirable location. Good dwelling house, newly fitted up, and outbuildings good. Fruit abundant; large orchard, all grafted when small, of choicest fruit. Peaches of the choicest kinds; quinces, cherries, plums, grapes, and shrubbery tastefully arranged.

The above is a part of the Abram Becker farm. If not sold will be rented with or without the land. Inquire of the subscriber near the premises.

163-3t* TRUMAN MATTISON.

**A Desirable Country Residence For Sale.**

DAVID THOMAS, near Aurora, Cayuga Co., N. Y., wishing to retire from the care of his farm, offers it with all its extensive improvements for sale. It is pleasantly situated near Cayuga Lake, contains 118 acres of land, has a spacious and comfortable dwelling, with a laborer's cottage, and various out-buildings, together with extensive orchard and fruit-gardens, and a large ornamental and kitchen garden; the whole forming a completely furnished, comfortable, and desirable farm-residence, which is offered at the low price of $60 per acre. 163-3t

**FARM FOR SALE.**

THE Subscriber wishing to retire from business offers his very valuable Farm, known as the "Armstrong Hill Farm," of one hundred and seventeen acres for sale. Said farm is delightfully situated in the town of Pittsford, nine miles south-east from Rochester, and three from Canal and Railroad, is in a high state of cultivation, adapted to wheat and all other grains, has an excellent orchard of grafted fruit, good buildings and fences, and is well watered. There are twenty-two acres of wheat on the ground.

**NEW VARIETY OF SWEET CORN.**

MESSRS. HOVEY & CO., No. 7, Merchants Row, Boston, would respectfully inform their friends and the public, that they have purchased the entire stock of the OLD COLONY SWEET CORN, raised by the Rev. A. R. Pope, and described by him in the Magazine of Horticulture, Volume 14, page 529.

It is a true hybrid and the most remarkable variety ever produced. It was raised in 1847, from the Southern White Corn, impregnated with the early Sweet Corn of New England. The ears are of remarkable size, containing sixteen, eighteen or twenty, and sometimes twenty-four rows each. In its productiveness it is unsurpassed, a single stock planted after the middle of June, producing six ears. It is the richest, sweetest and most delicious corn known. An analysis of it, and several other sorts, by Dr. C. T. Jackson, shows that it is more abundant in saccharine matter than any other variety, its composition being "dextrine, sugar, and phosphates," while the common varieties contain considerable "oil and gluten."

It has been exhibited before the Massachusetts Horticultural Society for three years, and has not only received the commendation of the Society, but has been awarded the following prizes:

1850. For a new variety of Sweet Corn, ..... $2,00
1851. For a *new* variety of Sweet Corn, called the Old Colony, ..... 8,00
For superior specimens of the Old Colony Sweet Corn, Silver Medal, ..... 5,00
1852. For fine specimens of Old Colony Sweet Corn, . 2,00

The Committee on Vegetables, of the Massachusetts Horticultural Society, in their Report for 1852, remark, "That the Old Colony Sweet Corn, raised by Mr. Pope, we recommend as worthy of cultivation by all."

The Old Colony Sweet Corn, though not as early as the Common Sweet, is sufficiently so to produce a perfect crop in New England. Two sowings, one in May and the other in June, will supply the table from July until frost. All who have eaten it, pronounce it the most luscious variety, and an invaluable addition to our esculent vegetables.

☞ Single ears, 25 cents each. The trade supplied on reasonable terms. 163w4

**Manny's Patent Adjustable Northern Illinois REAPER AND MOWER.**

FIRST PREMIUM MACHINE FOR 1853.

AWARDED the First Premium for Mowing and the second for Reaping, at the N. Y. State Fair, in the great trial at Geneva, N. Y., in July, in competition with eleven other machines; awarded a Silver Medal at the Ohio State Fair, for the best Reaper and Mower, and received the highest award at the Vermont and Michigan State Fairs, for the best Reaping and Mowing Machine.

The true merit of this Machine has given it a great triumph over all others, and being a perfect combination of Reaper and Mower, it comes to the farmer with double value, and it is clearly demonstrated to be the only successful combination of Reaper and Mower. As a Mower, it is as simple and perfect as though constructed expressly for mowing; and as a Reaper, it is as simple and perfect as if constructed for reaping only. All the change that is necessary from one plan to the other, is to insert or remove a loose platform.

Machines warranted to cut all kinds of grain as well as can be cut with a scythe, and to cut flax and millet, also to gather clover, timothy and flax seed, and to be well built and of good materials. This machine will cut from ten to fifteen acres per day, with two horses, and one person to tend it when mowing, and two persons when reaping. The cutting apparatus is made perfect by means of a double edged sickle, and double guards, as fully tested the last two years, and it is connected with a joint, so as to adjust itself to uneven ground, and by a level at the driver's seat, it can be raised when moving along, to cut from one inch to two feet from the ground. All side draft against the team is entirely avoided. The machine will turn square corners, and turn square about, either way. Over three hundred of these machines were in use the past season, all of which gave perfect satisfaction.

The machines are manufactured at Hoosick Falls for the State of New York, and I will have them delivered to any part of Western New York where ordered. Price of machine, where made, $125. Address Gen. R. HARMON Wheatland, Monroe Co., N. Y.

149-tf. R. HARMON, Agent.

**Important to Farmers**

**PORTABLE MILL.**

[From the Ohio Farmer, December 2, 1852.]

ROSS' IMPROVED PATENT CONICAL BURR MILL STONES.—Our readers will many of them remember that Ross' Portable Burr Stone Mill took the First Premium at the Annual State Fair, held in this city a few weeks since.—This admirable invention must commend itself to every one who has witnessed its operation. In the first place it is easily portable, simple in structure, does not easily get out of order, and does its work with great rapidity and perfection. It may be used for grinding the coarsest food for cattle, or the finest meal for family use. It is also well adapted for grinding wheat, rye or buckwheat. It is indeed a perfect grist mill in miniature, and we would advise every farmer, if possible, to procure one. The expense of one of these mills, with the apparatus for horse power, can not be very great; or a number of farmers might club together and procure one, which would be sufficient for all.

Mr. Ross is, we believe, a resident of Rochester, N. Y.

N. B.—Any further information relative to the Conical Mill can be obtained by letter, post-paid, or by calling at the factory of CHARLES ROSS,

**DAGUERREOTYPES.**

THE Subscriber continues the business of Daguerreotyping, at his old stand in Chappell's Block, 82 State-st. Grateful for past favors, he will, as heretofore, adhere to the motto, that "whatever is worth doing at all, is worth doing well,"—trusting therein for a continuance of public patronage. Pictures copied, and all other work done in the highest style and finish known to the Art.

Rochester, Jan., 1853. [162-oam] S. B. SMITH.

# Poetical.

## TO MY ABSENT HUSBAND.

Thou'st gone from home and me, Donald,
Thy face I see not now,
My heart is sad and lone to-day,
And gloom rests on my brow:
The sleigh-bells merrily greet mine ear,
And joyous forms I see,
But all to me is drear, Donald,
Without a smile from thee.

I miss thy gentle voice, Donald,
At morn, at eve, at noon,
Thy kiss, of all the gifts I crave,
Would be the dearest boon;
And, oh, to hear thy footsteps near,
What joy would fill my heart,
I'd tell thee o'er and o'er, Donald,
From me no more depart.

The hours glide slowly by, Donald,
That keep thee from my side,
And oft a tear, and oft a sigh,
Escapes thy anxious bride:
I count the moments as they pass
And deem them all too long,
With feelings naught can cheer, Donald,
I breathe my thoughts in song.

God keep thee from all harm, Donald,
And bring thee home again,
I trust thee to his guardian care,
I feel 'tis not in vain;
But, oh, I know not how I'd live,
Without thee as my stay,
This world seems little worth, Donald,
When thou art far away. A——E.

*[Rochester Democrat.*

# Rural Sketch Book.

## THE SKIPPER'S JACK-AT-A-PINCH.

"This is a fact, and no poetic fable."—*Byron.*

About two o'clock of the afternoon of the ——day of May, 1807, four persons were assembled in the parlor of a house on the stage road, ten or fifteen miles below Tarrytown. A gentleman of middle age, the master of the house, with his wife, and a beautiful daughter, were in colloquy with an individual of a dignified air, and singularly handsome countenance, about thirty years of age, who, with his valise in his hand, and his cloak on his arm, appeared accontred for traveling.

"I am truly sorry, Judge," said the host, "that we cannot detain you any longer."

"We certainly expected you to remain another night with us," said the wife.

"At least," said the daughter, with an engaging smile, "you will wait until the stage passes to-morrow noon?"

"It is difficult, my kind friends," replied the stranger, "to resist invitations so pressingly offered; and," said he, turning to the daughter, "if anything could induce me to forego my resolution, my dear young lady, it would be your solicitation; but I have been long absent from home.

The circuit has been prolonged far beyond my expectations; and indispensable engagements hurry me away. If I recollect right," continued he, turning to the host, "there is a fishing hut on the river side, somewhere opposite us; and there was once a path which led down the mountain to the spot; be good enough to put me in the way to find it, and I will make for the station.'

"It is passable only on foot, or on horseback," said the host, "or I would take you down in the carriage; but there is an opening in the wood, just yonder, which leads to the path, and, that once gained, you cannot go astray."

After many friendly greetings on all sides, the stranger made his bow and departed.—The path was found; and, trudging onward, he soon emerged from the ravine above the beach, where a group of fishermen were waiting the proper time of tide, to resume their labors. A couple of skiffs were drawn up on the shore, near which the congregation was assembled.

"Whose skiffs are these?" asked the new comer. "I want to be put on board one of those vessels in sight."

There was a light wind blowing from the north-west; and the white sails of the river craft were seen far above and below—some nearly opposite, and some far distant.

"This one," responded a fisherman, "is mine; but we can't spare time to put you on board, for it will soon be time for a haul.—The other belongs to the person now coming up."

The stranger inquired, as the other came near enough, whether he would accommodate him with a passage on board.

"I can let you have the skiff," he answered; "but I am obliged to go up the road.—Here, however, are a couple of idlers, who will undoubtedly row you off, and bring back the boat."

The suggestion was adopted; the wherry was chartered, and the oarsmen engaged for the voyage.

While the men were getting the boat in proper order, a woman made her appearance, dressed in a linsey-woolsey gown—not of the finest texture, or of the newest fashion, and none of the cleanest, withal. The face of this person was cast in the true Xantippian mould, with eyes so horribly askew, that an operator for strabismus would have coveted her as a subject for his skill; and, to crown the picture, the visage of the lady was of such a "vinegar aspect," as to warrant the belief that she had fed on crab-apples for a fortnight. Approaching the men, who were nearly ready to shove off, she accosted one of them thus:

"You're going off to them sloops, aren't you, Jake? I don't care if I go along."

"I do, Mrs. Nox!" said the oarsman.—"There will be two words to that bargain. That man," pointing to the stranger, who was coming down, "has hired the skiff; and, if he don't like your ugly mug better than I do, you won't get a passage this time.

The woman scowled in a fearful manner, but made no reply,

"You're going," said she, addressing the stranger, "aboard of them vessels. I want to go to York; and I can go aboard with you, just as well as not?"

"Exactly so, madam," said the stranger; "step in."

The skiff had but three seats—two for the oarsmen, and the stern-sheets, built sufficientlp broad to take two persons abreast. The stranger, with his valise on his knee, took one side, and the woman, with a very unsightly bundle in her lap, the other; and off shot the wherry into the stream, towards the nearest vessel. The stranger waved a pocket-handkerchief as a signal; and the skipper, putting his helm down, and hauling aft his main-sheet, bore up for the skiff. But as soon as they got near enough for a fair scrutiny, he exclaimed:

"Up helm, Joe! Square away! Them's no customers for me!"

"By Jolly, I thought so!" said the oarsman who had rebuffed Mrs. Nox—Mrs. Erebus, she might have been better named—as she cast a midnight-glance at the offender. A second vessel was tried with no better effect—a third with like success; at length a Tarrytowner answered the signal, and took them on board.

By this time it was near sun down; and, as they got upon the deck, the skipper addressed the stranger thus:

"I don't know how I'm to accommodate you and your woman with berths and bedding; and I'm afraid you won't fare very well for supper, for my cook got on a spree ashore, and we were obliged to leave him. However, the mate and I, who are all hands now, will cook up something or other."

The stranger had walked aft, and the woman was sitting near the hatchway, when the captain addressed her in an undertone, which yet was heard on quarter deck:

"That 'ere's your man, I take it?" said he, pointing over his shoulder.

"He aint no such thing!" said the woman, bridling up: "my man is a rather guess sort of fellow from him. I only got that 'ere chap to put me on board."

The captain now accosted his other passenger:

"This ain't your woman, I find?"

"O, no?" was the reply; "only a chance passenger."

"I thought you *was* queerly *yoked*, when I first saw you," said the captain. "I'm thinking I shall give *you* the old sail, which is the only thing to sleep on on board, and let her have the soft side of the plank I was going to give you."

"By no means! Give the poor woman the best accommodations you can. As for me, I shall do well enough."

The wind was falling, the tide turned, and the sloop was brought to an anchor—the jib hauled down, and the main-sail left standing, skipper fashion—when the captain and his adjunct began preparations for refection.

"I say, ma'am," said the captain, "I've a notion that you could lend us a lift with this 'ere supper?"

"Shan't do no such thing," was the reply. "I expect to pay for my passage; and if you've got any supper to get, you may get it yourself."

The captain did not outdo the Niblos and Delmonicos of the time; and his beef-steaks, fried in—the Lord knows what—fell far short of those of old Baker, of the City Tavern in Wall-street, in tenderness. Nor nor was the hyson of the first quality, or the sugar of the whitest; and although the lady grumbled, the stranger took everything kindly.

When it was time to retire, the lady took possession of the best berth, and the old sail; while the stranger, wrapped in his cloak, turned in, in the *gite pis-aller* that remained.

It was past midnight, when, from a horrid dream that he was undergoing the *peine forte et dure*, (so indurate was even the soft side of the plank the captain spoke of,) that functionary shook him rudely enough by the shoulder, and awoke him from his slumber.

"I say, Mister, aint you a doctor?"

A negative was returned.

"I'm sorry for it," continued he. "Here's my mate has got the awfulest stomach ache ever man had. I was in hopes you had something in them saddle-bags which might do him good. Do see if you can't help him."

The passenger arose; and, assuring the captain that there was nothing medicinal in his portmanteau, went over to the mate, who was writhing in great agony, and groaning heavily.

"Have you gin and peppermint on board?" he asked.

"Yes," responded the captain. "I've tried that, and it don't help him."

"Have you any pearl-ashes, then?" he inquired.

"O, yes!" answered the captain; "I always keep that. With hard-cider, in a morning, it is a capital drink."

"Well then," said the stranger, "bring it; and get some hot water, as quick as you can."

"The kettle must have boiled by this time," said the captin; "for I put it on awhile ago;" and, going forward to the coboose, he returned with the necessary ingredients for a drench. Putting the proper quantity of alkali into a pint mug, and pouring the water upon it—leaving sufficient "*sky-light*" for the infusion of due measure of right *scheidam*, sweetening the dose, and qualifying it with peppermint—the stranger administered the portion to his patient, which, in a short time, essentially relieved him; and dose number *two*, half an hour afterwards, having been imbibed, the sufferer, who was entirely prostrate by the pain, fell into a quiet slumber.

The stranger now again turned in; but had scarcely gotten into a dream, as uneasy as the first, before the captain was again at his side.

"Mister," said he, "the tide is now high-flood, and there is a smart breeze getting up. I want to get under weigh; and Higgins, here, is too sick to help. Now, do just get up, and haul in the slack, while I rouse up the ancher—do, that's a good fellow!"

The passenger was not obdurate; and, after proper application, and the usual "Yo! heave ho!" at the windlass, the ring of the anchor was hove chock to the hause-holes, the jib was hoisted, and the sloop was tearing down before it.

The passenger again resumed his berth, where he remained until day had broken, when the captain once more made his appearance.

"I say, Mister," said he, "the wind has chopped about; I want a hand to tend jib sheets—Higgins can't do it; so, just you bear a hand and help me, and a few stretches will bring us up with the dock."

Up got the passenger, and took the station assigned him, perfeming his duty with great alacrity; receiving the orders, "haul aft!"—"be spry!"—"pull away!"—"another pull and belay!"—at every tack; and, by dint of hard labor, on his part, and good steerage on the part of the captain, they got into the slip, and let run the halyards.

"Now heave 'em a rope!" shouted the captain. "Bear a hand!—bear a hand!—now haul in—haul in!"

These orders were promptly obeyed; and the sloop was safe at the dock. While the captain was stowing the sails, the stranger went below and soon returned in his cloak—valise in hand.

"Well captain," he asked, "what's to pay?"

"Pay!" said the skipper; "if there's anything to pay, I'm the chap that's got to do it—so, Mister, just tell us what's the damage, and I'll shell out directly—and thank you into the bargain. I never want a better Jack-at-a-pinch, than you are. Just say how much, and here it is."

"Poh! poh!" said the passenger, "you are welcome to all I have done; but I must pay for my passage. Is this enough?" handing him a bank-note.

"Why, this here," said the captain, looking at the note, "is five times as much as I should have charged you, if nothing had happened; but if you say take it, I will, and thank you kindly. And now, Mister, I should like to know where you live, and what your trade is, if it ain't asking too much?"

"I have been a lawyer, and live hereabouts," said the stranger.

"Well, one thing more, and I hope you won't think me too sassy; do tell me your name?"

"Tompkins," was the reply.

"Where from?"

"Westchester."

"No relation to 'Squire Caleb Tompkins, up here?"

"Yes," was the answer.

"Not very near, I take it," said the captain.

"Only his brother," was the response.

"His brother!—Caleb Thompkins' brother!" said the captain, aghast. "Why, you can't be Daniel D.?"

"The very same," said the stranger, smiling.

"Phouw?" here the captain gave an interjectional whistle. "Here's a pretty business? By the pipers! you're the new Governor?"

"So they tell me," said the Governor.

"Why, what an infernal impudent fellow you will think me! Here I've been getting you to physic my mate, and set you to working my old sloop; and I've been ordering you about, just as if I'd hired you at eight dollars a month! You'll forgive me I know, for this; and all I can do, is to ask your pardon!"

"Nonsense!" said the Governor; "come, shake hands, for I must be off," and he held out his hand.

The captain somewhat hesitatingly, seized the proffered hand in both his, and squeezed it quite hard enough for the comfort of the owner.

"Well," said he, "I've got one consolation, anyhow. I've always voted for you, whenever you have been up; and, last April, I, and five brothers, gave you a plumper for Governor; and if any of my kith or kin ever vote for anybody else, as long as you are going to stand, call me a flunkey! that's all."

There is no doubt that the skipper kept his word, and voted ever after for "The Farmer's Boy;" and there are few who ever held such close communion with Daniel D. Tompkins, that ever bolted at an election when he was a candidate.—*Home Journal*

## A YOUNG COMPOSITOR.

On one of the ferry boats yesterday two gentlemen were talking about the trial trip of the Ericsson, when a little fellow who had been listening attentively, remarked that she had been on two trial trips, and he supposed she had now gone on a voyage.—There was something so engaging in the manners of the child that one of the gentlemen drew him out on the subject of the caloric engine, and found him not only to be familiar with its general construction, but capable of conveying to another a clear idea of its plan. His remarkable intelligence and diminutive statue led the gentleman to question him closely, and, it appeared that he was exactly eight years old, and supports himself by setting type. His task was 1600 *ems* a day, and he said that when he chose he could complete it by 3 o'clock in the afternoon. He showed himself to be perfectly familiar with the technicalities of his trade; and take him altogether, he is one of the most extraordinary lilliputian typos we have ever seen.—*N. Y. Cour. & Enq.*

If you mean to make your side of the argument appear plausible, do not prejudice people against what you think truth by your passionate manner of defending it.

Clever Fellows.—People who spend two dollars every time they earn one.

# Wit and Humor.

## WORKING ON THE SABBATH.

There are a great many inhabitants of this mundane sphere who profess to keep the Sabbath, according to the fourth commandment, but, somehow or other, always find a multitude of "works of necessity to be attended to." We have seen a capital anecdote about a family of such people, who were pretty severely rebuked by a colored man in their employ. The family were farmers.—One Sabbath morning the colored man was not up, as usual, at breakfast. The son was sent to call him, but Cæsar said they might not wait for him, as he did not wish for any breakfast.

"Why Cæsar," said the young man "we shall want you as soon as the dew is off, to help about the hay."

"No" said he "I cannot work any more on the Sabbath; it is not right."

"It is not right!" said the other. "Is it not right to take care of what Providence has given us?"

"Oh, there is no necessity of it," said he; "and 'tis wrong to do it."

"But would you not pull your cow or sheep out of a pit on the Sabbath, Cæsar?"

"No, not if I had been trying all the week to shove them in; I would let them lie there."

A Dutchman related a misfortune which befel his son in the following manner:—"Poor Hans! he bit himsef mit a rattlesnake, and vash sick into his ped for six weeks in te month of August—and all his cry was Vater! Vater! and he could'nt eat nothin' till he complained of being a leetle petter so ash he could stand up on his elbow and eat a leetle tea."

A young man of our acquaintance caught, on Monday last, eighty mackerel in an hour. He resided over a fish store, and threw his hook out of a two story window. Whether this had anything to do with his good fortune the next grand jury will probably determine.

An advertisement in an Irish newspaper reads as follows:—"Lost on Saturday last, but the looser does not know where, an empty sack with a cheese in it. On the sack the letters P G are marked, but so worn out as not to be legible."

A bigot is a "narrow minded individual"—but a dealer in cross-bows is an-arrower. Hem!

A pretty girl with winning eyes is an "arch" creature, but Cupid with his bewitching quiver is an "archer."

An old sea Captain used to say he didn't care how he dressed when abroad, "because nobody knew him." And he didn't care how he dressed when at home, because every body knew him.

A merchant not over conversant with geography, on hearing that one of his vessels was in jeopardy, exclaimed, "Jeopardy, jeopardy, where's that?"

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

For the Rural New-Yorker.

## GEOGRAPHICAL ENIGMA.

I am composed of 14 letters.
My 1, 8, 3, 11 is a river in Sweden.
My 2, 13, 4, 5, 9 is a town in Michigan.
My 3, 7, 4, 4 is an island on the west coast of Scotland.
My 4, 5, 5 is a river in Ireland.
My 5, 8, 9 is a river in Germany.
My 6, 13, 5, 6, 5 is a river in Brazil.
My 7, 1, 9, 5 is a river in England.
My 8, 11, 3, 7, 14 is a county in Georgia.
My 9, 5, 13, 2, 5 is a river in France.
My 10, 11, 5, 2 is a town in France.
My 11, 4, 12, 13, 7, 14 is a town in Michigan.
My 12, 4, 11, 14, 3, 7 is a bay on the east coast of South America.
My 13, 4, 4, 13, 14, 7, 13, 9 is a bay in the United States.
My 14, 13, 4. 5 is a river in Africa.
My whole is a very popular work of the age.

Niles, Michigan, Feb. 14, 1853.

☞ Answer next week.

For Moore's Rural New-Yorker.

## CHARADE.

My first is a wily beast of pray,
My second is worn by all;
My whole is the name of a pretty flower
That grows by the garden wall.

Poolville, N. Y.

For the Rural New-Yorker.

## ARITHMETICAL QUESTION.

With what five pieces of United States coin can change be made for any number of cents from one to twenty, inclusive? O. D. B.

☞ Answer next week.

## ANSWER TO ENIGMA, &c., IN NO. 9.

Answer to Miscellaneous Enigma—*Knowledge is power.*

Answer to Charade—*Part-ridge.*

Answer to Puzzle—By cutting off the upper circular part, containing two of the pins, and by changing the position of the pieces, another cut will divide the horse-shoe into six portions, each containing one pin.

Answer to Riddle—*Car-nation.*

## TO AGENTS AND OTHERS.

Encouraged by the brilliant success which has thus far attended the publication of Moore's Rural New-Yorker, the Proprietor has resolved to make still greater efforts to furnish *the best and cheapest Agricultural, Literary and Family Newspaper in America.* And he is likewise disposed to remunerate, as far as possible, all Post-Masters and others, who may aid in augmenting the circulation and usefulness of the paper. Former agents and friends are aware that he was the first agricultural publisher who offered prizes for subscribers—and he now signifies [see evidence below] a determination to *keep in advance* of all imitators and competitors, by offering the *most liberal and valuable* Premiums. But, satisfied with offering greater inducements than any other publisher, he dispenses with all circumlution, and invites your attention to the following list of

### SPLENDID PREMIUMS!

To the person or persons who shall send us the greatest number of yearly subscribers to the Rural New-Yorker from any one town in *the State of New York*, in proportion to its population, (according to the U. S. census of 1850,) previous to the 1st of May, 1853, forwarding payment according to our terms, WE WILL SEND THE NUMBER OF COPIES SO ORDERED, ANOTHER YEAR, FREE OF CHARGE!

For the largest number of yearly subscribers from any town *out of the State of New York*, on like conditions, we will send the paper another year, as above specified, FREE.

### GRAND PRIZES!

1st. FIFTY DOLLARS, IN CASH, to the person who shall send us the greatest number of yearly subscribers, (six month subscriptions to be counted proportionably,) according to our terms, previous to the 1st of May, 1853.

2d. THIRTY DOLLARS, in Books or Agricultural Implements, to the person who shall send us the second greatest number, as above.

3d. TWENTY DOLLARS, in Books or Implements, to the person sending the next (third) greatest number.

4th. FIFTEEN DOLLARS, in Books or Implements, to the person sending the next (fourth) greatest number.

5th. TWELVE DOLLARS, in Books, to the person sending the next (fifth) greatest number.

6th. EIGHT DOLLARS, in Books, to the person sending the next (sixth) greatest number.

7th. FIVE DOLLARS, in Books, to the person sending the next (seventh) greatest number.

☞ Persons competing for premiums should give us notice to that effect in the letter containing first remittance.

[In order to give Subscribers, Local Agents and Post-masters, a fair and equal chance, traveling agents, post-riders and citizens of Rochester are excluded from competion for any of the above Premiums.]

### SPECIFIC PREMIUMS!

In order to reach and reward *every one* who may lend a portion of influence in support of the Rural New-Yorker, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities:

1st. FIVE DOLLARS, in Cash, or a copy of Webster's Unabridged Dictionary, (or $6 in Ag'l. Books,) to *every person* sending payment for fifty or more yearly copies (six month subscriptions proportionably,) according to our terms, previous to the 1st of May next.

2d. FIVE DOLLARS, in Books, or four extra copies of the Rural, to every person remitting payment for forty or more subscribers as above.

3d. THREE DOLLARS in Books, or a handsomely bound volume of the Rural for 1852, to every person remitting payment for thirty subscribers.

4th. To every one remitting payment for twenty copies, we will give an extra copy of the Rural, and four (the present and three past) volumes of The Wool Grower and Stock Register—or, if preferred, an extra copy of the Rural and $1,50 in books.

5th. To every one remitting for ten copies, an extra copy of the Rural and three volumes (past or present) of the Wool Grower—or, instead of vols. W. G., $1 in books.

6th. To every one remitting for six copies, an extra copy of the Rural and either volume of Wool Grower.

7th. To every one remitting for three copies ($5,) either volume of the Wool Grower, *and* a bound volume of Gen. Farmer for 1848 *or* '49.

8th. To every person remitting for one copy, ($2.) we will give a copy of either vol. Wool Grower, *or* the Farmer for '48 or '9, as preferred.

All competitors for Premiums are expected to adhere trictly to the following

### TERMS,—IN ADVANCE:

Two Dollars a Year. Three Copies, one year, for $5—Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Six month subscriptions in proportion. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different post offices if desired.

Friends of the Rural and its objects! will you not respond to these offers in a spirit of liberality such as is therein manifested? The premiums are certainly worth contending for by Subscribers, Agents, Post-Masters, and all others who desire to benefit themselves and community.

☞ Specimen numbers, &c., furnished free to all disposed to compete for the Premiums, or who desire to extend the circulation of the New-Yorker. Subscription money properly enclosed, may be mailed at our risk.

Address D. D. T. MOORE,
Rochester, N. Y.

Moore's Rural New-Yorker is one of the very best family journals with which we are acquainted. Its mechanical execution, its illustrations, and the arrangement of its contents are complete. The character of its editorials, communications, &c., are of the highest order. It must obtain a wide circulation.—*Louisville Journal.*

The Rural New-Yorker, we say again, is as interesting and useful a paper as can be found in the State or Union. This is no puff, but our real sentiments, and expressed because justly demanded.—*Sackett's Harbor Gazette.*

## MOORE'S RURAL NEW-YORKER:

A WEEKLY HOME JOURNAL,

## For both Country and Town Residents.

### TERMS, IN ADVANCE:

Two Dollars a Year—$1 for six months. To Clubs and Agents as follows:—Three Copies, one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

### Terms of Advertising:

One Dollar per square (ten lines—100 words, or less,) for the first insertion, and 50 cents for each subsequent publition,—*in advance.* ☞ The circulation of the Rural New-Yorker is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brie advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

## THE WOOL GROWER AND STOCK REGISTER.

This is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the Wool and Cattle Markets, and much other *useful* and *reliable* information which can be obtained from no other source. The Fourth Volume commenced in July.

Terms:—Fifty Cents a Year; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 11. ROCHESTER, N. Y.—SATURDAY, MARCH 12, 1853. WHOLE NO. 167.

**MOORE'S RURAL NEW-YORKER:**

A QUARTO WEEKLY

**Agricultural, Literary and Family Newspaper,**

**CONDUCTED BY D. D. T. MOORE,**

WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page.

## Rural New-Yorker.

### Progress and Improvement.

### SAVE THE FRAGMENTS.

CERTAINLY, gather them up—the little things, the remnants—that nothing be lost. He who was more than mortal—having miraculously fed the multitude, *ordered* the fragments to be gathered and saved. So should the farmer learn frugality, so take heed and save all the bits—the odds and ends. We know that "great streams from little fountains flow," whilst the continual drippings, though each in itself insignificant will wear away the rock. So it is that driblets fritter away a fortune.

So simple and insignificant an action as the picking up of a pin, was once the occasion, to an unknown youth, of a situation that opened to the honorable acquisition of great wealth and honor. Little acts give better indications of character than great deeds. So reasoned he, who had turned away the application of the poor youth, as he saw him unobserved, from his window, stoop to perform the little saving action.—A note to the rejected, the same evening, announced the desired situation.

A spirit of frugality does not indicate illiberality, nor a sordid selfishness. It is for saving, "that nothing be lost,—"a gathering up" that the fragments may serve some useful end, or praiseworthy purpose.

Yes, yes, let the farmer, especially the young farmer, bear the injunction in daily, active remembrance, and be sure to gather up the fragments. Let us itemize a little in one particular. In the case of food for stock there is much to be gathered up and saved. In the season of laying in the winter's store, save it all and save it *well*, for there may be, not only a "gathering up" in quantity, but in quality. A pound of fodder well cured and well saved, is worth *three* pounds but half cured and half saved: so there is a trebled "gathering up" in this respect. Don't waste any of the coarse fodder. Bean and pea vines are excellent for sheep, while most individuals of the horned stock have a relish for them too.—Buckwheat straw, voted by the majority a nuisance, if well secured is worth quite as much as the best of any other straw. If stowed away in good condition with some salt scattered on it, stock will relish it quite as well as first quality Oat straw. So they will the chaff of Buckwheat.

But we might go on at length, and enumerate articles that by many are needlessly wasted, which if suitably cared for and looked after, would add much to the farmer's profits in the item of feed alone. And it would most certainly add to the comfort of his animals, and give a greater surplus for those who have to purchase. Save, then, the fodder, and having saved it, continue to gather it up as you feed it. Don't throw it and your time away, by flinging it out in the mud to be trampled upon by your cattle. Here again is a chance that your savings shall be doubled again, or rather what the "slack hand" here scattereth, is more than at first thought it seemeth to be.—Gather up more of the fragments, then, by feeding in racks and boxes. Those who can, may have their straw-cutters, &c., and still keep saving the "waifs and strays." Those who have not got them, may soon do so by saving all the fragments they can.

Give your animals warm shelter, and make yet another important "gathering up." There is no sense in burning out fuel to keep the unsheltered system up to a comfortable warmth, when less feed will do it better under a warm shelter. Just as well thrust the human family out in the bleak field by a burning log pile to keep comfortable.—Another consideration—for whilst you are making these savings, there are others sure to follow close on in the wake,—your animals return high interest, and make rich deposits, which, if you are thoughtful to make the most of, your increased crops will make you rub your hands for joy as you gather them in.

The practice of "gathering up," when well acquired will make you far more attentive to business; and holding *all taunt*, you will be looking around for all the fragments legitimately your own. Hence as a result, your lands will grow fat, your cattle become sleek, your granaries overflow, your orchard bend with fruit, your purse plethoric, your wife gracious, your sons and daughters wise and good—and yourself a generous benefactor to the poor and unfortunate.

You will wonder, when you come to think of it, how many fragments there are going to waste. Everything that will lessen labor, or bring greater returns, or add to real and substantial improvement, whether in the method of clearing the land, constructing the fences, eradicating the weeds, cultivating and securing the crops, erecting buildings, &c., is such a gathering up of fragments as will in the aggregate make a telling account in the footing up of the profits.

But there is another sort of fragments, the gathering up, and the right use of which, is of infinite importance; that is time—a capital without which man is utterly and everlastingly bankrupt. Precious moments, golden sands, worth vastly more than ingots of lucre. For it is hereby we may improve human nature, give food to the living principle within, and increase its capacity for good. O that we may not also increase it for evil! Gather up, then, the fragments of time, and improve each moment to some useful purpose. So shall your harvest be rich for the great granary hereafter.

### POULTRY.

FOREIGN VARIETIES—DOUBTFUL BLOOD.

THAT there will be multitudes of eggs and chickens, of the foreign breeds of fowls, offered for sale the coming season, is to be expected. The subject of improvement in this item of domestic economy, has taken such a wide and deep hold upon the public sentiment, that in the anxiety and eagerness of the people to accomplish the desired purpose, many persons, not thoroughly instructed, will be liable to grevious imposition. There is reason to believe that many, very many, of questionable character as to genuineness and purity of blood, will be bred and sold as pure and genuine, by persons, either wanting in regard to integrity, or destitute of correct, reliable knowledge of the subject. There may be those of good standing abroad, where they are known only by their published notices, whose word at home would not be worth a shilling, any farther than the value of their statements could be known and sustained by collateral evidence. There are also those of less notoriety, whose self-confidence is such, that they lack the scrutiny needed to acquire correct information.

A single fact bearing upon this point, where producing and selling were contemplated, will illustrate this position. An enquiry was made in regard to the hens.

"They, too, are pure," was the prompt reply.

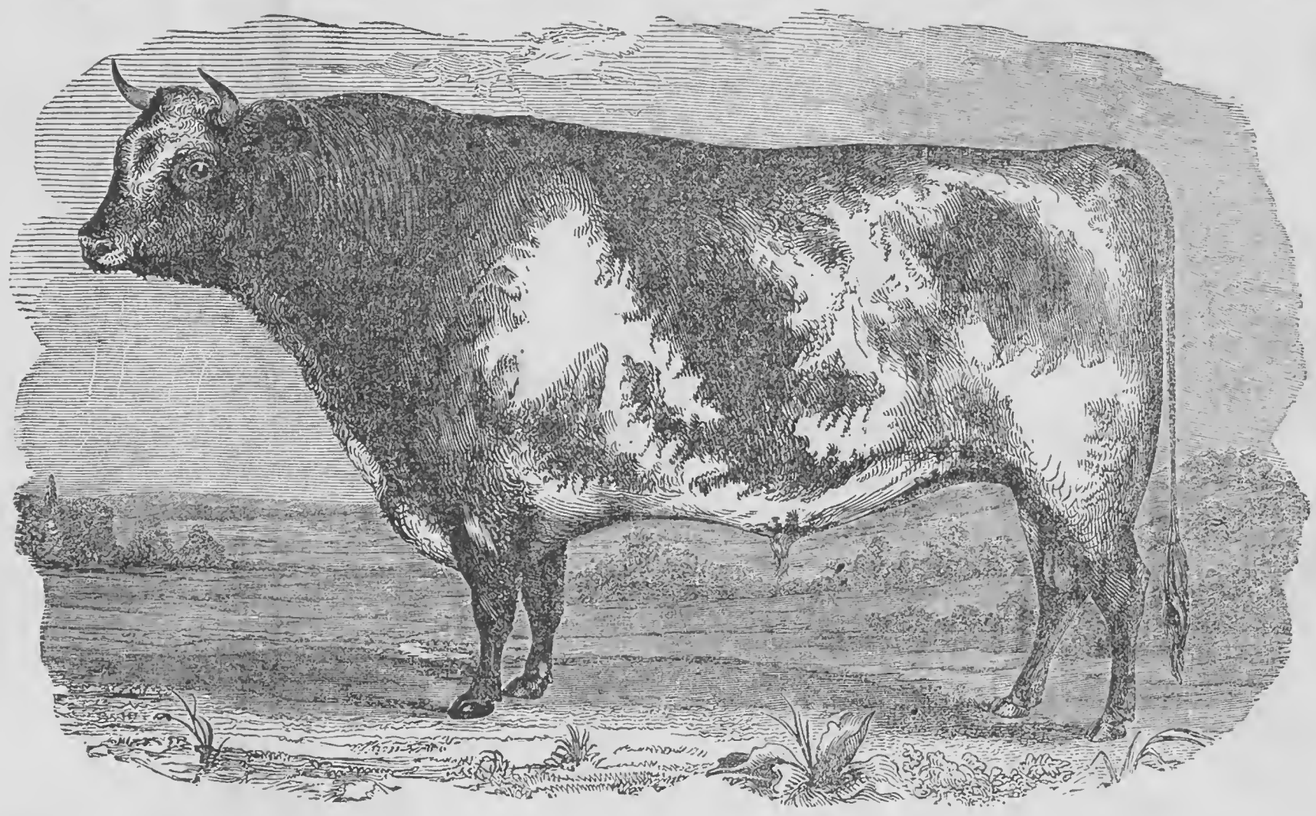
"From what importation are they derived?"

"Don't know."

"Have you not a statement of their origin?"

"Didn't want any."

"How do you know then they are pure?"



IMPORTED AYRSHIRE BULL "DANDY."—Prize animal at the N. Y. State Fair, 1849.

For Portrait of prize Ayrshire Cow, and an interesting article on this valuable improved breed of cattle, see next page.

"I know from their looks;—they can't cheat *me*."

They might have been perfect for aught that appeared, but the certainty of the fact was merged in these four significant words,—"they can't cheat *me*." And the value of this short phrase, to a cautious, intelligent purchaser, can easily be estimated.

In respect to none of the varieties can the hazards of mistake, from design or from ignorance, be greater than in regard to the Brahma Pootras. No breed can be so easily counterfeited, and none furnish so great inducements. They are the most rare, the most costly variety. But they can be manufactured, we are assured, from the product of the Gray Shanghai pair, where the shades of color happen to be satisfactory;—and also from the Grey Shanghai cock, and the large plump common hen, where the tinge of plumage happens to be right. It also accords, we are told, with the "mysteries of the trade," to have a genuine pair by their presence, cover with their mantle, and give name, character and value to young birds, who so resemble them as to seem related, but are not pure and genuine, nor worth comparatively more than the price of a Bantam. Disappointments from deficient knowledge, or deficient integrity, may also be anticipated, in regard to the other varieties.

Now, to the ordinary farmer who rears fowls for his own domestic use, with no design or desire to cultivate them for sale, it may not be so essential that he should know as to the purity of his stock. But to the farmer of taste and enterprise, the man of progress and improvement, it is indispensable that he should know, when he pays large moneys for fowls, that they are in all respects genuine. Of the genuine bird alone, can he expect to be able to maintain and improve, by careful culture, its original excellence. The Hybrid, in its propogation, will as often exhibit the imperfections of the inferior, as the perfections of the superior species. None others than genuine, therefore, are worth the notice of an intelligent purchaser. And to ensure safety in regard to this point, it is not only necessary that the breeder be a person of standing and character, but that he should be able to trace his stock through careful, respectable cultivators, back to the stock of the best importations. This can easily be done by all who merit the reputation of correct dealers. I would not purchase a bird, or an egg at any price, the purity of which could not be thus traced and verified. Nor would I purchase a bird or an egg of a vender, unless his word was altogether above suspicion. It is a thing perfectly easy, if at any time desirable, to ascertain with precision, the degree of credit to be attached to the assurances of a dealer upon this point.

An old mercantile friend, of whom an inquiry was once made by a young trador, in regard to the standing of Mr. B., who had applied for an invoice on credit, replied,—"I don't know Mr. B., sir!" Seeing his young friend look in astonishment, well assured that they had been long acquainted, he added,—"When I am asked the standing of a man, and have nothing good to say about him, I reply, I don't know him, sir. Now, I don't know Mr. B., sir! I don't know him, sir!"

There will be many a vender of young birds and eggs the present season, of whom intelligent, honorable men might say—"I don't know Mr. B., sir! I don't know him, sir!" *Verbum sat.* HONG KONG.

### MY EXPERIENCE.—NO. 2.

#### Indian Corn.

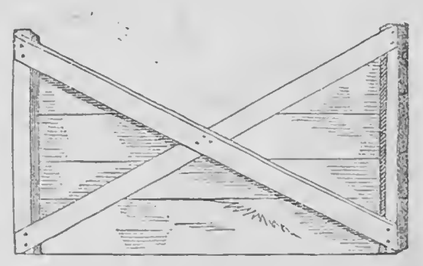
IN several instances I have known Indian corn to change from one variety to another, in a single season. Some seven or eight years ago I had some "Rice corn," from Michigan, which I planted in my garden, as *remotely* as I could from my "Sweet corn," which was the only other kind planted there; or indeed within, probably, one hundred rods. My "Rice corn" grew to more than twice its usual height, the stalks being from six to eight feet in length. It produced ears of two or three times the usual size,—and more than *nine-tenths* of it had changed to a *white, round-grained* variety, unmixed with a single grain of either the "Rice" or "Sweet corn." Some six or eight ears were *somewhat similar* to the seed planted. But not a tenth part of the produce exhibited the least relationship to the seed, in form, or appearance, excepting that the seed was *yellowish white*, and the produce was *purely white*. No intermixture with the "Sweet corn," in the other part of the garden could be detected.

A year or two after this occurrence I again tried to raise "Rice corn" in my garden; but, under similar circumstances, was again unsuccessful—the result being similar to that in my first experience. I then gave it up, satisfied that "Rice corn" would not "produce its like," *in my garden.*

"*Egyptian*," or perhaps more properly "Fodder corn," had also been previously tried, in the same manner. And a part of that had also *totally* changed its variety from white grains of five-eighths of an inch in length, *having a husk enveloping every grain*, to a *round, white-grained* kind, *without the least vestige of husk enclosing the several grains.* It was a singular, and, to me, very surprising exhibition of natural phenomenon, for which I could not account. And I should be very much pleased if some of our celebrated "Professors of Agriculture" would turn their attention to the subject, and inform us how we might secure *products of the same variety as the seed* which we sow, or plant. That we cannot always do so, is satisfactorialy shown by the results in the instances which I have given.

A still more extraordinary instance will be given in my next number, by which it will be seen that *wheat* is no more to be relied on, to produce its own variety, than potatoes and corn. 'HIEL.

### CONDENSED CORRESPONDENCE.



Feeding Box for Cattle.

EDS. RURAL:—I send you a sketch of a feeding box, which I think an improvement on the one you copy from the Genesee Farmer. In a box but six feet square, the master cattle would frighten the timid across the box, their heads being so near together; and, unless boarded up, calves or small stock might get caught between the braces. This box is 9 feet square, with posts of 3 by 4 inch scantling, 5 feet high; the sides boarded, but without bottom, so as to be shifted easily when the refuse fodder fills it, or any other cause makes such a course desirable. The sides are only high enough to keep the cattle from getting into the box, and the corners so low that they may easily disengage themselves when hurriedly driven away. It should be strongly put together, with wrought nails or rivets through the braces. A supply in every barn yard would be found very convenient and valuable.—I. GILLETT, *Stafford, Genesee Co., N. Y.*

#### Corn Shellers.—Seed Drills, &c.

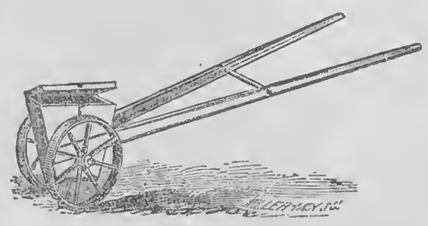
FRIEND MOORE:—Myself and one of my neighbors wish to purchase each of us a Corn sheller to be operated by hand power. We wish to obtain the kind that will shell the most corn, and do it in the best manner, with the least power. I presume the thing we want may be obtained in Rochester, but do not know, as I have not noticed it advertised in the RURAL. We wish also, to know the price of such machines, then we can calculate whether it will pay to purchase one.

I wish also to know where I can purchase

the best and simplest kind of seed drill for sowing carrot, turnip and rutabaga seeds, and the cost of such machine. If those who advertise agricultural implements for sale would state the prices it would be an advantage to them and farmers too, for then, as I have said before, we could calculate whether we can afford to buy them. Please give us the desired information through your paper.

By the way, I will just say we have formed a Town Agricultural Society or Association, in this town, and although we have not done much this winter, yet I think by the spirit which is manifested, the coming summer will show a different state of things in this town as regards the subject of agriculture. We expect to hold a fair or exhibition next fall to show to the world around what we have been about. I am not used to writing much myself, but by some means you shall be informed of our success if it would be acceptable. The RURAL is circulating pretty freely, I see, in this town, and I think it is doing great good among us. Success to it and you.—L. A. JOHNSON, *Fenner, Madison Co., N. Y.*

REMARKS.—Burrall's Corn Sheller, and the Clinton and Yankee Corn Shellers, have been for several years before the public, and are each found good articles. They can be obtained at most Agricultural warehouses here and elsewhere. Price from $10 to $12. As to Seed Drills, we think Mr. J. will find just what he wants in the one figured and described below:



This cut represents an improved hand drill, adapted to sowing carrot, ruta baga, beet, onion, and other small seeds in drills, with regularity and without regard to their weight or shape. The seeds are forced out by means of a circular brush which revolves against a tin plate, inserted in the bottom of the hopper, with a hole suited to the size of the seed. Each drill is provided with a series of these plates, for seed of different sizes and for regulating the quantity sown. It is light, simple and durable, and every one who has use for such a machine will find it valuable. Manufactured and sold by E. D. HALLOCK, 50 State st., Rochester. Price $5.

### SUGAR MAKING.

MANY farmers are turning their attention to making a supply of sugar for family use. In a new country where wood is of little value, and farmers have more time to devote to the labor, it is profitable to make maple sugar for home consumption, and may be so, to some extent, as an article of merchandize. Vermont has been for years noted for the large amount of maple sugar marketed by her farmers. Other States are but little behind. At the present price of cane sugar, and the price at which wood may be sold in all parts of Western New York, we have doubts about sugar making being a very profitable business. It requires quite an outlay for kettles, buckets and other implements, which if taken into account, with the time consumed, would make maple sugar more expensive than to purchase the year's supply from the grocer.—Of this, farmers will be best judges, and as many of them will go into the business, we will at all events offer them a few facts concerning its manufacture.

It may be unnecessary to say that attention to cleanliness is indispensable. Before commencing, buckets, tubs, and other utensils should be thoroughly scalded. Sap is often soured by using old spiles, in which the sour sap of the late run the previous spring remains. Cut the trees as little as possible. A three-quarter or inch auger is large enough. Sap should be gathered as fast as it runs, and boiled with the least possible delay. Two barrels on a sled with a tunnel made of a bucket, will be found convenient for gathering the sap, as it can be driven to nearly every tree in the bush. Kettles set in an arch answer a good purpose, but the better utensil is an evaporator made of sheets of Russia iron. A good size is two sheets riveted together lengthwise, with one riveted across the end, the sides to be turned up six or seven inches.—Around the sides place a wooden frame with handles, to facilitate its being moved when necessary. Set this on an arch so the fire passes *under the bottom only*, which prevents all danger of burning.

The sap may be boiled to the consistence of thin molasses, when it should be strained through a thick cotton, or what is better, a clean white flannel strainer, and left to settle. A brass kettle is the best in which to boil it to sugar. For cleansing or clarifying, use a pint of milk, the white of one or two eggs, and half a teaspoonful of saleratus well stirred into syrup, is enough for 20 to 25 pounds. Boil over a slow fire, skimming off all the scum that comes to the surface, until by taking a little and dropping it from a spoon or knife, it will string down like fine hair, an inch long. It will then be cooked enough to grain. While cooling, it should be stirred occasionally to prevent its becoming waxy. The more it is stirred the finer will be the grain. It may be caked in pans or boxes, or stirred until it is dry enough to put in the tub. A sugar tub should have a false bottom some inches above the real one, perforated with holes to allow the sugar to drain. Maple molasses is one of the luxuries of a country life in sugar season, and its use may be continued through the year, if enough is made, not too thick. We hope some of our readers will make an abundant supply of the best, and allow us the pleasure of judging of its quality. †

## AGRICULTURAL INTELLIGENCE.

### County Agricultural Societies.

EDS. RURAL NEW-YORKER:—The following are the officers elected by the Ontario County Agricultural Society, for the ensuing year:

President—JAMES L. MONIER.

Vice Presidents—Wm. Johnson, Gideon Pitts, W. W. Horrendeen, Wm. C. Dryer, B. F. Hawks.

Corresponding Secretary—Henry Howe.
Rec. Sec'y—Wm. H. Lapham.
Treasurer—A. G. Murray.

Among other things, it was resolved, unanimously, to hold the next fall exhibition at Geneva, whose citizens have secured a liberal donation by subscription to aid the Society in coming there to hold the Fair.

Gorham, March 1, 1853. W. H. L.

GORHAM, *Ontario Co.*—The Agricultural Association of this town recently elected the following officers for the current year:

President—NATHANIEL SMITH.
Vice Presidents—Henry Metcalf, Mason H. Reed, Geo. W. Stearns, Wm. R. Pettit.
Rec. Sec'y—Wm. T. Swart.
Cor. Sec'y—Harvey Stone.
Treasurer—David Picket.
Executive Committee—Geo. Snyder, C. W. Newman, Lebbeus Phillips, W. J. Dixon, Marshall Tufts, J. M. Pulver, Cornelius Dunham, J. W. Vanosdal, Statts Green, Richard Woodard, William Metcalf, John Smith, Chester Osborn, Alexander Arnold, S. M. Whitaker.

BRISTOL, *Ontario Co.*—The Agricultural and Mechanical Association of this town has the following board for 1853:

President—ELIJAH JONES.
Vice Presidents—Norman Hills, Constant Simmons, 2d.
Rec. Sec'y—Norman W. Randall.
Cor. Sec'y—Edwin Gooding.
Treasurer—Arunah Jones.
Vigilance Com.—Sylvester H. Wheeler, Billings T. Case, Benjamin F. Phillips, Ezra Rose, Geo. Gooding, Richard Buckalien, L. Pomeroy, Jr., Seymour W. Case, Thos. N. Hunn, Jas. Johnson, Daniel B. Satterly, S. A. Winslow, G. W. Simmons, Lewis Bently, Darius Rowley.

MADISON CO.—This County has the following board of officers for 1853:

President—SANFORD P. CHAPMAN, Clockville.
Vice Presidents—John B. Coe, Madison; Lewis Raynor, Cazenovia; M. D. Bailey, Lenox.
Rec. Sec'y—Thos. A. Clark, Sullivan.
Cor. Sec'y—Chas. D. Miller, Smithfield.
Treasurer—Alpheus Morse, Eaton.

## THE AGRICULTURAL PRESS.

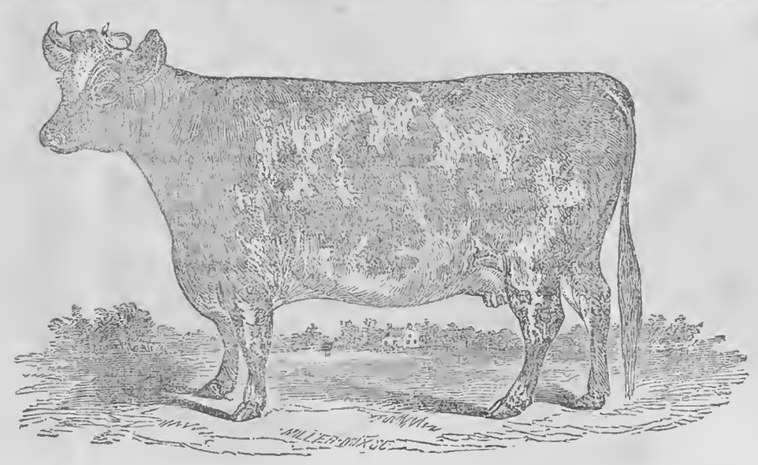
### Ayrshire Cattle.

THE following is from the February number of the *Wool Grower and Stock Register*. It constitutes No. 4 of a series of interesting articles on "Improved Breeds of Cattle."

THE AYRSHIRES are the subject of a valuable Essay from the pen of SANFORD HOWARD, Esq., in the recently published Transactions of the N. Y. State Ag. Society for 1851. The subject is so ably treated in this paper, that we give an abstract of it, in preference to attempting an original article. Mr. H. ranks among the best judges of stock in this country, and perhaps no writer is more thoroughly qualified to discuss the merits of the various improved breeds of cattle. Having bestowed much time and attention upon the subject, he is very properly considered good authority in all matters pertaining to Cattle, Horses, Sheep and Swine. Hence, with his paper before us, we can scarcely fail of producing an interesting number on Ayrshires, though only a compilation.

But to the subject direct. Mr. H. commences his Essay as follows:

"Considering the importance of the dairy in this country, it is a matter of surprise, that so little attention is paid to the character of the stock devoted to this object. According to the statistical returns of New York, for the year 1845, the whole number of milch cows in the State, was 999,490. The total produce of butter is stated at 79,501,-733½ pounds, and the produce of cheese, 36,744,-976 pounds—only equal to 79½ pounds of butter, and 36 pounds of cheese to each cow. The greatest quantity of butter per cow, returned from any one county, where no cheese was mentioned, was 110 pounds, from Kings. The greatest quantity



Portrait of an Ayrshire Cow.

of cheese per cow, returned from any one county, was 226 from Herkimer; but it is probable that some butter was produced from the same cows, in addition to the cheese. From the township of Fairfield, in Herkimer county, nearly 350 pounds of cheese were returned per cow.

The dairy produce of cows in quantity and quality, depends on their natural constitutions, and the treatment given them in reference to food and other requisites. Both these points should receive from dairymen the strictest attention, if they expect to receive the greatest profit. Every farmer may know that there is a great difference in the constitutional properties of animals. Some, from an inherent principle in their organization, can produce from a given amount of food, a greater amount of fat or flesh, than others; some again yield a greater quantity of milk or butter, under the same circumstances. It may have been noticed that these constitutional traits are to a certain extent, hereditary, and that families or breeds are characterized by peculiar propensities, which greatly affect their value for special purposes.

The difference in the amount of butter yielded by cows in the same dairy, and subjected to the same treatment in every respect, often amounts to 100 per cent., some giving not more than four or five pounds per week, and others eight to ten or more. In most dairies it is reasonable to believe that, if all the cows were equal in quality to the best in the herd, the quantity of butter would be increased at least one-third. But suppose attention to the breed or constitutional qualities of cows, should result in an increase of only one pound per week for each cow in the State, for six months of the year, it would give a yearly increase of 25,986,740 pounds, which at only twelve and a half cents per pound, would give the immense annual return of $3,248,382. When it is considered that this is but for one State alone, some idea may be had of the vast benefits which would result to the whole country, from an improvement readily attainable in milch cows.

The systematic breeding of cattle with reference to the dairy, or with that as a primary object, has scarcely been attempted in this country, until within a late period, and, indeed, has not been extensively practiced in Great Britain. The great aim of the most eminent breeders having generally been the development of the fattening principle, beef being in England an object of more consequence than butter and cheese. More attention is, however, being latterly bestowed on this important department of farm husbandry, and there are now two distinct and well-established breeds, the Ayrshire and the Alderney or Jersey, which are sedulously cultivated for their dairy properties. Neither of these breeds can be said to be common in the United States, though both have been known here to a limited extent for several years.

The Ayrshire breed, which takes its name from the country of Ayr, in Scotland, where it originated, about seventy years ago, has become widely disseminated, and if we may credit accounts and authorities, it is now, as a dairy breed, the most popular in Britain. Several importations of Ayrshires have been made within a few years to various parts of the United States; and although the trials which have been made with them are necessarily limited, from the comparatively small number of animals, and the shortness of time which has elapsed since their introduction, their qualities as a breed are evidently such as to render them deserving of being more fully known.

The most authentic accounts represent the modern Ayrshire to have been formed by an union of several breeds, though the particulars in regard to the various crosses which have entered into the composition of the present stock, cannot be accurately ascertained. The *nucleus* of the breed appears to have been first known under the name of the 'Dunlop stock,' having been possessed by a distinguished family in Ayrshire by the name of Dunlop, as early as 1780. Rawlin, (as quoted by Youatt) who wrote in 1794, speaking of the cattle of Ayrshire, says, 'they have another breed, called the Dunlop cows, which are allowed to be the best race for yielding milk in Great Britain or Ireland, not only for large quantities, but also for richess and quality.' This, though extravagant praise, perhaps, shows that the stock was deemed to possess great merit at that early day. We are informed in Youatt's treatise, that Robert Burns, when he resided on a farm at Nithsdale, in Dumfrieshire, introduced this stock to that neighborhood. In a letter dated Nov. 13, 1788, he speaks of a heifer which had been presented to him by the proprietor of the Dunlop house, as 'the finest quoy in Ayrshire.' (Mrs. Dunlop, it will be remembered, was a special friend and corresponpent of the poet.)

The most reasonable conclusion from all that has been written in regard to the origin of the modern Ayrshires, taken in connection with the points and characters of the animals themselves, is that they were produced by a union of the blood of the Holstein or Teeswater short-horns, and the Alderneys, with the ancient stock of the district from which they take their name."

Mr. HOWARD cites numerous authorities in regard to the yield of Ayrshire cows in milk, butter, and cheese,—showing that they have in some instances, in this country, given as high as nineteen pounds of butter per week, and that their average standard in Great Britain, for milk and butter, is higher than that of any other breed.—From all the evidence he can gather in regard to the Ayrshires, Mr. H. thinks their adoption for dairy purposes in this country, would secure the following advantages over our common stock:

"1. A greater quantity of milk, butter and cheese, for the food consumed. 2. Greater uniformity in the general character of the stock, from its inherent or hereditary qualities. 3. Better symmetry and constitution, and greater tendency to gain flesh when not giving milk."

Mr. H. makes the following observations in regard to the principles which ought to be observed in breeding dairy stock:

"Few of our dairymen pay any regard to the properties of their cows, except the property of giving milk. Some have even been heard to declare, in a boasting way, that they 'cared not how a cow *looked*, if she only gave the milk.' Such is entirely too contracted a view of what is required in the case, and it is strange that observation should not have taught them the absurdity of such a notion. The constitution should be regarded as of the first consequence. Without this, no dependence can be placed on the continuance in the stock of the properties desired, or of the animals possessing the health and vigor which is essential to profit. It is true that a cow of weak constitution, uncouth form, and coarse bone, when highly fed, and carefully protected, may give much milk: but it is generally deficient in richness, and she requires more and better food and better shelter than a hardy one, and yet will fail at an early age. Her weakness also exposes her more to various diseases, which for lack of energy to resist, are likely to occasion serious or fatal injury. Thus, excepting for use in the dairy for a short time, she is nearly worthless. Her progeny are inclined to inherit defects, requiring, if reared, the most careful nursing, and seldom prove profitable in the end.

It has been found in breeding sheep wholly for wool, even for *fine* wool, that it is necessary to pay particular regard to the points which give a symmetrical form to the body and denote hardiness of constitution, in order to produce a healthy and profitable stock. Similar principles apply to all animals. The breeder of dairy stock therefore, should not be satisfied without uniting in his animals the points which denote both constitution and milking properties.

These are not inconsistent with each other, and when combined, greatly enhance the aggregate value of the dairy cow. Even the fattening tendency should not be wholly overlooked. It is for beef that all cows are ultimately wanted, and it has been proved that a moderate development of the fattening propensity, indicates the habit of giving rich milk. But the fattening tendency should be kept in subserviency to that of giving milk; it should not be manifested to the extent which would lessen the value for the dairy by converting the food of the animal into fat at the time it was wanted for butter, but should be possessed to the degree indicating the butyraceous quality of the milk, and a tendency to thrive when dry. This balance of the dairy and fattening propensities, can readily be discerned by the *eye* and *fingers* of a close, practical observer, but is difficult to describe in words.

A good example of what may be accomplished in this respect, is furnished by the improved Jersey or Alderney cow. This breed was formerly inclined to be ill-shaped, rough and rugged; some of them, in the language of Col. LeCouteur, who has furnished an account of their improvement, were 'real 'Meg Merriles' of cows.' The figures which accompany Col. LeC.'s account, published in the 'Transactions' for 1850, illustrate the happy transformation which has taken place in this stock. The defects alluded to have been, in a great measure, bred out, and the animal has greatly increased in value by the properties which have been added."

The principal breeders of Ayrshires in the State of New York at the present time, are E. P. PRENTICE, Albany, (a portrait of whose fine prize bull "Dundee 2d," is given in connection with Mr. H.'s paper,) J. C. TIFFANY, Coxsackie, and JAMES BRODIE, Adams, Jefferson county. A bull and young cow belonging to Mr. B. were shown at the last State Fair, and commanded universal praise. Mr. MORRIS, of Westchester county, has formerly bred Ayrshires, but having at the same time Short-horns and Devons, which rendered it inconvenient to attend to all, he relinquished the former.—Though not generally introduced, there are some fine Ayershires in other States—particularly in Massachusetts, Ohio and Pennsylvania.

The illustrations we give represent superior specimens of the Ayrshire breed. The cow is an imported animal, and was awarded the first prize at the N. Y. State Fair, in 1845. The bull "Dandy," imported by S. G. WARD, of Lenox, Mass., received the highest prize in his class at the show of the Highland Agricultural Society of Scotland, in 1845,—and the first prize, as best aged bull, at the Fair of the N. Y. State Ag. Society, in 1849.

### A Journal of Farm Labor.

WE find in the *Granite Farmer* some excellent remarks and directions relative to this subject, from which we extract the following:

Most farmers, as we know by frequent inquiry, have little notion of the cost of their crops, and yet what is more vital to their prosperity! And how easily is this knowledge obtained, by simply keeping a diary of daily labor and expenditure. A small blank book costing a shilling or quarter of a dollar, or few sheets of paper stitched together, and the provision is made. Now for a method to be pursued in making the entries. This may be done by one system of daily entries, entering at night the labor of the day. This is perhaps the simplest at first, as there is but one place to write out the different operations of the day. In making out the debt and credit of each field or crop at the end, the entire entries of the season must be reviewed, and a new account made out with the separate crops. This last labor may be avoided by keeping the account separate. Let the fields be numbered and measured, or the spaces devoted to each crop measured, and let each have a separate page in the journal. For example let one page be given to "the garden," one to the "corn, six acres," one to the "oats, four acres," and "potatoes, two acres," &c., &c., giving a department of the journal to every source of expense and income. At the close of each day's work let the work done be entered, charged to the crop for which it has been given.

It is obvious that an account kept in this way through the season will show the absolute standing of the farmer to his farm, appropriate credits, of course being when the produce shall have been gathered measured and sold or stored.

Another advantage will grow out of this plan, if fully carried out, which is that every farmer will become convinced that he cannot afford to raise medium or small crops. He will see that if it costs him $20, per acre to raise 30 to 35 bushels of merchantable corn, he is receiving but a very small income, say from four to eight dollars per acre.—He will also see that if by plowing and harrowing more and applying more manure so as to bring the cost of culture up to $30 per acre he can harvest 60 bushels, he will receive a much greater profit, say eighteen dollars per acre.

The same would be found true of other crops, and as a result every person of judgment would improve in his methods of farming. By having a journal of farm operations of several years standing, and by comparing these with results each year, the farmer will soon have a guide book to his farm that will be invaluable.

### Political Farming

WE find this uncredited in an exchange, but whatever its paternity it is a good thing, and should be kept in motion:

"Political farming! What is that?" says one; "it must be modern and short-lived." Yes it *should* be "modern and short-lived."

"John, harness the bay horse before the carriage, for I have got to go to——ville, to-night, to attend the —— meeting.'

"Why, but sir," says John, "he has been plow all day."

"I *know*, but the Squire should find oats for him when he gets there."

The fatigued plow horse is soon at the door, and John with him, patting him sympathizingly.

"Now, John, take care of things," and off goes farmer ——, with the poor jaded plow horse, at his best trotting speed; off? where? to a *political* meeting. Wife looks imploringly at him before he starts, as if she did wish he would stay at home; but he whispers——visor in her ear, and she smiles and looks relieved.

Reader, this is not all fancy. To be sure there are excitable minds among farmers, as well as other classes, and though you may not be one, and cannot see why farmers will do so; ride day and night for politicians, and, in the end, become known as thorough going partizans; yet it is so; they *do* do it, but I trust the proportion is small. I am not going to write against proper attention to the rights and duties of citizenship. All Americans should act to the full extent of their rights and duty in this matter, and particularly should American farmers, the greatest class of tax-payers, see that they have "righteous rulers," faithful government servants, and capable ones.—But, in order to chase the phantom of political triumph through the mud for months, at the risk of health, of self and family, life of domestic animals, loss by derangement in farm management, by crops exposed and injured, by cattle not cared for, debts (though the farmer should not have such) not met at pay-day, and prosecution unless you have a lenient creditor, (which God grant you may not have,) if you are a *political* farmer, and at last a *political defeat*.

More "Unions" would be "saved" by staying at home with wife and children.—Farmers talking about "breaking up party ties!" Better talk about breaking that moss-bound, barren crisp-looking pasture on the hill-side yonder, or of breaking those fine pair of steers in the meadow. Why, ride half as far, spend half the amount of money to improve your stock, secure the most excellent kinds of seed or to procure labor-saving machines, would not that be risking *less*, gaining *more, feeling* happier?

If you are desirous of triumphing in any thing, let it be in the guiding of Nature to produce the golden corn, the yellow fields of grain, the luxurious fruit, &c., &c.; in plain words, in furnishing material for Indian bread and pumpkin pies!

## AN ESSAY ON LIQUID MANURES.

BY N. DAVIDSON REDPATH.

IN THREE PARTS.—PART SECOND.

THE system of liquid manure as applied to Agricultural purposes, is now being fully tested by enlightened farmers in Scotland, and is attracting the attention of Agricultural Societies throughout the land. We propose to give an article from the transactions of one of those Associations which have sent out delegates to report upon the system.—At the December Meeting of the last of Berwickshire Farmer's Club the visiting Committee reported as follows:—

1. Farm of Enterkine, near Tarbolton, the property of, and farmed by Mr. Bell.

31st October, 1852.—Visited this gentleman for the purpose of seeing his arrangements for irrigating with liquid manure.

His farm consists of about 130 acres;—but he has only as yet laid a pipe into one field, which was done last winter, being desirous of proceeding cautiously, and feeling his way, as it were, before extending the system over his whole farm. The field in which the experiment was tried, during the past summer, contained Italian rye-grass, sown in spring, and contains about 9 acres. In the middle of it, there is a hydraut, to which there is a Gutta Percha hose attached for distributing the liquid.

Mr. Bell has a large water wheel for driving his threshing machine, and with this wheel, he works two suction and force pumps, to draw the liquid manure from his tanks, and force it up into the distributing pipe.

There are proper channels from his byres, (1) feeding sheds, and stables, to the tanks, which are of a circular shape, and built of brick.

Mr. Bell finds that the rye-grass, when properly irrigated, grows with such rapidity as to admit of being cut six times during the summer and autumn, and immediately after each cutting, the manure is poured over the ground, at the rate of about 3,000 gallons per Scotch acre, diluted with three or four times its quantity in water.

On asking Mr. Bell, what stock was required to afford this supply, I learned that he has a dairy of 25 cows, besides a number of cattle;—but no sheep. These, however, are not enough to supply what is required, especially, as he does not allow ashes, in order to be applied to root crops. The quantity of liquid given by a cow, Mr. Bell states to be about 2½ gallons daily, or about 450 gallons in six months, which, when diluted with water, makes rather more than 2,000 gallons, about 10,000 gallons from five cows, which five cows he has found can be supported by one acre of the grass throughout six months.

But as there are six cuttings of the grass and six manurings, 6,000 gallons are required in the course of the season—and in order to make up this quantity, Mr. Bell mixes in his tanks Peruvian Guano at the rate of 1 cwt. to 3,000 gallons; so that for each acre of grass he has to apply about 16 cwt. of guano,—in addition to what comes from the court yard.

The cost of this manuring can be easily calculated, and the following is the statement which Mr. Bell gave to me of his returns per acre, as compared with the returns obtained from pasturing in the ordinary way.

He said that on ordinary rye-grass and clover, two Scotch acres (2) are required to keep one cow feeding on it during the summer and autumn. Her produce in butter, cheese, and milk, may be estimated at £4, which gives, therefore, a return of £2 per acre,—under that system of management. On the other hand, two acres of Italian rye-grass cut and manured six times, will support 10 cows, whose produce at £4 each, will be £40.

| | |
|---|---|
| Now deduct from this the cost of 16 cwt. of guano, viz:— | £16 0 0 |
| Expense of cutting grass for 10 cows daily, at 2s 6d, | 12 10 0 |
| Interest on capital | 4 0 0 |
| | £33 10 0 |
| | 40 0 0 |
| | £6 10 0 |

being a return of £3 5s per acre instead of £2.

But this is not all. Some account must be had of the solid manure of the cows which the field gets when it is pastured in the ordinary way, and which, by this system, is not applied to the rye-grass, but appropriated to other crops. The value of this solid manure, Mr. Bell estimates at 7s or 8s for each cow during six months;—and if this view be correct, as it seems to be, the return under the former system would be only £1 5s, and under the latter £7 5s per Scotch acre, showing a difference of £6 per acre in favor of the irrigation system.

In these calculations it is assumed, that under both systems, the cows give exactly the same quantity of milk; whereas it has been found that stall-fed cows give a larger quantity of milk than when pasturing in the open field.

The result of Mr. Bell's experiment has been to satisfy him of the profitableness of liquid manuring; and he means to extend the system over his whole farm.

I may add, that in distributing the liquid over the land, Mr. Bell does not follow the plan recommended by some, of throwing it into the air, so as to make it descend in the form of a shower. He considers that much of the ammonia is thereby lost. He causes the orifice of the distributing pipe to be held close to the ground.

1. Buyers, in Scotland, mean cow-houses.

2. A Scotch acre contains 6,150½ square English yards, an Imperial English acre 6860 square yards quarter.

THAT plenty should produce either covetousness or prodigality, is a perversion of providence; and yet the generality of men are the worse for their riches.

# Orchard and Garden.

HORTICULTURE is both pleasant and profitable. The term means garden-culture, and embraces within its signification the cultivation of fruits, flowers and vegetables.—The last branch is perhaps sufficiently appreciated, though not properly practiced. Fruit-culture is becoming more and more important, and beginning to receive a greater degree of attention than ever before; but nothing like an adequate regard to details in respect to varieties, the true method of cultivation, and the right treatment of trees, yet prevails. Indeed, few persons, comparatively, give an earnest attention to the subject. Here and there an amateur of wealth and leisure, is almost wholly absorbed in the delightful and fascinating occupation and study of properly preparing the soil, planting and pruning trees, observing daily and closely the habits of different varieties, and other matters connected with growing. But the majority of the people have no care or relish for these things, and even look upon the devoted cultivator as nearly if not quite beside himself.

Let me tell you, friends, that — profit aside, of which we will speak in due time — he derives more real, solid pleasure from these pursuits, foolish and visionary as you may deem them, than all your much loved gains afford. The gratification derived from the accumulation of wealth is usually, and almost necessarily, sordid and debasing, but that afforded by the culture and improvement of the soil, and the training and management of trees, and shrubs, and flowers, for the love of it, is on the contrary, refined and ennobling. No individual without experience, has a conception of the sincere delight with which one watches the growth and development of a new tree or flower; carefully noting its peculiar propensities or beauties; training and guiding it daily until it becomes, to him, a sentient being, and he comes to regard it with a feeling almost akin to the affection he would cherish for a bright child he was shaping and training for future ornament and usefulness to the world.

Is this enthusiasm? Well, then, let it cool a week.

### FIVE GOOD APPLES.

To persons intending to ingraft old trees or buy new ones the coming spring, we recommend the following,— St. Lawrence, Fameuse, Canada Red, Green Sweeting, and Northern Spy — the first for autumn, the second for early winter, the third for midwinter, the fourth for all who love a sweet apple, and the last for spring. Three of these, Famouse, Red, and Spy, possess an excellent quality, which we have not seen alluded to in print. They are remarkably light and easy of digestion, and occasion no feeling of weight and oppression, as do many of our finest varieties. Persons whose digestive organs are impaired, and who cannot bear a Spitzenburg or a Swaar, may eat these with impunity. All the above may be pronounced to be of first quality in Western New York.

APPLES FOR THE WEST.— The following apples have been recommended by the "North-western Fruit Growers Association" at their annual meeting, in 1852:—Carolina June, Sweet Juno, Early Pennock, Hocking, Early Harvest, (with a qualification,) Rambo, Snow, Maiden's Blush, Autumn Strawberry, Dominie, Rawles Jannet, White Winter Pearmain, Vandervere, Talman Sweet, (for baking.)

### GIRDLED APPLE TREES.—AGAIN.

EDS. NEW-YORKER:—While traveling in 1817, I saw an orchard which was entirely girdled, from 12 to 18 inches up the trunk, four years before. They were growing very finely, and were saved by inserting scions, four in each tree. [The mode in which this was done corresponds substantially with that described by R. N. Y., in a recent No. of the RURAL, so we do not repeat it.—EDS.]
—E. D. WIGHT, *North Bloomfield, N. Y.*

MR. MOORE:— If there are any young sprouts growing from the roots of this tree, Mr. WIGHT can save them by grafting the top of these sprouts into the bark above the wound, or by scions grafted in above and below. I have seen an orchard of fifty trees saved by these methods.—J. S. TEED, *New Hartford, N. Y.*

### STRAWBERIES FOR GENERAL CULTIVATION.

THE American Pomological Society, at the meeting last autumn, held conversational discussions on the different fruits, some of which have already appeared in the RURAL. The different varieties of strawberries and their adaptation to the soil and climate of different localities, was remarked upon as follows:

Mr. French, of Massachusetts. I, move that the Jenney seedling be admitted into the list for general cultivation. It is a large, hardy strawberry, a great bearer, and thrifty grower. It is a little too acid for some, but not for me. It will bear carriage very well, and the vine keeps the fruit concealed from the birds.

Mr. Lines, of Connecticut. It is a very solid fruit, and much esteemed. It is acid, but when quite ripe very delicious.

Mr. R. Parsons, of Long Island. We think none can supersede it.

Mr. Miller, of Pennsylvania. I have found it very fine, and I believe it can be eaten even without sugar.

The motion was agreed to.

Dr. Jones, of Ohio, moved that Burr's New Pine be recommended for general cultivation, which was unanimously adopted.

Mr. French. I propose the Willie. It is a first rate strawberry, and all in my vicinity, who have grown it, speak in the highest praise of it, with one exception.

Mr. Lines. I find when the vine has been standing three years, it is difficult to get it as large as it was before; however it is a fine fruit and enormous bearer. It has a decided tendency to get small.

Two-thirds of the members not voting in the affirmative, the motion was lost.

Mr. Robert Parsons asked for information in regard to the Crescent seedling, and said, that the White Bieton Pine was a large strawberry, of a high flavor and beautiful color.

Mr. Lines said he would like to know something about the McAvoy seedling.

Mr. Jones said, it has a fair reputation in Cincinnati, though not yet much cultivated.

Mr. R. Parsons said he knew very little about it, but thought it was better than the English strawberries generally.

Dr. Peirce, of Washington, D. C., said he had cultivated the Princess Alice Maud, an English strawberry, and had written to Mr. Slater in order to obtain some information in regard to it, and from whom he received a letter, which was read, and will be found in the Report of the State Fruit Committee for the District of Columbia.

Mr. French said he found it too tender for his part of the country.

### RAISING CRANBERRIES.

S. A. SHURTLEFF, of Spring Grove, writes as follows to the *New England Farmer*:

It is now five years since I have turned my attention to this subject; I have experimented considerably, and find that cranberries will grow on almost any soil; but the best in low meadows, where but little grass grows. I have succeeded best where it is not plowed summer or winter; where the soil is deep, and before draining it was swimming meadow. I mean when you walk on it, on the turf, it would sink from one to two feet, and then rise again when the weight was removed. My best cranberries are in a meadow where it was impossible to go on it with a horse. In 1848 I drained the meadow by ditching, so as to make it solid, and took care in mowing not to injure the vines; this has increased the fruit from about 2 bushels to 50 bushels. My hay is in less quantity, but in much better quality, on the same meadow.

I have raised cranberries this year on dry, sandy pasture, in wet, springy swamp, on hillocks, also on the best of mowing land.—I have no doubt that cranberries could be cultivated on any soil, with proper care and attention. They may be propagated by roots or seeds. The best way is to select the best kinds, and take up with a spade, a turf that contains plenty of vines, and dig a hole and put it in where you want it, and tread it down hard with the feet; then throw on one or two shovels full of sand or gravel, taking care to make the surface even, and not quite cover the top of the vines. This should be done in the fall, or early in the spring. The first season they will spread almost to meet, if they are put four feet apart, and the next year they will produce fine fruit enough to pay charges and trouble. They will continue to increase if you keep them well provided with a slight coat of sand or gravel every fall or winter.

The vines are easily obtained if wanted, of either the large pale kinds, the oval, or the round or flat kind, which is much the richest, as well as the greatest bearer with us, and of a dark red color.

### LARGE FACTS IN SMALL FRUITS.

R. G. PARDEE, of Geneva, writes as follows to the *Cultivator*:

1. During the last summer, I gathered from my garden more than fourteen bushels of strawberries, all raised at a cost of less than two shillings per bushel, all told.—Watered not more than three times.

2. I transplanted one plant of Burr's New Pine Strawberry plant, on the 1st July, 1851—from which, on the 1st October, I transplanted 50 plants in a roomy bed, and from which bed I sold on the 28th September, 1852, 700 young plants at $2,00 per 100, besides 300 plants left, and the fruit gathered in June last.

3. On the 28th day of April last, I transplanted in my garden, from a journey of 300 miles, one plant of Longworth's Prolific Strawberry, which plant has since produced more than 150 strong plants, which are now attached to it in my garden.

4. From eight plants of the "Crescent Seedling" Strawberry plants, I sold plants sufficient to one nurseryman, to amount to more than $100, at wholesale prices.

I give the above, only as remarkable facts, the like of which may never occur again even in my own experience, and for which I claim no particular credit, but all of which I can abundantly substantiate by witnesses entirely disinterested, in Palmyra, where they occurred; and I communicate them for lovers of large stories.

# Mechanic Arts, &c.

### LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending March 1, 1853.

Asa N. and Alden Case, of Gustavus, Ohio, for Improvement in Bedstead Fastenings.

Augustus C. Haring, of Louisville, Ky., for Improvement in Swivel-nobbed Keys for Door Locks.

James McKay, of Philadelphia, Pa,, for Improvements in Rotary Steam Engines.

Jonas Simmons, of Cohoes, N. Y., for Improved Supplemental Valve in Reciprocating Steam Engines.

Wm. Townshend, of Hinsdale, Mass., for Improvement in Looms.

E. Sumner Taylor, of Cleveland, Ohio, for Improvement in Bedstead Fastenings.

Wm. Wheeler, of Troy, N. Y., for Improvement in the Construction of Curry Combs.

REISSUE.

Nehemiah Hodge, of North Adams, Mass., for Improvement in the mode of Operating Brakes for Cars. Patented Oct. 2, '49. Reissued March 1, 1853.

### PREPARATION OF GUTTA PERCHA FOR USE.

SOME of the lumps in which it reaches us are not unlike flattened cheese,—double Gloucestor, for example; others are like cocoa nuts in their rough shells; and the first step taken with it is to bring these within the action of a vertical wheel, with knives fixed on the face of it, which revolving rapidly, cut the material into thin slices, and often expose the progress of the Malays towards the deceits of civilization, in the shape of lumps of wood encased, to increase the apparant quantity. When it has been sliced, it is boiled in coppers, forced into a hopper, when serrated knives tear into shreds, and it is washed in various waters, in the course of which the foreign matter sinks to the bottom and is removed, while the gutta percha floats. Being cleansed, and this is of great consequence especially for covering telegraphic wires, the material is put between rollers which partly squeezes out the moisture, and is then placed in a kneading machine, and ultimately is passed through rollers to form sheets and bands, or submitted to the drawing mill to be formed into cords or pipes. At the temperature of boiling water, it becomes soft, will take any form or the finest impression, and at the ordinary temperature regains the consistency of leather.

Herein lies as may be seen at once its extraordinary value. Combined with sulphur, it may be made as hard as ebony, too; but this is not the condition in which it is most useful. For pipe making and covering telegraphic wires, a further cleansing process is gone through. It is driven by immense pressure, the pressure of four hydraulic pumps, through gauze and very fine holes in a steel plate, and is rolled and kneaded again.

### CHEAPER THAN MATCHES.

THE editor of the Albany Express, in the course of an article upon "Freaks and Wonders of Electricity," writes out the following "spiritual manifestation:"

Happening to be in the parlor of a friend a few evenings since, he favored us with the exhibition of a very pretty electrical experiment. His daughter walked briskly across the floor once or twice, and then rapidly approached an extinguished gas burner, touched it with her fingers, and instantly the escaping fluid burst into flames. It was an entirely new way of lighting the gas, and involved a great saving af matches. Any person in the room, if their shoes and boots were not wet, could produce the same effect. The sparks of electricity emitted at the instant of the contact with the metal of the burner ignited the gas.

THE NEW GAS LIGHTERS.—A correspondent says he has tried to light his Gas with his fingers and "can't come it." Whereupon he berates the press for trying to humbug the public. We only say in reply, that *he* is the humbug, and not the press. The thing has been and can be done; nor is there any mystery about it. Children have, for years, been in the habit of amusing themselves by running across a carpeted floor, shaking their fingers, and exciting electricity, and then snapping it off upon brass knobs or upon the cheeks or noses of good natured friends. Nothing more is required to light gas burners, only the experiment has been reserved for these "latter days."—*Albany Journal.*

IMPROVED CLOVER THRESHER.—An improvement on the above has been invented by Joseph and Charles Daniel, of Little Hanover, Pa., who have taken measures to secure a patent. The improvement consists in arranging the teeth upon the threshing cylinder in zig-zag lines along its length while those of the concave are placed obliquely from the edges to the centre. By having the teeth arranged in this manner the seed will be thoroughly threshed and separated, as it is subjected to two motions, being carried not only around the cylinder, but likewise moved towards the centre dur the rotary motion, previously to being discharged upon the screen.

A WASHING and drying apparatus, capable of doing the work of forty women, washing, rinsing and drying clothes in thirty minutes, has been built for the Cunard steamer, and another for the Norwich and Worcester steamboat line. The wear to the clothing by the cleansing process is said to be very slight.

### MEANING OF THE WORD "CALORIC."

CALORIC is another name for heat. Strictly defined, it indicates the principle or matter of heat, and presupposes the belief in a fluid excessively thin and fine, which pervades all bodies, moves through them, and, in proportion as it is present or absent, produces all the effects of heat and cold. In short, if heat is caused by fluid, caloric is that fluid. This may be considered a distinction without a difference; and, for all practical purposes, caloric may be defined to be heat. Caloric expands air, as, with few exceptions, it does every other substance, on entering it. Caloric applied to water, expands it to steam; applied to steam, it expands it still more, forming what has been sometimes termed stame. Caloric is the source of power both of the steam and air engines. Both depend on the expansion of matter by heat.

The steam-engine is a caloric engine, for the same reason, and to the same extent, that the air-engine is, except that in both the air-engines of Ericsson and Stirling the calorie used each stroke is in part retained, and made to serve again. This is sufficient to justify, if any justification were needed, the appropriation of this name to the Ericsson engine. It is simply a distinctive appellation chosen for this particular form of an engine, moved by heat. The choice was certainly a very happy one, and has undoubtedly served to attract much greater attention to this invention than would have been done by the simple name of "air-engine" adopted by Stirling.—*Appleton's Mechanics' Magazine.*

### IMPROVED WAGON BRAKE.

A SELF-ACTING brake for wagons on common roads has been invented by W. D. Williams, of Raleigh, N. C. This brake is intended for retarding the velocity of a wagon while going down hill, and is so arranged that the action of the horse in drawing, when arrived at the bottom, will restore the brake to its former position, where it will remain while the wagon is on level ground. The arrangement consists of two iron clamps encircling the front axle, and each connected to a front hound by a link and two joint pins. The hounds are secured to the sides of the reach as well as to a cross-piece, and the latter by rods is connected to a similar piece, which carries the bar for actuating the brake blocks. An additional advantage of this brake, due to its capability of swinging on a centre, is, that it can be thrown forward when it is desired to dump the load, and then replaced in its former position.

BLAKE'S NUT CRACKER.—This is a Yankee notion, having sprung into being at New-Haven in the same month of the same year with Louis Napoleon's *coup d'etat*. It is designed to dispense with the use of the hammer as well as with that of the ordinary table nut-cracker, for nut-cracking purposes. It is not adapted for table use, but, as we can testify, cracks the hardest shells in a way to render all further cracking superfluous. It consists of a pair of pincers fixed upon a bit of board. You put in your nuts, press down the handle, the nut passes into a new condition, and as you remove your hand from the handle, a spiral spring casts it up, and the transformed nut drops into a basket, which ought to be standing below on purpose to receive it. A smart crackster ought to crack as many as twenty nuts in a minute, or 1,200 in an hour, without any danger of pounding the fingers.

# Domestic Economy.

### "POISONS AND ANTIDOTES."

IN the 5th No. of the RURAL is a list of Poisons and their Antidotes, to which I wish to add a few words.

ARSENIC.—I have heard of two cases in which *tobacco* had been used as an antidote to *arsenic*, with complete success. Let the sufferer, as soon as may be, drink plentifully of a tea, or decoction, of tobacco, and repeat till the object is effected. It is said that the decoction will not sicken or even be very offensive until the effect of the arsenic is neutralized.

SNAKE BITES.—The Southern physicians, it is said, treat those that have been bitten by Rattlesnakes, with alcoholic liquors. Let the sufferer drink plentifully, and the cure is said to be certain.

The treatment of arsenic with tobacco was stated a few years ago by a lecturer on Chemistry. The use of alcohol for snake bites I have read of several times in the papers. If any one is acquainted with any facts in either case, he will oblige the writer of this, and perhaps confer a favor on others, by making them known. H.

MUSH OR HASTY PUDDING.—Stir into a half pint of cold water, enough sifted Indian meal to make a thick batter. Have on the fire a pot containing three or four quarts of water, when it boils, pour in the batter, stirring it fast; let it boil a few minutes, then add sifted meal by the handful, till it is quite thick. Keep it boiling slowly, and stir it frequently, the more it is stirred, and the longer it is boiled, the better the mush. To be wolesome, it must be boiled at least two hours. This is a good receipt.

IT is not the *height* to which men are advanced that makes them giddy; it is the *looking down* with contempt upon those below them.

# Educational.

### ERRORS IN TEXT-BOOKS.

Errors in the text-books used in our schools are far too common — errors in orthography, errors in syntax, errors in the arrangement of subjects, errors in matters of fact, or in other words, in presenting to both teacher and learner as fact, what is not fact. Now these things ought not so to be. If a person undertakes to write or compile a manual of any kind, to be placed in the hands of a learner, it should be accurate in everything pertaining thereto, before the manuscript is sent to the publisher, and then it should be carefully attended to while passing through the press, or else the printed page will not truly represent the manuscript page. The Pennsylvania School Journal contains an extended table of discrepant dates in the different School Histories, showing that this subject has not been properly attended to.

### THE EDUCATION OF THE EYE.

We recollect of reading in our school boy days, a story entitled, "Eyes and no eyes; *or the art of seeing.*" The burden of the story was, that on a certain occasion, two school boys were allowed a holiday, which was spent in roaming over the fields. On their return, each was questioned by his tutor in relation to what he had seen. The first had seen *nothing*, or at least, nothing had interested him, and he could give no account of any thing that had occurred during the day. The other, on the contrary, gave a full, interesting and minute account of every thing he had seen; and the animation of his recital, gave evidence of the pleasure and profit he had derived from the day's adventure.

Now both of these lads had passed over nearly the same ground in their travels, both had enjoyed the same opportunities for plea ure and instruction, and both had about the same natural faculties. Whence the difference, then, in the results? We answer; one had exercised his faculties of *perception* and *observation*, while the other had not.

At the time we read this story, the full force of the *moral* which it was evidently intended to teach, was not fully comprehended. But we have often thought of it since, and the result of our cogitation shall be given to our readers.

If we carefully study the history of great men, we shall find one of the principal elements of their greatness to consist in their constant habit of carefully observing every thing that transpires about them. Much is doubtless learned from books, but more from intercourse with the world. A shrewd, inquiring *Yankee* keeps his eye "wkll skinned" as he terms it, and with a moderate amount or "book learning," often rises in a short time to posts of honor and distinction, as well as usefulness. He "keeps his eyes about him," of, in other words, he allows nothing to come under his observation, without learning something from it. He makes *men* and *things* his study, quite as much as books, though these he by no means despises. The opinion of such a man is worth having, for it is generally correct. His views are sound and practical; and though others may spin fine *theories*, they seldom arrive at safer conclusions, or more useful results.

But can the *eye* be educated? Certainly, as well as the feet, or the hands. Let the carpenter raise the steps over which you have been accustomed to pass, *a single inch*, and whether you know it or not, the first time you pass over them, you will stumble. The attention of the new born infant is first attracted to the light, and it will stretch forth its hand to get hold of the candle, though it be ten feet off. The eye of that infant has, as yet, learned nothing of distances. The man restored to sight by our Saviour, saw "men as trees walking." The eye of such a person is yet uneducated, and for a time of little use, *because it is not to be depended upon.* Things distant and near appear the same. It is idle to say, in relation to such cases, that it is the *mind* and not the *eye* that is to be trained; for the eye of a mere animal that has no mind, may be trained in the same way. Jowler knows at what precise moment to snap at the bit of cracker thrown at him, so as to catch it in his mouth; though there was a time when he was not thus expert. Without reason to guide him, his eye has been trained until he can estimate distances quite as well as his young master.

But, in applying this principle to education, we do not mean that the *mind* is not to be employed at all, while the *eye* is being trained. If the eye of a brute may be thus trained, how much more the eye of a being who has *reason* to guide and control his movements.

In giving this subject a practical bearing, let us, as in the instance already adduced, illustrate the point, by the case of two lads at school. One can spell orally any word, no matter what, the instant it is given; and yet, require him to *write* half a dozen lines, and half the words will be misspelt. His *mind* has been trained, but not his *eye;* he did not *see* the errors till pointed out, and he wonders how any one can! His writing is also wretched, because he never looks at his copy, nor observes wherein his scrawls differ from it. He does not notice that he makes the *querl* of the capital letter, K, turn to the right, instead of the left as it should, although his teacher may have boxed his ears a dozen times for the same mistake. In short, everything he undertakes is full of blunders, and the worst of it all is, he never sees the errors till the criticisms of others cover him with shame, and he finds, when perhaps too late, that for the want of a correct eye, rather than from more ignorance, he has a reputation for scholarship which is anything but enviable.

The other lad early comes to the very sensible conclusion that his eyes were not given him for nothing, but were actually made for *use.* His teacher never has occasion to say to him "where were your eyes, that you did not see that mistake?" for he never lets his "composition" go to the teacher's hands, till he has carefully copied it and corrected all errors. He does, indeed, make some mistakes; but his attention need be called but once to each, for he never makes it the second time. He carefully cultivates a habit of observation, and never allows an opportunity of learning anything useful to pass, without improving it. If, on his way to school, he passes where a written advertisement is posted, he carefully reads it to ascertain its nature; and having done that, he proceeds to criticise it. First, he looks to see if all the words are *spelt* right, for he regards bad spelling as a grievous fault; then he examines the *punctuation;* then, the *grammatical construction* of the sentences; then, whether the *capitals* are where they should be; and finally, he notices any peculiarity of the *penmanship*, and if this be unusually good, he carefully observes wherein it differs from his own. Now this incident, unimportant in itself, has furnished him with a lesson in five different branches? Moreover, the habit of criticism thus acquired, is invaluable to him, and the beneficial results of it will follow him through life.—The moment his eye rests upon anything wrong, the error is instantly detected; and the slightest mistake could no more escape his notice, than a discordant note would that of the most skilful musician.

Again—observe that proof-reader. See how quick he is to discover anything wrong. Was he always thus? No—he has spent years in acquiring *knowledge* sufficient to enable him to correct "proofs" on all conceivable subjects; but that is not all. He has, by practice, so educated his *eye*, that without apparent effort or special care he points out and corrects all the errors, with most astonishing rapidity. There was a time when, with all his knowledge, he was not thus expert. So, too, the teller of a bank, or a money broker, will run over hundreds of bank notes, faster than ordinary persons can count them, and at the same time detect any spurious notes that may happen to be among them. These illustrations show that there is such a thing as so disciplining the eye, as to make it exceedingly quick to discover whatever is not as it should be.

But this habit of close observation, like all others of real value, must be acquired early in life. The *school-room* is the proper place to develope and cultivate it, and the skillful teacher is the one of all others to call the attention of his pupils to its importance. Once get them started right, and they will pursue the course from the very love of it. In a short time, a mistake even of the most trivial kind, will be looked upon with abhorrence; and instead of performing every thing in a slip-shod, careless manner, they will take great pride in having it done *just right.—N. Y. Teacher.*

### NATIONALITY IN HANDWRITING.

Among other developments made at a recent sitting of the Edingburgh Academy of Sciences, was the most remarkable fact, that no man can ever get rid of the style of handwriting peculiar to his nation. If he be English, he always writes in English style: if French, in the French style: if German, Italian, or Spanish, in the style peculiar to his nation.

I am acquainted with a Frenchman who has passed all his life in England, and who is English in dress, habits, tastes, everything; who speaks English like one of our countrymen, and writes English with ten times more correctness than ninety-nine in the hundred of us, but who cannot for the very life of him, imitate our mode of writing. I have also heard of a Scotch youth who was carefully educated in this country, and for 18 years of his life mixed exclusively with French people, but who, though he had a French writing master, and perhaps never saw anything but French writing in his life, always wrote in the same style as we all do; it was really national instinct. In Paris all the writing-masters profess to teach the English manner of writing, but with all their exertions, they can never get their pupils to adopt any but the cramped hand of the French.

Some person pretended that he could tell the character of individuals from their handwriting. I know not, whether he spoke the truth or not, but assuredly he might have asserted, with the most perfect confidence that he could distinguish a man's country by his handwriting. The difference between our writing and that of the French is immense—a school boy would distinguish it at a glance. Mix together a hundred sheets of manuscript written by a hundred of our countrymen, and no one would fail to say which was the British and which was the French, even though they should all be written in the same language and with the same pens, ink, and paper.—The difference between Italian, Spanish, and German styles of writing is equally as great. *—Edingburgh Weekly Review.*

---

There is a great deal said about Luther's Sermons. His simplest thoughts were such. Here is a good specimon of his laconic preaching:

"This little fellow," said Martin Luther of a bird going to roost, "has chosen his shelter, and is quietly rocking himself to sleep without a care for to-morrow's lodging, calmly holding by his little twig, and leaving God alone to think for him."

# For the Young.

Written for the Rural New-Yorker.

### THE SAPPHIRE GROT.

A cave, of a character entirely unique, has been recently discovered in the Island of Capri, at the southern extremity of the Bay of Naples. At the base of an almost perpendicular limestone cliff, which rises from the sea to a great hight, a semicircular opening above the surface of the water is seen, the shape of which resembles the mouth of an oven, and but little surpassing one in size. When the sea is calm, the cavern may be entered in a small skiff, by bending below the sides of the boat. On clearing this narrow passage, the visitor is ushered into a grotto of considerable dimensions, the roof arched like a dome, the floor of water, and the whole lighted up with a rich blue tint, from which peculiarity it is called the Sapphire Grot.

It is an interesting question, why this cavern, with such a narrow opening, which would render it dark and gloomy, is found to be so beautifully illuminated. The explanation is, that the rays of light pass into it through the azure waters of the sea, which imparts to them its deep blue color. A proof of this, at once curious and interesting, is found in the fact that the shadow of the boat is thrown on the roof; and by covering the entrance, and thus excluding the direct rays, the intensity of the cerulean tint is greatly heightened. Capri is now resorted to by many travelers to behold this beautiful wonder of nature. It is supposed to have been known to the Romans, the island having been for a long time the abode of the Emperor Tiberius. J. W.

### THE WOODPECKER'S TREASURES.

A late writer of a work on California, gives some curious facts in relation to the treasures laid up by the woodpecker in that country. He says:

In stripping off the bark I observed it perforated with holes larger than those which a musket bullet would make, spaced with most accurate percision, as if bored under the guidance of a rule and compass, and many of them filled most neatly with acorns. Earlier in the season I remarked the holes in nearly all the softer timber, but imagining they were caused by wood insects, I did not stop to examine or inquire; but now, finding them studded with acorns firmly fixed in, which I knew could not have been driven there by the wind, I sought for an explanation, which was practically given me by Captain S.'s pointing out a flock of woodpeckers busily and noisily employed in the provident task of securing their winter's provisions. It appears that that sagacious bird is not all the time thriftlessly engaged "tapping the hollow beech-tree," for the more idle purpose of empty sound, but spends its summer season in picking those holes, in which it lays its store of food for the winter, where the elements can neither effect it nor place it beyond their reach, and it is considered a sure omen that the snowy period is approaching when these birds commence stowing away their acorns, which otherwise might be covered by its fall.

I frequently paused from my chopping to watch them in my neighborhood, with the acorns in their bills, half clawing, half flying round the tree, and to admire the adroitness with which they tried it at different holes till they found one of its exact caliber; when, inserting the pointed end, they tapped it home most artistically with their beaks, and flew down for another. But their natural instinct is even more remarkable in the choice of the nuts, which you will invariably find sound; whereas it is a matter of impossibility, in selecting them for roasting, to pick up a batch that will not have half of them unfit for use, the most safe and polished looking very frequently containing a large grub generated within.—Even the wily Indian, with all his craft and experience, is unable to arrive at any thing like an unerring selection, while in a large bag-full that we took from the bark of our log, there was not one containing the slightest germ of decay. They never encroach on their packed store till all on the surface are covered, when they resort to those in the bark.

---

The Cannon Ball Tree.—Among the plants of Guiana one of the most curious is the cannon ball tree. It grows to the height of sixty feet, and its flowers are remarkable for beauty and fragrance, and contradictory qualities. Its blossoms are of a delicious crimson, appearing in large bunches, and exhaling a rich perfume.

The fruit resembles enormous cannon balls hence the name. However, some say it has been so called because of the noise which the balls make in bursting. From the shell domestic utensils are made, and the contents contain several kinds of acids, besides sugar and gum, and furnish the materials for making an excellent drink in sickness. But, singular as it may appear, this pulp, when in a perfectly ripe state, is very filthy, and the odor from it is exceedingly unpleasant.

---

We rarely meet with persons that have a judgment; which, in many, render literature a very tiresome knowledge. Good judges are as rare as good authors.

---

He who has health should hope, and he who hopes must be happy.

### WASHINGTON LOVED HIS MOTHER.

Immediately after the organization of the present government, General Washington repaired to Fredricksburg, to pay his humble duty to his mother, preparatory to his departure to New-York. An affecting scene ensued. The son feelingly remarked the ravages which a lingering disease had made upon the aged frame of his parent, and thus addressed her:

"The people, mother, have been pleased, with the most flattering unanimity, to elect me to the chief magistracy of the United States; but, before I can assume the functions of that office, I have come to bid you an affectionate farewell. So soon as the public business, which must necessarily be encountered in arranging a new government, can be disposed of, I shall hasten to Virginia, and—"

Here the matron interrupted:—"You will see me no more. My great age and the disease that is fast approaching my vitals, warn me that I shall not be long in this world.—I trust I am somewhat prepared for a better. But go, George, fulfil the high destinies which Heaven appears to assign you; go, my son, and may that Heaven's and your mother's blessing be with you always."

The President was deeply affected. His head rested upon the shoulder of his parent, whose aged arm feebly yet fondly encircled his neck. That brow on which fame had wreathed the greatest laurel virtue ever gave to created man, relaxed from its lofty bearing. That look, which could have awed a Roman Senate, was bent in filial tenderness upon the time-worn features of this venerated matron.

The great man wept. A thousand recollections crowded upon his mind, as memory, retracing scenes long past, carried him back to his paternal mansion, and the days of his youth; and there the centre of attraction was his mother whose care, instruction and discipline, had prepared him to reach the topmost height of laudable ambition; yet how were his glories forgotten while he gazed upon her from whom, wasted by time and malady, he must soon part to meet no more on earth!

The matron's predictions were true. The disease which had so long preyed upon her frame completed its triumph and she expired at the age of eighty-five, confiding in the promises of immortality to the humble believer.

### THE NEWSPAPER.

No association of my early youth and childhood is more vivid in my recollection than the eagerness with which I devoured the contents of the village newspaper.—From its columns I learned to read; it was the director of my first buddings of tho't and reason. The day it was issued was with me the most eventful of the week.—My childish impatience was so great, that none dared to contend with me for the first perusal of it; and every line of prose and poetry was read and re-read. To me it was the oracle of the world, and the editor who wielded so important an engine was no ordinary man. I turned and looked after him, when he passed me in the street, as the crowd do upon an executive of the nation.

We had plenty of books in the house, and I read them; but I wanted something fresh and new to feast my curiosity upon, and tell me what was stirring in the world. It was enough for me that a thing was in the paper, to guarantee its truth. In vain was I told that the badly written fictions that I devoured so greedily, must not be believed. I *would* believe them, and that was the end of it. Sometimes when I was in the middle of a favorite piece, in would come neighbor B. to borrow the paper; and I, being but a child, would have to resign my right and see it carried away; and a newspaper borrower never appeared more hideous in the eyes of any editor, than he then did in mine. But I was soon after it, and had the pleasure of cutting off in return Mr. B. or some of his family, in the middle of the same piece, perhaps, and bringing the paper back again, to resume my reading. I oftener took it to the barn, however, and read an hour or so, to avoid being scolded by our family for daring to go after the lent paper so soon.

But not all the pages of literature, that I can now peruse, will give me half the gratification that was then afforded me by the village newspaper. And I think no father would suffer his children to be without a paper of some kind, if he would but consider the eagerness of children, almost universally, to read newspapers, and their acquirement of the habit of learning to read, so useful to them in after life. I think that the habit of borrowing, which is so rank in some families, begins with borrowing the newspaper. And, in fact, if one will borrow a newspaper,—a thing to be had on such equal terms by all,—he can borrow anything else without blushing.

He might be expected to be a subscriber for a newspaper, as much as his neighbor; his own money is worth no more than his neighbor's;—but as regards other things, as implements of husbandry, &c., he, no more than his neighbor, can be expected to have everything he might require, for any exigency. In whatever part of the country I have been, families and individuals have always been divided, or rather, have divided themselves into two classes, distinguishable, unmistakable, at first acquaintance—readers and non-readers of the public news. The one are really, worthily, inhabitants of enlightened America. To the others I might say, as Macbeth addressed the witches: "You should be *Americans*, and yet your *ignorance* forbids me to interpret that you are so."—Take the newspaper.—*Olive Branch.*

Listen, if you would learn; be silent if you would be safe.

# Sunday Reading.

### SOMETHING BEYOND.

Heart, weary heart, what means thy wild unrest—
Hast thou not tasted of earth's every pleasure?
With all that mortals seek thy lot is blest—
Yet thou dost ever chant in mornful measure,
Something beyond!

Heart, weary heart, can'st thou not find repose
In the sweet calm of Friendship's pure devotion?
Amid the peace which sympathy bestows,
Still dos't thou murmur with repressed emotion,
Something beyond!

Heart, weary heart, too idly hast thou poured
Thy music and thy perfume on the blast:
Now, beggared in Affection's treasured hoard,
Thy cry is still—thy saddest and thy last,—
Something beyond!

Heart, weary heart, oh cease thy wild unrest—
Earth cannot satisfy thy bitter yearning;
Then onward, upward, speed thy lonely quest,
And hope to find, where Heaven's pure stars are burning,
Something beyond!

For the Rural New-Yorker.

### CHARITY.

Have you seen a man who rises in the morning with a habitually clouded brow and an ill-natured look, and who, on reading his morning paper, or on learning the morning news, exhibits his displeasure by finding fault with almost every thing upon which he fixes his attention? That man, doubtless, is greatly wanting in charity.

Have you met with one who, in his daily conversation, is ever grumbling and growling about the apparent short comings of those with whom he has to do, and who unhesitatingly forms and pronounces an opinion upon a subject, before he has become sufficiently acquainted with the facts in the case, to enable him to form a true estimate of the same? You may mark that person as being very deficient in the virtue of which I am now speaking.

Show me a man in whose character charity is not a leading feature, and I will show you one who is wanting in one of the most essential qualifications necessary to fit him to maintain a true and desirable position in society, and to enable him to fulfil, beneficially, to all concerned, the relations which he sustains to his fellow men around. A mistake, he tortures into an intentional wrong. Misfortune finds no palliating cause with him.

Many seem to entertain the mistaken idea that charity consists almost exclusively in giving alms. It may modify our thoughts and our actions in half the affairs of human life. Nothing, indeed, will give better proportion to a man's character, than charity. It serves to impart evenness and harmony to his whole moral and mental nature. In thought, in word, and in deed, in prosperity and in adversity, it shines forth among the redeeming qualities of his character, the loveliest of them all. It creates sunshine in his soul, the irradiations of which cast a mellow and beautiful light around the pathway of his life. *

Perinton, March, 1853.

### SORROW'S TEACHINGS.

"How is it," said I, despondingly, to Aunt Milly, "that you, who have been steeped to the lips in trouble, can be so cheerful?"

"Listen to me, Ellen. You know my first great sorrow, the loss of my husband.—When the grave closed over him, the star of hope faded from my sky. I could see no mercy in the hand that dealt the blow.—The green earth became one wide sepulchre; the sweet ministrations of nature had no healing power. In my selfish despair, I would have shrouded the blue heavens in sable, and thrown a pall of gloom over every happy heart. Months passed away, slowly, wearily, and I found no alleviation of my sorrow; no tears came to ease that dull, dead pain, that seemed crushing the life from out my heart; no star of Bethlehem shone through the dark cloud over my head.

"I was sitting one dreary afternoon, as usual, motionless and speechless. It was dark and gloomy without, as my soul within. The driving sleet beat heavily against the windows. Twilight had set in. My little Charley had patiently tried for hours to amuse himself with his toys, now and then glancing sadly at my mournful face. But the oppressive gloom was becoming unendurable to the child. At length, creeping slowly to my side, and leaning heavily against my shoulder, he said, in a half sob, *Does God love to see you look so, Mother?"*

"No, no, Charley!" said I, as I clasped him to my heart with repentant tears. "No, no! I'll cloud your sunny face no longer."

"Alas! dear Ellen, I but turned from one idol to another; I gave God the second place and lived only for my boy; and so my wayward heart needed another lesson. The grave took in my last earthly treasure.—But when the smiter had done his work, those little lips, though silent, still said to me, "*God loveth the cheerful giver;*" and so, smiling through my tears, I learned to say, "Thy will be done." Dear Ellen, if the good Father taketh away with one hand, He gives with the other. There is always some blessing left. "*Ilka blade of grass keeps ain drop o' dew!*"—*Olive Branch.*

---

When a man has no dosign but to speak plain truth, he may say a great deal in a very narrow compass.

# Miscellaneous.

## FARMER-LIFE.

The last Knickerbocker Magazine has a "Winter Night's Epistle" to the Editor, by the "Peasant Bard," pleasant and true to nature:

"There's poetry in farming." True,
But I have read, and so have you,
That "*distance* lends unto the view
Enchantment fair."
For instance: digging gold will *do*
Till one gets there.

In summer planting, weeding, hoeing,
And practising "*Knick's knack*" at mowing,
(That science which you boast of knowing
So very well,)
The scorching sun no mean type showing
Of what's called h—ot.

In winter tugging with the flail,
Or sledding in a cutting gale,
Such as would send a gallant sail
In bare-poles seaward,
And blows your fore-mag's lusty tail
Straight out to leeward.

In place of literary talk
With compeers in your daily walk,
It's "Shall you top, or cut the stalk
Of that 'ere crop!"
Or, "Sold yer cattle?—how'll ye chalk
To sell, or swop?"

Not half the *prose* may well be told
Which farmers every day behold
In summer hot and winter cold,
Dull as 'tis real;
Yet we've incentives manifold
To the ideal.

The pictures in the book of June;
The glorious dawn, the balmy moon;
"The dewy eve, the rising moon;"
All these are ours,
And all the recompensing boon
Of birds and flowers.

When Winter hurls his storms apace,
Oft piteous is the farmer's case:
Night comes—the blazing chimney-place
Stills all complaints;
Thaws out his features, till his face
Shines like a saint's.

There, while his cheer reeks to the ceiling,
He gets most comfortably feeling,
Thinking how barn and battened shieling,
Secure and warm,
His poor dependants safe are shielding
From the wild storm.

There he may read, and muse and ponder
Upon this life, this world of wonder;
There, judge-like, he may set asunder
The truth from error,
And see in men of "blood and thunder"
No cause for terror.

There he may form just estimate
Of those the world calls good and great;
See *fortune*, *circumstance*, and *fate*,
Create renown,
And give a knave a chair of state,
An ass a crown.

Written for Moore's Rural New-Yorker.

## FROST-WORK.

A few mornings since, I sat by my window watching the waning moon as she journeyed among the sparkling gems set in the clear blue canopy, and shedding her beams so gently, as if to say, be thou peaceful and happy.

Soon the glad orient deepens, and the feeble rays of the moon give place to the brighter ones of the "King of day." But now the beauties of heaven are quite shut out from my sight. What unseen hand has covered these panes with delicate pencilings, such as no work of art can equal? It cannot be man's puny hand — no, it is the unadorned work of Nature. What a master workman; yet there is none of that rich coloring we sometimes see so profusely in her works. This we may suppose a pencil sketch without tinting.

But what a vanity! The leaf appears quite as delicate as that which teems with life, and it must have been an icy hand which formed it thus. Here are rocks and rugged mountains, whose summits seem lost in the clouds; and wide plains dotted with old castles and ruins, that seems to represent some strange country, and we may wonder what sort of beings could inhabit such an icy region. If there were such a place as here represented, we should like much to visit it, though it has such a cold look; yet it may not be cheerless. The river is motionless, fast bound in ice. From the appearance of the ground, and the foliage on the trees, it seems as though stern winter had immediately succeeded the gentle spring, for the branches appear as if transformed from all their verdure to counterparts in crystal.

We may try to imitate, but never can equal it. It is wrought by Him who is continually working wonders, that we may see His power and learn our own nothingness.

But how changed the scene! Where is now the river, the mountain, the flowers, and all that we have viewed with such delight? How often is beauty thus fading and transient! Nothing but a little change in the air, unseen it is true, has caused it to assume a new form, and the whole is now but a watery mist. E. H. W.

The apprehension of evil is many times worse than the evil itself; and the ills a man fears he shall suffer, he suffers in the very fear of them.

One act of beneficence, or act of real usefulness, is worth all the abstract sentiment in the world.

## PICTURE OF A FEMALE SLAVE-MARKET.

I find it takes now eyes to be surprised at very thought-stirring scenes, sometimes; but, to give a strong instance of what people may get so used to as to give over looking at it with any particular curiosity, I will describe *what was set out upon two tables*, on the opposite sides of the bar-room of my hotel. The reader will perhaps remember the description already given of this drinking saloon—a vast dome, like the body of a cathedral, around which the hotel is built, and to which it seems a secondary appurtenance. It is thronged at the drinking hour, and, on the morning I speak of, I had gone down to take a lounge through the crowd, interested as always in the faces and manners in a strange city, but looking for no special novelty beyond. The day was warm and the drinkers many. I was amused with the usual contrast, as I went in, the architectural sublimities commonly reserved for places of sacred resort (a dome sustained by lofty columns, and admitting light only from the meridian sky,) inclosing a throng so careless and lively. I strolled along one side, and saw the lunch-table spread out with *terrapin soup, olives, sandwiches, etc.*, and then with a chance turn, I crossed the crowded floor and came upon another table on the opposite side, set out with—what does the reader suppose? *half-a-dozen pretty and nicely dressed negresses*, from eighteen to twenty-five years of age, seated in chairs upon the top of the table, and waiting to be sold presently at auction!

And, to this nobody was giving a second look. Groups of men stood about, on the marble floor of the vast area, with hats on, and glasses in their hands, conversing gayly. The white aproned waiters ladled out the soup. The gracious and gentlemanly master-bar-keepers stood braiding rainbows across their firmament of decanters as they flung the ice and the rosy liquor back and forwards into fragrant contact with the mint. Politics were talked loud, and business was talked low. But it was not quite the hour—lacking a few minutes—when the destiny of these other warm dishes was to be decided.

Feeling themselves to be wholly unnoticed probably, the negresses were perfectly natural, and their amused interest in the scene around was sufficient to make them as gay as children at a show. The front of the table was on a line with the circle of columns, and it extended back across the corridor in the rear—one of the women, who had two children at her knee, sitting back against the wall of the dome. This last was the only one whose face expressed any seriousness or anxiety, though all were modest in their cheerfulness, and they were evidently girls of good conduct, as well as in admirable bodily condition. Two of them were really handsome, I thought, and by the taste with which their bandannas were coiffed, showed that they had inhaled a little of the French atmosphere of the city.

The auctioneer mounted a chair, presently, and the sale proceeded—too rapidly, however, for any very critical observation. With what I could see of it, I was exceedingly interested, though, of the crowd around, no one else except the bidders seemed to have the curiosity to look on.—The girls seemed bashful more than anything else, dropping their eyes as the auctioneer told their ages and qualities, or stealing furtive glances at the low-voiced namers of the dollars they might be worth—their vanity, doubtless, somewhat excited in watching the ladder up which their value was so reluctantly ascending. Imagination might paint very touching pictures from this scene. It was over before I had got out my "brushes and colors." I just remember that the mother looked pleased with the destiny of herself and children. The others were gone without my having been able to designate even their prices—deficient, as of course I was, in the practised alacrity of the market. But I looked down from the gallery above, upon the two bare tables, later in the day, and indulged reverie over the contrasted disposal of their respective viands — the stomach's digestion of what had been spread upon one, and fate's digestion of what had been spread upon the other.—*Home Journal.*

## CONJUGAL "REBUKES."

In Mrs. Oakes Smith's late disquisition on Divorce she lets drop the following remarks:

"One reason why men are no more true, noble and beautiful in their aspect, abroad, is because they have no magnanimous ideas in regard to home. They carry the meanness, or arrogance, or dishonesty, which finds no rebuke there, abroad."

It would appear from this paragraph that Mrs. Smith is a little inclined to be *radical* in her reforms of the relations between the sexes. Mrs. Smith is doubtless an excellent woman, and a woman of strong powers. But she is also, plainly, to say the least, a *managing* woman. And we entertain a vague suspicion that if all the women were to become just like her, there would soon have to be a reform started in favor of *men's* rights. Mrs. Smith declares very distinctly that the reason why men are no better than they should be, is, because they are not properly "rebuked" at home. She is evidently of opinion that a little diurnal training on the part of the wife would essentially improve the mind and manners of the husband. Now we wish to be patient with the efforts of woman to help herself, and improve her condition, and therefore we feel sorry to see such things as this come from the pen of a woman who is aiming at the mission of reformer in this respect.—The idea of making a man "noble and beautiful in his aspect abroad" by starting him down stairs of a pleasant morning and out on to the sidewalk by the sharp sting of a "rebuke" from his wife, does not come over us like the odor of roses. It may be the best way to make a "beauty" of a husband according to Mrs. Smith's notion of that appendage to a woman, but really we shouldn't fancy the sample of a man who could be improved by such a process.

It is such poor trash as this that brings down overwhelming ridicule upon the very best endeavors in the best of causes. Than such a suggestion as is here contained, there is nothing more intrinsically odious in the worst laws of the past in relation to the authority of the man over the woman. It is the essence of statutes providing that a woman might be flogged by the husband with a stick no bigger than his thumb. For in just such an idea, are all such laws bottomed. It is that of conjugal *correction*.—It is first a "rebuke," and then a pulling of the ears, and so on, step by step, till the woman is led out with a halter round the neck and disposed of to the highest bidder. What Mrs. Smith would seem to intimate, is, that "turn about is fair play." And that what has been tried upon the woman hitherto for their improvement, should now be tried upon the men. It is dismal to find discussion on these topics thus turning back upon its sources.

We are perfectly content to admit the doctrine of the equality of the sexes in the conjugal relation, and to spurn the idea of slavish submission on the part of the woman, and the brutalizing of the man. But this is far enough short of advocating the idea of the propriety of mutual "rebuke." We would make home the heaven of the affections. The doctrine of "rebukes" makes it their hell.—*N. Y. Tribune.*

## CHILDREN'S RIGHTS.

BY FANNY FERN.

Men's Rights! Women's Rights! I, for *Children's Rights*, throw down the gauntlet! Yes, little pet; Fanny Fern's about "takin' notes," and she'll "print 'em, too," if you don't get your dues. She has seen you seated by a pleasant window, in a railroad car, with your bright eyes dancing with delight, at the prospect of all the pretty things you were going to see, forcibly ejected by some overgrown Napoleon, who fancied your place, and thought in his wisdom, that children had no taste for anything but sugar candy. Fanny Fern knew better. She knew that the pretty trees, and flowers, and bright blue sky gave your little soul a thrill of delight, though you could not tell why; and she knew that great big man's soul was a great deal smaller than yours, to sit there and read a stupid political paper, when such a glowing landscape was before him that he might have feasted his eyes upon. And she longed to wipe away the big tear that you didn't dare to let fall; and she understood how a little girl or boy that didn't get a ride EVERY day in the year should not be quite able to swallow that great big lump in the throat, as he or she sat jammed down in a dark crowded corner of the car, instead of setting by that pleasant window.

Yes, and Fanny has seen you sometimes, when you've been muffled up to the tip of your little nose in woollen wrappers, in a close, crowded church, nodding your little drowsy heads, and keeping time to the sixth-*lie* and seventh-*lie* of some pompous theologian, whose preaching would have been high Dutch to you, had you been wide awake.

And she has seen you sitting like little automatons, in a badly-ventilated schoolroom, with your nervous little toes at just such an angle, for hours; under the tuition of a Miss Nancy Nipper, who didn't care a rush-light whether your spine was as crooked as the letter *S* or not, if the *Great Mogul Committee*, who marched in once a month to make the "grand tour," voted a "*model school-marm.*"

Yes, and *that an't all.* She has seen you sent off to bed, just at the witching hour of candle-light, when some entertaining guest was in the middle of a delightful story, that you, poor, miserable "little pitcher," was doomed never to hear the *end* of! Yes, and she has seen "the line and plummet" laid to you so rigidly, that you were driven to deceit and evasion; and then seen you punished for the very sin your tormentors helped you to commit. And she has seen your ears boxed *just as hard* for tearing a hole in your best pinafore, or breaking a china cup, as for telling as big a lie as Ananias and Sapphira did.

And when, by patient labor, you had reared an edifice of tiny blocks (fairer in its architectural proportions to your infantile eye than any palace in ancient Rome,) she has seen it ruthlessly kicked into a shattered ruin by somebody in the house whose dinner hadn't digested!

Never mind. *I wish I was mother to the whole of you!* Such glorious times as we'd have! Reading pretty books *that had no big words in 'em;* going to school where you could sneeze without getting a rap on the head for not *asking leave first;* and going to church on the quiet, blessed Sabbath, where the minister, like the dear Saviour, SOMETIMES remembers to "take *little children* in his arms, and bless them."

Then if you asked me a question, I wouldn't pretend not to hear; or lazily tell you "I didn't know," or turn you off with some fabulous evasion, for your memory to chew for a cud till you were old enough to see how you had been fooled. And I'd never wear such a fashionable gown, that you couldn't climb on my lap whenever the fit took you: or refuse to kiss you for fear you'd ruffle my curls, or my collar, or my temper—not a bit of it! and then you should pay me with your merry laugh, and your little confiding hand slid ever trustingly in mine.

Oh! I tell you, my little pets, Fanny is sick of din, and strife, and envy, and uncharitableness; and I'd rather, by ten thousand, live in a little world full of fresh, guileless, loving little children, than in this great museum full of such *dry, dusty withered hearts.*—*Olive Branch.*

## CHARACTER OF DR. SAMUEL JOHNSON.

Johnson's youth was poor, isolated, hopeless, very miserable. Indeed, it does not seem possible that, in any of the favorablest outward circumstances, Johnson's life could have been other than a painful one. The world might have had more of profitable *work* out of him, or less: but his *effort* against the world's work could never have been a light one. Nature, in return for his nobleness, had said to him, Live in an element of diseased sorrow. Nay, perhaps the sorrow and the nobleness were intimately and even inseparably connected with each other. At all events, poor Johnson had to go about girt with continual hypochondria, physical and spiritual pain, like a Hercules with the burning Nessus' shirt on him, which shoots in on him dull, incurable misery; the Nessus' shirt not to be stripped off, which is his own natural skin! In this manner he had to live. Figure him there with his scrofulous diseases, with his greedy heart, and unspeakable chaos of thoughts; stalking mournful as a stranger in this earth; eagerly devouring what spiritual thing he, could come at; school-languages and other merely grammatical stuff, if there were nothing better! The largest soul that was in all England—and provision made for it of "fourpence-halfpenny a day!" yet giant, invincible soul; a true man's.

One remembers always that story of the shoes at Oxford; the rough, seams faced, raw-boned College Servitor stalking about in winter season, with his shoes worn out; how the charitable Gentleman Commoner secretly places a new pair at his door; and the rawboned Servitor, lifting them, looking at them near, with his dim eyes, with what thoughts—pitches them out of the window! Wet feet, mud, frost, hunger, or what you will; but no beggary; we cannot stand beggary! Rude, stubborn self-help here; a whole world of squalor, rudeness, confused misery and want, yet of nobleness and manfulness withal. It is a type of the man's life, this pitching away of the shoes. An original man; not a second-hand, borrowing, or begging man. Let us stand on our own basis at any rate—on such shoes as we ourselves can get. On frost and mud, if you will, but honestly on that; on the reality and substance which nature gives us, not on the semblance, on the thing she has given another than us!—*Thomas Carlyle.*

## JOHN ERICSSON.

The name of Ericsson now takes rank with Franklin, Fulton, Watt, Morse and other great benefactors of mankind. He is a man of 50 years of age, of a muscular, well developed, and strongly knit frame; he is of middle size, has a firm tread, a person who gives assurance of reserved strength, and a head with all the proper intellectual developments, the high forehead and prominent brow, marking a man of thought and the philosopher; he has a dark complexion, with hair somewhat whitened by time, black eyes, introspective and reflective rather than observing, a decisive mouth, and the mixed temperament, combining the nervous and bilious which distinguishes the powerful in action and steady in endurance. His head rises in a phrenological summit of benevolence; he was heard to remark, the only sign he gave of self-gratulation on his triumph, that he was proud to be the means, through his invention, of saving life.

He was born in Sweden, in 1803. He early showed a taste for mechanics, and at the age of eleven attracted the notice of Count Platen, who obtained for him a cadetship in an engineer corps. He afterwards entered the Swedish army, and was employed in the survey of Northern Sweden. While occupied with his favorite study of mechanics, he projected his *flame engine.*—In 1826, he visited England. While there in 1829, he competed for the prize offered by the Liverpool and Manchester Railway for the best Locomotive, and produced an engine that produced the wonderful speed, at that time, of fifty miles an hour. His propeller, his semi-cylindrical engine, his centrifugal blower, his distance instrument for measuring distances at sea, his hydrostatic gauge, his pyrometer, and other ingenious inventions, have already made the name of Ericsson famous in the scientific world. The Caloric Engine, which has now arrived at the consummation of success, was first brought before the scientific world of London twenty years ago, and was rejected by men of science as an impracticability, and as involving the absurdity of perpetual motion. Faraday, Brunel, and Ure, after a short resistance, finally conceded the practicability of the invention, and Faraday endorsed the caloric engine in these famous lectures of his before the London Institution. Fox, whose name is indentified with the success of the great London Exhibtion, was a pupil of Ericsson.

We are indebted to an entertaining writer in a late No. of the "Literary World," for a portion of the above facts.

"Nothing New Under the Sun."—Two or three years ago some writers were tracing the origin of the idea used by Mr. Calhoun in the words "masterly inactivity," ascribing it to an eminent member of the British Parliament long ago; and from him to some one before him. Perhaps it *first* found expression in the 7th verse of XXXth chapter of Isaiah:—"For the Egyptians shall help in vain, and to no purpose; therefore have I cried concerning this, *their strength is to sit still.*"

There is hardly any bodily blemish which a winning behavior will not conceal, or make tolerable; and there is no external grace which ill-nature or affection will not deform.

In matters of conscience first thoughts are best; in matters of prudence last thoughts are best.

For the Rural New-Yorker.

## THERE'S THE PRINT OF LITTLE FEET

BY MRS. S. WEBSTER LLOYD.

There's the print of little feet
In the snow around my door,
Up, across, and down the street
They have wandered o'er and o'er.
Busy, active little feet,
To and fro they go;
Making tiny graceful foot-prints
In the wintry snow.

Onward in the road of life
These dear feet will tread,
Walking sometimes in earths sunshine—
Sometimes, storms o'er head.
But God grant that wheresoever
They may chance to go,
That they'll wander, never, never,
Mid haunts, vile and low.

Far ahead my thoughts are running,
Where will my boy be,
In life's ever changing drama,
Mingling actively?
And my mother-dreams are telling,
Moves he nobly there,
And my mother-heart is swelling
With hopes high and fair.

But his path is wisely hidden,—
Onward, could I see,
All my fairest dreams might vanish,
Vanish fearfully;
Others just as fondly cherished
Shipwrecked in life's sea,
Have caused brighter hopes to perish
Than I build for thee.

[Written for Moore's Rural New-Yorker.]

## MY THREE FRIENDS.

Each had a dream—a vision of the future, that lay before them. And my bright eyed Kate's was one of beauty—frail, perishing loveliness. Not the music of the birdling—not the quiet melody of the leafy forest—not the glad smile of the ever-changing heavens, beautiful in their rising splendor and their sinking glow, but the "human form divine," though earthly, which soon decays, and passes away, into the silent realms of Death. But the stern words of the "king of terrors," was a lesson she seldom read. No wonder then the way was bright, and her heart gave back the tone of melody that rose from the lips of pleasure. She dreamed not of the "evening twilight of the heart," when

"Life's fairy scenes depart,
As fades the day-beam in the rosy west."

And my sober-minded Helen had a *dream.* But hers was one of *duties*—faithfully and sternly performed. No fairy land to dwell in forever, but the rugged way of *life* in all its sad realities. Not the green earth, and the fair sun-light alone, but the dreary path and the darkened day of trial and sorrow. Nobly has she struggled on thus far; while alas! for the soundless hopes of youth, my merry-hearted Kate, unprepared for the light stroke of affliciton *murmured bitterly* beneath the chastening rod; but sunshine was mingled with the thicker gloom that hung around the footsteps of Helen.

Not the vision of beauty, nor the common walks of life, was the dream that visited the heart of my third friend. The first she over-looked—the last she despised.—But the hill of Science was before her. The temple of Fame shone on the rugged summit, which she had resolved to reach. Press thou forward, for the way is open before thee, and the skies are clear and cloudless above thee. Yet alas!

"The sun of Fame, 'twill gild the name,
But the heart ne'er feels its rays!"

And even now, I know,

"It is a joy to thee,
In this dreary world below,
To be striving earnestly
For the truths that great men know.
To be climbing unknown heights
On the ladder-rounds of mind,
Kindling up the beacon lights
For the followers behind."

Albion, N. Y., 1852. Ellen W.

A Last Look.—There is a feeling that resembles death in the last glance we are ever to bestow on a loved object. The girl you have treasured in your secret heart, as she passes by on her wedding day, it may be, happy and blissful, lifts up her laughing eyes—the symbol of her own light heart—and leaves in that look darkness and desolation for ever. The boy, your father-spirit has clung to like the very light of your existence, waves his hand from the quarter deck, as the gigantic ship bends over the breeze; the tears have dimmed his eyes, for, mark—he moves his fingers over them—and this is a last look.

Female Physicians.—That the medical profession is hereafter to consist of women as well as men, is no longer a matter of doubt in this direction. The preference for females in some departments of practice is becoming so general, we understand, that the few who are educated are overtasked with labor, and incompetent women have been prompted to advertise themselves, and for the want of those better qualified, are employed.—*Boston Journal.*

Each of the cardinal virtues is a brilliant gem in the character, and consistency is the string on which the whole are strung, without consistency a character is like a broken necklace—perfectly valueless.

ROCHESTER, MARCH 12, 1853.

## Gen Pierce's Inaugural.

The Inaugural of President Pierce, published elsewhere in this number, is a document of considerable importance, and will attract commensurate attention. It is worthy of careful perusal—and not alone for its commendable brevity. We admire its manly straight-forwardness, as well as the earnest and sincere spirit which characterizes it throughout. The opening paragraph embraces a touching sentiment, which evidently springs from the heart, while the whole address bespeaks sincerity and honesty of purpose. Those who, like us, are not bound by party ties or prejudices, will find much in it to approve and little worthy of condemation. The President is apparently fully impressed with the responsibility of his position,—its difficulties, dangers and temptations,—and speaks like one determined to discharge his duty faithfully, without consulting the wishes, or heeding the threats or importunities, of mere politicians. Although somewhat "Fillibustering" on the subject of annexation, the sentiments expressed by the President are generally just and patriotic, and will give satisfaction to the great mass of his countrymen.

## "Terra-Culture"—Again.

During the past two weeks we have received, from correspondents, and through the columns of our exchanges, a mass of most convincing evidence condemnatory of the itineraut lecturer's theory of "terra-culture," and the course of its pretended "discoverer." Among others, a gentleman whom the Professor has announced in the papers far and near, as having "produced 125 bushels of corn to the acre by the accidental application of the terra-cultural principle," writes us that the statement is *false*, and was published without his knowledge or consent! The gentleman referred to, avers that there was nothing *new* or *accidental* in the case—for he had cultivated his corn in the same manner for *fifteen* years!—We shall probably soon publish his letter, (giving name, residence, &c.,) and mode of cultivatiou.

According to his verbal and printed statements, the "Professor's" entire time is engaged for weeks or months in advance. If this is *true*, how happens it that he came to this city for the purpose of lecturing on the 3d inst., before a class was formed? He made a great ado in the daily prints, and yet we are credibly informed that there were only *two* persons present who had not heard him before, and but five or six who attended his previous lectures! He declined to "disclose"—and we reckon his invitations, or opportunities, to lecture in Western New York, will hereafter be extremely limited. But, notwithstanding his time is so very precious, he has remained here several days, nearly idle—only making futile attempts to induce the daily papers of this city to publish his incoherent ravings about the Rural and the late A. J. Downing! *We* can bear whatsoever he has to say—(and if he has any argument to offer, will give him an opportunity to speak in our columns, guaranteeing him an audience of a hundred thousand)—but we submit that no *man* who would attack the dead is worthy the name. *Perhaps* his time might be better employed in fulfilling engagements like unto that mentioned in the following paragraph from the last number of the Boston Cultivator:

"Mr. Levi Durand, of Derby, Ct., informs us that in May, 1852, the sum of $50 was raised in that town and forwarded to 'Professor' Russell Comstock,—that being the amount demanded by him to visit that place and lecture on the wonderful science of 'Terra-Culture,' of which he is the originator. But 'Professor' Comstock has not yet found it convenient to visit Derby. We hope the people there will not be inconsolable on account of the non-appearance of the 'Professor.'—Perhaps they have already received as much for their money as it is in his power to give."

P. S. We intended to only *allude* to "terra-culture" this week, but a couple of letters just received, are so brief and pertinent, that we are constrained to give them publicity. They are from intelligent, practical men, who have heard the disclosures. The first is from Mr. Willson of Marcellus, who has tested "terra-culture,"—(see vol. 3, page 330 of the Rural,)—and reads as follows:

Friend Moore:—I wish to impress on the minds of the readers of the Rural—those who have not heard the disclosures of the "terra-culture" system—not to meddle with it. It is throwing away money and time for naught. I have not heard of a man in my neighborhood who has been benefited by it; but there are those who have lost by trying it. One man, Mr. Gilbert, told me he had lost thirty dollars or more by the operation. The Rural of Feb. 26 gives a correct statement of the facts, and I would advise all to read it. Amery Willson.

The other letter is from a gentleman residing in Saratoga county, and says:

"Glad to see you are 'putting it' to Prof. C——, who is certainly the most arrant humbug of modern times. Stick to him until his pretended 'great discovery' is exterminated."

That's just what we propose to do—notwithstanding the *silence* in regard to, or *quasi* endorsement of, the "theory" on the part of certain agricultural journals in the vicinity of our correspondent.

Wilson (Niagara Co.) Collegiate Institute—This institution under the Principalship of Prof. Benj. Wilcox, and an able board of teachers, is prospering as it deserves. The Catalogue of the year ending Dec. 31, 1852, has the names of 381 students. The Spring term commences March 23d, continuing three months.

# Congressional.

### Synopsis of Proceedings.

Monday, Feb. 28.—*Senate.*—The Senate agreed to a number of amendments in the Appropriation bills, among which was one naming $8,000 as the salary of the Vice President and the Cabinet officers. The vote on this amendment was, yeas 36, nays 17. Other amendments were adopted, appropriating $50,000 for a bridge over the Potomac, and $150,000 to supply water to Washington City, with a proviso. Mr. Hunter reported in favor of granting a credit of five years on Railroad Iron imported from and after July next. The payment of a bonus of $6,000 each to five Foreign Ministers, and of an Assistant Secretary of State at a salary of $3,000, were amendments proposed and adopted without opposition.

*House.*—The Deficiency bill was taken up, and the Senate amendment authorizing the President to appoint an Assayer for San Francisco, was rejected. The Seigniorage amendment of the Senate was modified so that the actual cost of executing shall be charged, provided said charge shall not exceed one per cent. The Army bill was taken up in Committee, and the fortification proviso discussed.

Tuesday, March 1.—*Senate.*—Congress, as usual at the heel of the session, is working industriously. The Senate was in session till after midnight.—The Deficiency bill and the Reciprocity question were debated. To the Post Route bill two amendments were made, one raising the salary of Assistant Postmaster General to $3,000, the other to make all Railroads post routes—the bill passed.

*House.*—The Army bill came up again in Committee of the Whole, the question being upon agreeing to the Senate amendments. Those relating to the fortifying of San Francisco and various other of our seaports were non-concurred in. That ordering surveys for a Railroad to the Pacific, was agreed to.

Wednesday, March 2.—*Senate.*—The Indian Appropriation bill was reported back from Committee with, and the Navy bill without, amendments. The Civil and Diplomatic bill was then taken up, and amended so as to admit flax machinery free of duty. Various amendments were rejected, and the bill passed. The House resolution, providing for printing the Census returns was also passed. The Post Office bill passed, and the Army bill, after a conference on the disagreements; also the bill to establish the Territory of Washington.

*House.*—Many of the Senate amendments to the Army bill were concurred in. Among them that appropriating $500,000 for the defeuce of San Francisco, and that for the exploration of a Railroad route to California. The Light-house bill passed. The Civil and Diplomatic bill came from the Senate with 85 manuscript pages of amendments. In Committee of the Whole the amendments to increase the salaries of the Vice President and Secretaries; to appropriate $300,000 to refund duties on goods destroyed by fire in New York; to suspend duties for one year on Railroad iron, were voted down. Amid great confusion, that establishing an Assay Office in New York was adopted.

Thursday, March 3.—*Senate* and *House.*—We give a list of the most important Public Acts passed during the Session:

An Act making further appropriations for the Construction of Roads in the Territory of Minnesota. Approved Jan. 7.

An Act for the Construction of Military Roads in Oregon Territory. Approved Jan. 7.

An Act to amend an Act entitled "an Act to establish the Territorial Government of Oregon. Approved Aug. 14, 1849." Approved Jan. 7.

An Act authorizing certain soldiers in the late war with Great Britain to surrender the bounty lands drawn by them, and to locate others in lieu thereof. Approved Jan. 7.

An Act granting to the Sacketts Harbor and Ellisburg Railroad Company the right of way through the Military Reservations at Sacketts Harbor. Approved Jan. 7.

An Act to surrender to the State of Ohio the unfinished portion of the Cumberland Road in said State. Approved Jan. 20.

An Act making appropriations for the payment of Invalid and other Pensions of the United States for the year ending June 30, 1854. Approved Jan. 20.

An Act to amend an Act entitled "an Act for the discontinuance of the office of Surveyor General in the several Districts so soon as their surveys therein can be completed, for abolishing Land Offices under certain circumstances and for other purposes." Approved Jan. 22.

An Act to erect at the Capitol of the Nation an Equestrian Statue of Washington. Approved Jan. 25.

An Act granting the Right of Way and Public Lands to the States of Arkansas and Missouri, to aid in the construction of a Railroad from a point in the Mississippi, opposite the month of the Ohio river via. Little Rock to the Texas boundary, near Fulton, with branches to Fort Smith and the Mississippi river. Approved Feb. 9.

An Act to provide for the payment of the Companies of Captains Bush, Price and Snalarez, for military service in Florida. Approved Feb. 14.

An Act to authorize the Secretary of the Treasury to issue a register to the American-built steamship Alabatross. Approved Feb. 14.

An Act to amend an Act entitled "an Act to create the office of Surveyor General of the Public Lands of Oregon, and to provide for the survey and to make donations to the settlers of the Public Lands. Approved Feb. 14.

An Act granting the right of way to the St. Louis and Iron Mountain Railroad Company, and for others purposes. Approved Feb. 14.

An Act amendatory of existing laws relative to the half dollar, dime and half dime. Approved Feb. 21.

An Act to regulate the fees and costs to be allowed Clerks, Marshals and Attorneys of the Circuit Courts and District Courts of the United States, and for other purposes. Approved Feb. 26.

An Act to regulate the term of the District Court of the United States for the District of Iowa.

An Act to prevent Frauds upon the Treasury of the United States. Approved Feb. 2.

An Act to continue Half-pay to certain Widows and Orphans. Approved Feb. 3.

Friday, March 4.—Both Houses of Congress continued in session until noon, when the Session expired by constitutional limitation. The Appropriation bills were warmly discussed, and submitted to many Conference Committees, but were finally saved. The House adopted a unanimous vote of thanks to the Speaker, Hon. Linn Boyd who returned his acknowledgments in a neat speech. So the Thirty-Second Congress came to an end.

### Extra Session.

Friday, March 4.—The extra Session of the Senate was called to order by Mr. Cass, the oldest member, and the new Senators were sworn in.—They are as follows:—Messrs. Atherton, of N. H.; Benjamin, of La.; Clayton, of Del.; Douglas, of Ill.; Josias J. Evans, of S. C.; Everett, of Mass.; Houston, of Texas; Hunter, of Va.; Jones, of Iowa; Sebastian, of Ark.; D. E. Stuart, of Mich.; John B. Thompson, of Ky.; John R. Thompson, of N. J.; Robert Toombs, of Ga.; and William Wright, of N. J. Mr. Atchison, of Mo., was unanimously re-chosen President, *pro tem.*

The ceremonies of the Inauguration were attended by the usual display, and passed off satisfactorily. The porcession moved at 12 o'clock, Gen. Pierce and ex-President Fillmore riding side by side in the same carriage. The Diplomatic Corps was present in a body, in full dress, and made a fine appearance. Reaching the Capitol, the procession filed into the Senate Chamber, where the President and President elect took seats in front of the Secretary's table, with the Committee of Aarrangments on the right and left.—The Diplomatic Corps remained outside the Bar, and the Supreme Court Bench sat in ftont of the eastern lobby. The ceremony of the Inauguration took place at the eastern front of the Capitol, where an immense staging had been erected.—Chief Justice Taney administered the oath, and the President proceeded to deliver his Address, which is given below.

## INAUGURAL ADDRESS

OF THE

### President of the U. States, Delivered March 4.

My Countrymen:—It is a relief to feel that no heart but my own can know the personal regret and bitter sorrow, over which I have been borne to a position, so suitable for others, rather than desirable to myself.

The circumstances under which I have been called, for a limited period, to preside over the destinies of the Republic, fill me with a profound sense of responsibility, but with nothing like shrinking apprehension. I repair to the post assigned me, not as to one sought, but in obedience to the unsolicited expression of your will, answerable only for a fearless, faithful and diligent exercise of my best powers.

I ought to be, and am truly grateful, for the rare manifestation of the nation's confidence.—But this, so far from lightening my obligations, only adds to their weight. You have summoned me in my weakness;—you must sustain me by your strength. When looking for the fulfilment of reasonable requirements, you will not be unmindful of the great changes which have occurred even within the last quarter of a century, and the consequent augmentation and complexity of duties imposed in the administration both of your home and foreign affairs.

Whether the elements of inherent force in the Republic have kept pace with its unparalleled progression in territory, population and wealth, has been the subject of earnest thought and discussion on both sides of the ocean.

Less than sixty-three years ago, the Father of his Country made the then recent accession of the important State of North Carolina, to the Constitution of the United States, one of the subjects of his special congratulation.

At that moment, however, when the agitation consequent upon the Revolutionary struggle had hardly subsided—when we were just emerging from the weakness and embarrassment of the Confederation—there was an evident consciousness of vigor equal to the great mission so wisely and bravely fulfilled by our fathers. It was not a presumptuous assurance, but a calm faith springing from a clear view of the sources of power in a government constituted like ours.

It is no paradox to say that although comparatively weak, the new born Nation was intrinsically strong; inconsiderable in population and apparent resources, it was upheld by a broad and intelligent comprehension of right, and an all-prevading purpose to maintain them, stronger than armaments. It came from the furnace of the revolution, tempered to the necessity of the times. The thoughts of the men of that day were as practical as their sentiments were patriotic. They wasted no portion of their energies upon idle and delusive speculations; but, with a firm and fearless step, advanced beyond the governmental landmarks which had hitherto circumscribed the limits of human freedom, and planted their standard where it has stood against dangers which have threatened from abroad, and internal agitation which has, at times, fearfully menaced at home. They have proved themselves equals to the solution of the great problem, to understand which their minds had been illuminated by the dawning lights of the Revolution.

The object sought was not a thing dreamed of. It was a thing realized. They had exhibited not only the power to achieve, but, what all history affirms to be so much more unusual, the capacity to maintain.

The oppressed throughout the world, from that day to the present, have turned their eyes hitherward, not to find these lights extinguished, or to fear lest they should wane, but to be constantly cheered by their steady and increasing radiance. In this, our country has, in my judgment, thus far fulfilled its highest duty to suffering humanity.—It has spoken and will continue to speak not only by its words but by its acts, the language of sympathy, encouragement and hope to those who earnestly listen to tones which pronounce for the largest rational liberty. But, after all, the most animating encouragement and potent appeal for freedom, will be its own history, its trial and its triumphs. Pre-eminently, the power of our advocacy reposes in our example. But no example, be it remembered, can be powerful for lasting good, whatever apparent advantages may be gained, which is not based upon eternal principles of right and justice.

Our fathers decided for themselves, both upon the hour to declare and the hour to strike. They were their own judges of the circumstances under which it became them to pledge to each other their lives, their fortunes and their sacred honor, for the acquisition of the priceless inheritance transmitted to us.

The energy with which that great conflict was opened, under the guidance of a manifest and beneficent Providence—the uncomplaining endurance with which it was prosecuted to its consummation—were only surpassed by the wisdom and patriotic spirit of concession which characterized all the counsels of the early fathers. One of the most impressive evidences of that wisdom, is to be found in the fact, that the actual working of our system has dispelled a degree of solicitude which, at the outset, disturbed bold hearts and far reaching intellects.

The apprehension of dangers from extended Territories, multiplied States, accumulated wealth and augmented population, has proved to be unfounded. The stars upon your banner have become nearly three-fold their original number.—Your densely populated possessions skirt the shores of your two great oceans, and yet this vast increase of people and territory has not only shown itself compatible with the harmonious actions of the States and the Federal Government in their respective constitutional spheres, but has afforded an additional guarantee of the strength and integrity of both.

With an experience thus suggestive and cheering, the policy of my admistration will not be controlled by any timid forebodings of evil, from expansion. Indeed, it is not to be disguised that our attitude as a nation, and our position on the globe, render the acquisition of certain possessions not within our jurisdiction, eminently important for our protection, if not in the future, essential for the preservation of the rights of commerce, and the peace of the world. Should they be obtained, it will be through no grasping spirit, but with a view to obvious national interest and security, and in a manner entirely consistent with the strictest observance of national faith.

We have nothing in our history or position to invite aggression—we have everything to beckon us to the cultivation of peace and amity with all nations. Purposes, therefore, at once just and pacific, will be significantly marked in the conduct of our foreign affairs.

I intend that my administration shall leave no blot upon our fair record, and trust I may safely give the assurance that no act within the legitimate scope of my constitutional control, will be tolerated on the part of any portion of our citizens, which cannot challenge a ready justification before the tribunal of the civilized world.

An administration would be unworthy of confidence at home or respect abroad should it cease to be influenced by the conviction that no apparent advantage can be purchased at a price so dear as that of National wrong or dishonor. It is not your privilege as a nation to speak of a distant past. The striking incidents of your history—replete with instruction, and furnishing abundant grounds for hopeful confidence—are comprised in a period comparatively brief. But if your past is limited, your future is boundless. Its obligations throng the unexplored pathway of advancement, and will be limitless as duration. Hence a sound and comprehensive policy should embrace not less the distant future than the urgent present. The great objects of our pursuit as a people, are best to be attained by peace, and are entirely consistent with the tranquility and interest of the rest of mankind. With the neighboring nations upon our Continent, we should cultivate kindly and fraternal relations. We can desire nothing in regard to them so much as to see them consolidate their strength and pursue the paths of prosperity and happiness. If, in the course of their growth, we should open some new channels of trade, and create additional facilities for friendly intercourse, the benefits realized will be equal and mutual.

Of the complicated European systems of national policy, we have heretofore been independent. From their wars, their tumults and their anxieties, we have been happily almost entirely exempt. While these are confined to the nations which gave them existence, and within their legitimate jurisdiction, they cannot effect us, except as they appeal to our sympathies in the cause of human freedom and universal advancement. But the vast interests of commerce are common to all mankind, and the advantages of trade and international intercourse must always present a noble field for the moral influence of a great people.

With these views firmly and honestly carried out, we have a right to expect and shall, under all circumstances, require prompt reciprocity.

The rights which belong to us, as a nation, are not alone to be regarded, but those which pertain to every citizen in his individual capacity, at home and abroad, must be sacredly maintained, so long as he can discern every star in its place upon that ensign, without wealth to purchase for him preferment, or title to secure for him place. It will be his privilege, and must be his acknowledged right, to stand unabashed even in the presence of princes, with a proud consciousness that he is himself one of a nation of sovereigns, and that he cannot in legitimate pursuit, wander so far from home that the agent whom he shall leave behind in the place which I now occupy, will not see that no rude hand of power or tyranical passion is laid upon him with impunity. He must realize that upon every sea and upon every soil where our enterprise may rightfully seek the protection of our flag, American citizenship is an inviolable panoply for the security of American rights.

And in this connection it can hardly be necessary to reaffirm a principle which should now be regarded as fundamental. The rights, security and repose of this confederacy, reject the idea of interference or colonization on this side of the ocean by any foreign power, beyond present jurisdiction, as utterly inadmissible.

The opportunities of observation furnished by my brief experience as a soldier, confirmed in my own mind the opinion entertained and acted upon by others from the formation of the government, that the maintenance of large standing armies in our country would not only be dangerous but unnecessary.

They also illustrated the importance, I might well say, the absolute necessity, of the military science and practical skill furnished in such an eminent degree by the Institution which has made your army what it is under the discipline and instruction of officers not more distinguished for their solid attainments of gallantry and devotion to the public service, than for unobtrusive bearing and high moral tone. The army as organized must be the nucelus around which, in every time of need, the strength of our military power, and the sure bulwarks of your defence—a national militia—may be readily formed into a well disciplined and efficient organization. And the skill and self devotion of the Navy assure you that you may take the performance of the past as a pledge for the future, and may confidently expect that the flag which has waived its untarnished folds over every sea, will still float in undiminished honor.

But these, like many other subjects, will be appropriately brought at a future time to the attention of the co-ordinate branches of the government, to which I shall always look with profound respect and with trustful confidence, that they will accord to me the aid and support which I shall so much need, and which their experience and wisdom will readily suggest.

In the administration of domestic affairs, you expect a devoted integrity in the public service, and an observance of rigid economy in all departments, so marked as never justly to be questioned. If this reasonable expectation be not realized, I frankly confess that one of your leading hopes is doomed to disappointment, and that my efforts in a very important particular must result in a humiliating failure.

Offices can be properly regarded only in the light of aids for the accomplishment of these objects, and as occupancy can confer no prerogative nor importunate desire for preferment any claim, the public interests imperatively demand that they be considered with sole reference to the duties to be performed. Good citizens may well claim the protection of good laws and the benign influence of good government; but a claim for office is what the people of a Republic should never recognise.

No reasonable man of any party will expect the Administration to be so regardless of its responsibility, and of the obvious elements of success, as to retain persons known to be under the influence of political hostility and partisan prejudice, in position which will require not only severe labor, but cordial co-operation.

Having no implied engagements to ratify—no rewards to bestow—no resentments to remember, and no personal wishes to consult in selections for official station, I shall fulfil this difficult and delicate trust, admitting no motive as worthy, either of my character or position, which does not contemplate an efficient discharge of duty and the best interests of my country. I acknowledge my obligations to the masses of my countrymen, and to them alone. Higher objects than personal aggrandizement gave direction and energy to their exertions, in the late canvass, and they shall not be disappointed. They require at my hands diligence, integrity and capacity wherever there are duties to be performed. Without these qualities in their public servants, more stringent laws for the prevention or punishment of fraud, negligence and peculation will be vain. With them they will be unnecessary. But these are not the only points to which you look for vigilant watchfulness. The dangers of a concentration of all power in the general government of a confederacy so vast as ours, are too obvious to be disregarded. You have a right, therefore, to expect your agents in every department to regard strictly the limits imposed upon them by the Constitution of the United States.

The great scheme of our constitutional libery rests upon a proper distribution of power between the State and Federal authorities. And experience has shown that the harmony and happiness of our people must depend upon a just discrimination between the separate rights and responsibilities of the State, and your common rights and obligations under the general government. And here, in my opinion, are the considerations which should form the true basis of future concord in regard to the questions which have most seriously disturbed public tranquility. If the Federal Government will confine itself to the exercise of powers clearly granted by the Constitution, it can hardly suppose that its action upon any question should endanger the institutions of the State, or interfere with their right to manage matters strictly domestic according to the will of their own people.

In expressing briefly my views upon an important subject which has recently agitated the nation to almost a fearful degree, I am moved by no other impulse than a most earnest desire for the perpetuation of that Union which has made us what we are, showering upon us blessings, and conferring a power and influence which our fathers could hardly have anticipated, even with their most sanguine hopes directed to a far off future. The sentiments I now announce were not unknown before the expression of the voice which called me here. My own position upon this subject was clear and unequivocal upon the record of my words and my acts, and it is only recurred to at this time because silence might perhaps be misconstructed. With the Union, my best and dearest earthly hopes are entwined. Without it, what are we, individually or collectively? What becomes of the noblest field ever opened for the advancement of our race in religion, in government, in the arts, and in all that dignifies and adorns mankind?

From that radiant Constitution which both illumines our own way and points out to struggling nations their course, let but a single star be lost, and if there be not utter darkness, the lustre of the whole is dimmed. Do my countrymen need any assurance that such a catastrophy is not to overtake them while I have the power to stay it? It is with me an earnest and vital belief, that as the Union has been the source, under Providence, of our porsperity to this time, so it is the surest pledge of a continuance of the blessings we have enjoyed, and which we are sacredly bound to transmit undiminished to our children.

The field of calm and free discussion in our country is open, and will always be so, but it never has been and never can be traversed for good in a spirit of sectionalism and uncharitableness. The founders of the Republic dealt with things as they were presented to them, in a spirit of self-sacrificing patriotism, and as time has proved, with a comprehensive wisdom, which it will always be safe for us to consult. Every measure tending to strengthen the fraternal feelings of all the members of our Union, has my heartfelt approbation. To every theory of society or government, whether the offspring of feverish ambition or of morbid enthusiasm, calculated to dissolve the bonds of law and affection which unites us, I shall interpose a ready and stern resistance.

I believe that involuntary servitude, as it exists in distant States of this confederation, is recognized by the Constitution. I believe that it stands like any other admitted right, and the States where it exists are entitled to efficient remedies to enforce the constitutional provision, I hold that the laws of 1850, commonly called "the Compromise measures," are strictly constitutional, and to be unhesitatingly carried into effect. I believe that the constituted authorities of this Republic are bound to regard the rights of the South in this respect as they would view any other legal and constitutional right, and that the laws to enforce them should be respected and obeyed; not with a reluctance encouraged by abstract opinions as to their propriety in a different state of society, but cheerfully and according to the decisions of the tribunal to which their exposition belongs.

Such have been and are my convictions, and upon them I shall act. I fervently hope that the question is at rest, and that no sectional or ambitious or fanatical excitement may again threaten the durability of our Institutions or obscure the light of our prosperity. But let not the foundation of our hope rest upon man's wisdom. It will not be sufficient that sectional prejudices find no place in the public deliberations. It will not be sufficient that the rash councils of human passion are rejected. It must be felt that there is no national security but in the nation's humble, acknowledged dependence upon God and his overruling Providence.

We have been carried in safety through a perilous crisis. Wise councils, like those which gave us the Constitution, prevailed to hold it. Let the period be remembered as an admonition and not as an encouragement in any section of the Union to make experiments where experiments are fraught with such fearful hazard. Let it be impressed upon all hearts that, beautiful as our fabric is, no earthly power or wisdom could ever reunite its broken fargments. Standing as I do almost within view of the green slopes of Monticello, and as it were within reach of the tomb of Washington, with all the cherished memories of the past gathering round me like so many eloquent voices of exhortation from heaven, I can express no better hope for my country than that the kind Providence which smiled upon our fathers may enable their children to preserve the blessings they have inherited.

# Rural New-Yorker.

PUBLISHER'S NOTICES.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is ordered.

☞ ADVERTISEMENTS must be brief, appropriate to the objects of the paper, and accompanied with the cash.

☞ SEE Terms, Premium List, &c., on last page.

ADDITIONS TO CLUBS—Are still in order. Having but few back numbers, agents and others can order additions to Clubs at $1 per copy from 1st of March or April to end of the year and volume New Clubs, or single subscribers, can begin 1st February, March, or at date of subscribing.

---

FIRE ANNIHILATOR TESTED.—A fire occurred in the room over J. H. HAYES Hat store, on State street, in this city, on the 3d instant, which was speedily extinguished by the use of Phillip's Fire Annihilator. When the alarm was sounded, Mr. REYNOLDS, proprietor of Corinthian Hall, observing the flames, sent his man with three Annihilators which are kept for the protection of the hall. It was but the work of a few moments to take the machines up stairs and strike the rod, sending forth volumes of subtle vapor, which instantly pervaded every portion of the room, extinguishing the fire before the engines arrived upon the ground. The experiment was every way satisfactory, and was attended with an expense of some six dollars, as the jars can be again recharged. The damage by fire was some twenty-five dollars — not a tithe of what it would have been had an engine deluged the building with water. The lectures of Dr. BOYNTON, accompanied by experiments, must have satisfied most persons of the utility of the Annihilator for extinguishing indoor fires, but if any thing was wanting to inspire full confidence it has been furnished by its use on this occasion.

---

MELANCHOLY SUICIDE.—On Saturday evening, 5th inst., P. P. THAYER, one of the Aldermen elect, committed suicide by cutting his throat with a razor. He is supposed to have been laboring under something akin to *mania a potu*, induced by the use of opium and ardent spirits. Having been by his desire left alone to obtain some rest, he succeeded, in less than five minutes afterward, in severing the main arteries, and thus terminating his life in a few minutes. The deceased was an unmarried man, aged forty-three years, upright in his dealings, and highly esteemed. He came to this city from Boston, and has been formerly engaged in the grocery business, but at the time of his death kept a drug-store on Buffalo street.

---

ACKNOWLEDGEMENTS.—We are indebted to SIMON BROWN, Esq., Sec'y, for the volume of Transactions of Middlesex Co. Ag. Society, Mass., which we find to contain much valuable information connected with agriculture, horticulture and domestic economy, besides the list of Premiums, and an able address by L. V. BELL, Esq.

We are also under obligations to the same gentleman for the volume of Transactions of the different County Ag Societies of Massachusetts for 1851. Having no State Agricultural Society, the County Societies report to the Secretary of State, who, from those reports, compiles a volume which embraces as much valuable matter as any volume of its size with which we have met. We shall have occasion to consult its pages for the benefit of the readers of the Rural. †

---

LECTURES ON PHRENOLOGY.—Mr. O. S. FOWLER, of New York, is now engaged in delivering a course of lectures upon Phrenology, at Corinthian Hall. We have been present at every lecture of the course thus far, and are much pleased with the subject as presented by the lecturer. Although much is claimed for the science as connected with the organization of the brain, in connection with human physiology, we are pleased to hear the able lecturer succeed so well in sustaining his positions by evidence which will be deemed satisfactory. We are sure the lecturer will bear with us for saying he sometimes lacks suavity of manner and language, though in the main a pleasant speaker. Every body, with their whole family, should go and hear him, as they will be amply repaid by the instruction given. †

# Foreign Intelligence.

## Arrival of the Baltic.

THE Baltic arrived at New York on the 5th inst. with Liverpool dates to Feb. 23d. Among her passengers is that splended orator, known in England for his phillippics against the Catholic Church, Father Gavazzi. The news from England and France will not be found of great interest.—Austria is carrying matters with a high hand in poor Italy. That power is said to have made great sacrifices in order to come to terms with Prussia, and it is further rumored that there is imminent danger of an outbreak between it and Turkey. All these little matters, which form the shadows of events, seem to indicate the breaking of the general peace before a distant day.—*N. Y. Tribune.*

MARKETS.—*Breadstuffs.*—Flour is very dull at 6d to 1s lower. Wheat is in moderate request, at barely previous value. White India Corn is 1s to 2s lower, and becomes plentiful. At the Irish ports there have been considerable quantities of French corn received, cutting off demand from this market. Yellow corn dull.

*Provisions.*—Bacon keeps in steady request; but the expectation of imports from America makes curers more disposed to sell, and prices are, therefore, easier. Cheese is brisk. In beef or pork no change—no arrivals.

---

—— The Bank of England employs 800 clerks, and the salaries rise from £50 to £2,000 a year.

# Legislature of New York.

## Synopsis of Proceedings.

MONDAY, Feb. 23.—*Senate.*—The bill to extend the time for collection of taxes to April 1, was passed. Much time was lost in a discussion upon points of order, generally the most disorderly phase of Legislative proceedings.

*Assembly.*—A resolution was adopted directing the Canal Appraisers to report at once upon claims for damages and awards thereon. The bill to prevent Mock Auction frauds was passed. The Pilot bill was then taken up, and debated for considerable time; after which the House adj.

TUESDAY, March. 1.—*Senate.*—Bills were passed relating to the care and custody of vagrant children in the city of New York, and extending the provisions of the General Steamboat law to Ericsson Engine vessels.

*Assembly.*—Committee of Ways and Means reported three important bills:—To provide for means to pay the State debt and carry on the Government; To secure more just valuation of property; To apply a million per annum to the Erie Enlargement. An interesting debate ensued.

WEDNESDAY, March 2.—*Senate.*—The day was spent in debate on the Union College affairs.

*Assembly.*—Several Committees reported—one in favor of suppressing the traffic in intoxicating drinks. Motion was made to print 10,000 copies, but before deciding, the subject was referred.

THURSDAY, March 3.—*Senate.*—The proceedings of the day were of no general interest.

*Assembly.*—A long debate on a local bill occupied the day.

FRIDAY, March 4.—*Senate.*—Various petitions were presented, and one or two local bills passed

*Assembly.*—Among the bills reported was one abolishing the Military Commutation tax.

FRIDAY, March 4.—*Senate*—The Union College affair occupied the Senate. From a report presented it appears that the receipts of the College, since its foundation, have amounted nearly to $2,791,843; and that its present property amounts to $198,279 94.

*Assembly*—The proceedings present nothing worthy of special remark.

SATURDAY, March 5.—The *Senate* passed the bill to cede certain lands in Brooklyn to the U. S. Government on Saturday, but did little else.

*Assembly*—Several reports were received and their reference, &c., debated.

# News Brevities.

—— It is stated that there are 400,000 Indians west of the Mississippi.

—— The amount of outstanding treasury notes is reduced to barely $120,811.

—— The three wards of Adrian, Mich., show a population of 5,022.

—— The deliveries of tea recently in London, for a week, were 509,518lbs.

—— It is a fact, that 200,000 people daily arrive and quit London by Railroad.

—— Nebraska territory contains 340,000 square miles, with a white population of less than 600.

—— At Nashville, Tenn., on the 23d ult., the heaviest snow fell which has happened for some years.

—— The Buffalo and State Line Railroad declares a dividend of $5 on each share of the capital stock of the company.

—— A ship left New Orleans on the 23d ult., with over 5,000 bales of cotton, valued at $220,000, for St. Petersburg.

—— The Bank of England notes are twenty per cent. discount in Australia. They are hard to dispose of at that rate.

—— The total debt of the United States on the first of January, 1853, was $65,131,692, 13, of which $10,000,000 becomes due in 1868.

—— The East Boston Ornamental Tree Association has caused 225 shade trees to be set out in that city during the past year.

—— A Leyden jar, formerly used by Dr. Franklin in his experiments, and one of a battery of 64, is now owned by J. M. Weightman, of Boston.

—— One dollar bills on Cuyler's Bank, Palmyra, are altered to Fives, by the rascals who are doing a large business in this line with our local money.

—— The Osceola (Mo.) Independent says, the spring emigration to California and Oregon, from all parts of that State will be much larger than last year.

—— It is computed that the population of African descent, in North and South America, is 12,370,000; of the whole number 7,500,000 are slaves and 5,890,000 are free.

—— The Cincinnati Price Current has published its final statement of the number of hogs packed in the West, showing an excess over last year of 481,000.

—— Information is wanted in regard to Oren Frink, of Alexander, Genesee county, N. Y., who left home in October last. He was heard from last at the Navy Yard, Brooklyn.

—— John Hill recovered a verdict of $3,000 against the Rochester and Syracuse Railroad Co., last week, for injuries received in 1850, by collision with a train of cars at West Vienna.

—— The new Empress of France had fifty-eight splended wedding dresses made a few days previous to her marriage. Her pocket handkerchiefs, it is said, cost 2,000 francs apiece.

—— At Green Bay, on the 20th of January Mr. Abraham Place was married to Miss Petaunan-quat-tan-quay. We should say the lady had made a happy change of names.

—— Epes Sargent, the talented editor of the Boston Transcript, has issued his valedictory, having retired from the editorial chair, to devote his time more fully to his literary and other engagements.

---

☞ An unusually large number of females arrive weekly in California. The Placer Times says their influence for good can hardly be estimated. At their presence, the gambling house closes, as though some magic wand had been waved before its doors, and the people are won away from the drinking saloons and houses of dissipation, by an attraction, which, though apparently gentle, is all-powerful. At the incoming of every steamer now-a-days, the dawn of California grows brighter and brighter.

# Market Intelligence.

RURAL NEW-YORKER OFFICE,
Rochester, March 9, 1853.

WEATHER for the past week has been quite unfavorable to business, and our streets have been nearly bare of produce of any kind.

GRAIN.—Very little wheat offering. Millers take choice lots for retail trade. The news by the Baltic rather depresses the market; $1,06@1,10 would be the highest price and no large lot could find sale above the lowest figures.—No change in other grains.

PROVISIONS remain inactive at previous rates. Fresh butter and eggs are not plenty.

SEEDS.—Clover seed appears to be plenty, and retails at $6,50@6,75 for medium, an 50 to 75 cts. higher for large.—Peas are arriving from Canada and find a ready market at fair rates.

In other articles no variation except such as are noted in the table blow.

J. M. A. ESTEY,
167w3* Ogdensburgh, St. Lawrence Co., N. Y.

**CLYDE STALLION FOR SALE.**

THE Subscriber offers for sale the thorough bred horse Young Clyde. He is a beautiful dapple bay, with dark legs, black main and tail,—stands full 17 hands high, with great bone, muscle and action—and is 4 years old this spring.—Was raised in Darlington, Canada West. He was sired by the far-famed horse, Old Clyde; dam the well known bay mare Messenger.

For further particulars as to pedigree, &c., inquire of the subscriber at Hayward Place, or of S. B. GRANT, ½ mile north of the race course, in Irondequoit, near Rochester, where the horse may be seen. If not sold by the 1st of May, a trusty man is wanted to take charge of him, and travel the north part of this county.

167w6* EDWIN S. HAYWARD.
Brighton, near Rochester, N. Y., March, 1853.

**SALE OF NORMAN COLTS.**

THE Subscriber having rented his farm, will offer at Public Auction, on the 24th of this month, on his premises in Union Springs, Cayuga Co., N. Y., the following:—A large 2 year old stud colt, broke to harness; two yearlings,—two spring colts,—one fall colt—a number of farm and breeding mares, mostly in foal by his Norman and Sir Henry horses.

A full blooded French Merino buck; steers, cows, wagons, machinery, harness, &c.

Terms,—Nine months credit, four months without interest. Approved notes only taken.

ROBERT B. HOWLAND.
Third month, 3d. 1853. 167w2

**FARM FOR SALE.**

THE Subscriber offers his valuable farm for sale. Said farm is admirably adapted to raising stock and grain combined, being abundantly watered with durable springs. It is pleasantly situated in Marion, 7 miles north of the Erie Canal, Rochester and Syracuse Railroad, and the village of Palmyra, which is a good market. Contains 170 acres—has a large and commodious stone house, admirably calculated for two families; barn 40 by 60 feet, with additional stables and sheds, horse-barn, corn house, &c. Fruit abundant of all kinds. For further particulars, terms, &c., inquire of the owner on the premises.

B. B. ADAMS.
Marion, Wayne Co., N. Y., Feb. 23, 1853. 167w3*

**SMALL FARM FOR SALE.**

R. M. WALKER will sell his farm of 56 acres of good land, in Austinburg, Ashtabula, Co., O., four miles from the Lake shore Railroad, and 80 rods from Grand River Institute—a Manual Labor School for both sexes. One half improved, the rest in valuable timber,—with three acres of orcharding, carefully grafted, good fences, and a barn only. Price, $25 an acre.

A comfortable residence with abundant shade and fruit trees; a horse-barn, and two acres of beautiful land, close by the Institute, can also be purchased separately. Terms easy. Land for sale low, adjoining said farm.

167w2*

**FARM FOR SALE.**

A SMALL FARM of 43¾ acres, situated in the town of Walworth, Wayne Co., N. Y., one half mile south of Walworth Corners. Has on it a small house and other out buildings convenient for the farm; a young apple orchard of 400 trees, all grafted; also over 200 peach trees and other kinds of fruit, such as cherries, pears, quinces and currants, all just beginning to bear. For further particulars inquire of J. SEBRING, on the premises. 167w2*

**GENESEE CO. FARM FOR SALE.**

THE undersigned offers his Farm for sale. It is situated one and a half miles south-east of the Village of Le Roy,—contains 169 acres, with good buildings, and is well watered. For further particulars inquire of the subscriber on the premises, by mail or otherwise.

BENJ. SHEPARD.
Le Roy, N. Y., March 7, 1853. 167w4*.

**FANNY FERN'S NEW BOOK.**

IN PRESS AND WILL BE SPEEDILY PUBLISHED

FERN LEAVES FROM FANNY'S PORT-FOLIO,
*In One Elegant 12 mo. Volume, Illustrated. Price*, $1,25.

☞ All orders should be addressed to the Publishers,
DERBY & MILLER, Auburn, N. Y.,
Or, DERBY, ORTON & MULLIGAN, Buffalo.
165-3teow.

**AMERICAN ELOQUENCE.**

WILBUR M. HAYWARD having published WEBSTER'S Great Orations, would invite public attention to the same. The volume contains the Eulogy on Adams and Jefferson; the Landing of the pilgrims; the Bunker Hill Monument; and the Reply to Hayne. These productions of America's Master Mind will live and be read forever. The eloquence and example of Webster is a rich and exhaustless legacy, of which every American can feel proud, and for which he should be grateful. The work is embellished with a fine and accurate likeness of the great Statesman and Orator. It should be in the hands, and its sentiments of lofty patriotism on the hearts of all who boast of the American name. It is now for the first time in a form accessible to all. Price—Single copies 37½ cents. 3 copies $1. It can be mailed to all parts of the Union, and Canadas. Readers of the RURAL, send in your orders.

Address, WILBUR M. HAYWARD,
163-tf No. 4, Burns Block, Rochester, N. Y.

A WESTERN FARMERS' PAPER!

**Farmers' Companion & Horticultural Gazette.**

PUBLISHED monthly, in Detroit, Mich., on 16 extra large octavo pages, with numerous superior ENGRAVINGS,—edited by C. FOX and C. BETTS; J. C. HOLMES, Horticultural Editors; LINUS CONE, Corresponding Editor,—is peculiarly devoted to the interests of Western Agriculture and Gardening. The rising interests of STOCK RAISING and WOOL GROWING, will be particularly attended to As the Editors are all practical men, and old residents in the West, they believe they can afford much valuable *practical* information, and assist materially their brother farmers in their business; especially those who have lately immigrated, or intend to do so.

PRICE, ONLY FIFTY CENTS A YEAR.

*** The celebrated Prof. J. F. W. JOHNSTON, F. R. S. L. & E., the great Agricultural Chemist of England, has promised to contribute during the year.

Specimen numbers sent on application. A liberal commission to agents. Advertisements are confined to the cover, so as not to interfere with the reading.

Direct to CHAS. BETTS, Detroit, Mich.

**Erection of Lightning Rods.**

Rochester, July 13, 1852. 133-tf

**Those Premiums.—To Agents and Others.**

MANY friends are already entitled to specific premiums in Books, etc., for obtaining subscribers to our present volume, and we are now forwarding (by express and mail) to those who have designated the works desired. But as several have requested us to publish a list of Agricultural Books, from which they could make a selection, we give below the titles and prices of such as we have recently procured. If any wish books not mentioned in this list, we will furnish them at the regular cash prices.

Johnston's Ag. Chemistry, $1,25; Boussingault's Rural Economy, $1,25; Downing's Fruits and Fruit Trees of America, $1,50; Amer. Fruit Culturist, by Thomas, $1,25; Dictionary of Gardening, by Johnson, $1,25; Farmer's Dictionary, by Gardner, $1,75; Farmer's Every-Day Book, by Blake, $2,50; The Complete Farmer and Gardener, by Fessenden, $1,25; Rural Architecture, by Allen, $1,25; Ladies Companion to the Flower Garden, by Mrs. Loudon, $1,25; American Flower Garden, by Buist, $1,25; American Farm Book, $1; The Kitchen Garden, by Buist, 75c.; Continental Agriculture, by Colman, $1; Scientific Agriculture, by Rodgers, $1; American Lady's System of Cookery, by Mrs. Crowen, $1,25.

Youatt on the Horse, by Randall, $1.50; Youatt and Martin on Cattle, by Stevens, $1,25; Randall's Sheep Husbandry, $1,25; Morrell's American Shepherd, $1; Canfield on Sheep, $1; Youatt on Sheep, 75 cts.; The Pig, by Youatt, 75 cts.; Clater and Youatt's Cattle Doctor, by Skinner, 50 cts.; American Veterinarian, by Cole, 50c.; The Dairyman's Manual, $1; Browne's Poultry Book, $1; Bennett's do., $1; Bee-Keepers Manual, $1; Townly on Bees, 38c.

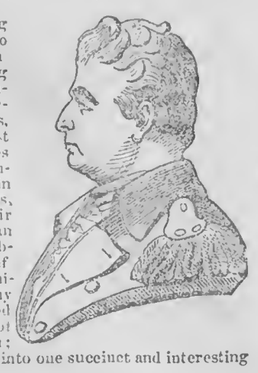
☞ The above works are all well bound, in muslin or leather, and mostly of late editions and finely illustrated.

The following works are bound in paper, pamphlet style, and furnished at 25 cents each:—Elements of Agriculture; Dana's Essay on Manures; Every Lady her own Flower Gardener; The American Kitchen Gardener; Amer. Bird Fancier; Amer. Rose Culturist; Pests of the Farm; The Horse; The Cow; The Hog; Domestic Fowls and Ornamental Poultry; The Hive and the Honey Bee.

We shall pre-pay the postage on books sent as premiums. Though this is more than was promised, we presume none of our friends will object!

**ETHAN ALLEN**
AND THE
**GREEN-MOUNTAIN HEROES**
OF '76.

By HENRY W. DE PEY, author of "Louis Napoleon and his Times," "Kossuth, &c."—128 pages 12mo. with a steel engraving of Kinney's Heroic Statue of Gen. Ethan Allen, a Map showing the route of Gen. Burgoyne, previous to his surrender at Saratoga, Oct. 17th, 1777, and a view of Old Ticonderoga



This book, full of thrilling interest, should be in the hands of every American Independent of its being historically valuable, it contains many accounts of hair-breadth escapes, hardships, and sufferings, almost past belief, and of bloody battles where the heroic Green-Mountain Boys fought in the defense of their homes, their children, and their wives. Although Ethan Allen is the principal subject of the work, brief historical and biographical reminiscences of many others, who are identified with the early history of New England, are given; thus weaving all together into one succinct and interesting historical narrative.

AGENTS WANTED.—This work affords a rare opportunity for Agents, and others, wishing to engage in a light and profitable business, as a liberal percentage will be allowed to all persons canvassing for the work.

Single copies, done up in substantial wrappers and delivered free of postage to any post-office in the United States, will be furnished for $1.25.

Address, *post-paid*, BEADLE & BROTHER,
*Buffalo, N. Y.*
165w6.

163-tf J. RAPALJE & CO.

**NEW VARIETY OF SWEET CORN.**

MESSRS. HOVEY & CO., No. 7, Merchants Row, Boston, would respectfully inform their friends and the public, that they have purchased the entire stock of the OLD COLONY SWEET CORN, raised by the Rev. A. R. Pope, and described by him in the Magazine of Horticulture, Volume 14 page 529.

It is a true hybrid and the most remarkable variety ever produced. It was raised in 1847, from the Southern White Corn, impregnated with the early Sweet Corn of New England. The ears are of remarkable size, containing sixteen, eighteen or twenty, and sometimes twenty-four rows each. In its productiveness it is unsurpassed, a single stock planted after the middle of June, producing six ears. It is the richest, sweetest and most delicious corn known. An analysis of it, and several other sorts, by Dr. C. T. Jackson, shows that it is more abundant in saccharine matter than any other variety, its composition being "dextrine, sugar, and phosphates," while the common varieties contain considerable "oil and gluten."

It has been exhibited before the Massachusetts Horticultural Society for three years, and has not only received the commendation of the Society, but has been awarded the following prizes:

1850. For a new variety of Sweet Corn..... $2,00
1851. For a *new* variety of Sweet Corn, called the Old Colony..... 8,00
For superior specimens of the Old Colony Sweet Corn, Silver Medal..... 5.00
1852. For fine specimens of Old Colony Sweet Corn,. 2,00

The Committee on Vegetables, of the Massachusetts Horticultural Society, in their Report for 1852, remark, "That the Old Colony Sweet Corn, raised by Mr. Pope, we recommend as worthy of cultivation by all"

The Old Colony Sweet Corn, though not as early as the Common Sweet, is sufficiently so to produce a perfect crop in New England. Two sowings, one in May and the other in June, will supply the table from July until frost. All who have eaten it, pronounce it the most luscious variety, and an invaluable addition to our esculent vegetables.

☞ Single ears, 25 cents each. The trade supplied on reasonable terms. 163w4

**FARMERS, LOOK HERE!**
**The Great Difficulty Surmounted.**

T. S. STEADMAN'S CLOVER AND GRASS-SEED REAPER.

IT has long been a question among Farmers why there could not be a machine constructed for the purpose of gathering Clover seed, that should gather the heads only, and leave the stalks upon the ground where they should be, thereby saving a vast amount of labor and time in transporting the stalks to the barn and out again to the field for manuring purposes.

The subscriber would respectfully announce to the farming community that *he has* removed all the obstacles which have hitherto prevented a machine of this kind from doing the work satisfactorily, and now offers his Reaper to the public, in the firm belief that it will give entire satisfaction. The machine will gather from eight to ten acres daily, gathering only the heads, and doing it in the finest order. Only one horse is used—moving it with perfect ease through the stoutest clover.

For farther testimonials in regard to my Machine, I would respectfully refer you to the following gentlemen: Hiram Frisbie, Holley; L. J. Waters, Buffalo; Wm. Hatch, Holley; Sylvester King, do.; Martin G. King, do. John Berry, do.; Nelson Hatch, do.

T. S. STEADMAN,
Holley, Orleans Co., N. Y. 153-4t-lam*

**Important to Farmers**
**PORTABLE MILL.**

[From the Ohio Farmer, December 2, 1852.]

ROSS' IMPROVED PATENT CONICAL BURR MILL STONES.—Our readers will many of them remember that Ross' Portable Burr Stone Mill took the First Premium at the Annual State Fair, held in this city a few weeks since.—This admirable invention must commend itself to every one who has witnessed its operation. In the first place it is easily portable, simple in structure, does not easily get out of order, and does its work with great rapidity and perfection. It may be used for grinding the coarsest food for cattle, or the finest meal for family use. It is also well adapted for grinding wheat, rye or buckwheat. It is indeed a perfect grist mill in miniature, and we would advise every farmer, if possible, to procure one. The expense of one of these mills, with the apparatus for horse power, can not be very great; or a number of farmers might club together and procure one, which would be sufficient for all.

Mr. Ross is, we believe, a resident of Rochester, N. Y.

N. B.—Any further information relative to the Conical Mill can be obtained by letter, post-paid, or by calling at the factory of CHARLES ROSS,
2d story Phenix Building, Aqueduct-st.,
154-tf opposite the Arcade, Rochester, N. Y.

**FARM FOR SALE IN MACEDON.**

A FERTILE Farm, under a high state of cultivation, situated 1½ miles from Macedon Centre, where a flourishing Academy is located; one mile from the Syracuse and Rochester Railroad, and two miles from Macedon locks, on the Erie canal. Seventy-five acres are under cultivation, and twenty-five covered with a heavy growth of valuable timber. The farm is watered by permanent springs,—has good orchards of the best varieties of apples, pears, peaches, &c.,—and comfortable and commodious buildings. It will be sold for $45 per acre. Inquire of J. B. SANDS, Canandaigua, or on the he premises, of L. TAFT.
Macedon, N. Y., Jan. 29, 1853. 163-3t-eow*

## GOOD NIGHT AND PLEASANT DREAMS.

BY ANSON G. CHESTER.

When on its couch of rosy clouds
The burning sun has sunk to rest,
And, tired with song, the woodland bird
Is rocking in its leafy nest,—
When evening lays its misty palm
On dewy flowers and silver streams,
How sweet to hear, from lips we love,
"Good night, good night and pleasant dreams."

O, bitter is the pilgrim's fate
Who wanders from his peaceful cot,
No tender wish and gentle word
Rebuke the sadness of his lot:
No wish! no word! the blesed wind,
The prayerful leaves, the hallowed beams—
God's chosen voices—breathe for him,
"Good night, good night and pleasant dreams."

[*Morning Express.*

# Rural Sketch Book.

## "I SHALL BE A FARMER'S WIFE."

BY CHARLIE CHESTNUT.

"O you eaves-dropper!"

"Beg your pardon, Mary, but I am not guilty of *that*."

"Now tell me, Warren, haven't you been hearing what we girls have been talking about?"

"Yes, I heard *something*, but let me premise that I was not eaves-dropping—but as I stepped on the piazza here, unconcious that I was in the vicinity of such a party, I stopped to examine this beautiful plant, and heard some one say, *she* never should marry a farmer—and another, 'I shall be a farmer's wife!'"

"Well, was that *all* you heard?"

"That was enough to interest me, you know, Mary, since I am to be a farmer, and of necessity will want a wife, and one of the right stamp, too—one not above the business—but *who were* those who were deciding upon their future? I am interested to know, and I may make you my informant, since you are disposed of, so much to the dismay of all our hearts."

"Warren!" said the maiden, blushing.—But let me introduce them.

Warren A—— was a young man of good character, education, family, &c.—a young farmer, and a favorite among those with whom he mingled—possessor of a beautiful farm, but without a helpmeet. Mary G—— was a pious, warm-hearted girl—one of those who can keep a secret for each of her friends, and one whose hand had been sought for by many of the young men of her acquaintance, but only *one* had obtained possession of her heart—of him we are not to speak. Warren A—— and Mary G—— had always been friends, intimate friends, from childhood, and had perfect confidence in each other. The gossips all said they were engaged, but it proved otherwise, and the gossips were at fault. Mary G. was a girl that could be *trusted*, however, and Warren knew it.

A company of girls are spending the afternoon with Mary G. and her sister, and from among the company, I wish the reader to make the acquaintance of two—one, a blue eyed, laughing girl, called a beauty—admired and flirted with by most of the young beaux—open-hearted to a fault—on the whole, a good-hearted girl—so called at least, yet known to many of her friends, as fickle-minded, ignorant and indolent—a farmer's daughter, whose *mother* done the work, and she—did'nt. But she had a peculiar winning way, and many were attracted and thought they loved, but a careful study of her character soon convinced them she was not the woman "for their money." Warren A. was one of those, and had tho't of making her his wife, (if *she* agreed, of course,) but a faithful study of himself, his opinions and inclinations, with those of the fair, thoughtless girl, had brought him to the conclusion that it would not answer.—Mind as well as form—worth as well as beauty—a *true* and affectionate heart, were necessary to constitute his "ideal of perfection," and though he once thought he loved her, yet a "vision lately floated by," which had disporsed all the tender memories of Ellen R——. It was *she*, who "would never marry a farmer."

That "vision" was the form of a beautiful, golden-haired girl, with eyes liquid with mirth, mingled with truth and affection.—She was beautiful, and no more beautiful than truthful; no coquetry—no heartlessness, but true unaffected simplicity—not the simplicity of ignorance, but the simplicity of honesty—always joyous, happy, and trying to make all happy around her. Such was Lois S——, she who "would be a farmer's wife."

Warren had but recently become acquainted with her, as her father had lately arrived in the vicinity with his family; but there appeared to be a something, (young men and women, guess what,) which fixed his attention on those eyes, and caused a throbbing in his bosom when they were turned upon him, and instantly withdrawn, with a blush on those fair cheeks, at the earnestness of his gaze.

Reader, you have an introduction—let us return to Mary and Warren.

"Mary," said Warren, "let your sisters entertain their company, while you entertain *yours*, and walk with me. I have a desire to talk with you." He drew Mary's arm within his, as he said this, and though she was about declining, said he, "I will make it all right with—; you need not fear."

Mary blushed again and said, "I feel assured you will, Warren, but it must be only a *short* walk, and what you have to say must be said briefly, as there is no excuse for me to make to the girls for absence."

They had left the yard, and were walking under a row of large maples.

"Mary, you are my friend—I claim you as such—you always have been—yes, a sister to me. Now, as I have no other sister, I may confide in you as a brother. You are not like the greater portion of women or girls, for very few can, or do, at least, keep a secret, but *you* can."

"Enough, flatterer! I will be your friend as I always have been, and your sister if you wish; but stop this useless talk—*think* what you please, but dont tell *me* my virtues—rather my faults."

"Well, Mary, the truth is, you are a good girl, and I am going to ask your opinion and advice. First, what is your opinion of Ellen R——?"

"My opinion of Ellen R.! Why you, who have known her from her infancy—who have been her school-mate for years—you, who have the reputation of being a good judge of character, asking me my opinion of Ellen R.! Is her character so enigmatical, Warren? You have studied it I am sure."

"Yes, Mary, I have studied it, but perhaps I have been prejudiced or blinded.—She is pleasant company, open-hearted, affectionate, and would it startle you should I tell you I am to be married to her soon?"

"*You* marry Ellen R.! Why Warren! I thought, but"——

"But *what*, Mary?"

"But I shall not tell *what* I thought."

"*Now*, perhaps, you will give your opinion yet?"

"No, indeed, I shall give no opinion if you are engaged."

"Will you, if I am not engaged?"

"Yes, if you desire it."

"I *do*, then, and am *not* engaged."

"Warren, I shall speak plainly—you are worthy of a better girl than Ellen. Altho' you are not a professed christian, you should seek a christian companion—one who has principle, a mind, a truthful and affectionate heart. I am not flattering you when I say you are worthy of it—beside, you know what she said, this hour in your hearing—she never would marry a farmer, tho' I suppose, and others with me thought, that she never would have said so, had she not been convinced by your actions of late, that if she did, it would not be you."

"My actions! Mary?"

"Yes, Warren; you may not have acknowledged it even to yourself, but still"—

"Still what?"

"No more of this Warren; let us return as you now have my opinion and advice."

"But I am not through; your opinion of Lois S——?"

"Warren! why did you ask?—not because she said she should marry a farmer, was it?"

"No, Mary, I did not think of that, but your opinion?"

"Lois S. is a christian—a warm-hearted, truthful and generous girl—the opposite of Ellen, in almost every respect. *I* should be proud of you, Warren, were you to secure such a prize for a wife; but *you* are to win her; believe me, she is unconscious of your being attracted, though it is plain to all observers. You have my best wishes; and now, Warren, open your heart, and—but here are the girls on their way home."

"O you truant, Mary!" exclaimed Lois S., as she, in company with Ellen R., met Mary at the gate. "Where have you been?"

"I teased her to walk with me," said Warren, as he stepped from behind a large maple.

"O excuse me, Mr. A., and Mary too; I did not know you had company."

"O, dear, she has been walking out with Warren—*that's great!*" said Ellen R.

"Call me *Warren*, Miss S., as that is the name I am known by in this little society, and it is a better name than Mr. A.—at least more convenient,—is it not, Mary?"

"I think so," answered Mary.

"I will then, if you will call me, Lois."

"I'll do it," said Warren. "And now Mary, you will excuse me, and I will, with *their* permission, accompany Ellen and Miss—excuse me,—*Lois* home."

"Yes, sir, you may accompany *me*," said Ellen, who had already hold of his arm.

He soon had the fair Lois' arm within his own, and they were shortly at Ellen's home. Bidding Ellen "good evening," they passed on in silence—strange, there was nothing they could converse about, was'nt it? I have read somewhere, that "still waters run deepest." At last, to break the embarrassing silence, (for it must have been embarrassing.) Warren asked how she had enjoyed the afternoon visit at Mr. G.'s.

"O, very well indeed, though I missed Mary long before I came away. She is a good girl, Mr. A.—Warren, I mean."

"Had I known it would have caused you an unenjoyed moment, I should not have asked her to walk."

"O, no! I enjoyed every moment, only we hunted for her. She was not to blame for choosing better company than us girls."

"Do *you* think it was better company, Lois?"

"I am no judge, but I presume *she* tho't so, or she would not have left us, and she is an acknowledged judge, you know; *I* judge from that."

"Well, I think Mary is a good judge, and—but—"

There was something choked Warren, then, or he would have finished the sentence, for it was in his *heart* to do it; but he stopped suddenly, embarrassed.

Lois noticed it, and said, "I did not know there were any *buts* to be found in Mary G.'s character or actions, Warren."

"Excuse me, so there is not," said Warren. They had reached the yard, passed the gate, and stopped at the door—Warren in a reverie—pleasant of course—and Lois looking at him with an inquiring, embarrassed air, wondering why he was so suddenly made silent and stupid—so perfectly opposite any thing she had previously seen in his actions—before so gay, companionable, and unembarrassed. (Do you suppose she couldn't guess?)

"Wont you walk in, Mr. A.—Warren I mean?" asked Lois, as he looked up.

Warren made an excuse, bade her good evening, and departed as if in a dream. He passed mechanically along, and at last ejaculated, half aloud, "So beautiful! *earnest*—and those eyes! What a sweet good night! *She* will be a farmer's wife, and—"

"And *you* are to blame if you don't make her *yours*," exclaimed a voice near.

Warren looked up, astonished.

"O *you* eaves-dropper!"

"No," said Mary, laughing, "I am no eaves-dropper, more than yourself, but you should not soliloquise so loudly."

"Well," said Warren, "I should not, but I am in the midst of friends."

"Well, Warren, have you confessed, proposed, and been accepted?—for it is my turn now."

"No, indeed, I have not, and have not concluded as it is best yet," (for Warren was one of your cautious fellows.)

"O stupidity! don't you know that you love the best girl in ———, and that *she* loves—"

"Who?" gasped Warren.

"Why, you, of course."

"Well, I have yet to learn *that*," said Warren, appearing relieved, "but has she ever *told* you so?"

"Told *me* so! then you believe I cannot keep a secret, do you? Do you think she instructed me to tell you she loved you?"

"O no, of course not," said Warren, abstractedly."

"Warren," said Mary, "you *love* that fair Lois S., and you may as well acknowledge it to yourself, and to—"

"Well, Mary—sister—dear," said he, grasping her hand, I rather think she shall have an opportunity to become *a farmer's wife!*"

---

In the parish of ———, near the —— church, in the beautiful village of M—, may be seen a neat little cottage, where may be found the pastor of the parish, with his beloved wife—beloved by all who know her—Mary G., she that *was*.

Across the fields yonder, through those trees, and that shrubbery, you catch a glimpse of a beautiful modern cottage—a Rural home—where you will find Deacon Warren A., and—he is a farmer, and has a "farmer's wife."

I would be spared the rest, but I must finish!

Do you see that wretch—a victim of the *rum demon?*—see him totter from that earthly *hell*—the dram-shop—(for there is one, in the same village which contains the happy pastor and his wife, Mary,)—he totters, and reels, and staggers towards a miserable, neglected, and dilapidated house; he enters!—there to meet, surrounded by shrinking, filthy, crying, half-starved children, the once beautiful and thoughtless Ellen R.! Attracted by a gay, dashing and showy exterior, she married,—a costly and brilliant wedding—splendid mansion, extravagantly furnished—the novelty of a fashionable life—husband, clerk in an extensive establishment in the city—Ellen thought herself happy. She had not married a farmer, but—a *Gambler!*

Reader, young man, maiden, *take heed!*

# Wit and Humor.

## GREAT REMEDY.—EXTRACT OF PEA NUTS.

A DAY or two ago we cut a hole in the Carpet Bag and took out this; and persons who take patent medicines will please notice:

The Great American Remedy! Hope for the afflicted! Let invalids rejoice!—The greatest discovery of the age! *The genuine extract of Pea Nuts!* Recommended in all cases by members of the faculty and members of the no faculty at all.—Prepared by Nostrum, Gull & Co. Invented by Esculpapius Quackenboss, M. D., D. D., L. L. D., an honorary member of the H. U. M. Society of B. U. G. $5 per bottle—5 bottles for $25. Cures invariably the following list of diseases, each in from 30 to 45 seconds. Guittar in the head, Scoffs and Scolds, Brown creaters, and Subjunction in the last stage coaches. Slick headache and Sheep's headache. Catches in the side and other violent cachinations. Chronic Rheumatism and all other 'isms. Diary and the worst cases of (linen) collary. These and ten thousand other diseases yield to its healing propensities. A thick folio volume of evidence in its favor will appear shortly.—Subscribers solicited.

---

A LADIES' ORTHOGRAPHY.—The following "character" was supplied to a house-maid in an English city by her mistress:—"The barer, Mrs.——, is of great rispektabilety and is amost exlant dumystick in a confident kapacity. She has lived ate years in her last plice, and has a hunimpichable carreter. She is pirfect sober, and never drinks nothing but what does her good. Will be fund a grate acvsition to a single jintleman, or would shute a weddower. The lady who she lives with givs her this carreter, and never would pearted with her, but she goes to osstrailye."

---

HOW TO MAKE A HEN LAY.—Tie a stout string round the body, and lay the bird upon its side on a board, and fasten the string underneath. You can put a pillow under its head if you wish. Hens secured in this manner will lay for any desired length of time.

---

CURIOUS.—Looking over other people's affairs, and overlooking your own.

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

## MISCELLANEOUS ENIGMA.

I am composed of 25 letters.
My 1, 7, 11, 22, 15 is often a great scoundrel.
My 9, 20, 3 is the definite article.
My 13, 11, 16 is what few wish to receive.
My 23, 24, 25, 4 often trouble travelers.
My 2, 3, 12, 3, 18 is the name of a lady.
My 13, 10, 22 will trip one's heels.
So will my 19, 8, 13.
My 4, 5, 6, 7, 8, 9 cannot be seen.
Add thereto my 4, and it can be tasted.
My last six aptly describe my whole.
My 1, 13, 21, 22, 15, 4 will often be heard at the card table.
My 4, 16, 8, 9, 21, 14, 12 is what we all should be.
My 12, 8, 11, 7 is not to be behind.
My 2, 10, 18, 9, 3, 7 loves my 19, 14, 22 3.
My 25, 10, 3, 4, 4, 8, 18, 19 is what you are now doing.
My 5, 3, 14, 13 is a delicious fruit.
My 7, 6, 18, 19 is an emblem of eternity.
My 4, 5, 8, 13, 3 adorns a church edifice.
My whole has made quite a stir in the United States.

## CHARADE.

My first we all would be glad to own,
And something we never can move alone,
My second, in England, holds my first;
My whole is a person that often is cursed.

Poolville, N. Y.

☞Answer next week.

## ANSWER TO ENIGMA, &c., IN NO. 10.

Answer to Geographical Enigma—*Uncle Tom's Cabin.*

Answer to Arithmetical Question—Two 1 cent pieces, one 3 cent piece, one 5 cent piece, and a 10 cent piece.

Answer to Charade—*Fox-glove.*

## TO AGENTS AND OTHERS.

ENCOURAGED by the brilliant success which has thus far attended the publication of MOORE'S RURAL NEW-YORKER, the Proprietor has resolved to make still greater efforts to furnish *the best and cheapest Agricultural, Literary and Family Newspaper in America.* And he is likewise disposed to remunerate, as far as possible, all Post-Masters and others, who may aid in augmenting the circulation and usefulness of the paper. Former agents and friends are aware that he was the first agricultural publisher who offered prizes for subscribers—and he now signifies [see evidence below] a determination to *keep in advance* of all imitators and competitors, by offering the *most liberal and valuable* PREMIUMS. But, satisfied with offering greater inducements than any other publisher, he dispenses with all circumlution, and invites your attention to the following list of

### SPLENDID PREMIUMS!

To the person or persons who shall send us the greatest number of yearly subscribers to the RURAL NEW-YORKER from any one town in *the State of New York*, IN PROPORTION TO ITS POPULATION, (according to the U. S. census of 1850,) previous to the 1st of May, 1853, forwarding payment according to our terms, WE WILL SEND THE NUMBER OF COPIES SO ORDERED, ANOTHER YEAR, FREE OF CHARGE!

For the largest number of yearly subscribers from any town *out of the State of New York*, on like conditions, we will send the paper another year, as above specified, FREE.

### GRAND PRIZES!

1st. FIFTY DOLLARS, IN CASH, to the person who shall send us the greatest number of yearly subscribers, (six month subscriptions to be counted proportionably,) according to our terms, previous to the 1st of May, 1853.

2d. THIRTY DOLLARS, in BOOKS or AGRICULTURAL IMPLEMENTS, to the person who shall send us the second greatest number, as above.

3d. TWENTY DOLLARS, in Books or Implements, to the person sending the next (third) greatest number.

4th. FIFTEEN DOLLARS, in Books or Implements, to the person sending the next (fourth) greatest number.

5th. TWELVE DOLLARS, in Books, to the person sending the next (fifth) greatest number.

6th. EIGHT DOLLARS, in Books, to the person sending the next (sixth) greatest number.

7th. FIVE DOLLARS, in Books, to the person sending the next (seventh) greatest number.

☞ Persons competing for premiums should give us notice to that effect in the letter containing first remittance.

[In order to give Subscribers, Local Agents and Post-masters, a fair and equal chance, traveling agents, post-riders and citizens of Rochester are excluded from competion for any of the above Premiums.]

### SPECIFIC PREMIUMS!

In order to reach and reward *every one* who may lend a portion of influence in support of the RURAL NEW-YORKER, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities:

1st. FIVE DOLLARS, in CASH, or a copy of WEBSTER'S UNABRIDGED DICTIONARY, (or $6 in Ag'l. Books,) to *every person* sending payment for FIFTY or more yearly copies (six month subscriptions proportionably,) according to our terms, previous to the 1st of May next.

2d. FIVE DOLLARS, in Books, or four extra copies of the RURAL, to every person remitting payment for FORTY or more subscribers as above.

3d. THREE DOLLARS in Books, or a handsomely bound volume of the RURAL for 1852, to every person remitting payment for THIRTY subscribers.

4th. To every one remitting payment for TWENTY copies, we will give an extra copy of the RURAL, and four (the present and three past) volumes of THE WOOL GROWER AND STOCK REGISTER—or, if preferred, an extra copy of the RURAL and $1,50 in books.

5th. To every one remitting for TEN copies, an extra copy of the RURAL and three volumes (past or present) of the WOOL GROWER—or, instead of vols. W. G., $1 in books.

6th. To every one remitting for SIX copies, an extra copy of the RURAL and either volume of Wool Grower.

7th. To every one remitting for THREE copies ($5,) either volume of the Wool Grower, *and* a bound volume of Gen. Farmer for 1848 *or* '49.

8th. To every person remitting for ONE copy, ($2,) we will give a copy of either vol. Wool Grower, *or* the Farmer for '48 or '9, as preferred.

All competitors for Premiums are expected to adhere trictly to the following

### TERMS,—IN ADVANCE:

TWO DOLLARS A YEAR. Three Copies, one year, for $5—Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Six month subscriptions in proportion. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different post offices if desired.

Friends of the RURAL and its objects! will you not respond to these offers in a spirit of liberality such as is therein manifested? The premiums are certainly worth contending for by Subscribers, Agents, Post-Masters, and all others who desire to benefit themselves and community.

☞ Specimen numbers, &c., furnished free to all disposed to compete for the Premiums, or who desire to extend the circulation of the NEW-YORKER. Subscription money properly enclosed, may be mailed at our risk.

Address D. D. T. MOORE,
Rochester, N. Y.

MOORE'S RURAL NEW-YORKER is one of the very best family journals with which we are acquainted. Its mechanical execution, its illustrations, and the arrangement of its contents are complete. The character of its editorials, communications, &c., are of the highest order. It must obtain a wide circulation.—*Louisville Journal.*

The RURAL NEW-YORKER, we say again, is as interesting and useful a paper as can be found in the State or Union. This is no puff, but our real sentiments, and expressed because justly demanded.—*Sackett's Harbor Gazette.*

## MOORE'S RURAL NEW-YORKER:

A WEEKLY HOME JOURNAL,

## For both Country and Town Residents.

### TERMS, IN ADVANCE:

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies, one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

### Terms of Advertising:

ONE DOLLAR per square (ten lines—100 words, or less,) for the first insertion, and 50 cents for each subsequent publication,—*in advance.* ☞ The circulation of the RURAL NEW-YORKER is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brie advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

## THE WOOL GROWER AND STOCK REGISTER.

THIS is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the WOOL and CATTLE MARKETS, and much other *useful* and *reliable* information which can be obtained from no other source. The Fourth Volume commenced in July.

TERMS:—FIFTY CENTS A YEAR; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

**MOORE'S RURAL NEW-YORKER:**

A QUARTO WEEKLY

Agricultural, Literary and Family Newspaper

CONDUCTED BY D. D. T. MOORE,

WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page.

## Progress and Improvement.

### LIME APPLIED TO SOILS.

MUCH has been written upon the use of lime for agricultural purposes, and it is generally conceded that to a certain extent, it is beneficial upon most soils, but of more value upon some than upon others. Its application has not been sufficiently well understood to enable farmers to adopt, with a certainty of success, any given quantity, as the amount used differs widely in different localities.

Lime may be applied in three different ways; directly to the land, or indirectly as a portion of the compost heap, and in other forms with manure. It may be applied as a carbonate of lime, by breaking or grinding the stone and strewing it plentifully over the field. In this form its value is prolonged for many years; its action being that of a mild calcareous earth. It is by the *debris* of lime-stone rocks, by the action of frost, and from other causes that our best calcareous soils are formed. The duration and effect of the lime will be in proportion to its purity—that having least alloy being most readily available, and longest showing its good effects. As a gradual improver of the soil, the lime-stone is found to be of more value than when used in the form of quick-lime.

The operation of burning expels the carbon by the agency of heat. In its natural state the stone possesses little active property, and can only enrich the soil as it crumbles to pieces through the action of the elements. When it has been burned its substance and character are changed, it becomes caustic to the tongue, and possesses the power of speedily decomposing most vegetable and animal bodies. Applied in this form, instead of being a fertilizer, affording nutriment to growing plants, it would, if long continued, burn them up, or effectually destroy the germ of the seed or the plant. This caustic power is lost by exposure to the atmosphere or by the application of water, by which it is reconverted into a substance nearly resembling that from which it was obtained, only rendered more soft, porous, and in most of its properties resembling chalk. For agricultural purposes it has been found best, instead of slacking lime by the application of water, to make it into small heaps of about a bushel each, which should be covered with fresh soil made very fine, a few inches in thickness, smoothed down by blows with the back of the spade, excluding either air or rain. In a few days it will be slacked, ready to spread upon the surface. After spreading it should be plowed in immediately, rather shallow, and harrowed down. Its immediate application while in a partially caustic state, renders a smaller quantity necessary as it is spread more thoroughly, and better incorporated with the soil, than when suffered to become moist, causing it to clod up, preventing its division and free incorporation with the soil upon which it has been strewed.

Limestone, in its natural state, differs very much in its purity, also in the different ingredients of which the stone is composed. Lime from the North River shows, by analysis in an unslacked state, the following composition:

| | |
|---|---|
| Water | 17.70 |
| Lime, as quick-lime | 37.30 |
| Magnesia | 21.20 |
| Sand, clay and lime | 23.80 |

A specimen of unslacked lime from Wrightsville, on the Susquehannah, contains:

| | |
|---|---|
| Sand | 4.85 |
| Iron and clay | 1.16 |
| Lime | 73.00 |
| Magnesia | 15.00 |

Other specimens contain magnesia as a carbonate, lime as a phosphate, i. e., bone-dust; and others still, lime as a sulphate, or gypsum.

It must be apparent to any reflecting person, that the application of lime indiscriminately for agricultural purposes can be attended with no certain results. Some contain a large per cent. of magnesia, others gypsum, phosphate of lime, and other valuable substances, while in other samples these constitutents are wanting. As soils are not exactly alike, it would be profitable to know what the soil contained and what it lacked, thus enabling the farmer to apply lime if necessary, in a manner that would best repay the labor and expense. More knowledge of this kind becomes indispensable to a farmer who desires to farm with success as the aim in applying manures is the greatest yield of crops from the smallest outlay of time and money, and the constant improvement of the soil.

Knowing the constituent parts of the lime, and the wants of the land, an important consideration is the mode of application.

One of the first requisites should be the thorough draining of the soil before lime is applied. Lime is applied in three different ways. Put on the surface and allowed to remain a few years; put on the surface and plowed in; or mixed in compost beds, and with that applied. The first method would have the effect of incorporating it with the land, particularly if it be a sandy soil. By the second it is placed in the bottom of the furrow, and is less easily incorporated with the soil. The third method gives it the best application, but is attended with larger expense in hauling and applying. A better method, and one strongly recommended, is to plow the land, and leaving it uneven, apply lime, harrow well, and cultivate it in some crop that requires frequent hoeing, as corn or beans. For this application, lime as a carbonate, or air-slacked lime, would be found the most profitable, if the soil was loose and pliable. This method enables the farmer to obtain not only the immediate benefit of the lime, but a greater profit than by any other mode in a given number of years, which is the great end to be obtained.

Other soils, as stiff clay, require a different treatment, so also of many other different applications and suggestions, upon which it is proposed to offer some remarks in a future number. †

### SHEEP AND WHEAT FARMS COMPARED.

EDS. RURAL:—Your correspondent, A. E. HARMON, after writing of his success in wheat raising, wishes to know if any reader can show an equal profit from the union of wheat and sheep husbandry. My farming does not exactly come under that head, so Mr. H. may object to my competition, yet I would like to present a simple statement of results arrived at.

About nine years ago I commenced farming on 185 acres of land, 110 of which was called cleared, but briers, bushes, and old logs covered a considerable share of it. It cost $1,695. At first, I kept some cows and sheep, and raised some wheat, oats, corn, peas, &c. I had about come to the conclusion that sheep would not pay for keeping, and consequently took but little care of them. All were kept in one flock, old and young, weak and strong—and I generally lost a large per cent of them in wintering, and those left gave but light fleeces, which is no wonder when the care I gave them is considered. But I read of wool growers doing well, and thought I would make another effort. I disposed of the poorest of my flock, sold all my cows except two—and, taking better care of my sheep, soon came to the conclusion, which facts prove to be right, that sheep husbandry *would pay* most encouragingly.

My sheep which formerly gave less than 3 lbs. of wool now give 4¼ lbs. and over.—The products of my farm for 1852 were as follows:—Oats, $266; Sheep, $300; Wool, $685,14; and other products on hand to the amount of $50,—amounting to $1,301 14, more than 75 per cent on the cost of the land. Can Mr. HARMON, say the same of his raising wheat? The above are surplus products over and above family consumption, &c.

Beside the profit of keeping sheep, I will mention a few other advantages. 1st. They will soon destroy what briars and small bushes they have access to, leaving the land in good condition for crops. 2d. It requires less hired help to realize $10,000, than in any other branch of farming with which I am acquainted. My expenses for hired help the past year were $79,65, and I had time enough to attend the State and County Fairs and read two agricultural and one political paper. 3d. The land is not run so hard, when the hay and straw, and most of the grain, is fed out on the premises, as it is when sold off, as is mostly the case in wheat farming. I did not take my pen, expecting to convince Mr. H. that wool is more profitable than wheat on his farm, but I think I have shown that it is a less expensive way of obtaining the "*root* of all evil."

For the benefit of some of your readers who have written to me about the sheep mentioned in a former article in the RURAL, allow me to state, that the full bloods were Spanish Merines, and the half-bloods were from fine-wooled ewes, part Merino, and, perhaps, part Saxon—sired by my full-blooded buck, which gave 16 lbs. of wool the past season. I have no sheep for sale.

J. J. CONET.

Ellington Chautauque Co. N. Y., Feb,. 1853.

### MY EXPERIENCE.—NO. 3.

#### Hutchinson Wheat.

WISHING to try a different variety of wheat from that which I had upon my farm, in the summer of 1850, I procured twenty bushels of the purest "Hutchinson" wheat which I could find in the neighborhood of my residence, for seed. My object was to get *pure* "Hutchinson" wheat to sow on a certain 14 acre field of clean fallow ground. That which I obtained had a *very small* quantity of what I supposed, to be "Red chaff bald" wheat, mixed with it. But so small was the quantity, that I am confident there was not one grain of it to fifty of the Hutchinson. It was so pure, and I was so careful to keep it so, that I did not allow it to be put into my barn, but had it put into a covered box and a couple of barrels, in my corn-house—to prevent any and every possible chance of mixture with my other wheat. About the 23d of September, the twenty bushels was sown upon the 14 acre field. It being rather late sown, and the season not very favorable, the wheat showed but a small top during the autumn. The straw, however, grew well during the spring and summer of 1851,—and, but for the ravages of the "midge," (usually called the "weevil,") the crop would have been nearly an "average" one. The soil upon which it was grown was chiefly a rich vegetable mold, usually called "black muck."

About a week before I supposed it would be necessary to harvest it, I went to the field (nearly a mile from my house,) to examine it for the purpose of determining the time of commencing the harvesting. And behold! the produce of my "Hutchinson" seed, was nearly all "Red chaff bearded," and "Red chaff bald" wheat, in nearly equal quantities. "Can such things be, and overcome us like a summer cloud, and not excite our special wonder?" I observed it with perfect astonishment; being scarcely willing to believe my own eyes. I *knew* that my hired men had sown my *very nearly pure* "*Hutchinson*" seed, on that field, because I saw them do it. And, notwithstanding my former little experiences with corn and potatoes, I expected to have harvested as nearly pure "Hutchinson" wheat, as I had sown. But so far from it was the produce, that upon repeated trials by actually counting the heads within a given space, I discovered that not *one-twentieth* part of it was of that variety. Indeed an adjoining field, upon which I had sown seed of my former crop, (a mixture of "Red chaff bald," "Red chaff bearded," Hutchinson, and White Flint,) produced, at least, double the proportionate quantity of the "Hutchinson" variety, that I had from my costly and carefully procured Hutchinson seed; (for I had given, *in exchange*, two bushels *extra*, for the very nearly pure seed.)

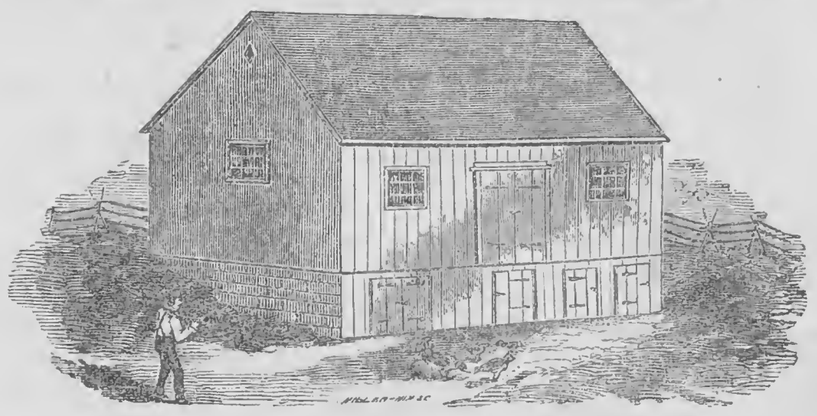
I had never before been able, *positively*, to detect dame nature in such a freak: although, in one or two instances, I had been suspicious that the product of my wheat, was, in some degree, different from the seed. But now I had caught the old lady *in the very act* of changing at least *nineteen-twentieths* of the whole produce of my fourteen acre field.

I am aware of the incredulity with which many people (particularly those who never grew a grain of wheat, nor indeed, any other farm product in their lives,) receive the information of these changes of varieties (*transmutation?*) of grains and vegetables. I have had repeated experiences of such incredulity. I can not help their "*unbelief.*" Nor do I much care whether they believe or not. The facts I know to be as I relate them. Other practical farmers have probably experienced similar changes in varieties of grains and vegetables. But I have seen no written, or printed statements of them. My object is to discover the cause, or causes, of these changes of variety.

Now, who can *correctly* inform me as to the particular process by which one kind of seed is changed to a different variety in the product? If any one can, let him speak, (or *write,*) and I will rejoice to learn of him.

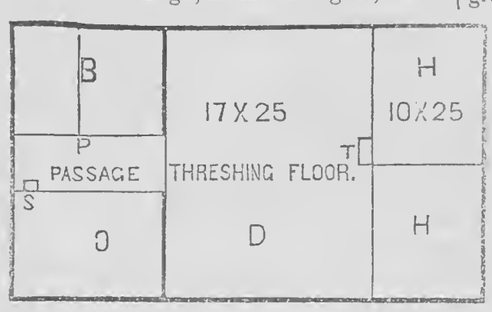
'HIEL.

LABOR is the great article of expense upon a farm in America, yet it is not nearly so great as in England, in proportion to the amount of the produce of a farm.

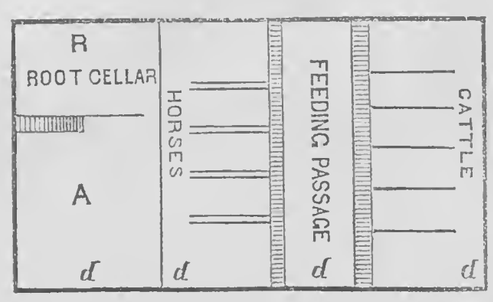


PLAN OF A SIDE-HILL BARN

THE following elevation and plans of a side-hill barn was communicated to the Genesee Farmer, by J. W. G., of Hillsboro, Ohio. The design, as far as it goes, seems a very good one, but we cannot commend the fence around it. As it will be of value to those who intend building barns in such situations, even if they do not adopt all its details, we copy it with the description given by Mr. G.:



MAIN FLOOR.



BASEMENT FLOOR.

The barn is designed to be built on the side of a hill which will allow of excavation sufficient to form the basement floor, which contains five stalls for horses and six for cattle, with a feeding passage between, into which is thrown the hay and oats through a trap door in the floor above. From this passage the manger on either side may be filled very handily and with much less trouble and less risk of being kicked, than when a person has to come up behind the animals to get at their heads. A may be used as a carriage or wagon shed, or to store away straw for the use of the cattle or bedding for horses. R is a cellar for roots, &c.

On the main floor, H is a place for hay and oats. T, trap-door communicating with the feeding passage below. D, threshing floor, 17 by 25. C and B, cribs for corn and other grain. P, passage. S, steps leading into the basement.

The cost of this barn would probably be between three and four hundred dollars, and, perhaps, as good and convenient as can be built for that sum.

### CONDENSED CORRESPONDENCE.

#### The Jointer Plow.—Information Wanted.

MESSRS. EDITORS:—I write you at this time for some information in regard to a jointer for a plow, which is partially described by LINUS CONE, of Michigan, as being used in that State,—and Mr. WILCOX, of Bloomfield, also recommends it in your columns. Now, I wish, Messrs. WILCOX, CONE, or yourself, if you understand how they are made, to give a cut of one in the RURAL, with such explanations that a common blacksmith can make one without a pattern to work from. In many cases, particularly where the ground is moist and mucky, I think they would work better than a Michigan Subsoil Plow, which in such land does not clear itself well; and again, the forward plow throws the furrow too far on to the preceding furrow, for the hind plow to cover sufficiently.

The Michigan plow is much used in this neighborhood, and well liked by most who use it,—for deep plowing and thorough pulverization of the soil, is found practically to be more successful than the old plan of shallow tillage, with but little after culture. This does not succeed as well as formerly, so there is a disposition in this community to improve in the tillage of their farms, so far as to keep up with the intelligence of the age, and this little town is determined to keep up with any town in this far-famed county of Seneca.—O. S., *Junius, N. Y.*

#### Smut in Oats.—Cause and Remedy.

Messrs. EDITORS:—In No. 5 of the present volume of the RURAL, a correspondent asks, "What is the cause of smut in Oats? Can it be prevented?" In answer, I submit the following, remarking that the solution of this, as of many other queries in agriculture, belongs to the physiology of plants, and shows the importance to the farmer, of a knowledge of the natural sciences.

The *smut* in Oats, (*Ustilago segetum*, Lin.) is a kind of primitive fungus, caused by a sickly condition of the plant. It origi-

nates under the skin, (*epidermis,*) and growing there, penetrates it,—finally covering and consuming the fruit-bearing parts of the plant. Besides oats, smut affects other grasses and cereals, as wheat, corn, barley, millet, &c. Rye alone escapes.

The causes originating the disease are various. Soil too hard, or too sterile; unripe seed, or that infected previously by smut; bad weather — either drought or long continued rains; late sowing, and fresh manures, in connection with unfavorable seasons; all by affecting the general health of the plant, produce the smut disease.

To prevent the growth of smut in oats and other grains, let these causes, as far as possible, be avoided. Then the following remedies or preventives will be in order:

1. Thorough preparation of the soil by deep plowing, and if wet, by under draining.

2. Good, ripe, plump seed, free from smut. To be sure of good seed, select it in the field, harvest and cure it carefully, and store it in a dry place.

3. Some persons have tried with success, soaking the seed in acids eight or ten hours before sowing. For nine bushels of Oats take one pound of copperas or blue vitriol, dissolve in two and one-half gallons of water, sprinkle with this the grain, shoveling it over several times. Others take liquid manure, wherein lime, salt, and green vitriol have been dissolved, and use it in the same manner. Both these remedies also, are often successful in preventing rust, but are not infallible.—T. v. W——TH, *Sullivan Co., N. Y.*

### The Poland Oats Again.

FRIEND MOORE:—Some of the readers of the RURAL seem to think the editor exaggerates a little as to the number of its issues, but with the evidence before me, you stand acquitted. Your remarks, appended to the article on Poland Oats, in No. 166, have showered upon me the proof that its circulation is immense. To answer all the letters and inquiries is more than one can do,—some want a pint, some a quart, some a half bushel, others further information in regard to their growth, cultivation, &c. So to you I come for help out of my difficulty. I wish to answer the inquiries through your columns:

The Poland oats do best when sown thin, and I regard one to one and one-fourth bushels per acre, sown with a drill, (in which they work admirably,) a plentiful seeding. It is best to sow as early as the ground can be got in good order. A clover sod will do well, no doubt. I have sown after corn, potatoes and wheat, with good success. They should be cut as soon as ripe and before the straw is dry. I could not supply as large a quantity as five bushels at a price that would be an object to a farmer. What I will do, will be seen by reference to the advertising columns of the present number of the RURAL.—I. W. BRIGGS, *West Macedon, N. Y.*

### Fencing.—Red Cedar, Locust, &c.

EDS. RURAL:—The Red Cedar has been highly recommended for hedges, by one of your correspondents. In relation to this subject, I would state, that traveling some years ago, in Monmouth Co., N. J., I saw a Red Cedar hedge of some years growth.—It was full of gaps and patched up with rails and broken fragments. I have seen brush fences as good, and stump fences much better. It would be better, I think, to plant trees, to supply our future necessities. The gaps in our forests might then be filled up, and good timber produced for future use. I have seen this tried, and the trees, now 20 years old, are thrifty and very valuable.—Oak, Locust, Chestnut and Pine, may thus be produced, and the Locust, particularly is of very rapid growth, rising loftily in the forest, and proving very durable for posts, and other uses.— WM. H. E., *Riga, N. Y.*

### Chess for Cows, &c.

EDS. RURAL:—W. B. P., of Prattsburgh, N. Y., thinks there is no danger in feeding chess to cows and sheep. I think such assertions are not warranted by sufficient experience. A neighbor of mine has had this misfortune occur to his cow, undoubtedly from the effects of feeding her chess. Another of my neighbors has found the same result in feeding it to a young heifer. Mr. B., of this town, a practical miller, (and of course one who knows the effect of grain on hogs,) says chess universally produces abortion in sows.—A. R. B., *North Clarkson, N. Y.*, Feb. 28, 1853.

### Seeding to Clover, &c.

EDS. RURAL:—As it is about the time of sowing clover and other grass seeds, I will give you my plan of sowing clover. For several years past, I have made it a rule to seed down all of my fields that are sown with grain, either winter or spring grain, and by so doing I always have plenty of pasture meadow and clover seed, which is very essential in farming. I find that plowing under the second crop of clover is much better than a fallow, besides it enriches the ground in place of impoverishing it, as a fallow does. I always try to plant my corn in a clover sod. By keeping the fields shut up until I am ready to plow for corn, I have quite a crop of clover to plow under, which makes the corn thrive beyond account. When I seed down a field to lay to a meadow for two or three years, I mix two bushels of timothy seed to one of clover, and sow that quantity on eight acres.—*Grimsby, C. W.* March 6, 1853.

CHICKWEED.—A subscriber asks, "Can any reader of the RURAL inform me how to kill chickweed, which grows spontaneously among wheat, and injures its growth and that of clover?" We should think thorough fallowing would do it. If that does not succeed, plant it to beans and be sure they are thoroughly hoed not less than three times.

## AN ESSAY ON LIQUID MANURES.

BY N. DAVIDSON REDPATH.

IN THREE PARTS.—PART THIRD.

II. Farm of Myre Mill, near Maybole, tenanted by Mr. James Kennedy.

22d October, 1852—Visited this farm, and had the good fortune to find Mr. Kennedy at home. Spent several hours walking over farm, and inspecting minutely all his arrangements for distributing liquid manure. Received also from him most freely and frankly, information on every point it occurred to me to put to him.

The whole extent of his farm is about 800 acres imperial; nearly one half is piped, so as to be capable of being irrigated with liquid manure.

Hydants—one or more are in each field, to which he attaches a Gutta Percha hose, for distribution. He considers that there should be a hydrant for every 9 acres imperial.

It is only to the part of his farm under the irrigation system to which my remarks will apply; and to give to practical farmers an idea of the nature of the crops grown on it, and of the stock which it supports under the above system, I may state the following particulars kindly furnished to me by Mr. Kennedy.

| | | |
|---|---|---|
| I. | Grain Crops | Wheat 125 Imperial acres.<br>Oats 187 do. |
| II. | Green Crops | Turnips 125 Imperal acres<br>Cabbages 12 do.<br>Carrots 12 do.<br>Mangolds 6 do. |
| III. | Grass | Italian Rye grass<br>Clover, &c. |

The following are the quantities of those several crops, in so far as I ascertained them:—Oat crop last year (1851) produced 10 qrs (1) per Imperial acre; Sweden last year 30 tons; cabbages last year 44 tons, this year 40 tons; carrots last year 23 tons, this year 16 tons; mangolds this year 25 tons per Imperial acre.

Mr. Kennedy mentioned that last spring the weather was particularly unsuitable in Ayrshire for both carrots and cabbages.—The latter he would have lost altogether had not the land been piped.

Italian rye grass yields a crop of about 40 tons per imperial acre,—when there are 6 cuttings. This year, however, owing to the drought, he had only 4 cuttings.

The following is his mode of management for this grass. He sows from middle of March to middle of April,—waiting till severe frosts are all over—at rate of 4 bushels to the imperial acre. Mr. Kennedy allows his Italian rye grass to stand for two years, the second year's crop producing a larger and earlier produce than the first year's.

Immediately after every cutting, he gives to the land what he terms a slushing with liquid manure, at the rate of about 4000 gallons per acre, the manure being diluted.

In regard to the preparation of the land for this crop—it is plowed in the previous autumn, and dunged. Whenever the plant prairds, it is irrigated with tank manure.

Mr. Kennedy had his first cutting of Italian rye grass this year on 18th April.

On ground well prepared and well manured, he has seen this crop grow in the 4 summer months at the rate of 1 ½ inches per day.

Mr. Kennedy considers that the manuring thus given, may be extended, with the effect of increasing his root crops, in a degree which will more than compensate the outlay, and for this purpose he wishes to have additional tanks. His only fear is, that the subsequent corn crops may lodge from rankness and softness of straw:—to obviate which, he intends to lay on the land a mixture of lime and salt, to be dissolved in his tanks with water, and distributed by means of his pipes.

The only green crops which Mr. K. has sold off his farm, are a portion of his carrots; and he got for them last year £2 a ton.

Mr. K. has 4 seperate tanks,—capable of holding about 75,000 gallons each. The object of having so many is to allow of the manure remaining long enough to undergo fermentation, before it is applied to the land; and also to keep the manure till such time as the land is prepared for receiving it.

These statements, it is trusted, abundantly prove the productive effects of liquid manures, and there can be no doubt that the introduction of such fertilizers into the United States would be attended with similar gratifying results. The irrigating system is peculiarly adapted to the warm summers of America; the earth would instantaneously imbibe the liquid and convey it directly to the roots of the plants where it would act both as a refectant and slimulant, whereas dung and other solid manures are comparatively long in enriching the soil.—Potato crops are greatly benefited by an application of liquid manure immediately before and after the brairding of the plants.

In some places in Scotland where dung is over plentiful, its use has been discarded in favor of animal urine where it can be procured, especially for starting young grass in the spring.

The expense of laying down the distribution pipes, as described in the above report, according to the estimate of Mr. Kennedy is about $16,60 per acre; but as labor is higher here than in Scotland, in all probability it it would cost a shade higher in this country. Yet no farmer, however poor, need be discouraged from making a trial as the liquid can be carried to the fields in water barrels and thrown on in the same manner as streets are watered in our large cities; or it may be conveyed in open casks and thrown out by hand.

It matters not how it is done: all that is necessary is to give it what Mr. KENNEDY, in the above report, styles a good "slushing," (that is drenching) "of liquid manure."—Not only the field but the farmer's garden may be benifited by the application of this admirable manure. Fruit trees, goosberries, and strawberries will receive great benefit by a liberal application before the bursting of the buds in spring: it promotes the growth of turneps, carrots, and other roots, and swells the dimension of the useful cabbage. In July, as COLUMELLA relates, it had greatly improved, in his time the Apple and grapes of that country. Sir GEORGE STAUNTON states, that "the Chinese apply liquid manure to their fruit trees as contributing much to their growth and vigor. In many cities of that empire it is sold in the streets for the purposes of garden culture, in quantities so small as an English pint!"

Agricultural reader, has your farm become exhausted by continual cropping?—Are your crops stunted and hunger bitten? And are you lamenting your inability to purchase bonodust, rapedust, guano, or other expensive fertilizers of the soil?—pause for a moment as a good husbandman, and ask yourself this question, Have I carefully husbanded all the available resources of invigoration within my power, my dung-heap, my compost, and last but not least my liquid manure? Then, WHY THIS WASTE? "I speak as unto wise men; judge ye."

† 1 An Imperial quarter contains 9¾ American bushels.

## AGRICULTURAL INTELLIGENCE.

### Pennsylvania State Fair.

THE Executive Committee of the State Agricultural Society of Pa. met at Harrisburgh, March 7th, and decided to hold the next State Fair at Pittsburgh on the 27th, 28th and 29th of September next.

Pittsburgh is in the extreme western part of the State, and by nature rather isolated from the eastern and middle sections. It will be difficult to induce the farmers of the Valleys of the Susquehannah to cross the mountains to meet their western brethren in a comparative exhibition of their products. Notwithstanding this drawback we shall expect the Fair at Pittsburgh to be a large one, and every way creditable to the Society. Situated where it commands the Valleys of the Allegany and Monongahela, also of the upper Ohio; this section alone if properly disposed, make a good show. Their neighbors in Ohio, will be willing unquestionably to go over and compare with them. Communication from Cleveland, Erie, and other lake towns, will be very cheap and expeditious by Railroad for Cleveland. Perhaps New York may feel disposed to be represented there by some of her choice horses, cattle, and sheep, as well as by her improved and valuable implements and machines. It can be easily done.

Our Pittsburgh friends have much to do to sustain the credit of the "Iron City," and we shall be disappointed if they do not meet the first expectation of all concerned. †

### Agriculture of Minesota.

FROM a copy of the St. Anthony's Express before us, we glean something of the doings of the Benton Co. Agricultural Society in that Territory. It boasts of being the only Agricultural Society in the United States in 46° north, has a charter granted by the Territorial Legislature, and is determined to take the lead of all others in the Territory. They have a clause in the constitution which requires three members from each election district to make an annual report of the crops, stock &c., in their respective localities. Wheat is grown to some extent, but mostly Spring-wheat, which is spoken of as being a fine plump berry, a sample of which weighed two pounds more to the bushel than winter wheat sown.—Corn flour ishes moderately, and is stated to ripen in *eight weeks* after planting. Potatoes, peas and beans are noticed as growing well, some of them very fine. One Swedes turnip presented, weighed *twenty-seven pounds.* No mention is made of fruit, but in place thereof, at a feast, they had apple sauce *made from pumpkins* which deceived them all.

It is also stated that their chief productions will consist of wool, pork, wheat and potatoes. Oats and corn will hardly pay for cultivation. We have no doubt wool will pay well. Of the wheat and oats we have serious doubts. The virgin soil may produce good crops, but subsequent years will change wheat growing to stock breeding and the dairy. Pork cannot be raised profitably where corn does not thrive well. Some may be fattened from the offal of a cheese or butter dairy, to good profit.—Those who first turn attention to cattle, sheep, and the dairy business, will reap a good reward. We say this from our observation of the effect of cultivation upon those northern climates. The subjoined table furnishes a view of the progress and productions of Benton county, for 1850, and 1852.

| | 1850. | 1852. |
|---|---|---|
| No. of acres of improved land, | 405 | 1,980 |
| Val. of farm implements, | $2,495 | $9,987 |
| Number of Horses, | 59 | 80 |
| " Milch Cows, | 50 | 97 |
| " Working Oxen, | 122 | 200 |
| " Other Cattle, | 53 | 130 |
| " Swine, | 42 | 425 |
| Value of Stock, | $11,925 | $27,963 |
| No. of bushels Corn, | 160 | 1,250 |
| " " Oats. | 60 | 13,000 |
| " " Wheat, | | 5,050 |
| " " Potatoes, | | 3,090 |
| " " Rutabagas, | | 16,000 |
| " " Tons of Hay, | | 772 |
| " " Sheep, | | 13 |

To this may be added, 9,000 bushels of Oats. 5,500 of Corn, 3,000 of Potatoes, 12,000 bushels Rutabagas, and 100 tons hay, raised at the Winnebago Agency.

## THE AGRICULTURAL PRESS.

### Analysis of Crops.

WE have been requested to publish on analysis of different crops, and so copy the following from NORTON'S "*Elements of Agriculture:*"

| | Corn. | Wheat. | W. straw. | Rye. | Oats. | Potatoes. | Turnips. | Hay. |
|---|---|---|---|---|---|---|---|---|
| Carbonic acid trac,. | — | — | — | — | — | 10,4 | — | — |
| Sulphuric acid,... | 0,5 | 1,0 | 1,0 | 1,5 | 10,5 | 7,1 | 13,6 | 2,7 |
| Phosphoric acid... | 49,2 | 47,0 | 3,1 | 47,3 | 3,8 | 11,3 | 7,6 | 6,0 |
| Chlorine,..... | 0,3 | trac | 0,6 | — | 0,3 | 2,7 | 3,5 | 2,6 |
| Lime,..... | 0,1 | 2,9 | 8,5 | 2,9 | 4,9 | 1,8 | 13,6 | 22,9 |
| Magnesia,..... | 17,5 | 15,9 | 5,0 | 10,1 | 9,9 | 5,4 | 5,3 | 5,7 |
| Potash..... | 23,2 | 29,5 | 7,2 | 32,8 | 27,2 | 1,5 | 42,0 | 18,2 |
| Soda,..... | 3,8 | trac | 0,3 | 4,4 | | trce | 5,2 | 2,3 |
| Silica,..... | 0,8 | 1,3 | 67,6 | 0,2 | 2,7 | 8,6 | 7,9 | 37,9 |
| Iron,..... | 0,1 | trac | 1,0 | 0,8 | 0,4 | 0,5 | 1,3 | 1,7 |
| Charcoal in ash and loss,..... | 4,5 | 2,4 | 5,7 | — | 0,3 | 0,7 | — | — |

These do not represent the *exact* composition of the ash from the above crops, in all cases, but should be considered only approximations. In different situations, there is frequently a considerable variation in composition; this does not, however, affect the general character, where the soil contains a full supply of necessary substances. The ash from healthy potatoes, for instance, never resembles that from a flourishing crop of wheat. The table then may be regarded as approaching sufficiently near the truth for all practical purposes.

### A Hint to Farmers.

THE *Maine Farmer* gives the following pertinent paragraphs on the importance of the proper care of stock:

WE may send to England for Durham cows, and to Spain or Saxony for the choicest sheep; we may search the world over for cattle that please the eye, but unless they receive the best care and liberal feeding they will most assuredly deteriorate, and eventually become as worthless and unworthy of propagation as any of the skeleton breeds that now haunt our rich but neglected pasture-lands. We remember an anecdote in point, and will relate it by way of illustration. A farmer having purchased a cow from a country abounding in the richest pasturage, upon taking her to his own interior pastures found that she fell short of the yield which he was informed she was accustomed to give. He complained to the gentleman of whom he had purchased, that the cow was not the one he bargained for, or in other words that she was "cracked up to be." "Why," said the seller, "I sold you my cow, but did not sell you my *pasture*, too."

The above, which we cut from an exchange, reminds us of the reply which a shrewd old farmer, whom we know many years ago, made to one of his neighbors. The latter had obtained some pigs of a man residing some miles off, and who, because intelligent, was always very successful in his farming operations, particularly surpassing his neighbors in raising pork. Shortly after, meeting the old gentleman referred to, he says, "Well, Mr. Sweetsir, I'm going to beat you in raising hogs this year; I have got some of J. M——'s breed." "A-a-h," drawled out the old man, "you'd better got the breed of his ho-og trough!"

### Small vs. Large Horses.

THE following on the comparative value of large and small horses is from the *New England Farmer:*

The arguments may all be in favor of great size, but the facts are all the other way. Large horses are more liable to stumble, and to be lame, than those of middle size. They are clumsy, and cannot fill themselves so quick.

Overgrown animals, of all descriptions, are less useful in most kinds of business, and less hardy than those of a smaller size. If theory is to be resorted to in order to determine such questions, we suggest to the lovers of overgrown animals, the following: The largest of any class is an unnatural growth. They have risen above the usual mark, and it costs more to keep them in that position, than it would were they more on a level with their species.

"Follow nature," is a rule not to be forgotten by farmers. Large men are not the best for business. Large cows are not the best for milk, Large oxen are not the best for traveling. Large hogs are not the hogs that fatten best, and large hens are not the hens to lay eggs.

Extremes are to be avoided. We want well formed animals, rather than such as have heavy large bones. Odd as it may seem to the theorist, short legged animals invariably prove to be better travelers than any. Short legged soldiers are better on a march, and the officers say they endure hardships longer than those of longer limbs.

On choosing a horse, take care by all means that his hind legs are short. If they are long, and split apart like a pair of dividers, never inquire the price of the horse-dealer; run for your life, and make no offer lest you be taken up.

Horses that are snug built are not always fast travelers. It is no easy matter to select a horse that is perfect in all points. Snug and tough horses are not fast on the road. The fastest trotters are not always made for very hard services

### Does the Ox Ever Lose his Cud.

ON this question the *Maine Farmer,* thus replies to a correspondent:

An opinion used to prevail pretty generally among farmers, and there are some yet who think that if animals that chew the cud should accidentally lose the cud from their mouths they would not be able again to raise any more and of course would die, unless a part of another creature's cud should be put into their mouths.

Such people imagined there was some mysterious connection between the pellet of half chewed material in the mouth and the mass of the same substance in the animal's stomach, and if that connection were broken off the animal had no means of restoring it.

This is all a fallacy. Ruminating animals when sick cease chewing the cud, on the same principle that a man ceases to eat when he is sick. The stomach and digestive organs lose their action, and there is no appetite for food, or for eating and digesting food in any form. A friend once told us an anecdote, which demonstrates the folly of the idea of any damage arising from an accidental loss of the cud. He had a pair of steer calves given him by his father, which he used to take great delight it training about the barnyard during his leisure hours. One day, as one of his calves stood chewing its cud, he came up suddenly upon it and laid hold of it. The calf, being frightened, jumped from him, and in its fright dropped its cud upon the ground. He had heard the story that unless another cud should be put into its mouth it would lose the power of raising its cud, and would die. He accordingly bowed up one of the cows in the stall, and waited for it to begin to chew its cud, in order to get a part of it to give the unfortunate calf, but the cow not being disposed to accomodate him immediately he stopped out to see how the calf got along, when lo, it had lain down and was chewing its cud as comfortably as if nothing had happened. This little occurrence taught him better than to believe the story before told him about any danger from accidental loss of cud.

### Breeds of Swine.

WE give below No. 3, of MR. HOWARD'S valuable articles on this subject, now in course of publication in the *Wool Grower and Stock Register*:

THE MIDDLESEX BREED.—This appears to be a popular breed in parts of England, and has sometimes carried prizes at the shows of the Smithfield Club. We have previously stated that the late Wm. Stickney imported Middlesex pigs into this country. He received a lot in 1844, and another lot in 1848. The breed is evidently derived from a large infusion of the Chinese with some larger stock. Our remarks refer to those introduced here. The color is usually white. The size of the animals is perhaps somewhat larger than the Suffolk, but the carcass is less symmetrical; the frame is more loose, the legs less straight, the knees apt to be turned in, the belly more hanging, and the general appearance indicating a softer texture of flesh. They fatten easily. They have been often crossed with the Suffolks, but with no advantage to the latter, so far as we learn. The late Mr. Stickney, and his successor, Mr. Isaac Stickney, continued the stock, unmixed, for several years; but it is not known to be so bred by any one in this country at the present time. Mr. Stickney states that he knows of no full bloods less than about a year and a half old.

THE LINCOLNSHIRE BREED was formerly in considerable repute. They were large, reaching the weight of 450 to 520 lbs. at two years, according to Youatt. An intermixture with the Chinese has produced a smaller stock, maturing at an earlier age. Both kinds have been occasionally introduced into this country. The larger sort were bred in the neighborhood of New York a few years since. We know of none in the vicinity of Boston, and presume none are bred here.

A variety called the "Chester County Hog," bearing considerable resemblance to the large Lincolnshire, and probably derived from a cross of that and some other stock, is met with in various parts of Pennsylvania.

THE LEICESTERSHIRE BREED was derived from

the stock of the celebrated breeder of the last century, Robert Bakewell. They are white, and of rather large size. They have been considerably bred in this country, but are not as popular as formerly. The breed has degenerated, and the animals are often defective in form—long and crooked in the back, giving less weight for the food consumed than some others.

The "Dutchess County Hog," is said to have been derived from a cross of the Leicester and Berkshire.

The Mackay Breed, formerly well known in the vicinity of Boston, was originated by the late Capt. John Mackay, of that city. He had a farm at Weston, in Middlesex county, on which he collected many hogs, which he procured in various parts of the world whither he was led in his commercial intercourse. These various kinds were bred together, and the result was the production of stock to which his name was applied. The writer of this article purchased pigs of Capt. Mackay at various times—first in 1830. It can hardly be said that his stock ever acquired a sufficiently uniform character to justify their being called a distinct breed. Their greatly diverse origin was always more or less manifest. They were, however, very easily fattened, and highly profitable. Some inclined to grow to a large size, yet were always fat, from three weeks old, if tolerably cared for, and at eighteen moths old sometimes weighed 600 lbs. each, and upwards. In the latter part of his breeding, Capt. M. gave his attention more to the propagation of this larger stock. In 1834, he sold all his swine to Col. Jaques, of the Ten-Hills Farm, who now has all of this valuable stock within our knowledge.—Various circumstances, which it is unnecessary to mention here, have conspired to nearly annihilate them. Col. J. has a boar and two sows which have descended entirely from the stock which came into his hands from Capt. Mackay, and he believes these are all that exist at the present time which have been so bred. He has written to every person who would be likely to have the stock, but can hear of no others. If there are any which can be *proved* to be unmixed with any other stock, we should like to know it.

The Bedford, or Woburn Breed, originated at Woburn, the estate of the Duke of Bedford. It was a valuable breed, and was widely disseminated. Various importations were made into this country—sometimes under different names. The first were sent as a present to Gen. Washington by the Duke of Bedford, about the year 1792.—Some of the descendants of this importation were subsequently introduced into Massachusetts by Col. Timothy Pickering, who was Secretary of State under a portion of Washington's administration. The same stock was bred in great perfection for several years by the late Dr. O. Fiske, of Worcester. The writer had personal experience with the breed from this and other stocks. But the last remnant of this famed Bedford breed, in this part of the country, we believe was merged in what has been called the "Hospital Breed," which is understood to have been formed by crossing stock obtained from Dr. Fiske with the Mackay and Leicester. Some of the peculiar points of the Bedford are still sometimes seen in the "Hospital" stock.

The Byfield, or Newbury-white Breed, originated, or first became noted, about forty years since, on the farm of the late Gorham Parsons, Esq., in Newbury, in the State of Massachusetts. It was said to have sprung from a cross with some pigs brought from Africa, which had a great tendency to fatten. No vestige of it is to be seen at the present time.

What was called the "Grass Breed," was probably derived from some mixture with the Byfield.

The foregoing list comprises most of the breeds which have been regarded as best adapted to the production of "clear pork." Other breeds which form a greater proportion of lean properly combined with fat, may be more profitable for particular situations. In our cities and large towns, a great quantity of pork is consumed in a fresh state. To be best adapted to this purpose, swine should be small boned, only moderately fat, but plump and meaty, weighing when dressed from forty to a hundred pounds—the flesh fine-grained and of the best quality as to flavor. Under this class, and as adapted to baconing as before mentioned, we may enumerate the following:

The Neapolitan Breed.—Martin, speaking of the excellence of Italian swine, observes:—"The ancient Romans made the art of breeding, rearing and fattening pigs a study, and elevated, so to speak, various strains to the highest perfection.—We cannot doubt that from those improved races of antiquity, the present pigs of Italy have descended.....It is not, we think, overstraining the mark, to regard the excellent breeds of pigs in Italy as the descendants of a long line of ancestry—of breeds established before Rome fell." The Neapolitan is the most celebrated Italian breed, and has been a source from which some of the most esteemed English breeds have been in part derived. They have also been introduced into the United States, but did not prove sufficiently hardy for ordinary management. Their flesh is of very superior quality. Martin's description of the breed is as follows:

"The Neapolitan pig is small, black, almost destitute af bristles, and remarkable for aptitude to fatten; it is short in the snout, small in the bone, with sharp erect ears. But it is by no means hardy, at least in our country, and if the sows happen to have litters in winter, it will be difficult, should the weather be severe, to save the young pigs from dying. But as a cross with some of our breeds, as the Berkshire, the Neapolitan race is most valuable. The cross-breed exhibit improvement in form without too great a delicacy of constitution; they have a remarkable tendency to fatten, and, though larger and stronger than the Neapolitans, display all their good qualities. The Essex breed is much indebted for its excellencies to the Neapolitan intermixture."

# Orchard and Garden.

## PLANTING ORCHARDS.—SELECT WINTER APPLES.

Messrs. Eds:—Will you, or some of your numerous readers, give through the Rural the names of eight or ten of the best Winter Apples—the long keepers, best suited to the region of Western New York? Please state also where those of the largest size (from 8 to 10 feet high) may be found, and the price per hundred. I think the time has come when farmers should devote more of their time to planting out good Apple trees on their broken, untillable land. There are many farms on which there are several acres of land that is not good for much else, which might be profitably appropriated to raising a good Apple orchard.—D., *Sheldrake, N. Y.*

If our friend really means what the above fairly implies, our advice is, not to throw away his money in the purchrse of trees.—"Land that is not good for much else," is good for nothing for an orchard. The best soil of the farm is only good enough for growing fruit profitably, and if "D." intends to occupy a portion of his with Apples for the reason solely, or chiefly, that it is of no value for other agricultural purposes, he will display more wisdom by leaving those acres in grass. But if the inquirer refers to land which, having a sufficient depth and strength of soil, is uneven and broken, and, therefore, not pleasant or convenient to cultivate for other crops, he may succeed in raising thrifty and productive trees, if he will thoroughly prepare the ground before planting. Put in the sub-soil plow with a strong team before it, and work the soil deep and often. It is absolutely indispensable to complete and continued success, that this preparation be made before the trees are set; afterwards deep and thorough working cannot be done. We shall say more on this subject hereafter, and in the meantime give a list of varieties which ought to satisfy any reasonable person:—Fameuse and Rambo, for early winter; Rhode Island Greening, Canada Red, Norton's Melon, Green Sweeting, Golden Russett, Esopus Spitzonburg, Swaar, Baldwin, Northern Spy, and for baking, Tolman Sweet. Trees of these varieties may be obtained at the Nurseries in Rochester; but where the largest may be had, we are not advised. It will probably be difficult to find them of the height our correspondent marks, and it ought to be.

## BUYING TREES.

Do not care to get large trees. The greater the age and size, the more are trees injured and checked by transplantation.—Young and small ones are more readily and certainly trained into comely shape. Indeed they scarcely need training, but in good soil and plenty of space, grow naturally into a fine form, and carry a graceful spreading head. In the nursery, trees are closely set, and if left there too long shoot up tall and spindled and weak. Care, rather, that they be in a thriving, healthy condition, with a good supply of fibrous roots. I would choose trees two, rather than four years old, at the same price; indeed, at double the price. Cherries and Peaches are best but one year from the bud.

Cactus.—*Answer to an Inquiry.*—The seeds planted by a lady reader may yet grow. Perhaps sufficient time has not elapsed. Sometimes they do not vegetate short of two or three months. It is possible the degree of heat may not have been sufficient; though they ought to grow in a temperature which does not fall below sixty. Again, the seeds perhaps were not fully ripened, or they may have been too much dried. And so, on the whole, we cannot understandingly say much about the matter presented by our fair correspondent.

## BOILING WATER FOR THE PEACH GRUB.

Friend Moore:—We learn something every day of our lives, though we may not always be aware of its importance. In conversation, especially, do we learn things worthy to be remembered, and recorded for the benefit of others.

Talking, a few days since, with Mrs. Mary Tabea, of Macedon, I learned the secret of her success in raising peaches. Last season the trees in her garden were loaded with the finest of peaches, while those of many of her neighbors, were as barren as the fig tree we read of. It was caused simply by pouring about two quarts of boiling water from a tea-kettle, around the trunk of each tree, and on the bark as high up as she could reach. The application was for the especial benefit of the peach grub. Previous years, she informed me, the leaves curled, fell off, and a new growth put out. But the last season nothing of this kind was observed, and the trees treated to this hot bath, besides bearing a bountiful crop of peaches, made more wood than the same had done in the previous two years, without maturing fruit. This is a single remedy and well worth the trial.—I. W. Briggs, *West Macedon, N. Y.*, March, 1853.

## PRUNING.

Few of the duties of the farm are so badly performed as that of pruning—bad in the *manner* in which it is done, and in the *season* of the year usually selected for the operation. Trees are living, sentient things, and must be treated as such. Their young back is as vulnerable to hobnail boots as the back of the hand, and as easily mutilated by a dull saw or knife. No skillful surgeon will amputate a limb with dull instruments, or leave the bleeding wound exposed to the air; but many farmers who have pruned for forty years, and think they "know a thing or two" about it, do both. They have seen the tree put on its green livery in spring, blossom, perfect its fruit, and increase in stature, and when it had performed its labors for the season, throw off the foliage which it no longer needed, and spread its broad limbs resistless to the winter winds. Thus they have seen it live, and breathe, and grow, and yet never seem to have appreciated it as a living friend, inviting them to its shade, regaling them with its fruits, and almost speaking in accents of affection.

Away with the ax, the coarse saw, and all dull tools about your trees, and in their places use those of the best make, and with edge as keen as Damascus blade.

Every wound that is made *should be covered.* If the tree is vigorous, and the place small, it will probably grow over; but covering greatly aids the effort of the tree in perfecting its outer garment. Paint, clay, gum-shellac, and waxed cloth, are used for this purpose; the shellace is dissolved in alcohol and applied with a brush. The cloth is spread with grafting wax made rather soft, and applied with a brush while warm. A strip of this tied round a wound, or a patch stuck on over it, will greatly facilitate the healing process.

Ninety orchards out of every hundred are mutilated and injured in being trimmed.—Limbs that ought to be cut off are preserved, and those that ought to be retained are taken away. Some are sawed partly off, and allowed to drop, tearing away the wood and bark from the under side, and leaving a ragged and ghastly wound, that never heals, but brings premature decay. This is strong language, we are aware, but a careful inspection of most old orchards will confirm it.—*N. E. Farmer.*

## STAKING FRUIT TREES.

We have for years practiced but one method of supporting young fruit trees, and like the way so well, we shall continue it until we see something better than has yet come to our notice. We drive a stake, which we usually make of a strip of board, or plank, strong enough to support the tree, but elastic to allow it considerable motion, about six or eight inches from the tree, on the south or west side, and fasten the tree to it by a strip of waste leather, forming a single loop, so as to allow the tree to move a little in the wind, fastening the ends of the leather on the top of the stake by a shingle nail. By this method the young tree has sufficient play to induce it to throw down its roots, which it will very soon, and stand erect without any support. This never mars or prevents the growth of the tree by stopping the circulation of the sap, and is the cheapest manner a tree can be staked up. During the summer months, it is well to cast off this leather, letting the tree depend upon its own energies, which will thus be greatly increased, replacing it in the fall after driving the stake firmly, or changing its position as may be required to train up the tree in the way it should grow.—*Jefferson Farmer.*

To Prevent Mice Eating Young Apple and Pear Trees.—Make a whitewash by mixing three lbs. of fresh burnt lumps of lime in five gallons of brine, and apply it warm. If half a pound of powdered barytes be added to the mixture, or the same quantity of arsenic, the application will be effectual; because a taste will kill.

Early Summer.—The Charleston Courier of February 15 says, we noticed a short time since that a gentleman in this city had sent us from his garden some pears nearly full grown. Yesterday we were presented with several, gathered from the same tree that morning, fully ripe and of a most delicious flavor.

# Domestic Economy.

A Caution.—We learn from a late treatise on Cancer, that the application of *soot* poultices, salves, &c., has fearfully increased the number of cases of cancer in our hospitals. From a careful inquiry into the origin and causes of cancer cases in one of the eastern hospitals, it was ascertained that in three cases out of five, the patients had had cuts, burns, or bruises, and had resorted to the much approved application of soot for relief. This author also cited a species of cancer peculiar to sweeps, and which he attributes to their constant proximity with soot

To Preserve Eggs.—If you take the eggs as soon as the hen has laid them, and smear the shells with lard or butter, they will keep as good as new laid eggs for some time; but if you rub the shells with butter at any time it will keep for months, and will prevent their being hatched.

# Mechanic Arts, &c.

## LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending March 8, 1853.

Seth Adams, of Boston, Mass., for improvement in printing presses.

Henry Bessemer, of Baxter House, England, for improvement in cane-juice evaporators. Patented in England, Feb. 24, 1852.

Henry Bessemer, of Baxter House, England, for improvement in filters for cane-juice. Patented in England, Feb. 24, 1852.

Stillman A. Clemens, of Springfield, Mass., for improvement in machines for breaking and dressing flax.

Samuel Gardiner, Jr., of New York, N. Y., for improved magnetic machine for washing and separating gold.

I. F. Mascher, of Philadelphia, Pa., for improvement in daguerreotype cases.

Lysander A. Orentt, of Albany, N. Y., for improvement in machines for moulding in flasks.

Thaddeus A. Smith, of Albany, N. Y., for improvements in moulding for cast iron plates with dove-tailed recesses.

Joel Tiffany, of Cleveland, Ohio, for improvement in machines for dressing shingles.

John J. Wagener, of Charleston, S. C., for improved cannon sight.

REISSUE.

Adam Hays, of Pittsburg, Pa., for improvement in splints for fractures. Patented Aug. 13, 1850. Re-issued, March 8, 1853.

## MASTIC CEMENT.

We have had many inquiries lately respecting the mastic cement for covering the fronts of houses and giving them the appearance of brown freestone. We have endeavored to find out its composition, and have at last, we believe, obtained reliable information respecting it. Red lead, oil, sand, and limestone dust, in some form, cover every compound of it. 50 parts by measure, of clean dry sand; 50 of limestone (not burned) reduced to grains like sand, or marble dust, and 10 parts of red lead, mixed with as much boiled linseed oil as will make it slightly moist, compose a mastic cement. The building of brick to receive it should be covered with three coats of boiled oil laid on with a brush, and all suffered to dry, before the mastic is put on. It is laid on with a trowel like plaster, but is not so moist. It becomes as hard as stone in the course of a few months. Care must be exercised not to use too much oil—although no evil will be the result—excepting that the cement will require longer exposure to harden. The oil prevents rain and moisture penetrating, and this is the reason why this mastic is not affected by the weather. Various compositions will answer about as well as the recipe above. We will present a few.

100 parts (by measure) of clear dry sand; 100 parts of powdered limestone, and 5 of red lead, make a hard mastic; this may be varied with the addition of 10 parts of red lead. 100 parts of sand, 50 parts of whiting and 10 of red lead make a moderately hard cement. 100 parts of sand, 25 parts of the plaster of Paris (or the same of marble dust) 10 parts of red lead, and 5 parts of yellow ochre, make a very beautiful and hard cement. As stated before, all of those compositions must be moistened with boiled linseed oil. The quantity of oil is so very small in proportion to the other materials, that the whole mass is very porous. The oil unites the particles together, it is the affinitive agent. The sand, &c., must be perfectly dry before they are mixed together; that is, they must be subjected to heat in an oven to drive off all the water contained in them. The sand should not be too coarse and should be passed through a fine sieve. Various coloring substances may be employed to mix with the above compositions, such as any of the pigments used in oil painting. We would use less than 10 parts of red lead in the cement.

The above compositsons might be moulded into statues and works of art, by oiling the paterns inside, before putting in the composition and allowing the mastic to harden in the moulds before it is removed. Two ounces of rosin pounded very fine should be added for every pint of oil used. The whole must be mixed with great care to make the cement properly.—*Sci. Amer.*

## A LARGE SHEET OF PAPER.

It was lately stated, as a remarkable fact performed in England, that a sheet of paper was made, 3,000 yards long, 54 inches wide, weighing 400 lbs., in three hours. In the ordinary course of business, a mill in Gardiner, made, last week, what might have been a continuous sheet of paper, but was cut into sheets for the convenience of the printer, 24,533 yards, or over ten miles in length, and 62 inches wide, weighing 3,200 lbs. In 24 consecutive hours, they turned off, on one machine, what, if it had not been cut up into sheets, would have measured in length 27 miles, 12 inches wide; or, as it was split into two parts after it was made, it would have formed a sheet about 55 miles long, and would have reached from the depot in Gardiner, to the junction of the Portland and Portsmouth Railroad, at Cape Elizabeth.

To Bleach a Faded Dress.—Wash the dress in hot suds, and boil it until the color appears to be gone; then rinse and dry it in the sun. Should it not be rendered white by these means, lay the dress in the open air, and bleach it for several days.—If still not quite white, repeat the boiling.

## PUTTERS TOGETHER OF UMBRELLAS.

The amount of work which the putter together performs for three farthings, is scarcely credible, were it not stated on authority beyond all dispute. The workman receives stick, stretchers, and runners from the warehouse; he provides iron wire and sheet brass; his workshop is supplied at his own charge with lathes, saws, rose cutters, drills, paring knives, vice, pliers and other tools; and he and his lads—two to four in number—set to work. First, the stick goes through its prescribed ordeal; it is usually beech, and was formerly stained; it is now singed to any desired tint. There is a portable fire-place with a hole in the chimney. The stick is thrust into that hole, and is passed over the top of a flame; being dexterously twisted about the while. It comes out of a dark, or light color, according to the time of its exposure to, or distance from the flame. The workers taper one end for receiving the ferule; they cut two grooves for receiving the two springs; which respectively keep the umbrella closed or open; they insert the springs into these grooves, adjust a stopper of wire to prevent the slides from going too far, and then fix a cross wire with a staple at each end of it.—Thus much for the stick; and now for the ribs.

The workman and his staff of boys roughly taper the slip of whalebone which is to form a rib; they shape it, smooth it, and varnish its tip; they drill a hole in it, to facilitate the fastening to the cover; they shape and smooth the head, lap sheet brass around it, and drill a hole through it afterwards to form a hinge; they similarly drill and shield it at the middle point where the stretcher is to be fastened, and they attach it to the stretcher by means of a little axis of wire. When all the eight ribs have been doctored in this way, they are separately weighed or weighted; that is, they are tested in respect to strength and flexibility, in order that the eight for any one umbrella may be selected as nearly equal as possible—a necessary condition for the symmetrical set of the umbrella when open. Thus far done, the busy workers proceed to thread the ribs; they insert a bit of wire in a drilled hole in each stretcher to a notch in the slides by means of this wire, and they fasten the ribs to their meeting points by other pieces of wire.

Now, what in the name of all that is cheap, does the reader imagine to be the rate of wages paid for this labor, and these bits of iron wire and sheet brass? In the first place, look at the movements, the separate operations. The stick passes through the hand nineteen times during its fashioning and adjustment; each rib passes thro' the hand thirteen times in preparing, once in weighing, and four times in threading; and thus, for an umbrella of eight ribs, there have been one hundred and sixty-three successive operations, performed by the workman and his three or four boys.—For this he receives from a halfpenny to three farthings in the case of parasols, and from three farthings in case of umbrellas, if the manufacture be of the commonest kind, and the ribs made of cane; but a whalebone ribbed umbrella brings him about twopence halfpenny.—*Household Words.*

## NOVELTY IN SHIP BUILDING.

Sometime since, the foreign papers bro't us accounts of a new mode of ship building, in which the timbers were dispensed with, and the whole vessel built of plank. The Peninsular and Oriental Company had launched a steamship at Cowes, constructed by Messrs. John and Robert White, on what is described as their "patent improved diagonal principal." Two thicknesses of diagonal planking, and a longitudinal planking outside, constituted the whole thickness of the sides:—how they are fastened and how given the proper line and curve, we are not informed. If the mode is practicable, every one will see that it must be a great improvement. The saving in the item of ship timber, which is becoming more and more scarce and dear,—the exclusion of the vacant spaces between the planking, which serve so admirably in ships of our common build to hold bilge water and dirt, and to harbor vermin and the seeds of disease,—the greater buoyancy of vessels thus constructed,—the room gained for cargo, and the obvious facilities obtained for securing the highest speed,—all unite to commend the new plan to our builders, provided the ships of the Messrs. White's patent answer the high wrought expectations of the inventors. If practicable, they will possess most of the advantages of iron ships, while some of their serious objections are avoided.—*N. Y. Times.*

## IMPROVED TRIP HAMMER.

Measures to secure a patent for improvements in the above have been taken by William Van Anden, of Poughkeepsie, N. Y.—In this invention there are two distinct improvements. The first enables the workman to regulate the force with which the hammer descends upon the anvil, and the second is a superior manner of placing the friction rollers which receive the action of the cams. The hammer shaft is attached to a collar which works loosely around a shaft provided with a spring, whose duty is to force down the hammer, which it does with more or less energy according to its adjutsment. When the cam shaft is made to rotate, the hammer shaft is elevated by the action of the cams against the friction rollers, which are placed in a frame capable of vibration, so as to relieve the cams after their highest points have performed their functions. A third cam, acting through the medium of a lever and set-screw, causes a spring to bear against the hammer shaft when the downward motion is to take place.

Bells were invented in the year 400.

# Educational.

## LEARN TO THINK.

This should be one of the first lessons instilled into the mind of young scholars. No teacher should be content with having a lesson learned so it may be repeated in the language of the author. Students should be required to give definitions, rules and explanations in their own language. This will always enable teachers to know whether the lesson is or is not understood. Learn students to think, to reason, and form their opinion upon every lesson or subject introduced to the class. It is too often the practice of scholars to take the opinion of a teacher as correct, without any reason being given, or any explanations to satisfy them of its correctness.

The object of education is to prepare men to think and act for themselves, to rely upon their own knowledge and judgment, in the place of confiding in those of others. Any system of education—any teacher's practice which is not designed and well calculated to effect this object, fully and thoroughly effect it, comes short of being a perfect, or even deserving system. Our scholars need a reform in this particular—a reform that can best be effected by the employment of teachers who are not only competent to teach, but have the ability to *think*, and learn others to think also.

Such is the character of the institutions under which we live, that the ability to think becomes a requisite of good citizenship.—Freemen, citizens of a free and enlightened government, it is a necessity that they be qualified to judge correctly of the great measures of national, constitutional, and governmental policy. They should be accustomed to investigate, compare, analyze and judge for themselves. It will give them more independence, more of a habit of self-reliance, more power, energy, and ability to become useful.

In the midst of our daily avocation, the thoughts should be turned upon useful and important matters, and may be so employed readily, if early accustomed to such discipline. No matter what the occupation, in all the range of mechanical or agricultural pursuits, it furnishes all needed time to employ the mind upon any of the questions which agitate society. It is said the poet Burns composed many of his finest pieces while at work. Manual labor, so far from being prejudicial to thought, furnishes health, strength and vigor, enabling the body to second the efforts of the mind to great and lasting labors of honor, usefulness and renown. We repeat, then, *learn to think*, upon any and all important principles and questions—learn to think for yourselves. It is the privilege, it is the duty of freemen.

C.

## A GOOD EDUCATION.

Parents generally are desirous of securing for their children what they call a "good education." This is a commendable manifestation of parental affection. It still would be more so, however, if the *motives* urging them to provide a good education for their children were somewhat more elevated than they usually are. A good education is too generally sought after, merely or chiefly as a stepping-stone to wealth or rank, or respectability in the world. There are considerations rendering a good education desirable, of a much higher and more commendable nature than this. Need we name them? For the present we will leave them to be presented by the conscience and good sense of our readers, while we proceed to say that which we intended to say.

It is this. Parents in desiring a good education for their children, too commonly indulge a very narrow and inadequate conception of what constitutes a really valuable or good education, and also of what influences a child must be brought under in order to secure it. Do not too many regard a good school, a teacher well versed in the usual branches and apt to teach, with approved text-books, about *all* that is necessary in order to secure the good education which they contemplate for their children? Is it not too generally and too much forgotten, that every conversation which they hear from the lips of their parents, and every action of their lives, which manifest either a low or a lofty character, either worthy or unworthy principles, are a part of the education, good or bad, of their children? Is it not too generally forgotten that every word and every deed of the companions and associates of our children has *something* to do in making their education either good or bad? Is it not too generally forgotten that the temper, the taste, the habits of their parents, and indeed of all with whom they come in contact, have a powerful influence in making the education of children either good or bad, according as these are of a happy or unhappy character? Let our children see their parents, and all whom their parents receive to their intimacy, living for high, noble, heaven approved ends and objects—such appearing plainly in all conversation and conduct as the ruling purpose of life—and they will *then* be receiving what constitutes the most essential part of what may *truly* be called A good education.—*Arthur's Home Gazette.*

MANDAN CHIEF IN FULL DRESS.

The above engraving shows that Fashion holds sway even in the Western Wilds, among the Mandans, an Indian tribe across the Mississippi. We copy from Graham's Magazine the following description of the subject of our illustration:

It is remarkable that the men, among the Indian tribes, are far more vain than the women. Among the Mandans, particularly, great attention was always paid to dress. When they are full dressed, they put a variety of feathers in the hair, frequently a semicircle of feathers of birds of prey, like radii or sunbeams, or a bunch of the feathers of the raven. Sometimes they have a thick bunch of owl's feathers, or small rosettes, made of broad raven's feathers cut short. These feathers are frequently determined according to the bands to which they belong. Sometimes they wear a cap with horns, (as in the portrait,) consisting of stripes of white ermine, with pieces of red cloth hanging down the back, to which is attached an upright row of black and white eagle feathers, beginning at the head, and reaching the whole length. Only distinguished warriors, who have performed many exploits, wear this head dress. Very celebrated and eminent warriors, when highly decorated, wear signals of their heroic deeds in their hair. Thus *Mato-Tope*, represented in the engraving, had fastened, transversely in his hair, a wooden knife, painted red, because he had killed a *chief* of another tribe in battle. The staff carried by them represents their exploits as well in gallantry as in battle, the number of rings often denoting the number of female hearts slain by their manly beauty.

A warrior, in adorning, takes more time for his toilet than the most elegant Parisian belle. Their faces are often painted in various colors, according to the taste or caprice of the Indian dandy. They have a singular mode of displaying their influence over the hearts of the young women of their tribe, endeavoring to gain credit by a variety of triumphs; they mark the number of conquered beauties by bundles of pealed oak twigs, painted at the tips. These twigs are always carried by the Indian dandy in his courting excursions.

## ORIGIN OF WORDS AND PHRASES.

Windfall.—The origin of this term is said to be the following:

Some of the nobility of England, by the tenure of their estates, were forbidden felling any of the trees upon them, the timber being reserved for the use of the royal navy. Such trees as fell without cutting were the property of the occupant. A tornado, therefore, was a perfect god-send, in every sense of the term, to those who had occupancy of extensive forests; and the *windfall* was sometimes of very great value.

Robbing Peter to pay Paul.—In the time of Edward VI., much of the lands of St. Peter, at Westminster, were seized by his majesty's ministers and courtiers, but in order to reconcile the people to that robbery, they allowed a portion of the lands to be appropriated towards the repairs of St. Paul's church; hence the phrase "robbing Poter to pay Paul."

He's Caught a Tartar.—In some battle between the Russians and the Tartars, who are a wild sort of people, in the north of Asia, a private soldier called out, "Captain, halloo there! I've caught a Tartar."

"Fetch him along then!" said the Captain.

"Ay, but he won't let me." said the man; and the fact was, the Tartar had caught him. So when a man thinks to take another in, and gets bit himself, they say, "He's caught a Tartar."

Bankrupt.—Few words have so remarkable a history as the familiar word bankrupt. The money changers of Italy had, it is said, benches or stalls, in the bourse or exchange in former times, and at these they conducted their ordinary business. When any of them fell back in the world, and became insolvent his bench was broken, and the name of broken bench, *banco rotto*, was given to him. When the word was adopted into English it was nearer the Italian than it now is, being "bankeront," instead of bankrupt.

Hie Betty Martin.—Many of our most popular vulgarisms have their origin in some whimsical perversion of language or of fact. St. Martin is one of the worthies of the Roman calender, and a form of prayer commences with the words, "*O mihi beate Martin;*" which was corrupted to "My eye and Betty Martin," and still further to "Hie! Betty Martin"

Roland for an Oliver.—Although no phrase is in more common use, yet few are acquainted with its origin. The expression signifies the giving of an equivalent. Roland and Oliver were two knights famous in romance. The wonderful achievement of the one can only be equalled by those of the other. Hence the phrase "Roland for an Oliver."

Mind your P's and Q's.—The origin of this phrase, is said to have been a call of attention, in the old English ale houses, *pints* and *quarts* being scored down to the unconcious or reckless beer- bibber.

Hobson's Choice.—The expression *Hobson's Choice*, is proverbial both in England and America. The story of its origin is as follows:

Thomas Hobson was a celebrated carrier at Cambridge, England, who, to his employment in that capacity, added the profession of supplying the students with horses. In doing this, he made it an unalterable rule that every horse should have an equal portion of time in which to rest, as well as labor; and he always refused to let a horse out of his turn. Hence the saying, "Hobson's choice; this or none."—*Arvine's Cyclopedia.*

"Memma," said a child, "my Sunday school teacher tells me that this world is only a place in which God lets us live a little while, that we may prepare for a better world; but mother, I do not see any preparing. I see you preparing to go into the country, and Aunt Eliza preparing to come here; but I don't see any one preparing to go to Heaven. If every body wants to go there, why don't they try to get ready?"

That child was a pretty close questioner.

Public men of high reputation are like lions in a menagerie, continually stirred up, that the crowd may see their size and hear their roar.

## NOT SUPERSTITIOUS

Not at all superstitious, is the cry. "Oh! I'm not superstitious!" and yet who likes to take an unsolicited look over the left shoulder, at the moon? How few do we find willing to begin any enterprise on Friday, that poor unluky child of the calendar, full of mists and omens.

"There," cries the good old lady with a serious face when the salt cellar tips over, "there will be a quarrel just as sartain as you live, before twelve hours, with *somebody*,"—a shrewd prediction! "And," says another, "when the dog howls under my window, and the lamp goes out three times, and I hear a pistol in the middle of the night, and I dream that my best teeth fall out, or that I see an empty coffin, somebody's got to die." Alas! for that unfortunate somebody! His shroud is making; his grave digging; his last narrow home sounds under the "rat-tap-plan" of the hammer—if it is stormy, for is it not true that all signs fail in dry weather?

The fact is just this. The stoutest heart has its moments of credulous belief. Ask any aged man of your acquaintance if he ever dreamed a dream or saw a sight that foreboded coming trouble, and he will tell you yes. Ask an old lady—heaven bless the venerable name—if she ever wound yarn over the cellar stairs at midnight, or went to bed backward, after taking a goodly dose of salt, repeating some foolish sort of rhyme about true loves, hearts, darts, eyes, complexion, etc., etc. Nine out of ten will say yes—though to be sure they had no faith in it; not a whit, not a particle; they only tried it just—well, just because.

Now with regard to dreams, we have had all sorts—we had like to say all sizes. We have buried our best friends, and wept over them with a grief as hearty as a real bereavement might call forth; and we have waked up half laughing, half crying over the delusion—yet happy to find our household unbroken. We have heard Tray's ominous howl, when he was baying the poor innocent moon, without even taking the precaution of turning our left shoe over three times,—and, most astonishing to relate, nobody we knew of died after it. We have broken looking-glasses, and they have served for a twelvemonth after, to make "nature hideous," by dividing the human face divine into squares and triangles, and patching the eyes over the nose, and the mouth upon the forehead, without doing farther injury. And yet for all that, we shall not say that we are entirely free from superstition, if it may be called so, for we have never yet found any living mortal that was.—*Olive Branch.*

## SYMPATHIES OF MIND WITH THE BODY.

All are aware of the wonderful influence exerted by the condition of the body upon the faculties and affections of the soul. The following, from the Essay on Indigestion, by Dr. James Johnson, contains some very remarkable facts:

"Many a happy and lucky thought has sprung from an empty stomach! Many an important undertaking has been ruined by a bit of undigested pickle—many a well-laid scheme has failed in execution from a drop of green bile—many a terrible and merciless edict has gone forth in consequence of an irritated gastric nerve. The character of men's minds has often suffered from temporary derangements of the body; and thus, health may make the same man a hero in the field, whom dyspepsia may render imbecile in the cabinet."

Dr. J. illustrates his subject in his usual felicitous manner. The following are some of his remarks:

"I lately saw a gentleman of brilliant talents and prolific genius, who could sit down and write extemporaneously whole pages of superior poetical effusions, with scarcely an effort of the mind, and who would yet, from sudden derangement of the digestive organs, be so completely and quickly prostrated in intellectual power, as not to be able to write three lines on the most common subject. On a late occasion, when he had merely to communicate an official transaction that required not more than half a dozen lines in the plainest language, he could not put pen to paper, tho' the attempt was made fifty times in the course of two days. At length he was forced to throw himself into a post-chaise, and perform a long journey to deliver orally what might have been done in one minute by the pen. In half an hour after this ride was performed, he sat down and wrote an ode descriptive of his own state of nervous irritability, which would not have done discredit to the pen of a Byron.

"The author of this essay has himself been so enervated by a fit of what is called indigestion, as to be utterly incapable of breaking the seal of a letter for twenty-four hours—though, to all appearance, in good health at the time. Equally astonishing and unaccountable is the degree of timidity, terror, incapacity, or whatever other magic spell it is, which annihilates, for a time, the whole energy of the mind, and renders the victim of dyspepsia afraid of his own shadow—or of things more unsubstantial if possible, than shadows."

Again he says:—"It is under the influence of such paroxysms as these, I am thoroughly convinced, that nine-tenths of those melancholy instances of suicide, which shock the ears of the public, take place."

We have no doubt of it. We have seen men of the strongest minds—strongest, we mean, but for their disease—as utterly overcome by a paroxysm of indigestion, as Dr. J. says he has been; and we have seen them on the very brink, too, of self-destruction. How little do mankind know of the reciprocal influence of mind and matter!—*Presbyterian Advocate.*

To conceal a fault by a lie has been said to be substituting a hole for a stain.

## PRACTICAL SKEPTICISM.

Even a casual observer will perceive that there is much of practical skepticism in society. Or, what is the same thing, that there are many who have not the least doubt of the existence of God, and of the heavenly origin of Christianity, yet who seem never to think that their faith has any thing to do with their daily walk and conversation. With them, the faith and the life are wide asunder, and are as distinctly separated as oil and water, though they may be in contact. They are like the man, who, though enthusiastic in his meetings for worship, was not very upright in his business transactions, and when asked how he reconciled his profession and conduct, answered, that *business* was one thing and *religion* another; that when he had *business* to attend to, he attended to that alone, and when he had *religion* to attend to, he gave himself wholly up to it. An answer, which, when rightly interpreted, amounts to this, that in his *business transactions* he forgot his religion, and in his *religious matters*, he never dreamed that they had any thing to do with his business. *Selfishness* was the guide in actual life, and a *wordy profession* in worship. God and Christianity were to be acknowledged in formal acts of devotion, but to be denied in the relations between man and brother. As though Christianity was a mere covering to hide an ulcered conduct, instead of being a present, living, diffusive power in the soul, inspiring him on all occasions with an unfaltering devotion to right, and a heavenly spirit that enables him to refuse every wrong, however much it may promise to his self-interest.

It is not an uncommon thing for men to deny their obligations to God and the Saviour, when those obligation come in contact with their passions and selfishness, and to do the very things, which the religion they profess denounces as sins. It seems as tho' it had come to be virtually admitted, that in many of the affairs of life, Christianity is an impracticable concern, that it will do very well to preach and talk about, that it is appropriate for Sunday, for ministers, and for funeral occasions, but that it is not possible to reduce to practice in the street, the shop, in the house, in political and national concerns. How often we see this view of it, avowed, not in so many words, but in the refusal to give God and his truth predominance in the soul and the life, that *wrong* may be resisted and the *right* loved and pursued. There are politicians who call themselves Christian men, who desire to be esteemed as such, yet who think it necessary in attaining power, to bribe and corrupt those who may be gained by bribery and corruption, to pursue measures, however questionable, to command success, looking only to the cravings of selfishness, rather than to individual and public morality and integrity. In business, there are those who profess to make the Bible their faith and guide, yet who carry on their business with the intent of making it pay as much as possible, without regard to the *wrong* which may be done to those with whom they may deal, thus practically forgetting that a dishonest gain is an act of injustice to another person, and a moral injury to themselves, which, if continued, must paralize their integrity and sense of duty. Then again, there are individuals who talk very earnestly of their church and of their faith, of their love for God and the Saviour, and yet who have no control over their temper; who are angry at the least provocation; who are fretful and peevish, if their will, however unjust, is resisted by others; and who follow the rule of blow for blow, railing for railing. Nor is it less the fact, that there are many who present to community and to their families an evil example in their conduct, sometimes indulge in profanity, now and then dip into licentiousness, are wanting in affection and in an earnest love of principle, and yet who observe the externals of religion and would instantly oppose the idea of their being unbelievers of God and Christianity. These, and instances of a similar character, may be found in the eventful scenes of human life, working for the cause of evil and to the injury of the Saviour's rule and reign in the affairs of the world. Such people virtually affirm, that Christianity has nothing to do with the subject of politics, with the conduct of business, with the control of the passions, and with the character of a man's example. Therefore they make Christianity an unpractical thing, by refusing to receive it as a *faith* not only, but as a *life*, and by rejecting it as a system to be believed not only, but to be obeyed as a *teacher* of the right, as a *guard* against wrong, and as a *guide* to the cheerful discharge of every duty.

## THE PLEASURES OF SCHOOL TEACHING.

BY A TEACHER.

"Delightful task! to rear the tender thought;
To teach the young idea how to shoot."

How sweet it is to watch the mind's unfolding!
To train the young thought and the guileless word;
To see where plastic characters are mouldering—
("Can I go out?"—"My lesson isn't heard!")
Half formed ideas through the young mind flitting—
("Shan't George be still, marm?"—"Joseph keeps a spitting!")

There is a throng of glad young faces round me,
Bright with the freshness of life's early spring;
And books, and slates, and maps on all sides bound me,
("Shan't them girls stop? they're playing with a string!")
And eager looks, and minds intent on study—
("Jim pushed me down, and got my books all muddy!")

No shade of earthly sorrow e'er has clouded
Their brief, bright lives, so innocent and fair—
("Please marm make John move down! my seat is crowded!")
No grief nor sadness—("Sammy pulled my hair!")
Existence is to them all sunny weather—
("Bill's been a pinchin' I"—"No I haven't nether!")

A precious charge to me has been intrusted,
The guidance of each young, immortal mind—
("Can't write with this steel pen! it's got all rusted!")
To nourish gentle thoughts and feelings kind,
To lead them in the path which Heaven pleases—
("My spelling book has got all tore to pieces!")

Oh! for more strength! more gentleness of spirit!
More wisdom in the better way to guide—
("I've got my lesson now! Oh, please to hear it!")
More patience to endure when "ills betide!"
("Jim Taylor's give my arm a dreadful twist!")
Oh such confusion! school may be—dismissed.

For the Rural New-Yorker.

## THE MUSIC OF A CHILD.

There is nothing in this wide world of ours, more musical than the laugh of a child. Its fair, open brow has not been darkened by the cares of after life. The glance of its loving eye has not been dimmed with the flow of tears. Its confidence has not been betrayed, nor its affections blighted. But its merry laugh springs from the overflow of kindly feelings. Moore understood this, when he said:

"The laugh of a child—of a child in the street—
Is sweeter by far than the viol's sweet tone;
And it comes, with the clangor of hurrying feet,
And leaves me here musing and dreaming alone.
I love it—I love it—the laugh of a child;
I love the sweet music that comes to me now:
And though other music my care has beguiled,
'Twas not like the child's, with a frank, open brow."

The individual is deserving of pity, who does not love the artless ways and merry music of a child. Such an one has but a cold, unfeeling breast at best; and is a stranger to those finer feelings that throb in the breast of the true man. The nobler qualities of the heart are dead, and do not warm his soul with generous emotions.—But to a gentler nature, the music of a child wakes the best sympathies of his heart, and warms his soul into a better appreciation of life's enjoyments. He can understand its unexpressed joy, and sympathize with its sorrows, which to other eyes may seem as trifles, unworthy of attention. Give us a home, where shall be heard the ringing laugh of childhood, and the fairy music of artless children. W. E. K.

## LOVE-LETTERS.

The first love-letter is an epoch in love's happy season — it makes assurance doubly sure — that which has hitherto only found utterance in sweet and hurried words, now seems to take a more tangible existence. A love-letter is a proof how dearly, even in absence, you are remembered. We once heard a young friend regret her approaching marriage, because she would then receive no more charming notes. Alas! the charming notes are not the only charming things that are no more. But a love-letter! how much of life's most perfect happiness do those words contain! With what anxiety is it expected! with what delight it is received! it seems almost too great a pleasure to open it. Suddenly we mock ourselves for the charming delay—the seal is hastily broken—the contents eagerly devoured; then it is read slowly, dwelling on every sentence to lengthen out its enjoyments; how sweet does every little word of endearment appear!—what importance is attached to the turn of phrase! Through the whole day, with what a care it is read over, and at night its contents mingle with our dreams! We often wonder, when we see people settled down in that cold calmness, too often the atmosphere around the domestic hearth, whether they ever recall the words they used to say, and the letters they used to write! Would those letters appear absurd or exaggerated or would they for a moment bring back the old feeling, or, at all events, tender regret for its departure?

I have often tried to catch the murmuring of falling snow. Not when the flakes dance and frolic in the dim air, as if participating in the glee of youthful anticipation, but when they soberly and unitedly sweep from the sky, like a vast shroud to wrap nature in her necessary repose. It reminds me of the influence of sympathy and affection on the heart. Behold how nature's rough out line is softened! How every abrupt feature is mellowed, and the bare, stript trees made lovely in their white array.—So on the sterner phases of human character, tenderness and love exercise their gentle power, softening incongruities, and harmonizing jarring elements or else wrapping them in the subduing veil of Charity.

## WEBSTER AND WIRT.

There is a peculiar and striking difference between the English and Irish statesman. The former uses the flowers of rhetoric and power of Logic only to convey great practical truths. The latter makes use of those truths as a foundation for oratorical display. The greatest speech ever delivered by an English statesman, was about bread! The greatest ever uttered by an Irish patriot, was upon the abstract rights and woes of Ireland.

The difference alluded to exists in American oratory. The Northern statesman like the English, speaking for a purpose; the Southern, like the Irish, speaking for effect.

The style of Webster and Wirt are opposites. One massive, grand, original and peculiar; the other, light, airy sympathetical. Wirt, in the fairy-like gorgeousness of his style, built his orations in perfect proportion from the foundation to the turret. All was symmetry, all was happy harmony. There was no fault, or blemish, or absence of grace, or presence of presumption, to mar the effect of that exquisite harmony which, blending with the melody of his genius, made everything beautiful and dramatic which he touched. He finished as he fashioned; he polished as he progressed. The edifice of his mind grew graceful under his efforts.—Exquisite and perfect detail kept pace with his construction. A thousand pillars, niches and minutely wrought passages filled the inner temple. Elaborately he engraved momentary reflection upon the passing thought. He spoke. He enlarged. He beautified, and after his prolific imagination had done its work, the airy edifice stood revealed, so fragile and so fair it seemed that any contact would contaminate it, and any rude encounter prostrate it to the earth.

Webster, like a great giant engaged in the construction of his castle, with his massive and gigantic mind, would place, now here, now there, a huge block of ungainly granite. The foundation is rough; great masses of thought are thrown roughly on the earth, as if by chance. And so the building grows, at first rude, then gloomy, until in the wildest grandeur of nature, it overawes and subdues the mind. The edifice of Wirt is like temples of ancient Grecian grace. The monuments of Webster like the pyramids. In departing years the former with all their gracefulness are lost in the distance. The latter in their sublimity seem to grow more sublime, as their outlines strike the sky.—The language of Wirt moved the sensibilities of his hearers. The words of Webster sunk into the hearts and memories of mankind, stirring them in their profoundest depths. The mind associates with Wirt his smooth open brow, curling locks, and words of warm, poetic fondness or playfulness.—We seem to see in Webster the ideal of the God-like and sublime. Upon the horizon of the past, present, and future, we behold his form, standing as it were upon the verge of eternity, with those superhuman eyes fixed on heaven. We see at his feet strewn as wrecks, the fragments of some great work. We see in his grasp the ensign of our liberties and our Constitution. From his grave we hear the echo of his patriotic prayer.—*Cotton Plant.*

## A BIT OF ROMANCE.

About six years ago, a Dr. H——, having become involved in debt, left his home and wife in another State, for Texas, for the purpose of improving his fortunes in a place where he would be free from the demands of clamorous creditors. In the course of time he went with the army to Mexico, and finally wended his way to California. After residing there some time, he met a young man from the place of his former residence, who, however, he did not know, and inquired of him if he knew his wife, whom he described, without, however, telling him the relation he bore to her. The young man replied that Mrs. H—— was his sister, and the last he heard of her, she was in St. Louis. After accumulating a competence, Dr. H— left for St. Louis, for the purpose of seeking his wife, who had long since given him up as dead.

In St. Louis he learned that she had left that place some time previously, and was believed to be in New Albany. He came hither, and upon inquiry learned that she was earning a livelihood by sewing. He learned that she believed her brother to be dead, not having heard from him for many years. Dr. H—— went to the house where he understood his wife was living, but found she had left there a few days before. He inquired about her general conduct and demeanor, and found that it had always been unexceptionable. She spoke but little of her husband, but told every one that she considered him dead. The lady of whom Dr. H—— was making inquiries discovered that he was the long lost husband, and offered to accompany him to the house where she was sewing.

Upon arriving there, she said to her, "Mrs. H——, here is a gentleman who saw your brother in California." She appeared astonished, looked at the visitor, but apparently did not recognize him. He brushed back his hair, and said quickly, "Eliza, don't you know me?' Mrs. H—— immediately swooned away, and fell on the floor. In the same moment a husband and brother, both supposed to be dead, were restored to her. Dr. H——, as we have said, has returned with a competence, and the supposed widow, it is presumed, will no longer sew for a livelihood.

The above statement, we are assured, is strictly correct. Here is a scene in real life equal in strangeness to any to which romance ever gave birth.—*New Albany (Ind.) Ledger.*

Let no one be weary of rendering good offices; for by obliging others, we are really kind to ourselves.

## THE FARMER'S DAUGHTER.

(*Concluded from page* 100, *this number.*)

"Mrs. Parsons will see you now; she wishes it."

She held out her hand to him, as if to lead him gently to the room, involuntarily, and he took it respectfully, but his heart beat faster than before, when he felt her soft and trembling hand within his. As he approached the bedside, the widow held out her hand to him, and thanked him with a naivette which started tears from his eyes.

"You are very kind and noble," she said, "and Alice too, God bless you both!"

A thrill ran through his heart as she said, "God bless you *both!*" And he told her that she should never suffer—that Ellen should not, while he had a dollar, and that he had wealth, and what was wealth good for if not to help the deserving! As he said this Ellen entered the room. She had been trying to sleep, but looked sadder than ever.

"And this Ellen" said Charles, softly and respectfully, "she shall with yourself always have friends and happiness."

She looked up sadly, at him, as if to say "No! no more happiness." Her pathetic face almost startled him, and he bade them all adieu, for tears were running down his cheeks.

When he had entered the parlor at Mr. Withers, the Misses Anne and Sarah accosted him as to his ride and the state of Mrs. Parsons.

"She is very ill—poor woman," he replied, and that was all. He did not feel in the mood for idle talk.

"And Alice Neil, how did you fancy her?"

"She is very good to Mrs. Parsons and Ellen," he replied.

"Some people make a great show of doing good for the name of the thing," replied Anne.

"And other folks," said Henry Withers, just entering the room, "and other folks neither make the show nor the reality, never do any good or pretend to do so."

It was in vain that Anne and Sarah questioned Charles: he had the good sense not to betray the state of his heart to them.—Almost every day he met Alice, either at the parsonage or at her father's, and gradually he discovered the wealth of pure love that lay in her heart. Gradually they became intimate, and learned to love each other, but not a word had been spoken of love, nor was there a person in the village of S——who thought them lovers, nor did they think themselves so.

One beautiful July morning, as Charles came down into the breakfast room at Mr. Wither's, Henry said:

"Mrs. Parsons is dead, Charles."

"Dead!" he replied with sorrow and astonishment, "dead?—when did she die?"

"Last night, at about midnight."

"Alas, for poor, poor Ellen!" he said and tears ran from his eyes.

"She has no money, nor friends—where will she go?" said Anne.

"She is rich in friends," said Charles, indignantly; "and as for money, I will share mine with her before she shall suffer."

The proud Anne was discomfited to hear him talk so, for she had set her heart upon winning the elegant, wealthy and noble Charles Davenport, and all once softened her heart towards the orphan child of the old pastor.

After breakfast, Charles rode over to the house of the dead. It was a fair, still, beautiful morning, yet the very birds were silent. The parsonage as he stopped before it seemed deserted. He entered the drawing room, no one was there, but in a moment Alice came in with her face pale and anxious, and tears standing in her sweet blue eyes.

"Dead!" he said with sorrow, as he rose and took her hand, "and poor Ellen."

There is something in sorrow which makes young hearts yearn to love each other stronger than before; and Alice trembled, but did not start away when he kissed her forehead and said:

"It shall be ours to love Ellen, and to cheer her stricken heart. And where is she?" he asked.

"She is asleep, poor thing! I thought it would kill her to see her mother die—it did almost. You know how for nights she has not slept, and now all is over, from mere exhaustion she is in a deep, almost too deep sleep."

"And do you think she will survive her mother long? Does she not already look as if she must soon die?"

"I fear so, at times," replied Alice, "but she is young, and perhaps you will think me egotist, but I think she loves me very much, and if I love her like a sister and watch over her, she may live and be happy yet."

Two days after, and the whole village followed the remains of the old pastor's widow to the grave. Everybody had loved her while alive, and mourned her now that she was dead.

There is always something peculiarly touching about a country funeral, where all the neighbors gather together and follow the corpse to its final home, while the solemn village bell tolls mournfully; but *this* scene was sadder than any of the villagers had witnessed since the old pastor's death.

It was the custom then and is now in that place, to open the coffin-lid at the grave, and let all present take a last look, and last of all the relations gaze upon the face of the departed, and the dearest friend of the deceased folds down the muslin over the dead face, and shuts it away from human sight forever. The custom is a strange, almost cruel one, but is still a custom in many parts of New England. When the coffin rested beside the open grave, the lid was raised, and one by one of the villagers looked upon the widow's face, some with tears and sobs, some without any visible emotion, though they were few.

Charles Davenport stood not far from Ellen, who was leaning upon Alice in a state of wild sorrow. He walked up to the coffin with Anne Withers upon his arm; she gazed down upon that placid face, for through all the sorrow of the countenance there gleamed a look of holy happiness, without a tear. But Charles burst into a flood of tears as he looked upon the touchingly beautiful face before him, and thought of her sufferings and Ellen's bitter sorrow.

Ellen came last, leaning upon the farmer's daughter, kind Alice, who would not let her go up alone to take the last—*last* look. Her face was very pale and sorrowful, and as she reached the coffin-side, she sank upon her knees. There was a look of agony intense and bitter upon her face, and the tears ran down like rain from her eyes. She kissed the white forehead, and stretched out her trembling hand to replace the muslin over her mother's face. It was more than she could bear, for throwing herself into Alice's arms and whispering, "I cannot! I I cannot!" she fainted away. Charles was at her side in an instant, and covering up that sorrowful yet sweet dead face, bore Ellen away to fresh air and cool water. The lid was shut, and the coffin lowered into the grave; a few remarks, which sounded strangely cold, made by the fashionable young clergyman, and the people turned away to their homes.

It was in vain that Anna Withers waited for Charles; he and Alice had borne Ellen to the farmer's home, and were doing all that they could to soften her agonizing sorrow. In the evening he came back to Mr. Withers', but started the next day for ever, in a few days. He told his father all that had happened while he was gone, and with all the enthusiasm of his nature pictured Alice Neil to them, with her beauty and grace, and education too, and more than all her love and kindness.

"And you love Alice, Charles!" said his mother. He said nothing but blushed scarlet.

"Go and win her if you can," said his father; 'we shall love her for her gentle virtues and herself, as well as for your sake.—She may be humbly born, but she is nobler and far more worthy than those rich and fashionable women who live but to ride in their carriages and look coldly down upon the virtuous poor!"

When Charles was again in the village of S——, he went at once to farmer Neil's. Alice and Ellen were together in the parlor, the former looking sweetly beautiful, and the latter, though sad, yet more cheerful than he had ever seen her. As if guessing the object of his visit, Ellen arose in a little while to go out. The color crimsoned the cheek of Alice as she tried in vain to detain her—and they were alone.

I will not describe what followed. A half hour afterwards, Charles left the farm house the happiest fellow in S——: and Alice, with her cheeks very red, her eyes full of happy tears, entered the kitchen in search of Ellen.

"What is the matter, Ally?" asked her father. "Has young Davenport been making love to you? He should have better manners than to try to rob me of my bird!"

Her cheeks flushed redder than ever, and she looked almost painted. Ellen sprang to her side, and looked beseechingly into the old farmer's face, and he added—

"Ally, I am joking—you may love whom you choose—I shall never complain."

"But, father—if—if—I love *him!*" said Alice, softly and tremblingly.

'Why, you would love a noble fellow—and if he loved you, the world would say you had maried very high, but good and noble as he is, Ally, you are worthy of him."

The next day Charles explained all to the father.

Months passed away, and they were married; and now Alice is the mistress of a beautiful home which she graces more beautifully than ever Anne or Sarah Withers could do. She is loved by old Mr. and Mrs. Davenport. She and Charles spend the warm dog-days always with her father in S——, and are happy. Ellen is with them like a sister, growing more beautiful, though there is a sadness in her blue eyes, at times, which only makes her beauty the more touching to see. She is a favorite with many wealthy people, but her gentleness makes her also loved by the poor. She remembers the kindness of friends when she was poor—old Mr. Davenport has made her wealthy, and is kind always to those who are as he once was.

## THE TYRANTS OF THE HOUSEHOLD.

And so it is, and for his rule over his family and for his conduct to wife and children—subjects over whom his power is monarchical—any one who watches the world must think with trembling, sometimes of the account which many a man will have to render. For in our society there's no law to control the King of the Fireside. He may kill a wife gradually, and be no more questioned than the grand seignor who drowns a slave at midnight. He may make slaves and hypocrites of his children; or friends and freemen; or drive them into revolt and enmity against the natural law of love. I have heard politicians and coffee-house wiseacres talking over the newspaper, and railing at the tyranny of the French King, and the Emperor, and wondered how these (who are monarchs, too, in their way,) govern their own dominions at home, where each man rules absolute! When the annals of each little region are shown to the Supreme Master, under whom we hold sovereignty, histories will be laid bare of household tyrants as cruel as Amurath and as savage as Nero, and as reckless and dissolute as Charles.—*Thackeray's Esmond.*

One great and kindling thought from a retired and obscure man, may live when thrones are fallen and the memories of those who filled them obliterated, and, like an undying fire, may illuminate, and quicken all future generations.

# For the Ladies.

[Written for Moore's Rural New-Yorker.]

## SUNNY DAYS.

How sunny are our childhood's days,
How full of life and glee,—
A halo beams o'er all our ways,
Our hearts how light and free:
Unfetter'd as a bird on wing
Our happy spirits bound,
Nor dream that time can ever bring
A note of sorrow's sound.

How bright all nature to our view,
In every change a charm—
The silv'ry stars, the skies so blue,
The summer days so warm:
The pearly streams, the tiny brooks,
The woods and forests wild—
How dear were then their quiet nooks,
How oft the hours beguiled.

And Autumn with its faded flow'rs
And leaves of varied hue,
Brings still its joys for weary hours,
Its sports so fresh and new—
And Winter with its chilling winds,
And frost, and hail, and snow,
Hath visions bright to youthful minds
Of pleasure's ruddy glow.

The seasons each with equal zest
Amusements gay impart,
Where dwells content within the breast
And sunshine in the heart:
Our childhood's wishes are but few,
To make life glad and bright—
In later years we oft pursue,
In vain, the hidden light.

Rochester, March, 1853. Azile.

Written for the Rural New-Yorker.

## MY COUSIN HELEN.

How strange is human life. What a mysterious link in the great chain of being, is our earthly existence. We live, we die.—Oh, what weighty responsibilities, what solemn thoughts do these words suggest. Various are the scenes that cluster around life's pathway. Some are bright and radiant with beauty, casting a holy and lovely sensation over the soul; some are dark and sad, whose melancholy influence is sorely felt.

We live amid smiles and tears, amid joys and sorrows. The things of earth are transient. What we most cherish, what we most love, is soon torn from us. The flower blooms in beauty, unfolds its rich colors to the sunlight, breathes its soft fragrance upon the air, withers, and dies. The loved, the pure, the good, in whom our affections centre, thus wither and die. They fade from our sight, and their forms are seen on earth no more. Though they have laid aside the earthly tenement, and gone to join the choir that tune their harps to celestial melody, they "still live." They hold a sacred place in our hearts. To their remembrance our holiest and purest hours are given.

How sad yet calm and holy quiet steals over me, as my mind recalls the form of one now slumbering in the grave. Yes, methinks I now see that youthful form, that light, elastic step, and hear the rich melody of that gentle voice. The eye, in itself a soul, beamed with angelic light. The innocent and lovely expression of that youthful countenance, made a deep impress on the heart. And then so good was every motive, so full of thought and feeling was every action, that none could but love.

I saw her, day by day, as she grew up from the little child, and burst into lovely womanhood. All our fond anticipations, centered in infancy, were now dawning into realization. She was the soul, the life, the light of the circle in which she moved.—How many a saddened heart has been calmed by her soothing words of consolation. How many poor and afflicted ones have implored blessings upon her, for her numberless deeds of kindness.

She stood before the altar and yielded up her heart's best affections to one by whom she was tenderly loved. Now she was to act in a different sphere. The future appeared all bright and beautiful. She seemed to live not for herself, but to render those happy by whom she was surrounded. But how fragile are human hopes, how disappointed are human expectations! Death, the fell-destroyer, entered the happy home and cut down a lovely victim.

I stood beside the death-bed. The roses had fled from the cheek, and the color from the lips. The eye once bright and animated was dim, and its cold, feeble gaze, plainly told that its fires were going out. That fair, pale forehead, around which the bright curls had clustered, was now cold with the dews of death. The accents of that gentle and harmonious voice were now feeble—the last faint breathings of a departing spirit. Yet how calm, how quiet, how contented was that suffering one. No regret was heard save for those she left behind. Angels hovered over that death-couch, and bore the ransomed spirit to its Maker.

We followed Helen to the tomb and placed her mortal remains in the cold, narrow grave. We hallowed it by our tears. And when we turned away from that spot which contained our buried love, our hearts bled afresh. But we were comforted by the well assured hope, that she, who had been so kind and good on earth, was now a saint in Heaven. A. J. E.

Rochester, March 7, 1853.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, MARCH 19, 1853.

### PUBLISHER'S NOTICES.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is ordered.

☞ ADVERTISEMENTS must be brief, appropriate to the objects of the paper, and accompanied with the cash.

☞ SEE Terms, Premium List, &c., on last page.

ADDITIONS TO CLUBS—Are still in order. Having but few back numbers, agents and others can order additions to Clubs at $1 per copy from 1st of March or April to end of the year and volume New Clubs, or single subscribers, can begin 1st February, March, or at date of subscribing.

### To our Correspondents.

WE are under many obligations to numerous correspondents for valuable and interesting communications on Agricultural subjects. While highly gratified with the stand taken by our farming friends for the support and success of the RURAL, we are especially proud of the real practical information, with which they enable us to enrich its columns. During the winter we have received more than we could publish, hence our port-folio is rich for the future. Considering both seasonableness and opportunity, we shall give the favors of our friends their due share of attention, and hope to increase rather than diminish the interest of this department of the NEW-YORKER. We earnestly invite the continued co-operation of all who can give us facts, experience, and suggestions, of value to our Agricultural readers.

We are not unmindful of the debt we owe to those who contribute to other departments of the paper. Their aid is duly appreciated and we shall treat no well-written and appropriate contribution with neglect. But time must be allowed for their examination—more time than at present we can command, to decide on the large number before us.

### Notes from the Capital.

ALBANY, March 12, 1853.

DURING the past week the Legislature have been occupied on the subjects of the Canals and the State Finances. A bill has passed the Assembly imposing a tax of seven-tenths of a mill *per* dollar to meet the deficiency in the Treasury, and to aid in the enlargement of the Canals. The bill also provides for the collection of tolls on all freight transported by railroad, except on cattle, horses, sheep, fresh meat, butter, cheese and milk.

Other plans are under discussion in both Houses, the most prominent of which is to amend the Constitution so that money can be borrowed by the State, and paid from the revenues of the canals without taxing the people. This plan also provides for the payment of the million and half now in canal revenue certificates under the law of 1851. It is somewhat probable that this may yet be adopted.

The State Normal School is now in the third week of its eighteenth term. The number of pupils is about 240, and the average of talent is greater than usual, owing probably to the fact that the demand for good teachers is increasing very rapidly.

Business generally is rather dull, especially for butter speculators who have rather long faces "for a cause." Office seekers look anxious, and probably will for some weeks.

We have had a treat of about a foot of snow, probably some that was reserved in December.

More anon. OWE.

### Phrenological Lectures.

THE course of Lectures upon this science, of which mention was made last week, have now been concluded. The attendance has been quite large, and the lectures eminently practical and instructive. The lecture to Ladies was largely attended, and we hear it highly commended by many who were present, as giving just the information needed by the mothers of America. The lectures on "hereditary laws, love and parentage, matrimony, and the perfect woman," unfold laws and principles that should be more generally known, and more practically heeded. Those who were so unfortunate as not to hear them, may obtain much of the same knowledge from works on these subjects, published by Fowlers and Wells. We are aware that some characterize the lectures as ultra and impracticable. This may be so to a certain extent, for the very reason that something of an ultra and new style may be necessary to call the attention of the public to the important truths presented for their consideration. Human Physiology, one of the great pillars of Mr. FOWLER'S system, is less understood than Phenology, and there is much to be learned in both sciences before mankind will be prepared to fulfil the important injunction, "know thyself." To our apprehension such lectures cannot be too often repeated, for the benefit of our race. †

THE MAPLE EXTRACT before us demonstrates not only that the season of sugar-making has arrived, but that the donor of the "specimen"—Mr. J. B. MITCHELL, of Pittsford,—knows how to make, and where to dispose of a superior article.

——The number of convicts in all the New York State Prisons, is 1688.

## Literary Notices.

ANNUAL OF SCIENTIFIC DISCOVERY; or, Year-book of Facts in Science and Art, for 1853. Edited by DAVID A. WELLS, A. M. Boston: Gould and Lincoln, 1853.

THIS is the fourth annual volume of a work "exhibiting the most important discoveries and improvemnnts in Mechanics, Useful Arts, Natural Philosophy, Chemistry, Astronomy, Meteorology, Zoology, Botany, Mineralogy, Geology, Geography, Antiquities, &c. Together with a list of recent scientific publications; a classified list of Patents; obituaries of eminent scientific men; notes on the progress of science during the year 1852, etc., etc." A truly valuable work, containing a fund of information, found nowhere else so cheaply and readily. Sold by SAGE & BRO.

THE CAPTIVE IN PATAGONIA; or Life among the Giants. A personal narrative by B. F. BOURNE; with illustrations. Boston: Gould & Liucoln. 1853.

THE author of the volume before us sailed from the port of New Bedford, in the winter of 1848-9, as mate of the brig John Allyne, bound for California, and was, by the insubordination of the crew, and the treachery of the natives, made prisoner. He remained with the savages three months, passing over large portions of that unexplored country, suffering all that man can suffer and live. Escaping by stratagem, he has furnished an interesting narrative, interspersed with valuable information, about the country and its inhabitants. It is one of the too small number of books of travel worth reading. Sold by SAGE & BRO.

THE SENATOR'S SON, or The Maine Law a last Refuge. A story dedicated to the Law Makers. By METTA VICTORIA FULLER. Cleveland: Tooker & Gatchell, 1853.

THIS new work by Miss FULLER, possesses a higher and more practical tone than her previous efforts, and seems well calculated to do good. It powerfully delineates the evils of Intemperance, and the need of a restraining Law, in which the only hope of the sufferers from this vice is found. It is a handsome volume, and we earnestly hope it may have many readers. For sale by D. M. DEWEY.

HOME SCENES; a Family Story. By AMANDA WESTON. Syracuse: L. C. Mattack, 1853.

THIS little volume contains, we are told, a cheerful and truthful view of scenes at home, well calculated to promote better enjoyment of life by both parents and children, and to prompt to the correction of various domestic errors.

THE EDENBURGH REVIEW for January commences the 97th volume of this Quarterly. It contains nine articles, among them one on the Hungarian Revolution, others on Saul of Tarsus, Cathedral Reform, the Indian Army, Montalembert, and the Fall of the Derby Ministry. Republished by Leonard Scott & Co., New York, in connection with the London, North British, and Westminster Quarterly Reviews, and Blackwood's Magazine. Terms, for one Review $3 a year, for two $5, for three $7, for the four $8; Blackwood's Magazine $3, Blackwood and the four Reviews $10. D. M. DEWEY, agent.

"CHEMICAL FIELD LECTURES" is the name of a work designed for Agriculturists. It was translated from the German by JAMES E. TESCHEMACHER, a well known Agricultural writer—who has edited it with valuable notes, adapting it to our wants. Dr. STOCKHARDT, a celebrated German Chemist, is the author. The topics most intimately connected with farming are not only popularly, but ably treated. DEWEY has it.

THE KNICKERBOCKER for March has its usual rich variety of contents. There is a forcibly written article on "Second Marriages," which, as a specimen of fine logic, will well repay perusal.—McMAHON, Waverly News Room, agent.

NEW MUSIC.—We have received from Mrs. WM. WEBSTER another musical composition, entitled "The Introduction Polka," and dedicated to the daughters of JAMES BUCHAN, Esq., of this city.—It possesses the spirit and brilliancy of her former productions.

THE WOOL GROWER AND STOCK REGISTER for March, has the following inviting table of contents:

WOOL AND SHEEP HUSBANDRY.

THE WEATHER AND SEASON.—The weather since the first of the month has continued rather moderate until Monday the 14th, which was a very cold, windy, squally day—one of the most tedious days of the past winter season. Tuesday morning thermometer at 10.

Heard the crows cawing on Saturday; also on the same day, saw skunk-cabbage (Ictodes fœtida) in flower. This is a common plant in low wet grounds. The common name indicates its well known property. These are the first heralds of Spring observed by—w.

## Legislature of New York.

### Synopsis of Proceedings.

MONDAY, March 7.—*Senate.*—Notices, reports, &c., occupied the Senate.

*Assembly.*—The bill to provide means for paying the State Debt was before the House.

TUESDAY, March 8.—*Senate.*—The Senate received notice of several new bills, had several introduced, refused to stay in Executive session; after which, the usual select Committee of eight was appointed.

*Assembly.*—The Assembly considered, in Committee, the State Finance bill. Amendments to make it include incorporated Canal Companies, to restore the tolls on Railways as they existed in 1850, and to tax the earnings of Railways, were agreed to, and the bill reported to the House.—Adjournment was not taken till a late hour.

WEDNESDAY, March 9.—*Senate.*—The Senate considered a majority report from the Select Committee, but took no action thereon.

*Assembly.*—The Assembly discussed innumerable amendments to the Tax bill, refused to accept any of them, and finally passed the bill as it was originally reported.

THURSDAY, March 10.—*Senate.*—The Senate considered an amendment to the Constitution, proposed by Mr. BRISTOL, and rejected it.

*Assembly*—In the House the Tax bill was discussed at length. The motion to insert the Senate Toll bill was adopted; the motion to strike out the tolls on the Ogdensburg and Erie Railroad have been lost.

FRIDAY, March 11.—*Senate.*—Bills were reported enlarging the basis of Bank circulation, and supplying Brooklyn with water. In Committee, the bill suspending the publication of the Colonial History was discussed, but no action taken on it.

*Assembly.*—A report was made erecting out of Erie, Cattaraugus, and Chautauque counties, the new county of Marshall. Another incorporating the New York State Law School. The Senate bill imposing tolls, being amended by striking out live stock and fresh meats, was concurred in.—Ayes 79, nays 28. The bill providing for the payment of the State debt and pushing on the public works, was moved to third reading.

SATURDAY, March 12.—*Senate.*—A petition was presented from 10,000 citizens of New York city, against the Ecclesiastical Devise Law. A bill to recognize the First Regiment of New York Volunteers was reported. A bill was passed to extend the time for the completion of the Watertown and Rome Railroad.

*Assembly.*—The bill to divide the Nineteenth Ward of New York city was reported complete. Mr. SHAW laid on the table a resolution inquiring into the expediency of such an amendment to the Constitution as shall give to the Legislature authority to sell the Canals. The new Assessment bill was further debated.

REMARKS.

Monthly mean temperature, 31.15.

" " height of barometer 29.52 inches.

Zodiacal light very brilliant on the evening of the 14th.

The daily mean of the above table is made of three observations—two, only, being published—the highest and lowest. This accounts for the difficulty which some find in trying to get the daily mean, as published, from the two observations.

"TERRA CULTURE."—*Correction.*—In an article in last week's paper, it was stated that $50 had been *sent* to Russell Comstock, as we understood, by citizens of Derby, Ct. We are informed that this is a mistake, that the money was *pledged*, and was ready for him at the time appointed for his lecture.—*Boston Cultivator.*

HAVING copied the erroneous statement into our last number, we promptly and cheerfully publish the above correction. While we are anxious to guard the public against so foolish a humbug as "terra-culture," we would avoid doing injustice to its originator. Indeed we have facts enough to bury the theory beyond the hope of successful resurrection, without recourse to any but truthful statements.

A WOMEN'S TEMPERANCE MEETING will be held at Corinthian Hall, on Tuesday evening the 22d inst., at 7½ o'clock. Mrs. AMELIA BLOOMER, of Seneca Falls, Rev. ANTOINETTE L. BROWN, of Henrietta, and SUSAN B. ANTHONY, of Rochester, will be the speakers of the evening. All friends of Temperance are respectfully invited to attend.—Admission one shilling. Tickets to be had at DEWEY'S News Room, and at the door on the evening of the meeting.

## Congressional.

### Synopsis of Proceedings.

MONDAY, March 7.—*Senate.*—The Cabinet as heretofore given, was unanimously confirmed.—Several matters were brought up for future discussion.

TUESDAY, March 8.—The following is a list of the Committees appointed:

*On Foreign Relations*—Messrs. Mason, (Chairman,) Douglas, Clayton, Norris, Everett.

*On Finance*—Messrs. Hunter, (Chairman,) Bright, Pearce, Gwin, Badger.

*On Military Affairs*—Messrs. Shields, (Chairman,) Borland, Dawson, Fitzpatrick, Jones of Tennessee.

*On Commerce*—Messrs. Hamlin, (Chairman,) Soule, Seward, Dodge of Wiscousin, Benjamin.

*On Naval Affairs*—Messrs. Gwin, (Chairman,) Mallory, Fish, Thomson of New Jersey, Toombs.

*On Public Lands*—Messrs. Borland, (Chairman,) Dodge of Iowa, Pratt, Pettit, Thompson of Ky.

*On Roads and Canals*—Messrs. Bright, (Chairman,) Douglas, Geyer, Adams, Sumner.

*On Pensions*—Messrs. Jones of Iowa, (Chairman,) Weller, Foot, Evans, Toombs.

*On Indian Affairs*—Messrs. Sebastin, (Chairman,) Walker, Cooper, Rusk, Smith.

*On the District of Columbia*—Messrs. Shields, (Chairman,) Norris, Badger, Mallory, Cooper.

*On Claims*—Messrs. Broadhead, (Chairman,) Adams, Pratt, Wade, Chase.

*On Patents and the Patent Office*—Messrs. James, (Chairman,) Evans, Dawson, Stuart, Smith.

*On the Judicary*—Messrs. Butler, (Chairman,) Toucey, Geyer, Stuart, Phelps.

*On Territories*—Messrs. Douglas, (Chairman,) Houston, Weller, Cooper, Jones of Tenn.

*On the Post Office and Post Roads*—Messrs. Rusk, (Chairman,) Soule, Hamlin, Morton, Smith.

*On Public Buildings*—Messrs. James, (Chairman,) Hunter, Badger.

*On the Library*—Messrs. Pearce, (Chairman,) Bayard, Atherton.

WEDNESDAY, March 9.—*Senate.*—Mr. CLAYTON concluded his remarks on the Central American treaties. A resolution calling for information respecting the imprisonment in Cuba of JAMES H. WEST, a citizen of R. I., was passed in Executive Session.

THURSDAY, March 10.—*Senate.*—A resolution was passed calling on the Secretary of the Navy for information relative to purchase of coal for the squadron to Japan. A resolution was adopted referring some of the unfinished business of last session, touching the difficulties of the Superintendent of Indian Affairs in Minnesota, to Indian Committee. Mr. DOUGLAS made a speech on the Bulwer and Clayton treaty. Adj. to Monday.

DEAD LETTER CURIOSITIES. One million of dead letters, that is, letters for which the owners could not be found, were recently burned in a huge boufire at Washington. The Republic enumerates the following as a portion of the contents of them:—"A horse shoe; a ginger cake, the postage on which was $2,10; a donation to a church, being a small cake in a paper box; a quilt, a New Year's present to a bachelor; a Dutch pattern for a child's dress; a pin-cushion, the stand of it in the bottom of a glass lamp, the postage $4, the intrinsic worth about as many cents; a zinc frame belonging to a galvanic battery, postage $17; a stone weighing two pounds, addressed to a gentleman by "Eliza," as a sample of his generosity; a pair of men's boots sent to a lady; a large bottle of salve; and a bundle containing a coarse shirt, a pair of blue stockings, and a razor."

STATE LIBRARY.—The work of finishing the interior of the State Library building is progressing a pace—at snail's pace, we think. Workmen are engaged in preparing the flooring. This is to be composed of square blocks of English-made tiles, cut in diamonds, and of three different colors—white, buff and slate. These tiles are laid in cement, half an inch thick, and then left to harden like stone. This material will make a beautiful Mosaic flooring, not only durable, but perfectly fireproof. Nearly the entire edifice is thoroughly fire-proof, and why the winding stair-ways should have all been constructed of wood, is a mystery to us. They should have been made either of iron or stone.—*Alb. Reg.*

THE ARCTIC EXPLORATION.—The New York papers state that the expedition, under the command of Dr. Kane, will sail for the Arctic seas about the middle of April. The whole company numbers nineteen men, including eleven hands, and each is armed with one of Marston's rifles, and an abundance of amunition. Besides the brig Advance, the frame-work of a smaller vessel, which can be put together when required, four gutta-percha boats, intended for sledges and five whale boats, will be carried out, to which forty-eight dogs will be added when the party arrive on the upper coast of Greenland.

LIABILITY FOR COUNTERFEIT BILLS.—The system adopted by the Suffolk Bank, of Boston, of marking all counterfeit bills that pass through the foreign money department of that institution, operates as a great check to the passage of bad money in that city. When once a bill is marked, the person from whom it was received is liable, and must redeem it or inform to whom it was returned. Attempts have been made to erase the Suffolk mark, but the officers now put it both on the face and back of the bill, in such a way as to render any removal impossible.

COAL EXPLORATION.—Illinois is bound to be much richer in coal than has been supposed. The coal field of Pennsylvania is said to embrace an area of some 63,000 square miles; and the Chicago Democrat states that the recent disclosures of the State survey, make it certain that the coal fields of Illinois will be found equal in extent to that, and probably will exceed it.

CHINESE INDUSTRY.—Parrott's building in San Francisco, of 100 feet front, 70 or 80 feet deep and four stories high, all of solid granite, was put up in Canton, block by block, by Chinese workmen; and the blocks being all numbered, the building was then taken down, put aboard ship, brought across the Pacific, and re-erected in San Francisco by the same hands.

MADISON UNIVERSITY.—It appears by the annual Catalogue for 1852-53 that there are now 201 students in this Institution. Eleven are theological students, ninety-three undergraduates, and ninety-seven in the preparatory department. The entire course comprises eight years.

## News Brevities.

——Navigation on the Pennsylvania Canals opened on the 3d inst.

——A mob was recently quelled in Boston by the Fire-Department playing on them.

——Twelve steamers are now on their way from England to Australia.

——The Pacha of Egypt has given orders for leveling the Isthmus of Suez.

——The population of the Brazilian Empire in South America, 5,200,000.

——It is said that the Canal will be opened for navigation on the 15th of April.

——Gen. Scott is about to establish the headquarters of the army at New York.

——Butter in Baltimore is quoted dull at 15 a 17 cts. for roll, and 14 a 16 cts. in kegs.

——The Governor of Vermont has set apart the 8th of April as a day of humiliation and prayer.

——Virginia, perhaps for the first time since the Government was formed, is without a Cabinet Minister!

——There are 42 light-houses on the English coast; 16 on the Scottish, and 26 on the Irish coast.

——Resolutions have passed the Virginia legislature in favor of reducing the duty on railroad iron.

——It is stated that in the city of Glasgow twenty thousand people go to bed drunk every Saturday night.

——Hon. Robert McClelland, the new Secretary of the Interior, under Pierce, is a native of Franklin Co., Pa.

——A tremendous hail storm occurred at Hayneville, Ala., last week. The hail stones were as large as marbles.

——There are thirty-six members of Parliament who are non-conformists, representing nearly 4,000,000 of persons.

——The iron pavement in Howard street, Boston, has not been affected by frost or the travel over it during the winter.

——Hon. Jonathan Phillips has made the liberal donation of five hundred dollars to the U. S. Agricultural Society.

——Col. Fremont's solicitors communicate to the London Times the recognition of his claims to the estate of Mariposas, California.

——The well known German, Kinkel, has accepted a place as Professor of the German language, at Westbourne College, London.

——A stoker on board H. M. ship Valorus, has become entitled to the Earldom of Stockport, and estates producing $155,000 a year.

——It is owing to the exertions of Eliza Cook, that £400 have been raised for the purpose of erecting a mounment to Thomas Hood.

——A Rhode Island Bank issues fractional bills, as $1,25, $1,50, $1,75, to facilitate the making of change.

——The citizens of Poughkeepsie are subscribing liberally to secure a "House for the Friendless" in that beautiful village.

——There are applications before the Massachusetts Legislature for over *seventeen millions* of additional banking capital.

——The sugar crop of Louisiana, it is said, will be larger for 1852 than ever before. It will reach fully 290,000 hogsheads.

——Dr. Oliver Wendell Holmes, we see it stated, has appeared on seventy-one occasions before popular audiences during the season.

——It is stated that the Legislature of Pennsylvania has, among other projects, a bill for an incorporation to *raise chickens.*

——A wild horse was recently purchased in Cincinnati for $4,000, and will be exhibited in New York at the World's Fair.

——The fiftieth anniversary of the introduction of Methodistism into Cincinnati, was celebrated on the afternoon and evening of the 7th of March.

——A Railroad has been opened between Chicago and La Salle, and the Tribune of the former place congratulates themselves upon the event.

——A new comet was discovered Tuesday evening at the Observatory of Harvard College, by Charles W. Tuttle, assistant at the Observatory.

——A tornado visited the vicinity of Clarksonville, Tennessee, on Sunday night, levelling dwellings, stables, barns and trees, to the ground.

——Ex-President Fillmore is preparing for his Southern tour. He will be the guest at Charleston of a distinguished Democratic politician.

——M. Cabet's community, at Nauvoo, recently celebrated its anniversary. Its net profits for the last year are said to have been $9,000.

——The tobacco crop of the United States, for the last year, amounted to about $200,000,000.—Of this, $80,000,000 worth was consumed at home.

——A joint stock company has been formed to work the Middletown, Conn., silver mines. Its capital is $60,000. The mines are said to be very rich.

——It is estimated, by the San Francisco papers, that an increase of at least 75,000 was made to the population of California, during the year 1852.

——The contributions to the Washington National Monument during the month of Feburary, amounted to $1,604, 22 and the expenditures to $2,109, 19.

——The Baptist Register says there are fourteen Protestant schools, and twenty-six Protestant sermons are preached every Sabbath day in Constantinople.

——George D. Prentice, the witty editor of the Louisville Journal, contemplates going into the very unpoetical business of buying and selling dry-goods!

——The organ in use at Dr. Peabody's Church in Boston, was selected by Handel more than a century ago. It is still in some respects a fine instrument.

——During the month of February there arrived at New York 12,289 immigrants. The number of vessels which arrived during the same period was 213—total tonnage 115,098.

——Epes Sargent, Esq., has retired from the editorial chair of The Boston Transcript. Daniel N. Haskel, heretofore a contributor to The Transcript, succeeds Mr. Sargent.

——First Steamer arrived at Cleveland on the 12th. She came from Sandusky, landed her passengers (two) on the ice, three miles out, and started back again.

——The public debt of the United States due 1st July, 1853, and which the Secretary advertises will be paid on presentation, amounts to within a fraction of six millions of dollars.

——The annual amount of lead produced from the Wisconsin Lead Mines, is about 40,000,000 pounds, which, at five cents a pound, (a low enough estimate now,) amounts to $2,000,000.

# Foreign Intelligence.

## Arrival of the Africa.

By the steamer Africa which arrived at New York on the 13th iust. we have Liverpool dates to Feb. 27th.

The Africa was detained at Liverpool in consequence of a terrible storm which prevented her getting the mails on board.

The most singular feature of the news is that France, while professing to act with Austria in the Monteuegrin difficulty, is on terms of the closest relations with Turkey.

Apprehensions are eutertained of an outbreak in Hungary. Mazziui is suspected to be iu Milan.

Cottou is ⅛ lower. Breadstuffs dull.

On Thursday, an important debate took place iu the House of Lords, ou the subject of war with Ava. The Earl of Ellenbury moved for the production of a letter writteu iu 1829 by the direction of the East India Company to the Governor, giviug instructions as to the line of operations to be followed in case of a further war with Ava, especially with reference to the proclamation for the annexation of Pegu.

The Earls of Aberdeen and Derby both defended the policy hitherto pursued.

In the House of Commons, on Friday, the subject of Jewish disabilities was discussed, the object being to extend to the Jewish subjects of Great Britain the same privileges which are enjoyed by Protestaut dissenters and Romau Catholics. The motion to go into consideration of the subject was carried.

A telegraphic despatch received by the French Government, states that on the rejection by the Porte of the ultimatum of Austria, respecting the Montenegriu affairs, the Austrian flag was struck, and not only Count Leuingen, but the whole Austrian Legation left Constantinople.

The Ottoman Porte considers himself as under the protection of England aud France.

# California News.

## Arrival of the Uncle Sam.

The Steamer Uncle Sam, from Aspinwall, via. Kingston, arrived at New York on the 15th inst., bringing dates from San Francisco to the 30th ult., and $300,000 in gold.

The Mail Steamer had on board, on her departure from San Francisco on the 15th ult., nearly $3,000,000 in gold.

Benecia has been finally decided upon as the Capital of the State of California.

The rainy season has been succeeded by several weeks of fine weather.

The floods had subsided in all directions, and the prospects of the miners were never more encouraging. The markets generally well sustained, except for flour, which has fallen to $12@13 per barrel. Provisions, however, are well sustained.

# News Paragraphs.

☞ The value of the imports into Canada in 1852 was $20,286,052, being a slight decrease on the previour year's importations, which amounted to $2,956,800, and in the previous year to $2,-957,756. The revenue from the Canal, is increasing. Last year it amounted to $338,340 against $304,864 in 1851. This includes the Welland, St. Lawrence, Chambly and Burlington Bay Canals aud St. Ann's Lock. The slight decrease in the importations of last year as compared with those of 1851 is attributable to the heavy stocks in the hands of merchants in the beginning of 1852, and not to any decrease of consumption.

☞ A white sheet of snow has covered Paris and its neighborhood; and, wonderful to say, a concert of merry bells of sleighs is just passing under my window. For twelve years there never has beeu such a depth of snow witnessed in Paris; and I am told by au old gentleman who has just visited me, that the last time he had seen snow in Paris was in 1841.

—— A man in New Bedford, who had backed out from a promise of marriage, was prosecuted and imprisoned by his intended. The injured fair one paid his board in jail for two weeks, when he surrendered, and they were married. The *Standard* thinks other damsels similarly situated might adopt this method with equal success.

☞ Passenger trains on the Chicago and Rock Island Railroad, have commenced running to La Salle. Navigation is now open on the Illinois river, and a line of first class steamers are running between La Salle and St. Louis, connecting with the Rock Island Railroad at the former place.

☞ The amount of money in the U. S Treasury on the 28th ult., was $15,715,140 86.—Of this sum $4,443,853 16 was in the Sub Treasury at New York, and $5,508,820 in the mint at Philadelphia. The deposits in New York have since increased to more than $6,000,000.

☞ The Africa brings rather stirring intelligence. War between Austria and Turkey may involve other and powerful Nations. Europe is very plethoric. Unless the old system of depletion has really gone out of fashion, blood-lettiug is not unlikely to be restored to.

☞ A Niles (Michigan) correspondent of the Chicago Tribune says the California fever is raging in that part of the country as fierce as ever.—Many who had gone thence to the laud of gold had returned, bringing back highly favorable reports, and had determined to go again.

☞ No less than 40,000 pine logs have been cut, and 25,000 have been put into the river at a point sixty-five miles from Potsdam, St. Lawrence Co. A quantity sufficient to make 25,000,000 feet of lumber, which, to be brought to market, will pay a toll of $9,000 to the State!

☞ The emigration to Prarie du Chien is said to have been very extensive for some time back. The place is now crowded with new families, and from indications, a further rush of strangers is expected in the spring. The garrison is full, and so is every tenantable house in town.

☞ Late reports from the Lake Superior Copper Regions state that the Cliff Mine is now in operation at the eighth level, 520 feet below the surface, and yielding more copper than any level above it. It uow pays a profit of about $20,000 per month.

☞ Hudson River Railroad. The Albany Atlas states that the double track will be completed through in August, when the express trains will make the whole distance in three hours, and the efficiency of the road will bo vastly increased.

☞ The new liquor law in Illinois provides that licenses for the sale of intoxicating drinks shall range from $30 to $300, and no liquor to be sold, less than one gallon in quantity, without license.

## Literature Fund.

The Regents of the University have apportioned to such Academies as were entitled thereto, a portion of the $40,000 of Literature Fund. The following institutious in this sectiou share in the distribution:

| | |
|---|---|
| Riga Academy (for books, &c.,) | $250 00 |
| Albion Academy, | 359 12 |
| Alfred Academy, | 338 10 |
| Bethany Academy, | 166 19 |
| Brockport Collegiate Institute, | 454 63 |
| Canandaigua Academy, | 217 76 |
| Cary Collegiate Seminary, | 227 31 |
| Clarkson Academy, | 70 69 |
| Clover Street Seminary, | 242 59 |
| East Bloomfield Academy, | 154 73 |
| Genesee Wesleyan Seminary, | 1,444 40 |
| Gensee and Wyoming Seminary, | 250 23 |
| Genesco Academy, | 384 95 |
| Holley Academy, | 89 79 |
| Ingham Collegiate Institute, | 471 81 |
| Lockport Union School, | 462 26 |
| Macedon Academy, | 238 77 |
| Medina Academy, | 221 58 |
| Middlebury Academy, | 192 73 |
| Nunda Literary Institute, | 160 46 |
| Ontario Seminary, | 362 94 |
| Ovid Academy, | 126 07 |
| Riga Academy, | 105 07 |
| Rochester Female Academy, | 34 40 |
| Seneca Falls Academy, | 191 02 |
| Walworth Academy, | 106 75 |
| Yates Academy, | 320 91 |

State Prisons.—The annual report of the State Prison Inspector shows that the whole number of convicts in our State Prisons on the 1st of December, 1852, was 1,843; 129 more than one year ago. Of these, 924 were at Sing Sing, 752 at Auburn, and 167 at Clinton. Of those discharged, 143 were by pardon, and seveu transferred to the Lunatic Asylum. Sing Sing has not paid expeuses by $17,255 30. At Auburu, the expenses exceed the earnings only $158. The Clinton Prisou is not expected to pay yet. The mining operations are enlarged, and more ore will be raised this year than heretofore. The blast furnace has been erected, and forges for making finished iron will be put up, so that employment can be furnished to 300 convicts. The statistics in regard to temperance and education of the convicts, are much as usual—the great majority were intemperate, and but a small number eujoyed the beuefits of schools.

New York Mint.—The Journal of Commerce (Cotton, nondescript) says, the Assay Office abont to be established in that city by virtue of an appropriation of $100,000 made at the recent session of Congress, will probably expand into a Branch Mint, and perhaps will eventually absorb the mother Mint, now at Philadelphia. In the meantime, as an Assay Office, it will produce an important change in the disposition of the gold dust arriving here from California. Instead of being sent to Philadelphia for coninage, most of it will be sent to the Assay Office here, and be cast into bars, discs, slugs and ingots, having a specified value, and being in all respects equal to coin as a legal tender.

Railroads in Minnesota.—There is perhaps as much interest felt in Minnesota at this time upon the subject of railroads, as iu any other port of the country. Before the adjournment of the present Legislative Assembly, charters will have been passed, incorporating companies to construct a road between St. Paul and St. Anthony; from the Mississippi to Fond du Lac on Lake Superior; from St. Paul or St. Anthony to the Iowa line—our part of the Louisiana and Minnesota Railroad; and, we hope, also to announce the passage of a charter looking to the construction of a road directly across the State of Wisconsin towards Milwaukie and Chicago.—*St Paul Minnesotian.*

The New Silver Coin.—The weight of the new silver coinage authorized by the recent act o Congress, which goes into operation in June next, as compared with that coinage since the passage of the act upon the same subject in 1837, is as follows:

| Silver. | Act of Jan., 1837. | Act of Feb., 1853. |
|---|---|---|
| Dollar, | 412½ grains. | No change. |
| Half Dollar, | 206¼ " | 192 grains. |
| Quarter Dollar, | 103⅛ " | 96 " |
| Dime, | 41¼ " | 38.40 " |
| Half Dime, | 20⅝ " | 19.20 " |

Culture of Potatoes in Bermeda.—By the late dates from Bermuda, we learn that the crop which now excites the most interest and at entiou and from which the greatest results are anticipated, is the potato. The import of that esculent from the United States, exclusively for planting, has reached not less than 6,000 barrels, or 16,000 bushels. The Bermuda potato crop of this year, from present appearances, bids fair to be twice as large as auy hitherto raised.

Cotton in Western Africa.—Thirty varieties of cotton have been found growing spontaneously in Africa. A missionary says he has stood erect under the branches of a cotton tree in a Goulah village, so heavily laden with bolls that it was propped up with forked sticks to prevent it from breaking down under its own weight. The cotton was equal to that of auy country. The natives manufacture cotton goods extensively.

Liberal Endowment.—Miss Catharine E Beecher has offered to endow the Professorship of a female Seminary in Dubuque with the sum of $20,000, and also to furnish books and apparatus to the amount of $1,000 provided the citizens of Dubuque will erect a building and guarantee a certain number of scholars. The proposition has been accepted, and a Committee appointed to solicit donations.—*Cincinnati Atlas.*

Massachusetts Election.—Sufficient returns have been received from the election of Delegates to the Massachusetts Constitutional Convention, held on Monday, to show that the Whigs are in a minority and that the Coalitionists have swept the State. The ablest men in the State have been elected as delegates, among them Wilson, Griswold, Banks, Boutwell, Hallett, Hobert, Keys and Charles Sumner.

What Offal is Worth.—During a trial of a case in one of the courts of New York city a few days ago, in which the Mayor attempted to restrain Michael Kelly from removing offal bones from the city, it was shown by Kelly that the amount paid by himself and others engaged in the business, amounts to $10,000 a year, and the proceeds of their sales to $200,000.

The Wool Crop.—The Cleveland Herald of the 12th inst. says, "an intelligent buyer informs us that three-quarters of the wool in Northern Ohio has already been contracted for at prices from 45 to 55 cents per pound. In one instance a lot of wool which was offered and refused at 40 cents, was since sold at 50 cents."

☞ In Glengary Co., Canada, there is a population of 17,000, of which 3,228 bear the name of McDonell or McDonald.

# Market Intelligence.

Rural New-Yorker Office,
Rochester, March 16, 1853.

The weather has been unfavorable for business during the week, either very muddy, or as to-day, inteusely cold and blustering.

Grain—Very little offering. The news by the Africa has a depressing tendency on prices.

Provisions remain inactive at previous rates. Fresh butter and eggs are not plenty.

Seeds.—Clover seed appears to be plenty, and retails at $6,50@6,75 for medium, an 50 to 75 cts. higher for large.—Peas are arriving from Canada and find a ready market at fair rates.

In other articles no variation except such as are noted in the table blow.

### Rochester Wholesale Prices.

### CLOVER AND TIMOTHY SEED.

200 Bush. medium Clover Seed; 100 bu. large or late Clover seed; 200 bu. Timothy seed, on hand and for sale at the lowest market price, at the Genesee Seed Store, 65 Buffalo st., Rochester, by

163-tf J. RAPALJE & CO.

Moore's Rural New-Yorker is a capital paper. It is published at Rochester, one of the most beautiful cities in the country, is printed well, is judicious in its extracts and subjects for editorials, and opens rich, like a honey comb, —having sweets in every cell.—*New England Farmer.*

### ETHAN ALLEN
AND THE
### GREEN-MOUNTAIN HEROES
OF '76.

By Henry W. De Puy, author of "Louis Napoleon and his Times," "Kossuth, &c."—428 pages 12mo. with a steel engraving of Kinney's Heroic Statue of Gen. Ethan Allen, a Map showing the route of Gen. Burgoyne, previous to his surrender at Saratoga, Oct. 17th, 1777, and a view of Old Ticonderoga.

This book, full of thrilling interest, should be in the hands of every American Independent of its being historically valuable, it contains many accounts of hair-breadth escapes, hardships, and sufferings, almost past belief, and of bloody battles where the heroic Green-Mountain Boys fought in the defense of their homes, their children, and their wives. Although Ethan Allen is the principal subject of the work, brief historical and biographical reminiscences of many others, who are identified with the early history of New England, are given; thus weaving all together into one succinct and interesting historical narrative.

AGENTS WANTED.—This work affords a rare opportunity for Agents, and others, wishing to engage in a light and profitable business, as a liberal percentage will be allowed to all persons canvassing for the work.

Single copies, done up in substantial wrappers and delivered free of postage to any post-office in the United States, will be furnished for $1.25.

Address, *post-paid*, Beadle & Brother,
*Buffalo, N. Y.*

### CARY'S ROTARY FIRE ENGINE PUMP.

THE Inventor after thoroughly testing his engine pump (for the past two years,) feels confident that it is not equalled by any thing now in market, in the way of raising or forcing water—the motion being rotary, the stream is constant without the aid of an air vessel. The packing is self-adjusting, very durable, and cannot well get out of order.

These pumps are well calculated for all the purposes for which pumps or hydrants may be used, viz., Factories, Steamboats, Tanneries, Breweries, Distilleries, Railroad Water Stations, Hotels, Mines, Garden Engines, &c. The highest testimonials will be given.

No. 1 is a house or well pump and domestic Fire Engine, and will raise from 20 to 30 gallons per minute.

No. 2 will raise 100 gallons at 120 revolutions.
No. 2½ do 200 do 120 do.
No. 3 do 300 do 120 do.

The quantity raised can bo doubled, by doubling the revolutions. These machines are manufactured and sold by the subscribers at Brockport, N. Y.
76-tf. CARY & BRAINARD.

Johnston's Ag. Chemistry, $1,25; Boussingault's Rural Economy, $1,25; Downing's Fruits and Fruit Trees of America, $1,50; Amer. Fruit Culturist, by Thomas, $1,25; Dictionary of Gardening, by Johnson, $1,25; Farmer's Dictionary, by Gardner, $1,75; Farmer's Every-Day Book, by Blake, $2,50; The Complete Farmer and Gardener, by Fessenden, $1,25; Rural Architecture, by Allen, $1,25; Ladies Companion to the Flower Garden, by Mrs. Loudon, $1,25; American Flower Garden, by Buist, $1,25; American Farm Book, $1; The Kitchen Garden, by Buist, 75c.; Continental Agriculture, by Colman, $1; Scientific Agriculture, by Rodgers, $1; American Lady's System of Cookery, by Mrs. Crowen, $1,25.

The above works are all well bound, in muslin or leather, and mostly of late editions and finely illustrated.

The following works are bound in paper, pamphlet style, and furnished at 25 cents each:—Elements of Agriculture; Dana's Essay on Manures; Every Lady her own Flower Gardener; The American Kitchen Gardener; Amer. Bird Fancier; Amer. Rose Culturist; Pests of the Farm; The Horse; The Cow; The Hog; Domestic Fowls and Ornamental Poultry; The Hive and the Honey Bee.

We shall pre-pay the postage on books sent as premiums. Though this is more than was promised, we presume none of our friends will object!

# Poetical.

For the Rural New-Yorker.

## SONNET.

BY WM. EDWARD KNOWLES.

We saw a child at play amid the flowers;
We heard him laugh within his glad retreat;
And the fair morning, with her noiseless feet,
Trod up the golden pathway of the hours.
In her soft arms she took this child of ours,
And bore it where the loved and lost one meet;
Enticing it from out the earthly bowers,
The glory of a higher birth to greet.—
Yet we wept not, when from our view it rose,—
Or if we did, we wept but for the joy,
That the dear treasure was beyond its foes,
Where it could taste its sweets without alloy.
And as we longed and pray for his returu,
A voice came down, and bade us not to mourn!

# Rural Sketch Book.

## THE FARMER'S DAUGHTER.

BY D. W. BARTLETT.

THERE is no place in the world more joyful than a farmer's home. Talk not of the palaces built and inhabited by merchant princes, nor of rich men's country seats, for they will not compare with the old homestead, for gentle joys and peaceful comforts! In the one you may tread upon finer carpets, and gaze into splendid mirrors, or listen to more fashionable musie from costly pianos; but in the other you can hear the sweet voice of the farmer's daughter singing happy songs, artless but beautiful; and there are springs of water, clear as crystal, over which, when you bend down, in thoir chaste depths, you can see your face. And then, while too often in the rich man's house there are jealousies and heartburnings, in the farm house there are happiness and content.

How foolish are they who pine for wealth and grandeur! Neither brings happiness, nor love, nor contentment. Money will not purchase a single worthy heart, nor all the grandour in the world secure true friendship or love. If you would be happy, do right—be content with a home full of simplo joys and loves—never struggle for great wealth or fame; chase not such meteors, such false stars—oh, never, if you would live a life of peace and joy.

There was once, in the little village of S——, a farmer's home, which was one of the happiest in the world. The village lay a few miles from the beautiful Connecticut river, in a valley of great beauty. Ranges of lofty mountains stretched far away to the north and south on either hand, while in the valley ran a beautiful stream, called by the Indians, years before, the Tunxis.

Squire Neil, the owner of the farm, was a true type of the New England farmer. He was generous and yet careful; heartily attached to his church and religion, but not uncourteous to those belonging to other sects; independent as a lord, but plain and kind. He was himself a hard working man, and had received only a common school education; yet, from careful observation and a studious turn, he had stored his mind with a great deal of useful knowledge, so that, with his strong native powers, notwithstanding his sunburnt complexion and his hard, rough hands, he was better fitted to take his seat among strong-minded men of intellect, than many a man who has received all the education to be got at school and colleges.

His farm was not a very large one, but was well tilled, and looked very beautiful in the summer time. There were acros of old woods on it, where the drum of the partridge was heard, and the chirp of the squirrel and the songs of many birds. There were acres, too, of corn, and oats, and rye, waving in the wind, and fields of unknown grass—could anything be more beautiful?

His wife was all kindnoss and gentleness, and was blessed by all those who were in distress, for miles around. She had two children—Edward, who was twenty, and Alice, who was eighteen. And my pen falters when I try to describe the farmer's daughter—gentle Alice Neil. Her form was slight and very graceful; her face was the very picture of quiet love, and her eyes, though blue as the sky over her head, would sometimes sparkle so, and look so full of glee, gentle and slight, and tenderly fair as she was, that a stranger would say she had wit and strong intellect, as well as gentle-heartedness. And she had, but her kindness and love were stronger than anything else. Her heart was even stronger than her head.

It was a Sunday in the last week of June, and the bells of the village church were ringing pleasantly, holily out of the summer air. The morning was hot, but the odor of roses and flowers was in the air, and the mountain sides were green with the leaves of trees; and the grass was ready to be mowed in the fields, and the grain looked yellow as gold, while the corn leaves trembled in the soft south wind.

The farmer lived not far from the church, and set out with his family on foot to attend upon the worship of God. Never did Alice Neil look swoeter than when, on a pleasant Sabbath morning, dressed in simple white, and with her little hymn book in her hand, she walked to church. She always sang in the choir, and any one could see that, when the old Squire looked up at her from his seat down in the body of the house, his eyes seemed to moisten with love and tenderness.

The minister who preached that day, was a young man, with less heart than the old pastor had, (he had died a few months before,) but with many graces of oratory. He was not so plain as the old minister, but he used finer language and made better gestures, though he did not, with all his rhetoric, touch the hearts of his hearers. But the old pastor, with his grey hairs and tremulous voice, was eloquent, and often caused the tears to flow from the eyes of those around him. When he spoke of the grave, there was a touching tenderness and awe in his voice, as if he felt that it was soon to be his own home; and when he talked of heaven, it was with such tears of joy that the audience wept, too, like children.

The old pastor loved Alice Niel, for he had baptized her, and led her gently along into the arms of the church, and it seemed to him a sight of wondrous beauty to see so fair and sweet a girl offer up her life to be devoted to God. But death had stricken the old man, and his wife and child were left without money or lands. The house they lived in was their own, and that was all Mrs. Parsons and her daughter Ellen possessed, and the mother lay very ill.

But if the villagers mourned the old pastor as they listened to the sermon of the new one,—who was only preaching "on probotion,"—there was one family, that of Mr. Withers, which was pleased. He was a welthy, retired merchant, from New York, where he had made his money rapidly in speculations, and had come back to his native town, built himself a splendid house, bought many acres of land, and set up for a proud gentleman. His two daughters, Miss Sarah and Miss Ann, were well pleased with the young Rev. Mr. Applegate, and liked his polite bows better than the humble demeanor of the old Mr. Parsons.

In their slip at church they had a stranger to-day, and they seemed very proud of his acquaintance. He was indeed a noble looking young man, with dark hair and eyes, and a brow of great beauty, and a figure such as is not often met. And any one could see that he was a real gentleman, for he was modest, and seemed to respect the simple villagers aronnd him as much as he would the richest man in the world. He was the son of an old family in New York, and of great wealth; but that family was not devoted to fashion merely, for it prized goodness above all things.

Charles Davenport was the only son of parents who loved him, and his mother had given him pious counsels, and he had profitted by them. He had come to spend a few weeks in the little village of S——, at the earnest request of Henry Withers, who had once saved his life in New York, and whom he had ever after loved, though he was in many things unworthy of his love. The Misses Withers were, of course, in ecstacies at his arrival, and wore proud to think that the wealthy Charles Davenport was their guest.

When the meeting was over, and they had returned to their fine mansion, they discussed, as was their custom, the merits of the new pastor, and lauded him highly.—Charles heard them in silence, for he was not pleased with the cold sentences of the preacher, but ventured to ask "who that young lady was who sung in the choir, with auburn hair and blue eyes."

"Oh," replied Anne Withers, "it was Alice Neil, the daughter of old farmer Neil. They have a small farm at the other side of the village."

"And she is the prettiest girl in town!" added Henry Withers, who delighted in vexing his proud sisters.

"I am sure she is not *beautiful*," replied Anne, "and if she were, her ignorance and vulgar manners would not allow her to go into good society."

"Alice Neil ignorant and vulgar?" said Henry. "Has she not been always at school, and is she not as graceful as beautiful?"

Charles Davenport heard in silence all that was said, and excusing himself, went up to his chamber to see the sun set, and to witness the close of the holy day alone, and away from the conversation of the sisters. The sun went slowly down behind the western range of mountains, and the clouds in the west grew crimson, and golden, and gorgeous, and then the tints faded slowly, and at last the evening star came out. The next day was as fair and glorious a one as the Sabbath had been, only it was not so quiet, and still and holy.

Mrs. Parsons lay ill, very ill, upon her couch, and it seemed to her at times almost as if God had deserted the family,—for her husband was dead, and they were poor, and now she was sick.—if she should die, what would become of Ellen? There was the old and ever faithful servant Betsey, who clung to them in their sorrow and poverty, but she could not support her gentle girl. As she thought of all this, the tears ran down her pale cheeks, and while she was weeping, Ellen entered.

"Dear mother! why do you weep!"

"Do not ask, my child. I am not so strong now as I used to be, and I weep almost without cause."

"But you are in pain, mother. I know that you suffer—let me do something for you!"

She was only fourteen years of ago, and there was upon her young face a sorrowfulness which many said betokened an early grave. But she was exquisitely beautiful, too fair, and gentle, and sweet to live where there is sorrow and trouble. Her hair was light, her face very pale, and her eyes of soft blue. The tears started to them at once when she saw her mother weep, and she put her soft arms about her neck and said,

"Do not weep, mother—why should you be unhappy? Is not father in heaven, and should we wish him back here?"

It seemed strange that so young a girl should speak words of consolation to her mother, and the stricken woman looked at her at first as if she thought it was an angel comforting her, instead of Ellen.

"No," said she, "I do not wish him back; but if—Ellen—I should die——"

"You—you will not die, mother?" replied the young girl, bursting into tears as the thought struck her that it might be true.

"Yes, my child—it is that—I do not fear death, but what will become of you, where will you go?" and she sobbed upon her pillow with Ellen's arm around her neck. For a moment Ellen was overcome with sorrow, but shortly dried her tears, and said with a sweet calmness, "God will take care of me, mother!"

Just then there was a slight knock at the chamber door, and the faithful nurse entered and said. "Alice Neil has come," and Ellen sprung up and was soen in the arms of her dear friend.

"How kind of you Alice, to come so often, and bring so many things, and mother loves you, I do believe, as well as me—come and comfort her, for she is sad to-day."

And the farmer's daughter sat down by the sick bed, and unfolded the delicacies she had brought for the old pastor's wife; and as she pressed them upon her, she talked so gentle and kindly, and with such cheerfulness, that the sick woman's tears dried away. For days she had come and sat there, until her voice and presence seemed necessary to the poor widow, and she wept with Ellen and then made her smile,—it might have been a sorrowful smile, but it was one of resignation. She was an angel to both—both loved her, and one leaned upon her. Ellen left the sick room a little while, and then Mrs. Parsons said,

"Alice, I feel that it is very doubtful if I ever get well; and if I do net, what will become of my poor child."

"Do not talk so," replied Alice. "You will live yet for a long time to gladden us all—but if——" She could not speak the words, it seemed too dreadful for her to talk of death.

"If I should die," said the widow, as if in supplication—

"Then be snre so long as Alice Neil has a home, Ellen shall share it. She shall share my joys, and I will love her like a sister. I have no other in the world."

"Bless you for those words—God bless you!" cried Mrs. Parsons.

When Alice left the room, Ellen followed her out into the yard, and said softly,

Alice, do you think that mother ——, the tears gushed from her eyes, but she continued—"Do you think she must—*must die?*" and when she had uttered these words she laid her head upon Alice's bosom, and cried as if her heart would break.

It was some time before Alice spoke, but Ellen raised her eyes to hers so mournfully she answered, "I hope not, Ellen," but the look that accompanied the words said more; her gentle heart was stricken with the truth, and she whispered, "Good-bye, Alice; when *she* is gone *you* will love me—will you not—good-bye!" and she ran back to her mother's side.

Alice had not walked far before she met the stranger whom she had seen the day before. He stopped and said,

"Will you excuse my rudeness, Miss Neil?"

At first she was going to rnn away, but he looked so earnest and kind, and his whole bearing so gentlemanly, that she stopped and raised her eyes to his, but blushed and quickly dropped them again.

"If you will pardon me for stopping a stranger," said he in soft tones, "I want to ask about the widow of the parsonage. I have heard all about her and her sorrows, and—and your kindness to them."

"She is very ill," replied Alice, tremblingly.

"And she is very poor—is she not?" he asked.

"She is, but she has friends who love her and will never let her suffer," replied Alice, moving on.

"Stay a moment, Miss Neil," he said.—"You would think more kindly of me if you knew my heart towards the poor woman.—I am rich; here, take her this money, give it to the sick woman, and say to her that ten times this is hers whenever she wants it, and that it comes from a stranger who will never see her or hers suffer."

In a moment he was gone. She looked at the bills he had forced into her little basket; they amounted to fifty dollars. She wept for joy, for she knew it would cheer the heart of the sick widow; and that night, as she lay upon her pillow, for the first time her rest was broken and her dreams were feverish. It was not strango, for few young men posses the attraetions that Charles Davenport possessed, and he was as fair, and there is a fascination in a noble spirit for the gentle and loving. Alice could not forget his fair face and noble brow, nor his generous spirit; but had a person told her she was in love, she would have sincerely denied it.

The next morning Alice rose oarly, and while the dew yet sparkled on the grass, went to the old parsonage. She asked the nurse as she entered the house how was Mrs. Parsons, and was pained to learn that she had passed a bad night. In a few moments she entered the sick room. Mrs. Parsons did look worse; her face had almost the hue of death, and there was a look in her eyes which was unearthly. Ellen was bending over her mother, like an angel of patience, and it was difficult to say which face was the palest—the mother's or daughter's. It was evident that she had not slept any that night, and there was a sorrow on her young face which it was sad to look upon. When Alice entered, she sprang up and put her arms around her neck and kissed her, and then took her place again at the bedside without speaking. Her heart was too full of sorrow to speak.

"God bless you for coming here!" said the sick woman; "the sight of your face does me good."

"Ellen should go and rest," said Alice kindly; "let me take her place awile."

"No! no! dear mothor, let me stay here, I could not sleep were I away."

"But you will be ill if you do not," urged Alice. "Go that you may have renewed strength to nurse your mother."

At length she consented to leave the room, and when she was gone, Alice gave the money to Mrs. Parsons which Charles Davenport had crowded into her little basket, and told her all that he had said. The tears ran down the poor sick woman's cheek as she said,

"For Ellen's sake I take it, and tell him, Alice, that God will bless him for his kindness."

Alice staid awhile, and promising to return shortly and spend the whole day, walked back to her home. What was her surpriso to find Henry Withers and Charles Davenport there. The former introduced the latter, and Alice blushed beautifully as he took her hand. Pretty soon old farmer Neil came in and said,

"Well, Ally, how did you find Mrs. Parsons?"

"Very badly, father. I fear she will not livo long."

"Poor woman!" said the farmer with a sigh; "and there is little Ellen, 'twill kill the gentle thing."

"She watched by her mother's side all last night," said Alico, "and she looks pale and sickly already, and I promised to go right back as soon as I told you and mother."

"Just like you, Ally. Your mother was just saying that she would watch with her to-night; so go as quick as you can back again."

"Here is a carriage at the door," said Charles Davenport, "I will walk back to Mr. Withers, and Henry shall drive you to the parsonage."

"Oh, no!" replied Alico, "I can walk."

"You have walked there and back already," said her father, "and you had better take the offer."

"She shall do so," said Henry Withers, "only *I* will walk home and Charles drive her to Mrs. Parsons."

Charles made no objections, nor did Alice, and soon they were riding towards the cottage. She told him all that the sick woman said about his kind-hearted gift, and he asked,

"Would she let me come once to her bedside as you have been? I would like to tell her with my own lips never to fear that herself or her daughter shall come to want."

"I will ask her," replied Alice. The rest of the way neither spoke: Alice was too modest, and Charles from some eause was silent. The carriage stopped before the door, he helped her out, and she ran in.—After he had tied his horse, he entered into the little and pretty sitting room, and as no one was there drew himself a chair and sat down. In a few minutes Alice came from the sick room. It seemed to him that he had never seen such a beauty before, and her kindness and grace were touching. As she entered a slight blush crimsoned her cheek, and she said.

## VALUABLE FARM
### FOR SALE AT AUCTION.

BY order of the Surrogate of the County of Livingston, N. Y., the farm of Uri Webster, late of Lima, in the said County of Livingston, will be sold at Public Auction, to the highest bidder, at one of the clock, in the afternoon, on Saturday, the 2d day of April, 1853, the sale to take place at the North Dwelling House, situated in the said town of Lima.

The premises will be sold subject to mortgage and judgment incumbrances, amounting, at the time of sale, principal and interest, to the sum of four thousand and ninety-two dollars and twenty cents. The balance of the purchase money over and above the incumbrances, is to be paid as follows, viz:—one fourth cash; and the other three-fourths in three equal annual installments, with interest annually; and secured by mortgage on the premises sold, and the bond of the purchaser.

The premises are described briefly as follows:—Beginning at the junction of the two roads near Lord Sterling's late farm, on the road leading south from Richard Peck's; and running thence north in the centre of the last named road to the south line of lands owned and occupied by the heirs of Ebenezer Rathbone, and by John Decker;—thence running east on said line to the east line of said John Decker's land; thence running north on said last line to the south line of the original portion of the Factory lot, sold for the flouring mill, known as the Eggleston Mill; thence east on said mill lot line, eighty-six rods across the Honeoye creek, one rod beyond the east bank; thence up the said creek on a line parallel with the said creek one rod east of the east bank eighty rods; thence up said creek upon the east bank to a small walnut tree near the old saw mill formerly owned by Thomas Peck, deceased; thence westerly to the corner of the Grey road so called, on a line which is a continuation of the road leading east from the point of beginning; thence up the centre of said last named road to said point of beginning, containing one hundred and sixty-six acres and forty-five rods of land, out of which however are reserved one acre, situated on the Honeoye creek, heretofore deeded to Warren Pierpont, with a water privilege and easements sufficient to run a fulling mill with one stock, or one set of woollen carding machines; and reserving also one acre and one fifth, near the same, deeded to Hollum Hutchinson and Ward Mann, with water power and easements sufficient for one run of stones with elevators and conveyors, after said Pierpont and the saw mill on the premises are supplied with water; and also reserving the privilege of carrying water from certain springs in pipes under ground across the premises above described.

The premises are in a compact form, and also capable of division into two farms. They will be sold together, or separately, as will appear to the undersigned most advantageous to the creditors and heirs.

There are on the premises two good houses, barns and outbuildings; a superb orchard of grafted fruit; an excellent saw mill privilege and saw mill, the dam of which however has lately been carried away by a freshet; and fifteen or twenty acres of timber and wood land. Besides the Honeoye creek which runs upon the premises, there are at least *three* never failing springs of pure water.

☞ Immediate possession will be given of the premises. The growing crops will be reserved out of the sale, and the privilege of entering to harvest, thresh and carry the same away.

EDWARD WEBSTER,
MERCY WEBSTER,
Lima, N. Y., Jan. 31, 1853. Administrators.

N. B. The undersigned, in his individual capacity, for the benefit of the creditors and heirs, and for the convenience of purchasers, has made arrangements with Alexander Duncan, Esq., of Providence, R. I., the Executor of the Will of the late Cyrus Butler, whereby $1,600 which is secured to him by bond and mortgage on the premises, may remain three years, on the payment of interest semi annually, the purchaser giving his bond as collateral security; with the further assurance from Mr. Duncan, that in all probability the same can be renewed after the close of the three years, on the same terms if the purchaser should desire. Chas. Seymour, of Canandaigua, for a small per centage, will receive and receipt the interest, and transmit it to Mr. Duncan

On the payment in cash of a sum, which, together with the quarter of the surplus required by the Surrogate, will make up a cash payment of two thousand dollars, the balance of the incumbrances, exclusive of the $1,600 above mentioned, will if the purchaser desire it, be so divided as to make with the other three-quarters surplus required by the Surrogate in three years, four annual installments, on which equal sums, interest will be required annually.

165w3. EDWARD WEBSTER.

Manny's Patent Adjustable Northern Illinois
## REAPER AND MOWER.
FIRST PREMIUM MACHINE FOR 1853.

AWARDED the First Premium for Mowing and the second for Reaping, at the N. Y. State Fair, in the great trial at Geneva, N. Y., in July, in competition with eleven other machines; awarded a Silver Medal at the Ohio State Fair, for the best Reaper and Mower, and received the highest award at the Vermont and Michigan State Fairs, for the best Reaping and Mowing Machine.

The true merit of this Machine has given it a great triumph over all others, and being a perfect combination of Reaper and Mower, it comes to the farmer with double value, and it is clearly demonstrated to be the only successful combination of Reaper and Mower. As a Mower, it is as simple and perfect as though constructed expressly for mowing; and as a Reaper, it is as simple and perfect as if constructed for reaping only. All the change that is necessary from one plan to the other, is to insert or remove a loose platform.

Machines warranted to cut all kinds of grain as well as can be cut with a scythe, and to cut flax and millet, also to gather clover, timothy and flax seed, and to be well built and of good materials. This machine will cut from ten to fifteen acres per day, with two horses, and one person to tend it when mowing, and two persons when reaping. The cutting apparatus is made perfect by means of a double edged sickle, and double guards, as fully tested the last two years, and it is connected with a joint, so as to adjust itself to uneven ground, and by a level at the driver's seat, it can be raised when moving along, to cut from one inch to two feet from the ground. All side draft against the team is entirely avoided. The machine will turn square corners, and turn square about, either way. Over three hundred of these machines were in use the past season, all of which gave perfect satisfaction.

The machines are manufactured at Hoosick Falls for the State of New York, and I will have them delivered to any part of Western New York where ordered. Price of machine, where made, $125. Address Gen. R. HARMON Wheatland, Monroe Co., N. Y.

149-tf. R. HARMON, Agent.

## ROCHESTER STEREOTYPE FOUNDRY.

THE undersigned would respectfully inform the public—and especially book and periodical publishers, authors, &c.—that he has established a STEREOTYPE FOUNDRY in Rochester. His establishment is furnished with every facility for Stereotyping, in the best manner, Books, Pamphlets, Periodicals, Cuts of all kinds, (including figures of animals, implements, etc.) Patent Medicine Advertisements, &c., &c. Plates blocked in a superior style on mahogany. All work executed with promptness and on reasonable terms, and equal in style and finish to that done at any other Foundry in the country.

An establishment of this kind has long been a desideratum in this city, and now that one is in operation, it is hoped a liberal share of patronage will be awarded to the enterprise.

☞ Foundry in Talman Block, Buffalo street. All orders from a distance may be addressed to

J. W. BROWN,
April, 1852. [122-1am-tf] Rochester, N. Y.

## MOORE'S RURAL NEW-YORKER:
A WEEKLY HOME JOURNAL,
## For both Country and Town Residents.

TERMS, IN ADVANCE:

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies, one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

### Terms of Advertising:

ONE DOLLAR per square (ten lines—100 words, or less,) for the first insertion, and 50 cents for each subsequent publition,—*in advance.* ☞ The circulation of the RURAL NEW-YORKER is much larger than that of any other newspaper published in the State, out of New York city Only a limited space, however, is devoted to advertisements, and hence preferenee is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brie advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 13. ROCHESTER, N. Y.—SATURDAY, MARCH 26, 1853. WHOLE NO. 169.

**MOORE'S RURAL NEW-YORKER:**
A QUARTO WEEKLY
Agricultural, Literary and Family Newspaper

CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page.

## Rural New-Yorker.

### Progress and Improvement.

### THE WOOD PILE.

WHAT comfort on a cold night to gather around the cheerful, roaring fire and take one's ease in converse with good books and papers, and to hold social communion with the loved ones that cluster under the "roof tree" of home. There's warmth in the hickory's blaze that goes deeper than the skin. It melts the feelings of the heart and opens them to the genial influences of fellow feeling in other bosoms.

But the wood that makes the glow must be fitted for its purpose. It must have the elements of sociality interwoven among its constituent parts. In other words, it must have the elements of heat and combustion well developed, else there will be a corresponding failure, and what, otherwise is the source of comfort, becomes one of vexation and trouble, souring the spirit and destroying the joys of the social hearth. There is therefore much importance attached to the wood pile. What, in your instance, reader, is its condition? Is it heaped with your year's supply? Is that supply prepared for its proper use, and so bestowed that it shall season to the best advantage? Well seasoned wood, of almost any description, can yield you all the fireside cheer imaginable. It is sociable, or if you prefer it, it will infuse sociability in your being, and thus promote your home happiness.

Seasoned wood is much more economical. This should commend the subject to every user of the article, for a judicious economy is laudable, and when properly directed, it enhances the comfort of individuals, and improves the world. It is economical, because it takes a smaller amount to give warmth to a given space for a given length of time; and because it takes much less time to start a fire and to then keep it burning. The water and sap, which constitutes a large amount of the weight of green wood, has to be expelled,—steamed away,—before the wood can be applied to its legitimate use. Therefore the fuel used to convert this water into steam, is wasted. Better therefore, is it not, to let the winds drink up the moisture before the wood is brought to the stove or hearth.

It is cheaper, too, because time is saved in the gathering of the wood. When one makes a business of doing any sort of work, he can accomplish far more, than when it is done at hap-hazard. In the former case one "gets his hand in," as is the common saying. It can be done at a season of the year when the farmer has more leisure—when his time is not as valuable. The doing up of such odd jobs, then helps on the seed time and harvest,—the summer and autumn work—by relieving those times of matter foreign to their purpose. At such seasons a day's delay often works tenfold injury in the loss of growth or in securing the product in its best condition. There is a loss also by reason of an extra amount of time required to get the team every now and then to run after a "jag" of wood.

The "women folks" find a great saving effected in their department, by the use of well seasoned fuel,—less time being required to prepare the meals, whilst the cooking is of a much better order. There is, in this view of the matter, a saving of health to all. There is, too, a saving in the "wear and tear of conscience." Where good feeling prevails, matters are quite apt to "go on like clock-work;" hence, more is accomplished—all of which adds vastly to the knitting together of the bonds of brotherhood between man and his fellow. But we have not time now to enlarge on the benefits of a "well ordered" wood-pile.

If your year's supply is not secured and properly prepared and housed, then let not a day be lost till you set about the matter in earnest. Spring work and seed time are hard by, and there is no time to be idled away. Gather up the sticks with diligence, and hereafter forever forswear this stick to stick, shivering and fretting way of getting through the world. Try the matter and see if fretting wives, scolding servants, smoky, feed and a thousand petty annoyances that sour the temper of all, do not vanish away as if by magic, and give place to that state of things which shall charm back good feeling to your fireside. It will help to establish a thorough system in all your works, so that, really, there is no calculating how much good may result in the end, from a proper care in this one item of good husbandry.

Instructions might be given for the preparation of wood, but the circumstances of each, and the extent of his forest will suggest what is best in the selection of kinds, while his good sense will tell him that good philosophy, would split the round sticks and place them in the pile, back downward, that the moisture may speedily escape upward and not be confined under the bark to induce incipient decay. But enough is said that ought to induce action in those who have heretofore, though reading the RURAL regularly, neglected to act in this matter.

### AGRICULTURAL CHEMISTRY.

"AGRICULTURAL Chemistry," says Sir HUMPHREY DAVY, "has for its object all those changes in the arrangements of matter connected with the growth and nourishment of plants,—the comparative values of their produce as food,—the constitution of soils,—the manner in which lands are enriched by manure, or rendered fertile by the different processes of cultivation."

Now it would seem to any thinking, reflecting mind, that the science and art which treats of, and expands the laws of growth and nourishment, whether of plants or animals, would be of the deepest interest to all who are engaged in agricultural pursuits.—The great problem which every farmer needs to solve is, How can I produce the greatest amount of wheat, or any other grain, root, bulb, or grass, with the least outlay of money or labor? This inquiry is susceptible of the clearest and most satisfactory solution and demonstration. The key to this problem is found in the science of Chemistry—a science scarcely more than three fourths of a century of age.

To the farmer no less than to the artist and mechanic, the science of Chemistry is what the ancients sought through many centuries, with great diligence and care, but never found. They, like the moderns, were intoxicated, as it were, with the idea of boundless wealth, and spent their time in nothing so much as searching for the philosopher's *stone*, and a *panacea* which should confer the boon of eternal youth and of earthly immortality. Notwithstanding the alchemists sought in vain for these specifics, they were, nevertheless, the great pioneers in the science of Chemistry,—that science which, though not able to change lead into gold, or drive away disease which flesh is heir to, nor to abolish, decay and death, the common fate of all organic bodies, yet, has taught man and is still teaching him how he may with a moderate degree of labor transmute common earth into that which is of far greater value than gold—and though it cannot confer immortal youth, yet, by Chemical therapeutics, many a poor sufferer of bodily pain has been relieved and restored to health.

But, says the farmer, I have neither time nor ability to study and investige the laws of this abstruse science—and even if I had both, there are neither schools nor colleges, where I could obtain the necessary aid and instruction in the prosecution of this invaluable art and science. For as yet, there does not exist an Agricultural School in our country.

Notwithstanding this is true, there are many able teachers of this invaluable science—laborers that are striving with all their might to disseminate light and knowledge on this subject for the good of the farmer. For what such persons have already done, the tiller of the soil has reason to be thankful, and take courage—though what has been accomplished is but a foretasto of the good time coming—a time when science shall be regarded and received in its true sense, to wit, as knowledge classified.

There are few if any, who do not look upon knowledge as conferring power upon those who possess it,—a power that shall enable its possessors, in whatever department of labor they engage, to prosecute it with success. Let farmers then seek that Chemical knowledge which shall enable them to combine their labor and the elements so as to produce the most favorable results.—W.

### IRISH CUP POTATOES.

THIS is a variety which should be better known among gardeners and farmers.—They attain good size, are firm fleshed, mostly of an orange color, mealy and dry when cooked, with an excellent flavor, equal to any potato with which we are acquainted. We have been using LANGWORTHY'S Seedling White Mercer all winter, and for baking esteem them superior to all others. The Cups come nearer to them than any thing we have known. These potatoes are dry and mealy, whether boiled or baked; they will be more generally preferred for family use. At this time they are fresh, firm fleshed, and every way a desirable spring potato.

J. H. WATTS, Esq., favored us with the sample of which we speak. They were grown by R. H. BROWN, of Greece, of whom possibly a few might be obtained by those wanting seed.

### CONDENSED CORRESPONDENCE.

#### Draining.—Parallel and Turf Drains.

EDITORS RURAL:—I am gratified in seeing the growing interest upon the subject of draining. The frequent and well written articles upon that subject, in your excellent paper, are well calculated to increase that interest—especially the essay of Mr. REDPATH in the three first numbers. Yet to this, though good in its general features, I must beg leave to make a few exceptions.

First, in regard to parallel drains from fifteen to forty feet apart. These are only necessary on very low, level pieces, and our land is generally rolling. I wish to show a plan by which this important work can be more effectually, as well as more cheaply, performed. Many years ago this plan of parallel drains, from the top to the bottom of the hill, was considered the best in England, but time and experience has shown its fallacy. Now, four or five drains, and sometimes less, across the hill, with a very little fall, will drain a field better than twenty or thirty of these parallel drains running straight down the hill. The reason is obvious, for let the water proceed from springs or any other source, it naturally makes its way down the hill, and my cross drain cuts off these water courses, and fully answers the purpose intended. Indeed I have known large fields more effectually drained by one good drain across the upper side of the field, than by a great number running in the opposite direction; and I am much surprised that Mr. R. is so much behind the improvements of the age.

There are some other particulars in his article, from which I must dissent. One is the use of tiles without bottoms, which I would oppose on any kind of land, as the least settling of one below another, must

MR. ROTCH'S "FANCY" LOP-EARED RABBITS.

For description of this variety, and remarks on rearing Rabbits, see next page.

soriously diminish the capacity of the drain.

I would propose an improved manner of constructing the turf drain. This should be dug very narrow; then a tapering piece of wood, like a straight pole, should be placed in the bottom, and the turf pounded down firmly upon it, and then filled in with earth. A section of the drain is thus completed, and the pole is then drawn along, and the operation continued until the drain is finished.—These drains are as good for marsh lands as any other kind, and much cheaper, I have made a great many drains of various kinds, as well as the tools to use in their construction, and if any one wishes any information upon the subject, it will be cheerfully given by applying to—UNCLE ABRAM DAN, *Pittsford, N. Y.*

#### Farmers' Clubs.—Town Fairs.

MESSRS. EDITORS:—Mr. Abbott's suggestions in a recent number of the RURAL, in reference to Farmers' Clubs, are humorous as well as interesting. On the whole, I like what he has to say on the subject, and think a vast amount of valuable information might be dissominated among us by the institution of Farmers' Clubs. Whether it would be advisable to have the women connected with such Clubs, or not, is a question to be settled by experiment. For some reasons, it seems objectionable. We should have Farmers' Clubs in every neighborhood in the country. Periodicals, agricultural works, &c., should be taken and placed in some suitable place in the neighborhood, where they could be perused at pleasure by those who would take an interest in reading them.

I think that we ought to pay more attention to the subject of establishing Town Fairs. I was going to say that not one-tenth part of the industry and cattle—that is, things worthy of being exhibited—are ever shown at our Conty and State Fairs.—Here is farmer B., who has, by the way, a good cow or horse,—he does not exhibit the beast simply because he is not near enough to the show ground to make the matter of exhibition pay. Whereas, if the Fair were to be hold in his own town, and not twenty or thirty miles distant from him, he would "spruce up," and show the best stock on his farm. Some towns in this State, I believe, have established Town Agricultural Societies. This is a choice, good plan, and it would be a pleasing thing if we could have several such Societies in Onondaga, as well as in other counties in the State.

Let both of these subjects be agitated more through the agricultural press, not only by editors, but by correspondents, who feel that they can awaken an interest in the minds of the people on the topics proposed for discussion.—W. TAPPAN, *Baldwinsville, N. Y.*, Feb. 26, 1853.

#### Keeping Poultry,—Again.

EDITORS RURAL:—In No. 2, of the present volume, you gave your readers my arrangement for wintering poultry. I am now able to give you the exact cost and profit, while they were kept on one bushel of corn, which may be more satisfactory.—As usual, at the commencement of winter, as soon as they required feeding, I put a box of corn on the shelf, and kept a supply by them. There were but few days before January when they laid no eggs, and thro' January, the daily average of eggs was about half a dozen. The eighth of February there were thirty hens and one cock.—I weighed 75 lbs. of ears of corn, and shelled it, and had 60 lbs. of shelled corn. Half of this I put in the box, and when it was gone I gave them the other half. It lasted them seventeen days. The weather was the most uniform we have had this winter, the ground being covered with snow, which prevented them from getting much else, only from the manure heap. There was another cause to lessen the amount of eggs, eight of the layers wanted to sit within the time of trial.

Now for the cost and profit:—1 bushel of corn, 63 cents, 10 dozen eggs at 1 shilling, the market price, $1,25; profit 63 cents.—But this does not show all the profit. Poultry in the fall are generally considered worth 12½ cents apiece. If they have full feed till spring, they are fit for market, or in first rate condition for layers, and would be worth 25 cents or more. Farmers can you put corn into pork, beef or mutton, and show as good a price for it? Many farmers will say, they have no place warm enough to make poultry profitable. It requires but a few hours labor to make a roosting place for them warm enough by covering it with straw, or long manure from the yard. It is a plenty of corn that they can get to at all times, that does the principal part towards keeping them warm. How many there are who reside in cities and villages, that occupy a house and lot with a barn on it, who might have a supply of fresh eggs all winter much cheaper than to rely upon the market for them. Full grown pullets will be found much the best layers, as every year that there is added to a hen's age, there will be a falling off in the amount of her eggs.

A word to the boys that gather the eggs. Get a piece of the white of basswood timber; if there is a turning lathe convenient have some nest eggs turned, if not, make them with your jack-knife. They seldom fail to answer the purpose. Frost does not injure them, neither will anything break the nests up.—ALVIN WILCOX, *West Bloomfield, N. Y.*, Feb. 24, 1853.

#### The Australian Wheat.

MESSRS EDITORS:—I herewith enclose for your inspection, a sample of my Australian wheat of last years growth; the first of my raising in Michigan. The head I send you is of the average size, containing some sixty berries. The berries enclosed are a fair average sample. The Australian wheat is superior to all other varieties that I am acquainted with, for several reasons, which an inspection of it explains. It is a very large kind of wheat, the berry being nearly twice the size of the common flint wheat; its heads are generally large and well filled; its straw is large, transparent and strong—on this account it cannot fall down or lodge; its average yield, with ordinary culture, is thirty-five or forty bushels per acre—fifty-four bushels has been raised with but ordi-

nary culture, on the worn-out, sandy soil of Long Island, where I obtained the seed.—Its color is white; and, notwithstanding the size of the berry, it weighs as heavy as the flint, and I have never known it to be affected with either rust, smut or insect. That the Australian is destined to become the favorite wheat of our Western farmers, I have no doubt; and for the prairie and timbered lands I think it unequaled, from observations made last season.

I have now sown a few acres of the Australian wheat, which looks extremely well at present—far better than any other wheat in this town—and bids fair for a yield of forty bushels to the acre; indeed I shall be disappointed if it does not turn out thirty-five bushels. I will furnish seed for the coming fall, from the present growing crop, at a moderate price; also samples by mail to all post-paid applicants. I have been somewhat particular in describing the above named wheat, but not with the intention of misrepresenting it.—D. D. Tooker, *Napoleon, Jackson County, Mich.*, 1853.

### Bots Killing Horses.

Mr. Editor:—I have seen several articles in the Rural on this subject, and would now give my experience and opinions. I cannot believe that bots ever cause the death of a horse. The cases supposed to occur from bots are rather from inflamation of the stomach. Bots never injure, or commence eating the stomach of a horse until the mucous coat is destroyed by inflamation, which is alone sufficient to kill them. In examining horses after death, I have sometimes found a large number of bots sticking in the maw—some eaten through—but examination convinced me that inflamation and not the bots was the fatal cause.—I have seen but few cases of inflamation of the stomach. Ninety cases in a hundred of supposed bots, are cases of colic, and can be cured by the following prescription:—In a severe attack, bleed 4 or 6 quarts; take 2 oz. spts of turpentine, 2 oz. laudanum and put into a pint of whiskey, shake up well and give as a drench, then keep the horse moving. If he does not improve in two hours, repeat the dose.

I have followed the above prescription for all the cases which the bot men called bots, but which I called colic, and have not lost a patient in twenty-five years. There is nothing which could be administered, which would kill a bot, which woul dnot also kill a horse. Slight cases of the colic may be cured by tieing a threepenny paper of tobacco upon the bits in a cloth, and putting on the bridle and moving the horse smartly.—*Benton Center.*

### Large Yield of Clover Seed.

Friend Moore:—As there has been some talk and excitement in these parts, about a crop of clover seed gathered from a twelve acre field, on my farm, I have thought proper to place a statement of the facts at your disposal. Two years ago this spring, I sowed three bushels of clean seed on said field, then in wheat; the seed took first rate; and, the wheat being light in consequence of the severe winter, the clover grew, rooted and branched uncommonly the first season.—Last spring I turned on horses, hogs, cattle, and sheep, and kept it pastured down very short, till the 10th of June, when I took out all but the sheep, which remained on till the 17th. But the clover had the start of them, and evidently took its growth from the 10th of June. The 16th of June I sowed nine bushels of plaster on the field. I gathered it somewhat carefully, and threshed, cleaned, and sold eighty-eight bushels and twenty pounds by weight, and kept two bushels of clean seed myself—besides four bushels of tailings in which there is considerable good seed.

This was thought by many to be a "fish story," and when the quantity of seed could no longer be doubted, some thought I must be mistaken in the quantity of ground, so I procured a land chain and employed two disinterested men to chain the field; they certify that said field contains eleven acres and one hundred and sixteen rods of land, or 11¾ acres, lacking 4 rods. The seed was threshed with machinery owned by David Redmore; the chaff was taken from the straw with a spike machine and flat bolt; the seed was taken from the chaff with a grater, and the whole machinery worked admirably. I sold my seed for $6,50 per bushel,—and I think, if I can learn when the next fair is held in Tompkins Co., and can enter my seed according to the rules of said fair, I shall be entitled to attend. My farm is not for sale.—Ira L. Terry, *Hector, Tompkins Co., N. Y.*

### A March Morning Sunrise.

A March morning sunrise on a farm! Reader, did you ever enjoy one? Come with me then, and if you don't spend a pleasant half hour it is *your* fault. It thawed yesterday, has frozen during the night, and this morn is "sparkling and bright"—those snow crystals! You know "old Sol" is an *anti*-congealer, and if he don't warm your heart all aglow, then you are "proof."

*Remember*, it's sunrise—let's to the farm yard and visit the sheep-cote. There! ain't that worth coming to see? From those faces so innocent, learn a thing or two. The yard has a southern and eastern exposure, and now that the sun is up, don't they enjoy it? Take notice, they have been fed this morning, and see them nip those clover blossoms! Now to the cow-barn,—those two long rows of well-fed kine? Did you ever read of contentment's being one of the pillars of felicity? Don't forget. Innocence in the sheep-yard, and contentment in the cow-barn! Through the horse stable next, and don't those sleek nags look as though they could make bells jingle? I reckon they can, give them the opportunity—and not only that, but they can draw a plow.

Then here are the fowls—none of your costly importations, for we don't appear to be "taken down" with the "hen fever" yet, though it has been all around us. But then we are not troubled for eggs. You see they have been fed, but theirs is a "grab game," and I think it is a "game" that's being played by hen dealers—extensively. Innocence, Contentment, and Selfishness!

Now to the kitchen—the farmer's sitting-room and parlor. It is sunrise, and the rays enter those east windows cheerily. The "chores" are done—the farmer reading the newspaper, perhaps the Rural, and perhaps not; one of the boys with a paper; another with Byron, or Shakspeare; another, the youngest, drawing around that tin horse and wagon, and chatting half intelligibly to any one who will take the trouble to hear. The "dame and daughters" taking up breakfast, and only waiting for the coffee to boil.

Do you drink coffee? Now for breakfast. Remember it's sunrise, and plenty of sweet cream for coffee. Don't forget to enjoy it.—Charlie Chestnut.

## AGRICULTUAL INTELLIGENCE.

### Agriculture of Indiana.

The young and growing State of Indiana, has no design of being eclipsed by her older sisters in Agricultural improvements.—With a soil unsurpassed for richness, cultivated by a vigorous, industrious and highly intelligent people, there is little danger of being outstripped in the race by any of her most favored competitors. One of the warmest friends of improvement, fore most in every good word and work, is his excellency, Gov. Wright. He was active in the organization of the late board of Agriculture, at the head of which we think he was placed. In his Annual Message he thus appropriately brings the subjectto the attention of the Legislature:

The Agricultural, Mechanical, and Manufacturing interests of the State are in a condition of growing prosperity. Forty-five county agricultural societies have been established under the act of February 14, 1851, for the encouragement of agriculture; and in twenty of these counties, fairs have been held in the course of the last year.

The first State Fair was held at Indianapolis, in the month of October, 1852.—There was shown, at that time, a very interesting and large exhigition of fine stock, agricultural productions, domestic manufactures, farming implements, and mechanical skill. It was the first great exhibition of the products of the labor, enterprise, and skill of the people of Indiana. It is estimated that net less than thirty thousand persons, many of whom were visiters from other States, were in attendance, and, although this large assemblage was drawn together on the eve of a Presidential election, the prevailing subjects of interest among the multitude were connected with the advancement of the cause of Agriculture, and the encouragement of the various branches of useful labor.

It is an object worthy the profound attention of the statesman to build up and establish in a State a system of practical and prosperous industry. And, in our State, rich in soil, coal fields, mineral ores, and other elements of wealth, it will be a wise line of policy to encourage a system of political economy which, by making labor profitable and attractive, will draw the skill and industry of the people into those opening channels of agriculture, trade, and commerce, which, under sound legislation, cannot fail to make Indiana, in the course of a few years, pre-eminently distinguished among the more prosperous States of the Union.

It is gratifying to observe that there is at this time, a growing and healthy spirit of industry and improvement abroad in Indiana. Farmers, mechanics, and manufacturers, as individuals, and as members of industrial associations, are turning their attention earnestly to a consideration of the best means of promoting the interests of their several pursuits. It is your duty to aid and encourage this great movement.—Upon its success the true, substantial wealth, and the real prosperity of the State, must depend.

The State Board of Agriculture is now in session, with a full delegation from the county societies. A Report of the transactions of the last year will be laid before you, at an early day. Three sessions have been held by the Board, since the passage of the act under which it was organized; and, after paying all expenses, it has on hand a surplus of two thousand dollars. This sum will be reserved, to be paid out in premiums at the State Fair, to be held some time in the course of the present year.

If it be your pleasure to add to this amount, reserved for premiums, by an appropriation, the stimulus that the General Assembly will thereby give to different branches of home industry will, by increasing the quantity and value of various kinds of property subject to taxation, return to the revenues of the State more than four-fold the amount of such appropriation.

We are receiving from our sister States, New York, Ohio, Michigan, &c., numbers of their annual agricultural reports, in exchange for ours. The very valuable Reports received from these States will be distributed among our county agricultural societies. In this way the knowledge acquired by our sister States, in the most important departments of agriculture, will be placed within the reach of the farmers of Indiana. Of the second annual Report of the State Board of Agriculture, I recommend that you authorize the publication of a number of copies equal to the number published of the first report.

### Wisconsin State Ag. Society.

The anuual meeting was held on the 19th of Jan., 1853, at which time the following officers were elected for the paesent year:

President—Elisha W. Engerton.

Vice Presidents—Bertine Pinkney, Jeremiah E. Dodge; and Nathaniel B. Clapp.

Corres. and Rec. Sec'y—Albert C. Ingham, Madison.

Treasurer—Simeon Mills.

Executive Committee—Additional members: Hiram Barber, Henry M. Billings, Martin Field, Samuel S. Daggett, and Mark Miller.

At a meeting of the Ex. Com. held subsequently, Albert C. Ingham, Elisha W. Edgerton and Jeremiah E. Dodge, were appointed members of the National Board of Agriculture of the U. S. Ag. Society. Delegates were also appointed to attend the New York and other Fairs, and action was also had in regard to the exhibition to take place during the ensuing season in the city of New York.

The next Fair was located at Watertown, and the time for holding it fixed on the 4th, 5th, 6th, and 7th days of October next.

Provision was also made for holding a Winter Fair, at Madison, the capital of the State, to be held on the first Wednesday of February, in each year.

## LOP-EARED RABBITS.

The engraving on the preceding page represents a "fancy" variety of Rabbits, originally from Madagascar. Mr. Roten of Merris, Otsego Co. whose property they are, furnished the drawing and a chapter on the subject for "Allen's Rural Architecture," from which we extract the following:

"Rabbits kept for profit in the vicinity of a city, and where there are mills, may be raised at a very small cost; and when once known as an article of food, will be liberally paid for by the epicure, for their meat is as delicate as a chicken's, and their fat mild, and very rich. I am surprised they are not more generally kept, as a source of amusement, and for the purposes of experiment.

"There is, I think, in many, a natural fondness for animals, but not easily indulged without more room than is often to be found in city residences. Fowls, and pigeons, trespass on our neighbors, and are a frequent cause of tronble. This objection does not hold good against the rabbit, which occupies so small a space, that where there is an out-house there may be a rabbitry. *English* children are encouraged in their fondness for animals, as tending to good morals and good feelings, and as offering a *home* amusement, in contradistinction to *street* associations."

Mr. Rotch continues:

"The food of the rabbit embraces great variety, including grain of all kinds, bran, pea-chaff, miller's waste, brewer's grains, clover and other hay, and the various weeds known as plantain, dock, mallow, dandelion, purslain, thistles, &c., &c.

The rabbit thus easily conforms itself to the means, condition, and circumstances of its owner; occupies but little space, breeds often, comes early to maturity, and is withal, a healthy animal, requiring however, to be kept clean, and to be *cautiously* fed with *succulent* food, which must always be free from dew or rain—water is unnecessary to them when fed with 'greens.' My own course of feeding is, one gill of oats in the morning, with a medium-sized cabbage leaf, or what I may consider its *equivalent* in any other vegetable food, for the rabbit in confinement must be, as already stated, cautiously fed with what is succulent. At noon, I feed a handfull of cut hay or clover chaff and in the evening the same as in the morning. To does, when suckling, I give what they will eat of both green and dry food.—The cost to me is about three cents per week, per head.

I by no means recommend this as the best, or the most economical mode of feeding, but it happens to suit my convenience.—Were I in a town, or near mills, I should make use of other and cheaper substitutes. My young rabbits, when taken from the doe, say at eight, ten, or twelve weeks old, are turned out together till about six months old, when it becomes necessary to take them up, and put them in seperate hutches, to prevent their fighting and destroying each other. The doe at that age is ready to breed; her period of gestation is about thirty-one or two days, and she produces from three or four to a dozen young at a 'litter.' It is not well to let her raise more than six, or even four at once—the fewer, the larger and finer the produce.

Young rabbits are killed for the table at any age, from twelve months old, and are a very acceptable addition to the country larder. The male is not allowed to remain with the doe, lest he should destroy the young ones.

Hutches are made singly, or in stacks, to suit the apartment, which should be capable of thorough ventilation. The best size is about three feet long, two feet deep, and fourteen inches high, with a small apartment partitioned off from one end, nearly a foot wide, as a breeding place for the doe. A wire door forms the front, and an opening is left behind for cleaning; the floor should have a descent to the back of the hutch of two inches. All edges should be tinned, to save them from being gnawed."

Lice on Cows, &c.—A correspondent of the Southern Planter says:

I saw in some agricultural work, perhaps your own, that the water in which Irish potatoes have been boiled, if applied to cows, &c., would kill lice upon them. I tried it several times with signal success, and a few days ago, ordered my boy to try it upon my cows, which, at this time of the year, generally are full of ticks; the result of which is, that they have all taken their departure.

## THE AGRICULTURAL PRESS.

### Planting Potatoes.

The *Farmer and Artisan* gives the following expeditious process of planting potatoes:

Last spring we visited the farm of Samuel Haskell, Esq., just beyond the confines of this city, and found him in the field with a pair of horses and plow planting potatoes. He was at work on a field from which a crop of grain had been taken the previous year. It had been dressed with a good coat of manure. His process of planting was, after turning the first furrow, drop the seed potatoes upon it about a foot and a half apart and turn the next one so as to cover them. The potatoes were again dropped upon the furrow last turned and covered by the succeeding one. In this way he informed me that himself and two boys could prepare the ground and plant an acre a day, very easily. We recently met him and inquired about the potato crop, and was told that he obtained a good yield of fine potatoes. This is certainly a very cheap mode of raising potatoes. Will it not be an object to our farmers to try it?

### A Pig Trough.

Mr. D. Stiles of Middletown, Massachusetts, in a communication to the Massachusetts Ploughman, gives the following description of a pig trough used by him:

"Now while I am at it I will inform you how my wife, or even our youngest daughter ten years old, can feed the hogs, or even clean out the trough, without being obliged to enter the pen; the pen is under the barn; the trough is taken up by a windlass, assisted by a weight to balance; two bars of iron one inch through, set firmly in stone, or wood, at bottom and at top in barn floor; a small chain, say six feet long, attached to each end of trough, forms a bail from the centre of which the rope is attached that connects with the windlass. A latch holds it up, and is let down at pleasure.

"It makes hogs quite decent; none of this snorting and blowing in your face, presenting faces that never were washed, and a countenance as fierce as a lion; no pouring spout with a splash at last, that sends half their dinner ten feet against the wall. But with an up-turned eye, and many anxious looks, in a subdued tone, they implore the blessing to descend; at last it drops, held firmly between the bars—no slop, or turn over, there it is in the middle of the pen, above perhaps three or four feet of constantly increasing manure, without the least danger of being submerged."

### Cooking Food for Animals.

A reported assertion on this subject by Prof. Mapes, is remarked upon as follows in the *Wool Grower and Stock Register*.—The matter is one worthy of careful experiment:

Prof. J. J. Mapes, of New Jersey, is reported in the National Era to have said in a speech at the recent meeting of the U. S. Ag. Society, that "there was [is] the fact that eighteen and a-half pounds of cooked corn-meal would [will] produce as much meat and muscle as fifty pounds of uncooked. But farmers would not believe this without endorsement from a respectable source."

This is, indeed, true, Prof. Mapes. Farmers will not believe such a statement unless it be endorsed as intimated—and more. They will require that such a statement shall be backed by experiment or practical demonstration, like the following, to wit,—You shall, in accordance with the fact, take three-eighths of a given quantity of corn-meal, and produce by cooking it, "as much meat and muscle" as five-eighths shall produce when uncooked—for this is your fact. Nothing short of such demonstration will satisfy the doubting and inquisitive ruralist.

That corn-meal is rendered more nutritions by cooking, that is to say will produce more "meat and muscle," few if any will doubt; that three bushels of corn-meal cooked will produce as much "meat and muscle" as eight bushels of uncooked very few will be inclined to believe, though "endorsed" by Prof. Mapes.

Experiments in feeding animals of any kind, should be made with great care, with reference to all the circumstances pertaining thereto. For example: if you wish to test the question, as to quantity, you must have regard to temperature.—If your cattle, or sheep, as the case may be, are kept, and fed in warm, well-ventilated stables, the quantity of feed necessary for them will be much less, than if they are exposed to the inclemency of the weather; the quantity required in the latter condition, has been stated to be nearly double what it would be in the former. This circumstance, as to housing, needs to be considered in ascertaining the difference between cooked and uncooked food, as to quantity.

The well known effect produced upon vegetable food by cooking, is that it serves to disorganize more completely the substance by rupturing the grains of starch—coagulating the albumen—softening the tissues, which are more or less tough and stringy, and thus rendering them tender, and when taken into the stomach, easy of digestion. That it would be good economy for those who have large numbers of domestic animals to feed, to have accommodations for cooking the cereals and perhaps some other vegetables, before feeding them to animals, there can be little doubt.

As Prof. Mapes is in constant communication with the Agricultural citizens of our Republic, it is to be hoped that he will take especial pains to communicate, not only the great fact which he has announced, but the fullest and clearest proofs, demonstrations, and experiments upon which it is founded; for if the man who makes two spires of grass grow where only one grew before is a benefactor, how much greater he who has found out a way by which he can "produce as much meat and muscle" with the expenditure of only three bushels of corn, as has heretofore required eight. Just consider for a moment, how this multiplies the quantity of corn in the United States. It more than doubles it. This is a discovery worth far more to the farmers of our country, where such vast quantities of Indian corn are produced, than any other which has been made during the present century. The discovery however does not end here. If cooking, alone, so increases the nutritive qualities of corn meal, it would seem a most conclusive inference, that all the cereal grains can be thus multiplied. Why not? Then three bushels of oats, of wheat, of rye, of barley, as well as of corn, when cooked and fed to horses, cattle or sheep, will supply as much nutrition as eight of these severally, when uncooked. It seems almost too good to be true, does it not farmers?—notwithstanding it is asserted by Prof. Mapes. You must believe it if you can,—and there cannot be a doubt of your being glad to do so, just so soon as you see the demonstrative proof which the Professor is called upon by the millions of "busy farmers" who, he says, "have not much time to think or to compare notes with their fellows at a distance." As "busy" as they are, they will find time to query with the learned Professor, it is thought. Let the proof be furnished forthwith. W. L.

### Artificial Incubation.

"Farmer D.," in the same paper, tells a new way of hatching chickens, and, now that "time is precious" to so many of the "blooded" biddies, it will interest all poultry fanciers:

An English errand boy, seeing the family in the daily use of eggs of the costly Chinese fowls, requested permission to hatch some as his father used to do in England. "Well, how was that?" When we wanted early Dorking chickens for market, and it was so cold that the eggs would often get chilled, and lose their vitality, while the hens came off to feed, he used to hatch them in the dung heap. "How?" He covered them with the manure, and carefully examined them just at the time he expected them to hatch, and we have had full broods all hatch within eight hours of the time the first one broke the shell. "What did he do with them then?" If we had a hen setting whose eggs had been frosted and failed, we put them under her. At other times we have waited a few days for a hen to hatch, and if she had room we have put them under her; and when we have had no hen to receive them, we have reared them in a box in the kitchen, where the warmth of the fire has made it comfortable and safe.—They have done well and grown finely.

Now, Mr. Editor, to me it was a new thought; perhaps it may be so to others. I was pleased with the suggestion, considering it much less troublesome than the artificial mode of hatching, where the heat is kept up 21 days, by burning lamps placed under the vessels that contain the eggs. I shall try the experiment as a matter of curiosity. If I succeed you shall know it. If I fail, from any prominent defect or hazard necessarily attached to the system, I will advise you.

I state my plan, that others, if they see fit, may also make the experiment. I shall remove the top of the heap of horse manure, in which a portion of litter is intermixed, down to a level, where I judge the warmth, by applying the back of the hand, is 98 or 100°—say blood heat. Here make a regular nest, coating it slightly with fine hay. Take then a strip of old woolen blanket or flannel half a yard wide, and of length sufficient when doubled, to cover the nest, the ends of the cloth reaching to the front edge of the heap. Fold this, and lay it over the nest, and place the eggs between the folds. They will now have warm flannel underneath and above them, to keep them clean from contact with the manure. Cover them then with the manure to the depth that has been removed. If I think fresh air is occasionally needed, I can form a channel for its admission, by laying side by side, half an inch apart, two strips of board an inch square, and about a foot in length, from the edge of the nest to near the front edge of the heap; and by raising the upper covering of flannel a few inches, can admit fresh air through this channel. They can easily be protected, and kept dry from falling snows and rains, by a small coop, or some other temporary roofing placed over them.

# Orchard and Garden.

## DWARF PEARS ON QUINCE STOCKS.

We have no hesitation in recommending and urging the culture of these trees. We do not mean any and all varieties. Only a few, comparatively, can confidently be said to succeed on this stock, but these few are so excellent that any reasonable person will not "ask for more."

He who designs to plant trees of this description should learn what kinds do well before purchasing. To do this he must consult persons of experience, on whose accuracy he can rely, or standard promological works.

After one is satisfied on this point, there yet remains another of equal importance—pruning. Few persons can be made to understand the necessity or mode of pruning these trees. We have bought scores for neighbors, and given them instructions how to prune, and in not a few instances have cut for them, but after the season of their planting, the trees have been left to take care of themselves, and run wild; and in many cases they are not cut at all, but put out just as they came from the nursery, and permitted to grow as they may. When properly trained, these trees are beautiful objects. We should be delighted to see anything more beautiful and satisfactory to look upon than a fine, well shaped dwarf pear tree in the trim of its full bloom. Even as an ornamental tree, they are well worth planting and caring for. But when in addition to elegance of form, and foliage, and flower, they furnish you fruit every year, and at all seasons of year, rich, and delicious, and beautiful, we should like to know what possible reason can be given why they should not be extensively cultivated. Varieties may be selected adapted to different climates and soils. One may have them in eating from July to May. Not one individual in ten knows what a *good* pear is, and as the excellence of the fruit becomes more generally understood, the best sorts will be more universally planted.

We shall give other articles containing hints in relation to pruning, selection of varieties, &c., in future numbers. We wish it understood that we write for the benefit of those only who have given but very little attention to the subject under consideration. Our hints are designed for the uninitiated—those who may desire to plant trees, shrubs, or flowers, and to whom this publication may be the chief source of information.

## VERBENAS.—THEIR CULTIVATION.

Bright and beautiful ye are, in your varied shades and brilliant hues. Ye look up and laugh in the sun's clear noon-day face, and blush not in his hottest glare. We love to gaze on you, beauteous flowers! and well do you repay the care and labor bestowed in your cultivation.

Prepare a bed, say five feet wide, worked thoroughly and deep. Let it be level with the surrounding surface. Turn the plants out of the pots into this border, as the gardeners style it, placing them lengthwise of the bed, a foot and a half from the outer edges, and two feet asunder. Such varieties as do not naturally creep on the surface should be fixed to the earth as they extend, by hooked twigs or pegs crossing them.—Lying on the ground they multiply themselves by sending down roots at the joints, and so gaining strength and spreading, cover the whole bed with beauty.

## FRUITS WORTHY OF GENERAL CULTIVATION.

The list below embraces the "Fruits worthy of General Cultivation" in the catalogue of the American Pomogical Society:

APPLES.

| | |
|---|---|
| American Summer Pearmain, | Red Astrachan, |
| Baldwin, | Roxbury Russet, |
| Bullock's Pippin, | Summer Rose, |
| Danvers Winter Sweet, | Swaar, |
| Early Harvest, | Vandervere, |
| Early Strawberry, | White seek-no-furth'r |
| Fall Pippin, | Wine Apple, or Hays, |
| Fameuse, | Winesap, |
| Gravenstein, | *And for particular localities:* |
| Hubbardston Nonsuch, | Canadian Red, |
| Large Yellow Bough, | Esopus Spitzenburg, |
| Lady Apple, | Newtown Pippin, |
| Porter, | Northern Spy, |
| Rhode Island Greening, | Yellow Belle Fleur. |

PEARS.

| | |
|---|---|
| Ananas d'Ete, | Paradise d'Automne, |
| Andrews, | Restiezer, |
| Belle Lucrative or Fondante d'Automne, | Seckel, |
| Beurre d'Anjou, | Tyson, |
| Beurre d'Aremberg, | Urbaniste, |
| Beurre Bose, | Uvedale's St.Germain, for baking, |
| Bloodgood, | Vicer of Winkfield, |
| Buffum, | William's Bonecretien or Bartlett, |
| Dearborn's Seedling, | Winter Nelis, |
| Doyenne d'Ete, | *And for particular localities:* |
| Flemish Beauty, | Grey Doyenne, |
| Fulton, | White Doyenne. |
| Golden Beurre of Bilboa, | |
| Louise Bonne de Jersey, | |
| Madeleine, | |

APRICOTS.

## CUTTING SCIONS.

March is the month for cuttings scions that are intended for late using. Scions cut at this season of the year may be kept till June or July, in good condition for setting. They, when practical, should be cut from vigorous, bearing trees. Cut the whole of the last year's growth, but in no case suffer more than half an inch of a former year's growth to remain on the scion, as it will absorb the sap from the available part of the scion, and consequently diminish its vitality. It is a fixed law of nature that the extremity of a severed branch decays first. We have frequently known the vitality of healthy scions destroyed by keeping them attached to a foot or two of the growth of former years. They should never be kept wet nor very moist, unless the butt-ends are covered with a composition that is impervious to water. The absorption of water destroys them at once. The cut ends may be made secure against the absorption of water by dipping them into melted composition; such as is generally used for cement, will do.

The best method of keeping scions is to pack them in a box and cover them with damp moss or straw, or they may be rolled in damp sacking or almost any kind of cloth The box should be kept covered and put in a dark and cool part of the cellar: as light and warmth will destroy them When taken out for use in the field or in transporting them, they may be kept in wet sacking or any other article that will not dry too readily, but the newly cut ends must not be allowed to come in contact with water.—Those not intended to be kept long, may be cut in April or May; but should be set in a few days after cutting. It is a very safe way of doing business, to cut and set them on the same day. They may be set any time from March till July, but the earliest set generally do the best.

The different varieties of scions should be kept separate and each bundle labeled.—The cheapest kind of labels are made by splitting a soft piece of pine timber into strips about four inches in length, and one-half inch in width, and about an eighth of an inch thick—make them smooth and write upon them the name of the variety with a pointed piece of red chalk. It will not require a very skillful mechanic to notch the labels at one end, and attach it to the scions with a piece of twine. The labels should be prepared before the scions are cut, in order to prevent mistakes.—*Keene (N. H.) News.*

## WASH FOR FRUIT TREES.

Some years ago, we were called on by a man named Peter, and hailing from New Jersey. He had pruning materials with him, and offered to perform that operation, and also put unhealthy and unproductive trees into speedy bearing condition. We gave him employment for a few days among our trees, and after pruning was all performed, with some interest, went around with him to find out his application to promote fruitfulness, and which recalled his panacea.

We took him to the first tree old enough to bear, telling him, "Peter, this tree seems big enough to have fruit—has been standing in good soil for several years—what had better be done?" Peter would walk round and round the tree, very quietly examine every part of it, and pausing for a minute or two, as in deep thought, would break forth thus: "Well now Mr. ———, *in my opinion*, the *best* thing for this tree, is to get some soft soap and lye, mix them half and half, take a white-wash brush and rub with this mixture *up and down* to trunk and branches." This seemed very reasonable, and we would pass on to the next, remarking, "Peter, here is a tree differently affected from the other—*that* had been making very little growth, but this appears to have grown rapidly, still there is no fruit; what had better be done with *this* subject?" Peter would appear to be puzzled, would reflect a little longer than before, passing around and around the tree, scrutinizing every part very closely, and then break forth again, "Well now, Mr. ———, *in my opinion* (laying considerable emphasis) the best thing for this tree, is to get some soft soap and lye, mix them *half and half*, take a white-wash brush and rub with this mixture up and down to trunk and branches."

We would then pass on to a third subject, a plum tree having the excrescences on the branches, remarking, "Here is entirely a different disease from either of the others, what can be done here?" Peter would walk round and round as before, eyeing the tree most carefully, and deliberately as if working out some abtruse question in metaphysics, and after considerrble pause, like a physician in a critical case, would remark, "Well now, Mr. ——, in *my opinion*, the best thing for *this tree* (emphasizing the word as if a new recipe was coming,) is to get some soft soap and lye, mix them half and half, take a white wash brush and rub with this mixture *up and down*."

Much amused, we took him to a sugar maple, healthy and vigorous, but with two or three limbs broken, and the bark somewhat scaled by another tree falling on it.—"Peter what had better be done here?"—He seemed somewhat confounded, examined the tree as before, paused awhile as if in profound thought, and with the greatest gravity remarked—"Well now, Mr. ———, in my opinion, the best thing for this tree is to get some soft soap and lye, mix them half and half, take a white wash brush and rub with the mixture up and down." It was useless to go farther. Peter was evidently a man of one idea. We followed his advice however, and found so much benefit from the application to all our fruit trees, that we have recommended it with confidence ever since. Peter scraped the bark off an old Queen apple tree, and applied his mixture pretty copiously, and the next season we had a greatly increased crop of fruit.—It is a mixture convenient to most *farmers*. —*Pa. Farm Journal.*

Oyster Shells for Fruit Trees.—A correspondent writes to the Germantown Telegraph as follows:

One of the most effectual applications I have ever made to fruit trees in an old and barren situation, is a compost in which finely broken oyster shells were the principal ingredient. The oyster shells have generally a large per centage of saline matter attaching to them, in a fresh state, with some animal matter and much lime. By breaking them and mixing them with wood ashes, and spreading it thickly around old trees, an almost immediate and decided improvement will take place.

Artichokes.—For stock feeding we know of no root which is better fitted as a substitute for the potato than this. In nutritive properties, as we showed this time last year, weight for weight, it may be considered as its equal, whereas, in productive capacity it is many times its superior. A lot assigned to artichokes should be kept for their culture alone, as when once planted they remain for years. Manure as for corn, plant four by two feet apart, keep them clean as you would—or ought—a crop of corn, and they will not fail to yield you some 500 bushels of roots.—*American Farmer.*

## THE AUGUSTA ROSE.

The subscribers take great pleasure in announcing to all the lovers of that beautiful flower, the Rose, that they will send out, for the first time, on the first day of May next, properly packed for transportation to any part of the United States, strong plants of their *New, Double Yellow, Fragrant, Climbing Rose*, Augusta, which has been acknowledged by all who have seen its beauties, to be decidedly not only the best double yellow climbing Rose, but the freest bloomer, and the most deliciously fragrant of any in the country.

This Rose was raised from seed, planted by the Hon. James Mathews, of Coshocton, Ohio, in the spring of 1847, who, having in his collection the finest Roses in the country, including Lamarque, Solfatere and Chromatella, speaks thus of the Augusta:

"This plant has thrown up shoots for the past two seasons from sixteen to eighteen feet in height, and has proven itself, not only a remarkable grower, but of a vigorous and healthy habit. The Rose resembles Lamarque somewhat in appearance, but is a *more vigorous grower*; leaves *much larger, more ruddy and dark* in hue, *very glossy and handsome*; young wood of a very reddish cast, full of short, ragged thorns, but more numerous than Lamarque; old wood, large, coarse and strong; flowers very large and very double, and in color pure yellow, deeper than *Devoniensis*, and quite twice as large as *La Pactole*; bud is shaped like Lamarque, but is larger, and the flower when expanded is also much larger. It is purely *tea-scented*, quite as fragrant as Devoniensis, and *more* fragrant than any other variety with which I am acquainted. This rose has been the admiration of all who have seen it, being greatly preferred to all others of my pretty large collection; and it fully realizes my most sanguine expectations, being fully one hundred per cent better than Lamarque." [See Horticulturist, vol. iv, page 147.] After several years further experience in growing and testing this Rose, he writes thus:—"The Augusta has proved itself *the finest of Noisettes, a very vigorous grower*, with *splendid foliage, of the most free blooming habits, and deliciously fragrant.* My opinion of it has increased yearly with its growth, and I have never as yet seen its equal."

We forwarded to the late lamented A. J. Downing, in August, 1851, a cluster of its flowers, and in the September number of the Horticulturist,—[see page 436.]—he published the following commendation of it:

[Opinion of the late A. J. Downing, Esq., of Newburgh.]

"We have just received by express, from Messrs. Thorp, Smith, Hanchett, & Co., of the Syracuse Nurseries, a branch of the 'Augusta' in good order, and are glad to bear testimony (as far as a cluster of cut flowers will allow us) to the beauty of this new variety. The flowers are a fine yellow, *deeper than cloth of gold*, and deliciously fragrant. We learn from those who have seen this new American seedling growing, that it is a fine, vigorous climber, with an everblooming habit, and have no doubt it will prove a great acquisition."

We have recently been favored with a letter from the following eminent Horticulturist and Pomologist, of Boston, Mass., the contents of which we are kindly permitted to make public.

[Extract of a letter from the Hon. Marshall P. Wilder, Boston, Mass.]

"I am happy to say that, although I had heard a favorable opinion expressed in relation to the merits of this rose, its beauty exceeded my anticipations.

"The Augusta rose is certainly an excellent variety, having in its growth the climbing habit of the *Noisettes*, while in bloom and fragrance, it seems nearly allied to the *Teas*. Its foliage is beautiful; its flower is very pure and delicate in color; its form globular and perfect, and although very double and full, appears to expand its buds freely. Considering these valuable characteristics it may be esteemed as a good acquisition, and worthy of a place among the best varieties extant."

In addition to the preceding commendations, we have the privilege also of giving the following extracts from notices and opinions with which we have been kindly favored by persons who have had opportunities of examining its characteristics, all gentlemen of the highest character and worth, and most of them extensively known throughout the country for their fine horticultural taste and knowledge.

[From the Hon. E. W. Leavenworth, of Syracuse.]

"I have seen the 'Augusta' rose, several times during two successive seasons. It is a vigorous grower, and free runner, with dark green polished leaves, and the general aspect of the plant is very beautiful. It blooms with the greatest freedom, small plants not a foot high, having been frequently seen by me covered with flowers. The flowers are very double, very large and beautiful and in fine clusters. It is very fragrant, and the fragrance is of a very agreeable nature. I am familiar with many of the finest yellow roses, and have no hesitation in giving this a decided preference to any of them, for the vigor and beauty of the plant, the elegance of the bud and flower, and for its charming fragrance."

[From Charles B. Sedgwick, Esq., of Syracuse.]

"I have on several occasions seen and examined your 'Augusta rose' during the last two seasons, and it appears to be possessed of a combination of desirable qualities.—Its strong and free growth; the beauty and richness of the leaf; its high fragrance; the size, color and well developed form of the flower, all combine to place it in the front rank of the new roses. I have noticed the full clusters upon quite small plants, and judge that it blooms freely, and is a perpetual, from having seen it in blossom at various seasons of the year."

[From the Rev. Samuel J. May, of Syracuse.]

"It seems to me to combine more excellencies than any species of the rose that I am acquainted with. It is a climber, grows rapidly and abundantly—as much so, I think, as the Michigan rose—the foliage is rich, and it is a perpetual and profuse bloomer. The flowers, taken singly, are more beautiful than those of the Michigan. They are of a brilliant, though not of a glaring, yellow color; and, more than all, have a delicious fragrance like the choicest kinds of the Tea rose. Whoever shall possess himself of this plant will confess that he has indeed a floral treasure."

[From J. W. P. Allen, Esq., late Corresponding Secretary of the Oswego Horticultural Society, Oswego, N. Y.]

"Having seen your new rose, the 'Augusta,' in bloom, during nearly every month in the year, I do not hesitate to say that, combining as it does the properties of a free grower, perpetual and profuse bloomer, fine foliage, great beauty of developing bud and perfect flower, with the richest fragrance, it will be the greatest acquisition yet given to the amateurs of Flora in the form of a yellow rose."

[From Dr. Herman Wendell, of Albany.]

"I have no doubt but that the rose, when it comes to be known, will be a general favorite, for, from its delicious fragrance, (which, by the way, is precisely that of Smithii, a yellow Noisette,) its very free blooming character, as well as its running habit, it cannot but please admirers and amateurs of the rose."

[From Messrs. Thornburn, & Co., New York, and Newark, N. J.]

"This is the finest American (or any other of its class) rose ever raised—is a hardy outdoor runner,—beautiful deep green glossy foliage, similar to the Cloth of Gold; the flowers of a deep nankeen yellow, full cupped to the centre, and of the most delicious tea fragrance. This rose is no catch-penny, but has passed the ordeal of severe scrutiny."

### CAUTION.

As the sole possessors of the Augusta, and in order to place purchasers on their guard against the frauds and villanies of the unprincipled, who have already, to some extent, taken advantage of its reputation to impose upon the unsuspecting some unknown variety under its name, we hereby caution all persons against purchasing from any one who cannot show due authority from us to sell it. To show that the entire stock is in our hands, (we never yet having sent it out,) we give below the certificate of the original proprietor and originator. In his letter to our Mr. F., forwarding the certificate, he makes the following explanatory statement:

"I have never raised a plant from the original stock up to this time, nor have I ever given cuttings or scions *to any one but yourself* since I made a present of the right to you. But it is proper for me to state that about that time, for the many courtesies extended to me by our mutual friend, Mr. Fish, of Macon, Geo., I forwrded him at his request, a few of the buds."

We have a letter from Mr. Fish, stating that he was entirely unsuccessful in his attempt to propagate it—every bud having failed—and he is now awaiting a plant for himself from us.

[Mr. Mathew's Certificate.]

"I hereby certify that I have never given or distributed to any nurseryman in the United States or elsewhere, any plants, scions, or buds of the "Augusta" rose, which was raised from seed by myself, except to Mr. A. Fahnestock, now of Syracuse, N. Y., to whom I presented the right of said rose, with the exclusive privilege to propagate from, sell, or dispose of it as he might think proper. Dated, Coshocton, this 4th day of June, 1851. Jas. Mathews."

AGENTS.

The following are our duly authorised agents at the places designated, with whom orders may be left:

JOHN FEAST, Baltimore, Md.
JAS. D. FULTON, Philadelphia, Pa.
GEO. C. THORBURN, Newark, N. J.
H. P. BYRAM, Louisville, Ky.
PARSONS & CO., Flushing, N. Y.
MORSE & HOUGHTON, Cleveland, Ohio.
A. E. GLENN, Columbus, Ohio.
J. C. FERRIS, Cincinnati, "
KENNEDY & CO., Pittsburgh, Pa.
L. J. GILSON, Cazenovia, N. Y., traveling agent.

☞ The Rose will be sent to any part of the country, packed in the safest manner, in answer to all orders enclosing Five Dollars; or 1 dozen to one address, for Forty Dollars. THORP, SMITH, HANCHETT & CO.
Syracuse Nurseries, Syracuse, N. Y., March 1, 1853.

# Domestic Economy.

Tooth Paste.—Four parts of porphyrized red coral, two parts of bitartrate of potass, one part of cochineal, one-eighth of a part of alum, ten parts of the best honey: the cochineal and honey to be rubbed togother, then set aside for some time, and afterwards the other substances to be added, and rendered aromatic by means of some aromatic oil. By putting some on a brush and rubbing it on the teeth, it will render them beautifully white and clean.

Crackers.—One quart of flour with two ounces of butter rubbed in; one teaspoonful of saleratus in a wine glass of warm water; half a teaspoonful of salt, and milk enough to rub it out. Beat it half an hour with a pestle, cut it into thin round cakes, prick them, and set them in the oven when other things are taken out. Let them bake till crisp.

Worth Remembering.—A small lamp, with a single tube and wick, such as is used for burning fluid, if filled with chloric ether, and lighted, will disinfect a sick room, a ratty parlor, or other "odorous" place, in a very few minutes. So says the Annual of Scientific Discovery for 1853.

# Mechanic Arts, &c.

## LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending March 15, 1853.

Warren Aldrich, of Lowell, Mass., for Improvement in Turning-Lathes.

Henry Bessemer, of Baxtor House, England, for Improvement in Machines for expressing Sugar-Cane Juice. Patented in England Feb. 24, 1852.

Henry Bessemer, of Baxtor House, England, for Improvement in Heaters for Sugar-Syrup.—Patented in England Feb. 24, 1852.

Wm. & S. G. Coleman, of Providence, R. I., for Improvements in supporting the Topping-Lift and Peak-Halyard Block of Sail-Vessels.

Peter Ten Eyck, of New York, N. Y., for Improvement in Rocking-Chairs.

Moses Marshall, of Lowell, Mass., Assignor to M. Marshall, W. Aldrich & L. B. Tyng, of same place, for Improvement in Knitting-Machines.

RE-ISSUE.

Wanton Rouse, of Taunton, Mass., for Improvement in serf-acting Mules for spinning. Patented Nov. 2, 1852.

## EXPLOSION OF BURNING FLUIDS.

The atmosphere, as is well known, contains oxygen gas, in the proportion of one-fifth part, by measure.

It is also well known that if hydrogen gas be mingled with atmospheric air, it becomes explosive when flame is applied. If the hydrogen be added in the proportion of two measures to one of oxygen, and especially if the whole quantity be large, the ignited gases will explode with great violence.—The same is true if the illuminating gas be substituted for hydrogen gas; but that gas being composed of hydrogen and carbon, requires more oxygen gas. If a drop of either be agitated in a bottle of oxygen gas, its vapor will instantly mix with the gas, and then a burning candle applied at the mouth of the bottle will cause a loud and it may be a dangerous explosion.

A glass globe of two quarts capacity which had been rinsed with alcohol, merely shaken in it and then poured out, was placed on the hearth of a Franklin stove to dry, its mouth being towards the fire, but at the distance of three feet from it, when it was soon shattered with a violent and dangerous detonation.

These facts will explain the explosion of the burning fluids now so generally used, and which are composed of oil of turpentine and alcohol. The inflammable vapor, which is constantly rising from the fluid when there is any space above, (in other words, if the vessel is not full of the fluid,) becomes mixed with the air and soon makes it explosive, just as if hydrogen gas were mingled with it; on the contact or near approach of flame an explosion will or may ensue—The flame may be even some distance, because if the vessel be open, the vapor will flow out of it, and being heavier than the air, it may even reach a candle placed on the floor away from flame, as in the case of the glass globe above.

Wherever a lamp containing burning fluid is only partly filled—and the same with the cannister or reservoir—the air above becomes explosive. This state of things occurs constantly in the lamp as the fluid burns away, and in the can or reservoir as the fluid is from time to time poured out for use.

It is so common that the fluids are poured into the lamp: and from the can, with a flame near at hand, and perhaps burning in the lamp itself, that we must continue to expect these very distressing casualities by explosion and burning, because most persons who perform these duties are ignorant of the danger and its causes, and the few who know better are often rash and presumptuous. The danger may be entirely avoided by the use of the wire gauze protectors that have been recently introduced.

It may be proper to add that I have no interest whatever in the invention.

B. Silliman.

New Haven, Jan. 20, 1853.

## INGENUITY.

Of all the thousand and one talents bestowed upon humanity, ingenuity is certainly the most accommodating. Its like is not to be found for making old things new. It stuffs and covers cast-off shoe boxes, converting them into beautiful ornaments. It turns mother's faded gown into a smart Sunday dress for two or three little responsibilities. It cuts father's worn-out coat into a good holiday suit for little Tommy. It makes of last year's hack a fashionable opera cloak for the present season. It converts yesterday's dry bones into a savory stew, and the surplus of broken bread into an Aldermanic plum-pudding. It strings meadow cranberries for bracelets on the arm of beauty, that excites the envy of ignorant aristocracy. It makes the country belle the observed of all observers, when she has made of biddy's quills an elegant ostrich feather. It gives the poor exquisite the luxury of stiff dickeys cut from the whitest paper. It tastefully covers tarnished mirrors in country parlors. It transforms empty barrels into comfortable easy chairs. It invents fashions for deformity, and deforms every body but the inventor. It makes fortunes by whimsical advertisements. It tests a lover's foibles by a thousand little stratagems. It apologizes for a scanty table with profuse compliments. It says no, in order to know whether it may safely say yes. It has prepared colds for any musical emergency. It is the stepping stone to genius, and is often mistaken for it. Finally, ingenuity, like sweet charity, covers a multitude of sins.—*Olive Branch.*

# Educational.

### THE FREE SCHOOL QUESTION.

Hon. H. Greeley —*Sir:* In your review of Randall's School Report, published in the Semi-Weekly Tribune, of Jan. 7, 1853, you have the magnanimity, to honor the opposers of the Free School Laws, with the title of "wrong-headed donkeys, and thick hides, who are destitute of common sense." And why are we so kindly treated? Because we are not willing to sumbit to the arbitrary dictation of a few visionary theorists in the management of our parental duties, and in the control of the fruits of our industry.

But, sir, however stupid or thick-hided we may be, we have the faculty to know, that the over-heated zeal of some men, does more harm in a good cause than its open opposers; their imagination being too powerful for their judgment, they over-leap the bounds of prudence and forget that the end does not always justify the means. You have repeatedly portrayed in vivid colors the wonderful power that the magic wand of Free Schools would have in reforming the follies and vices of community, *if we asses* would but allow the principle to go into operation.

Why is it, that you persist in your *dogmatical dictation to us*, when you have the positive evidence that Free Schools do not produce those wonderful results. You have Free Schools in the city, and have you no educated rogues, no lettered vagrants, nor juvenile delinquents? Do all your little ones between 4 and 20 attend school? I hope they do, for there is not the awful rate-bill to frighten them, and all who do enter, attend constantly, surely, for they have nothing to pay.

The City School Superintendent, in his report of February, 1853, does not state the number of children that do not enter school, nor the number that attended less than two months, but he states that there was registered at the date of his report 8,081, and that 3,184 attended less than four months. Strange, what kept so many so much out of school! *They were free*, and there was only 1,511 that attended twelve months,—rather a poor exhibit of the faithful attendance on Free Schools. And why is it that the Select Schools are so much more regularly attended than the free ones? Simply because those who enter have to pay, attend or not. Free Schools, and the day-book, under the rate-bill, encourage irregular attendance,—*no attendance, no pay, is the motto*—and parents are indifferent whether their children go or not.

In all cases, political, social, or domestic, the nearer that the responsibility of the actor can be placed to the *interested*, the better, and in nothing more so, than in the management of schools and money matters. Had our office holders to foot the bills, they would not be so liberal in their appropriations, nor would they be so often tempted to be dishonest. The Free School motto, that the property of the State must educate the children of the State, i. e., that the fruits of industry belong not to the producers, but, *the powers that be*, is a doctrine that has long been preached by the oppressors of mankind, but little did I expect that it would have been so soon ingrafted into the creed of independent freemen. The State has some property, its canals, and the school funds, but the earnings of the producers, belong not to the State, nor their control to the office holders.

It is generally admitted, that the poor and the needy should be provided for at the public expense; and it is equally admitted, (*even by the hard-hides*,) that the children of the poor should be educated,—but, there is not a sane man in the world, who believes that to clothe and feed the whole of community, at the public expense, would increase their industry, curtail their extravagances, improve their morals, or increase their happiness, (although there are many that would willingly adopt the plan,) and the grand scheme of educating all at the public expense is equally as ridiculous.

The State School Fund is amply sufficient to educate all the children of the poor in the State, so that whatever additional sum is raised by taxation, is directly for the benefit of those who do not need assistance.—To make schools free to those who have the means to pay (even by voluntary subscription,) would retard the progress of learning, by increasing the indifference of parents towards their children's attendance and progress at school, and relax the industry of the scholars; but to raise the money by direct taxation, to assist those who do not need it, *is unjust* and *morally wrong*, and will encourage men to prey on the rights of their fellows, and blunt their sense of moral honesty. It is taking the earnings of the industrious and prudent man, to encourage the idle and extravagant in his folly.

A, by his industry, earns $500 per year, and by his economy saves a portion of it to provide for his future comfort, *on which he is taxed*. B, by his vocation earns the same amount, but spends it, as fast as he earns it, *so pays no tax*. A is at the expense of educating his own children, and has to be taxed to pay B.'s school-bill, which we will call $20. It matters not to A. who pays the tax, nor to B. who receives the benefit of it, whether it is applied to pay B.'s school-bill, or any other of his wants, it is $20 taken from the prudent man's earnings, and given to B. to encourage his extravagances.

The doctrine that the property of the State must educate the children of the State, is too congenial to the spirit of agrarianism to need any encouragement. The idle and the extravagant see clearly, that it is the duty of their prudent neighbors to educate their children; and the children imbibing the principles of their parents, see little difference between having their school-bills paid by their fortunate neighbors, and their sharing with them the fruits of their orchards, and the contents of their granaries. That such are the facts, the alarming increase of juvenile delinquents, is too powerful evidence to be resisted.

One of the greatest moral evils in society, is the indifference of so many parents to the physical, moral, and mental training of their children, (*and especially the training to habits of industry and economy.*) Were we all industrious and economical, there would not be so many rogues, nor so much vice, and had there been as much pains taken to stimulate and encourage parents to perform their important trust, that there has been to establish free schools, and the State supervision of them, there would not have been so many juvenile delinquents. And it is really astonishing that the friends of free schools, do not see the great mischief that they are doing by removing from parents their responsible duties. Wm. Garbutt.

Wheatland, N. Y., January, 1853.

Eds. Rural:—An exact copy of the above was sent to Mr. Greeley, with a request that he would publish it in the semi-weekly Tribune, but if he did not choose to do so, to be so good as to return it; and two postage stamps were enclosed, so that it would not be any expense to him to do so. As yet, he has not done either. Please give it an insertion in your useful journal, and much oblige, W. Garbutt.

March, 1853.

### POWER OF THE VOICE OVER CHILDREN.

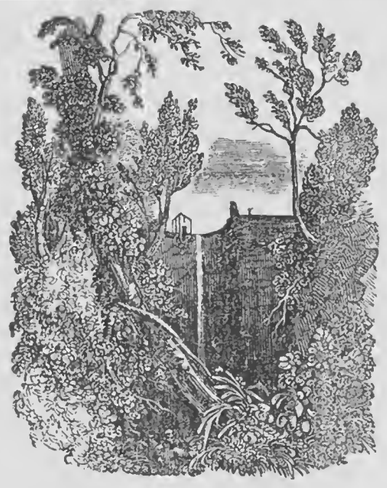
It is usual to attempt the management of children either by corporeal punishment, or by rewards addressed to the senses, or by words alone. There is one other means of government, the power and importance of which are seldom regarded. I refer to the human voice. A blow may be inflicted on a child, accompanied by words so uttered as to counteract entirely its intended effect; or the parent may use language in the correction of the child, not objectionable in itself, yet spoken in a tone which more than defeats its influence. Let any one endeavor to recall the image of a fond mother, long since at rest in heaven. Her sweet smile and ever clear countenance are brought vividly to recollection; and so also in her voice—and blessed is that parent who is endowed with a pleasing utterance. What is it which lulls the infant to repose? It is no array of mean words. There is no charm to the untaught one in letters, syllables, and sentences. It is the sound which strikes i s little ear that sooths and composes it to sleep. A few notes, however unskillfully arranged, if uttered in a soft tone, are found to possess a magic influence. Think we that this influence is confined to the cradle? No, it is diffused over every age, and ceases not while the child remains under the parental roof. Is the boy growing rude in manner and boisterous in speech? I know of no instrument so sure to control these tendencies as the gentle tones of a mother. She who speaks to her son harshly, does but give to his conduct the sanction of her own example. She pours oil on the already raging flame. In the pressure of duty, we are liable to utter ourselves hastily to our children. Perhaps a threat is expressed in a loud and irritating tone; instead of allaying the passions of the child, it serves directly to increase them. Every fretful expression awakens in him the same spirit which produced it. So does a pleasant voice call up agreeable feelings. Whatever disposition, therefore, we would encourage in a child, the same we should manifest in the tone in which we address him.—*Church of England Magazine.*

A Word Fitly Spoken.—Gen. Cass said lately in the Senate of the United States—"Independent of its connection with human destiny hereafter, I believe the fate of the republican government is indissolubly bound up with the faith of the Christian religion, and that a people who repeal its holy faith will find themselves the slaves of their own evil passions and of arbitrary power."

A common civility to an impertinent fellow often draws upon one many unforseen troubles; and if one does not take particular care, will be interpreted by him as an overture of friendship and intimacy.

Of all poverty, that of the mind is the most deplorable.

# For the Young.



THE DEVIL'S HOLE.

Those who have visited Niagara will remember a remarkable chasm, notched into the bank from its top to its bottom, about three miles below the Falls. Its walls are nearly perpendicular, and the gloom which prevails therein has doubtless given it the name of the Devil's Hole. There is a sad history connected with this scene. Ninety years ago, in 1763, a train of twenty-four loaded wagons, with their drivers and a guard of fifty soldiers, were either killed or driven over this precipice by the Indians—but one man escaping the dreadful fate.—The cut above, shows the scene from the opposite bank of the river.

Written for Moore's Rural New-Yorker.

### THE STARRY HEAVENS.

There can be none that love the study of Nature but must delight in contemplating the Starry Heavens. We find beauty every where spread on the earth — the mountain, the ravine, the lake, the ocean, the flowers that bloom at our feet, the shady grove, where we love to list to the music of birds, and the river dashing on, and giving us the noise of many waters, all delight us much.

So when day is departed, and these beauties are shut out from our view, we behold the blue concave spangled with countless stars,—moon, the planets,—all innumerable worlds, each performing its revolution in the same undeviating manner, and keeping its path in obedience to the laws of its own attraction and gravitation. In tracing constellations, and finding the place and position of stars, we derive much pleasure.

How would the mariner guide his way thro' the trackless deep, but for the knowledge derived from the heavenly bodies? Although we may attempt to consider their infinite number, their immense distance, and that they may be worlds, inhabited by mortal beings, we are lost in wonder. It is beyond our power of conception.

Here we see the glory of the Creator most emphatically displayed, and are led to look beyond to the Author, "who knoweth them all, and calleth them by name, and whose ways are past finding out." Who can say there is no beauty in the Heavens?

E. H. W.

### SPOILED BOYS.

What! did you ever see such a thing as a spoiled boy? Indeed we have seen them, and been disgusted with them. A boy may be spoiled about as easily as a girl, by injudicious training; no, we'll take that back—much easier.

In the first place, then, by leading him to depend upon his sisters. Who has not seen the spoiled boy in the man who could not tie his dickey without calling his wife from the breakfast table to help him; or put on his coat without she held the sleeves; or get a drop of hot water when the kettle was right before him?

Another way to spoil a boy is to pick up after him. Now that's a thing we wouldn't do (begging pardon of the gentleman) for the President. We hold that there is as much need of neat habits in a boy, as in the gentler sex; and this idea of gathering the coat from the sofa, the vest from the rocking-chair, the boots from the hearth-rug, the collar from under the table, and the neck-cloth from nobody knows where—is perfectly and superlatively ridiculous.

Again, why is the boy allowed to use coarse, indelicate expressions, that, from the lips of a girl would call forth well-merited rebuke? Should the mind of the man be made of coarse material because he is expected to jostle his way through the rude elements of human nature? That is not the law of the machinist who controls dumb matter. Though one engine may be ponderous and massive, destined for the roughest work, and another delicate and complicated, there is the same smoothness of material in both—the same polish, the same nice finish. A boy will most surely be spoiled, if led to think he can commit offences against morals, which by his parents are considered only masculine—not criminal.

Another wrong thing is to bring a boy up for a profession, will he, nill he. Some parents have a respectable horror for dirt, and cannot think of soiled hands and a trade with any degree of complacency. Therefore the world is burdened with burdens to themselves, in the shape of lawyers, doctors etc., who are too poor to live, and too poor, to die—in comfort.

Finally, the surest way to spoil a boy is not to instil into his very soul, from the time he is an infant, a true reverence for woman; a regard for her virtue as sacred as the love he bears his mother. Never let her name be trifled with in his presence, or her actions interpreted loosely, else you may hereafter share the disgrace of having given to the world a curse more corrupting than that of all others—a heartless libertine. —*Olive Branch.*

# Natural History.

### THE BARKING WOLF.

This animal, which inhabits the western prairies, and which is therefore, often called the prairie wolf, closely resembles the domestic dog of the Indians in appearance, and is remarkably active and intelligent.—He barks so as to imitate the common dog very distinctly; the first two or three notes are not to be distinguished from those of a small terrier, except that he adds to these notes a lengthened scream, giving a peculiar wildness to these sounds. His most wonderful quality is his extraordinary sagacity, of which the naturalist—Say—gives, in the Journal of Long's Expedition, the following anecdote:—'Mr. Titian Peale constructed and tried various kinds of traps to take them, one of which was a shallow box, supported at one end by the well-known kind of trap-stick called 'figure four,' which elevated the front of the trap upward of three feet above its slab flooring; the trap was about six feet long, and nearly the same in breadth, and plentifully baited with offal. Notwithstanding this arrangement, a wolf actually burrowed under the flooring, and pulled down the bait through the crevices in the floor; tracks of different size were observed about the trap. This procedure would seem to be the result of a faculty beyond mere instinct.

"The trap proving useless, another was constructed in a different part of the country, formed like a large cage, through which the animals might enter, but not return.—This was equally unsuccessful; the wolves attempted in vain to get at the bait, as they would not enter by the route prepared for them. A large double 'steel trap,' was next tried, this was profusely baited, and the whole, with the exception of the bait, was carefully concealed beneath the fallen leaves. This was also unsuccessful. Tracks of the anticipated victims were next day observed to be impressed in numbers on the earth near the spot, but still the trap, with its seductive charge, remained untouched. The bait was then removed from the trap and suspended over it from the branch of a tree, several pieces of meat were also suspended in a similar manner from trees in the vicinity. The following morning the bait over the trap alone remained. Supposing that their exquisite sense of smell warned them of the position of the trap, it was removed and again covered with leaves, and the baits being disposed of as before, the leaves to a considerable distance around were burned, and the trap remained perfectly concealed by ashes; still the bait over the trap was avoided."

It was not till a long trap was used that an individual of this species was caught.—This long trap is made by raising one log above another at one end by means of an upright stick, which rests upon a round horizontal trigger on the lower log.

We remember an instance of shrewdness, somewhat approximating this, in the case of the common rat, which, as Dr. Godman remarks, and as every one knows, "is the veriest scoundrel in the brute creation," although he acts solely according to the impulses of nature, and is therefore not so bad as scoundrels of a higher order of beings, who know better, and have not this apology to offer. Being much annoyed by a throng of uncommonly mischievous and impudent rats, we resolved to outgeneral and entrap them. Knowing their superlative cunning, we buried a powerful steel trap in a mass of bran, after this material has been allowed to become very familiar to them for some days, during which time their tracks were found to mark every part of its surface.—But to deprive them of the advantage even of acute scent, we took care to use a spoon in moving the bran, and in covering the trap. Portions of cheese were then scattered over the whole surface. The next morning these had all disappeared, except over that part where the trap lay concealed, and numerous tracks were seen on every other part of the bran.

The Stormy Petrel.—A Lubec correspondent of the Boston *Journal* furnishes a sketch of the Stormy Petrel, as found in the Bay of Fundy. The Petrel is found in great abundance in the Bay of Fundy, and in fair weather they are seldom seen in very close proximity to the land; but when the weather is thick and hazy, and also in the night, they come on shore. They dig holes in banks, like the king-fisher and bank-swallow, where they lay their eggs and rear their young. They are never seen flying in the vicinity of their nests like other birds; hence our correspondent comes to the conclusion that they seek their nests under the cover of night. When a mackerel fishor is engaged dressing fish, these birds will feed all night around the vessel, upon the offals thrown overboard. On one of the islands in the bay is a brook of fresh water, where the fishermen resort for a supply, and the birds are heard in great numbers in the vicinity at night. There are two varieties, which are denominated by the "down east" fishermen "Father Cary's" and "Mother Cary's Chickens."

# Sunday Reading.

### PRAYER.

Prayer is the incense of the soul,
The odor of the flower;
And rises as the waters roll,
To God's controlling power!
Within the soul there would not be
This infinite desire
To whisper thoughts in prayer to Thee,
Hadst Thou not lit the fire.

Prayer is the spirit speaking truth
To Thee, whose love divine
Steals gently down like dew to soothe,
Or like the sunbeams shine.
For, in the humblest soul that lives,
As in the lowliest flower,
The dew-drop back His image gives,
The soul reflects His power!

At night, when all is hushed and still,
And e'en soft echo sleeps,
A still small voice doth o'er me thrill,
And to each heart-throb leaps;
It is the spirit-pulse which beats
Forever deep and true!
The atom with its Author meets,
As sunlight greets the dew:

For the Rural New-Yorker.

### CHRISTIANITY AND CIVILIZATION.

History furnishes us with the fact, that Christianity and civilization are co-extensive. No land can be found enjoying the benefits of the one, without the other. In those parts of the world which have never felt the invigorating rays of Gospel truth, the blessings of free institutions have never been known. If we confine the results of civilization to this life, how strangely they contrast with the desolation of paganism.—Here smiling fields and golden harvests, reward the farmer's toil. The rich fruits of summer, are laid in store for the demands of winter. Experience soon determines proper division of labor, so that, in the thousand avocations of life, society moves like the different parts of a vast complicated machinery, in perfect harmony and regularity. Industry and economy invariably secures competency.

Socially and politically, civilization is in total contrast with heathenism. The family circle is a little empire, over which peace and joy may reign supreme. Our rights are secured by mutual compact, and the man who invades them, does it at his peril. Not so, in lands uncivilized. No waving fields, gilded with the summer's sun, cheer the hearts of Hindoo's sons, or satiate the craving appetite of the poor Feejees. If to-day they are fed to surfeiting, it is no security that to-morrow they may not starve.—Social and political rights and privileges are unknown.

If, as an enlightened people, our lives are loaded with blessings, to what are we indebted for them? It is answered, Civilization. True; but what is the source of civilization? If it is co-extensive with Christianity, which is the cause and which is the effect? Let history and facts decide.

These combine in declaring that Christianity precedes, and Civilization follows as one of its legitimate fruits. It is the gradual spread of those principles, first taught 1800 years ago, by the founder of the Christian System, that has dashed to atoms the thrones of tyranny, and poured in such richness and abundance, the blessings of civilization upon our world. Jefferson learned from the Bible, the truth, "all men are created free and equal." The light of the Bible has revealed the dark designs of despotic power, and under its penetrating rays, the tyrant's sceptre becomes the broken reed.

Civilization then, is not a spontaneous production, but the result of the spread of truth. As an illustration of the position taken, look to the Sandwich Islands.—Stretching farther back than any of their records, or even tradition, they had occupied a cluster of Islands in the Pacific Ocean. Human language is almost inadequate, to portray the degradation in which they were found in 1819, by Missionaries. Midnight superstition and gloom, had settled down upon their prospects, unalleviated by the least ray of light or hope. But the darkness receded before the light of Bible truth, and in twenty-five years what was the result? Now stately edifices adorn the well tilled lands. Ships are seen crowding the long wharfs—the rolling of the printing press is heard sending out light and truth, and all is peace and plenty. Their civilization is the result of Christianity. Liberia is another illustration of the same truth.—An investigation will show, that our own land, instead of being an exception to the rule, is one of the clearest proofs of the correctness of the position here taken.—Every farmer, then, as he reaps his fields, and enjoys the luxuries of Rural life, is a debtor to Christianity. S. H.

Royalton, N. Y., March 14, 1853.

It is better to sow a young heart with generous thoughts and deeds than a field with corn, since the heart's harvest is perpetual.

# Miscellaneous.

Written for the Rural New-Yorker.

## MENTAL WORTH.

Deep in the bosom of the earth,
A crystal stream had murmured on
Unseen; its beauty and its worth
Were never known, ne'er thought upon,
Till man, by labor, toil and might,
Had brought that crystal stream to light.

Beneath the dreary, frowning brow,
Of yonder rugged Alpine steep,
Perchance, rich treasures slumber now,
And ever undisturbed will sleep,
Till man, by labor, toil and might,
Shall bring its golden stores to light.

And thus there is within each breast,
A latent source of priceless thought—
A mine, where sparkling gems attest
True worth, when it with care is wrought.
Oh! labor then with all thy might,
To bring thy hidden worth to light.

Reed's Corners, N. Y., March, 1853. Mac.

## DESCRIPTION OF SAVANNAH.

BY N. P. WILLIS.

I must record, for invalids, that it was cool at Savannah—cool enough for an invalid's great coat—on the evening of May the second. I had hoped better things of it. An old gentleman, to whom I sat next at the tea table, said it was too cool for his daughter to leave her room. He was on his way with her to some more thermal resort in Florida, of which I have forgotten the name. A pale lady, in blanket shawl, sat opposite me. A summery and healing association comes up usually with the mention of Savannah, the name being descriptive of a perennial feature of Southern scenery; and doubtless the general average of its temperature deserves it. Its caprices should be guarded against, however. It has long been the first refuge of the alarmed consumptive, and its history, truly written, would probably be that of a "Bridge of Sighs," by which many had returned to health, and as many had passed on to remediless confirmation of disease.

The bed-room candle, offered me by Prudence after tea, was outvoted by a brilliant moon out of doors.—(a "tie-vote," of course, on the republican principle, but the individual moon, to my thinking, being a majority over the individual candle)—and I started to get a first view of Savannah while she was probably looking her best. It was indeed a glorious night. And a more singular scene, than that city first seen by moonlight, is not likely to fall often in the traveler's way. It is laid out curiously, as the guide book tells—its plan a chequer board, and every other square a park—but the streets, besides, being lined with trees, and avenues being planted through the centre of the principal ones, the leaves form a complete ceiling overhead, and no two stars are visible at a time, I should say, from any side-walk or thoroughfare in the entire municipality. I have sometimes felt in the woods, a desire to climb up some tall tree and *see out*—and the same feeling comes over one, after a while, in walking along miles of a closely-chequered carpet of light and shade, with a roof as closely-chequered and interminable above. It occurred to me whether we might not *leave* out the sky a little too much, occasionally, in our improvements and beautifyings.

Whether these overshadowing trees act on the city like the outspread hand with which a mother says "hush" to her children, is open to supposition; but, that some peculiarly quietizing influence is exercised on the habits and character of the inhabitants, must be the stranger's invariable impression—though he might balance between this explanation of it, and the town's growing considerate, even in the shutting of doors, from its long use as a Mecca of invalids. So still a place, it seemed to me, I had never been in before. Constantinople, with no wheels in its streets, and Venice, with its silent-gliding gondolas, are noisy to Savannah. It is true that the deep sand of every thoroughfare makes carts and carriages unheard, and the profusion of leaves may so thicken the air as to deaden the common reverberations—but there is a stillness more deep and universal than can thus obviously be accounted for. I was there three Sundays—(week-days behaving themselves like Sundays, that is to say)—and the hush of this first evening, which I was inclined to attribute partly to strict observance of the Sabbath, was, I afterwards found, the perpetual habit of the people. In my two hours' ramble, I passed through whole streets without meeting a soul. I scarce saw ten persons altogether, in the two hours. Thinking the homes should be livelier, for the life not stirring abroad, I looked for open windows and lighted rooms—but a sign, even of a single lamp in the front apartments of houses, was strangely rare. There was everywhere the shut up look of families absent. For long distances I saw nothing to disturb the idea forcibly suggested by the excessive foliage and the loneliness and stillness—that it was a silent city, deserted but undecayed, which the growth of a luxuriant wilderness had overtaken and buried.

It is curious that it should be but "across a ferry," as it were, from Havana, the most *out*-doors-y city in the world, to Savannah, the most *in*-doors-y. It cannot be altogether a matter of principle, though Savannah is said to be the most religious of towns, and Havana (where I heard the military band play polkas as part of the Sabbath service,) is perhaps as peculiarly irreligious. Nor can it be altogether a peculiarity of race—though the Havanese would seem to play the sun-fish as naturally as the Savannese play the oyster. There is a *fashion*—which is part of the character of a town, differing in different places to a degree which is not easily explainable—in the *amount of appearing abroad.* ("gadding," as the straight-laced call it,) which is respectable and proper. The subject might profitably be lectured upon. Inestimable as the fireside virtues are, domestic bliss requires a certain amount of airing, in "best-regulated families," and the natural desire "to see and be seen," has its use in the composition of human society.

With twenty thousand inhabitants, Savannah seems to have no poor people. In various rambles, during the few days of my stay there, I could find no quarter of the city where there were any but comfortable dwellings—more than comfortable, indeed, for the poorest inhabitant has an avenue of shade-trees before his door, and must see an open square from his window. The luxuries of park culture, which the noblemen of England spend fortunes in maintaining around their dwellings, are here at the humblest man's threshold, free of cost. No child can grow up in Savannah without Nature for a nurse—beautiful trees for the infant waking-dream to build its nest in—velvet grass, clover and buttercups, to make the world seem like a play-ground, and the commonest highway a path of flowers.—Does any one think that character is not affected by such influences—that hope and imagination, confidence and cheerful habits of temper, (to say nothing of health,) are not nurtured by such surroundings in childhood? They make impressions too vivid and too universal not to have been intended by an all-wise Providence as a blessing to improve. Schools should be where there are trees, streams, mountains—teachers for the play-hours as well If I may strengthen my remark by recalling what made an impression on myself, I have forgotten every circumstance of a year or two that I was at school at Concord, New Hampshire, when a boy, except the natural scenery of the place. The faces of my teacher and my playmates have long ago faded from my memory, while I remember the rocks and eddies of the Merrimac, the forms of the trees on the meadow opposite the town, and every bend of the river's current. Whether Governor Oglethorpe, in laying out the city of Savannah, thought of more than the health and luxury in parks and shade-trees, it is too late, perhaps to inquire—but, to his beautifully rural plan, and energy of forecast in the completion of it, the inhabitants are indebted I believe, for a perpetual teaching of moral beauty, no less than for a sanitary luxury.—*Home Journal.*

## CHRISTIANITY AND GOOD TASTE.

A Christian may be consistent with his duty and profession while he consults taste in all things, for in regard to most of the objects of life, the Christian character is beautified and adorned by judicious attention to propriety and good taste. There are a multitude of cases in which he may without a penny's additional expense, or a step out of his way, add to his own enjoyment in life, and to that of others also.

There are many cases also in which conformity to a correct taste becomes an absolute Christian duty. Among these, are propriety of apparel in the minister, comfort of the person, courtesy of expression, appropriateness of sacred architecture, cleanliness, and such a union of decency and comfort as a small exertion of contrivance can bring about with limited resources.—Christian principle requires the exercise of good taste when all that is needed for it is the putting forth of a little care on our part to secure fitness.

Where the gospel of God has had most influence—there has been the purest and simplest display of good taste. Compare the gaudy dress and adornments of heathen with the modest propriety of Christian people. The Bible is itself a true standard of the taste.—*Ohio Observer.*

## NEATNESS IN SPEECH.

The nose and the roof of the mouth may be regarded as the sound board of the voice. The teeth form a bridge or barrier, upon which the lips and tongue are constantly playing; and their beauty and regularity contribute much to the neatness of speech. The action of the tongue is susceptible of high cultivation, and upon its activity depends much of that silvery tone of voice which delight us. With many it lies a sluggish lump in the mouth, as when pronouncing the letter L, it so blocks up the passage that the voice escapes with difficulty. The lips are employed in the softer tones, and are chargeable with the same lassitude of expression. The chin has an important office to perform, which is to operate upon the hinge which opens and shuts the mouth, for upon its activity we either disclose a polite or vulgar pronunciation. Every one must have noticed in lazy speakers, how the words are drawled out of the mouth, as naeo for no. Others begin to talk before their mouths are open, affixing the mouth-closing M to most of their words, as M yes for yes. —*Gardiner's Music of Nature.*

True as a Dictionary.—Col. Benton says: "Above a century ago," there was a class of gentry, roving the seas, and helping themselves to whatever they wanted, and were able to take from nations or individuals, whom the English called *Freebooters*, and the French called *Filibusters*, and the Spaniards called *Flibusteros*, and which we (the Americans) call *Flibusters*; and whose natural and international creed was comprised in the answer to two brief questions. First, whether any man or nation, has any thing that we want? and secondly, are we able to take it? and these two questions being affirmatively answered; "*take it!*" was the word!

The idle should not be classed among the living; they are a sort of dead men who can't be buried.

## THE CHOICE OF ONE'S BUISINESS.

Some people are cursed with congenital laziness. It cannot be called inbred, for it seems to be independent of all training, and to remain in spite of the stoutest efforts of their well-wishers to rid them of the incubus. Others are lazy rather from the force of their connections, and for lack of a motive to action. But fortunately for us, and, perhaps it is in vanity that we always add, for the world, if for us, most of our race are by nature disposed to be industrious, and prefer to make some stir in the world as they sail through it. There are few so far given over to indolence that there is not some employment which they like—some business which they would enjoy.

If parents would study the natural preferences of their children,—would seek earnestly to discover their proclivity, there would be saved to the world an abundance of unnecessary misery, and to humanity many of her pangs. The parent who is at all shrewd cannot but find out what his offspring most likes: the choice of his sports, the amusements he prefers, the topics which most fix his attention, and absorbs his thoughts, reappearing in his subsequent meditations and inquiries, point with unerring accuracy to the needed information.—In lack of any partialities in earlier life, how easy it is to plant them there, and to water them, and make them grow till they seem part of the mind's original construction, is another subject full of profit in the contemplation, but impertinent to our purpose.—We speak of that period in the child's life, when the taste has become apparent, and he has begun to think for himself somewhat, when incorrect notions and propensities that are disagreeable will down at the bidding of the domestic teacher; of the time when the child must go out from the family circle to learn a trade, to fit himself for a profession, to earn a living somehow.

Now the trouble is apt to lie here.—There has been no work of preparation going on. The choice of a profession has been left till the very eve of entering upon it. Some cause, of the most temporary and fleeting character, dictates the decision, and the youth is chained for life to an employment which he abhors, or only loves "on compulsion." A well-trained man soon learns to be content with an imposition which he cannot well shake off. The axe being dull he puts to the more strength.—He heats the iron by hammering it. The labor being before him he sticks by it until habit has made it agreeable. But all are not thus gifted. More, finding their work disagreeable, do as little at it as the stress of circumstances will permit, and seek for other engagements to consume the leisure hours. Their best efforts are diverted from the proper channel. Their force is directed unavailingly upon two or more objects, which if expended on one, would work results that now seem miraculous.

Our country is full of this uneconomized, unsaved labor. There are men in shops and work-yards who thrust the plane lazily and strike with the axe forcelessly, because they ought to be on farms. And there are dull, melancholy men in pulpits and offices, and behind counters, who preach sleepily, miserably perform their official duties, and make small profits on their goods, who would work right lustily in ship-yards and enjoy a full flow of spirits if their muscles could keep time to the clatter of hammers and the strokes of workmen ten hours in the day. We pity the man who goes into the pulpit from "a sense of duty" simply. The Apostle, who felt that a woe was on him if he was not a preacher, also heartily loved his business. We doubt if many are really "called" to any work which they loathe.—We pity the doctor, who is such simply, because his crabbed old uncle offers to take him into his office without charging tuition.—Very fortunate it is that the departments of labor open to us are so various that we can scarcely fail to be suited with them.—And the parent who in old age looks upon a son toiling unwillingly at his daily task, may very properly inquire how far his failure to discover and direct the tastes of his offspring is chargeable for the unfortunate issue. Set the generation that is now growing, on the track, and we shall find their power immensely magnified without any increase of cost. When one's profession lies in the line of his tastes, he does double service unawares. The grades are all easy.—The track is in order. Loads that look immovable, move onward as if they were mere makeweights. A word to the wise is sufficient. We have written almost a chapter of them—may they provoke the wisdom of some who have not furnished the tokens in extravagant abundance heretofore.—*N. Y. Times.*

## NOW, IN THE COUNTRY.

Now, in the country, are the farmers, boys and men, getting ready for spring work. Now are the sap-buckets taken from the garret and got ready for the delicious juice of the sweet sugar maple; now is the smell of red cedar spouts through which the nectar is to distil into the bucket, the stone-trough, and the potash kettle, when boiling, foaming, rising, and sinking, the compound stands at last confessed, Maple Sugar in the Grain. Now the thin blue spiral smoke-column rises over the reddening woods, and many a night gathering is there before the blazing sugar-fires, in comfortable wigwams, with odorous clean straw upon the ground floors. Now red-hot coals are sponked upon green maple logs, and the naked forest resounds with cannon like reports, and the ringing laughter of honest, careless hearts. Now the willow basket of apples stands in the corner of the great kitchen fire place, and a pitcher of sweet cider keeps it company; and the boys are cracking and munching the rich brown buttornuts, by way of variety. Now we will close this reminiscence of country life. Now we will stop.

# For the Ladies.

## THE HEART'S MELODIES.

Listen! listen! full is ever
This wide world with music true,
Naught can still it, mar it, never—
Naught that hate or wrong can do.

Gentle, humble, all who tremble
While fierce passions round them jar,
Shall hear whispers that resemble,
Angel voices from afar.

None so weary, none so lonely,
But some heart responsive gives
Beat for beat; and Love needs only
Touch the chords, and music lives.

Though the world with darkness blendeth,
Though the wood be hushed and drear,
Though the lone flower, trembling, bendeth,
As the cold wind moaneth near:

Morn shall come; again from blindness
All to life and glory start;
So, like light, one touch of kindness
Wakes the music of the Heart.

[*Chambers' Journal.*

## PURITY OF LANGUAGE.

BY A FARMER'S WIFE.

Perhaps there is no subject that appears of so little consequence at the first glance, that in reality forms so important a part in the establishment of character among strangers, as the language employed, and the manner in which the ideas are expressed.—Let an individual appear in any community, whatever his character may be where he is known, if he can and does converse well, a favorable impression is made and he finds it comparatively easy to acquire a standing, whatever purpose he may have to gain.—On the contrary if a man is careless and awkward in his choice and use of language, though he may be very wise, people will not listen to him with any satisfaction, and he thus loses the benefit of favorable first impressions. However sensible a person may be, it is certain his conversation loses much of its effect by being expressed in ill-chosen terms.

No argument is needed to convince any one of the truth of these remarks, who has ever observed the respectful deference that is always accorded to good talkers.—By good talkers, I mean those who can clothe even a common-place subject in such a garb as will render it pleasing. One can determine by hearing a very few sentences, whether the speaker is in the habit of uttering his thoughts to refined listeners.—All have not opportunities, for acquiring an easy and graceful style of conversation, but there is no possible excuse for interlarding whatever they have to communicate with the slang phrases, and exclamations that creep into our language with such facility, and are sometimes so ludicrously originated. No want of grammatical accuracy is half so annoying to a cultivated hearer as these vulgarities of speech. If such language is scarcely tolerable in man, what shall I say of females who indulge in its use, especially in the hearing of children? How careful should *mothers* be that their children may never hear them use a cant phrase or give utterance to an indelicate allusion. Children are not only imitative beings, but they are exjudges of character. Those who have never heard impure language from their parents will be instinctively shocked when they hear it from others, and none are quicker in detecting it. A little girl four or five years old was visiting in a very respectable family, and heard a young lady use the phrase "plaguy bad;" it instantly caught her ear. "Plagny bad" said she "what does that mean?" The young lady replied "plaguy was not a proper word; I only meant the thing was *very* bad." "Then why do you not say very bad?" persisted the child; "I believe *plaguy* is a vulgar word, I know it is not in mother's dictionary." The young lady was never betrayed into the use of that word again, and I have heard her say the criticism of that child was worth more to her than half a dozen such from older persons. She is now a mother and feels the importance of keeping a double watch over her tongue.

We can generally judge in a measure by the speech of a child what kind of people his parents are. I have known children to be so well guarded from hearing improper language, that they did not know the difference between vulgarity and profanity, and only found it out when old enough to learn it among the playmates at school. What a pity that aught but good, should be learned when so many of the impressions that govern the whole life, are received into the mind! But the evil exists, and the most that can be done in the present state of affairs is for every individual parent to use his best endeavors to counteract the effect.

We deprecate *these* evils, but what shall I say of the abominable practice of *profane swearing?* It is no more than we may expect, to hear oaths from the degraded being who reels along the street reeking with the steam of some polluted sink of vice and misery; but when this corrupt vice is fastened on the tongue of him who is looked up to as an example, not only by his children, but by the community, I am at a loss for language strong enough for its denunciation. I once knew a man on whom this habit was so firmly fixed, that he would sit down to the table with his family and ask God to bless them, and the food prepared for their use, and before using he would take that holy name in vain!

Revolting as is the idea, it is nevertheless true, if we may believe the newspaper reporters, that grave men, chosen to sit in the halls of legislation and make laws for the government of their country, too frequently indulge in this debasing and offensive practice, without danger of even a call to order from the presiding officer. We expect at least that men occupying such a position should be gentlemen, and that appellation is always accorded to them, but if one gives but a glance at the daily proceedings in our National and State Assemblies, he will see how unjustly it is in many cases bestowed.

Let parents, mothers particularly, assiduously guard their children from the contaminating effects of ribald and profane language; guard them with care from the effect of low cant which is often gilded with wittieism that makes it attractive, but none the less reprehensible. Much of the low wit that abounds in the newspapers of the day, is unfit to be read by children, and even editors who intend to exclude every thing of the sort from their columns are sometimes tempted to admit an anecdote of this character, for the "point of the joke."

I believe the vice of profane swearing is so rare among females who lay any claim to respectability, that I scarcely need allude to it. But it is a fact that many well educated, intelligent females, are far too careless of their language in their every day intercourse. I presume there is scarcely a young man to be found who would utter an improper or profane word in the presence of that mother or sister from whose lips he had never heard aught but purity of expression—pure words swelling up from pure minds. How careful should we be in the choice of all our expressions; and if the habit is early fixed, and grows with the growth, the appropriate language will flow as naturally as water from the fountain.

I consider good conversational powers, among the highest accomplishments; with these, plainness of features is forgotten, and we are involuntarily attracted towards the individual who exercises them.

Next to early habit, frequent intercourse with strangers is an important aid to acquiring ease and facility in conversation.—If females would take hold of this matter in earnest, I think a reform in the character of general conversation might be effected, and many of the strong expletives now employed would soon cease to offend the refined ear; and instead of the vapid trash that passes for conversation at a social gathering, these occasions might be made to contribute to our improvement and a rational enjoyment, becoming intelligent and responsible beings.

Willow-dell Farm, March 1., 1853.

## STRANGE CUSTOM.

A most extraordinary custom prevails among the Vizrees, a powerful tribe occupying an extensive district in Caubal, among the mountains between Persia and India.—It is, in fact, a female perogative that has no parallel among any other people upon the earth, and that reverses what we are in the habit of considering the natural order of things — the women choose their husbands, and not the husbands their wives. If a woman be pleased with a man, she sends the drummer of the camp to pin a handkerchief to his cap, with a pin which she has used to fasten her hair. The drummer watches his opportunity, and does this in public, naming the woman, and the man is obliged to marry her, if he can pay her price to her father.

A Wife.—When a man of sense comes to marry, it is a companion whom he wants, and not an artist. It is not merely a creature who can paint, and play, and sing, and dance. It is a being who can comfort and counsel him; one who can reason and reflect, and feel and judge, and discourse and discriminate; one who can assist him in his affairs, lighten his sorrows, purify his joys, strengthen his principles, and educate his children. Such is the woman who is fit for a mother and the mistress of a family. A woman of the former description may occasionally figure in a drawing-room, and excite the admiration of the company, but is entirely unfit for a helpmate to a man, and to train up a child in the way he should go.

Small acts of kindness are very pleasant, and how desirable do they make life. Every dark object is made light by them, and every tear of sorrow is brushed away.—When the heart is sad, and despondency sits at the entrance of the soul, a trilling kindness drives despair away, and makes the path cheerful and pleasant.

A quiet mind, like other blessings, is more easily lost than gained.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, MARCH 26, 1853.

*SPECIAL NOTICE—NEW QUARTER.*

THE SPRING SERIES OF THE RURAL, *commencing next week, will be opened with vigor, and a determination to improve as we advance. Without making any pledges, we can safely say that the immediate future of the paper will indicate no deterioration. Those who wish to subscribe, or renew their subscriptions, will bear in mind that* NOW IS THE TIME. *We shall add largely to present edition, in order to supply orders from the beginning of the new quarter. See Publisher's Notices, Premiums, &c., on next page.* March 26.

## "Time Up."—Progress Reported.

ON the eve of going to press, the chief clerk in our mailing department—a department becoming quite as laborious, and perhaps more important, than some at the seat of Government—reminds us that the subscriptions of a large number of RURAL-ists expire with the present number. He states that "time up" will be printed in *red ink* on the margin of the papers of all whose terms now expire—but suggests that it may be proper to call attention to the brief notification. We are confident that those who receive such intimation, require no extra inducements to renew their subscriptions—knowing, as they do, that the RURAL is worth more now than heretofore, and that its improvements keep pace with its increase of supporters. But, taking it for granted that all interested will invite a continuance of our weekly visits to their Rural Inglesides, we still have a request to prefer. And while mentioning it, permit us, reader, the familiarity of taking your sleeve,—thus approaching your acoustic organ.

Now, premising the RURAL to be, in *your* opinion, a *good* proper, worthy the support (we ignore the word *patronage*, for we ask none, as such,) of yourself and friends, what we desire is this:—That you, and each of you, in renewing your subscriptions, give us a specimen of your ability and facility in writing proper names, and counting subscription money! We have performed considerable labor in this line, of late, and trust our friends will exercise their talents in the same direction; thereby furnishing us material for the continuance of an agreeable avocation!—the more agreeable because it provides the wherewithal to remunerate editors, contributors, paper makers, (great cormorants, by the way,) printers, clerks, engravers, agents, &c., and leaves a margin for improving our paper in *in* and *ex*-ternals.

In plain phrascology, we frankly ask that each subscriber, in renewing his or *her* subscription, (woman's rights and wisdom are manifested on our subscription books,) will present also the names of such friends as wish, or may be induced, to subscribe for the RURAL. It is not bad to *take*—will injure nobody nor any of their friends: on the contrary it is generally pronounced a pleasant and valuable elixir—good for all, and perfectly safe for young people. It will interest and benefit the seniors—all who have arrived at maturity—while we are sure that the rising generation, will, after an introduction, vote for it unanimously.—And, reader, if you add to your own from two to twenty names, the price will be materially lessened, and you will obtain some valuable books in return for your exercise of influence in behalf of the paper—to say nothing of the benefit to your neighbors. Moreover, there *may be* another direct advantage to yourself, viz.,—If your neighbors take the RURAL, your copy will stand a much better chance of being read quietly under your own roof, and thereafter preserved for future reference! People *will* have the paper, even if they must borrow it,—hence the above is an important consideration.

But we have written "Progress Reported" at the head of this article, and must at least allude thereto. We'll not, however, present any prolix, vain-boasting statement. Suffice it, that on this, the first "Quarter-Day" of our fourth year, we are enabled to report an actual INCREASE of about (perhaps a little over,) *six thousand subscribers*, since the expiration of our third volume—(while we have placed more than double that number of names on our books within the same period.)—This fact speaks for itself—and, as some say when a subject is perfectly plain, and others when it is beyond comprehension, "comment is unnecessary." Yet we must be permitted to express sincere acknowledgements for the kindly interest manifested in support of the RURAL by individual Subscribers, Post-Masters, Local and Canvassing Agents, Clergymen and Teachers, in all parts of the Union. While we are deeply sensible of our indebtedness to each and all who have contributed, and are still contributing, to the unexampled success of this journal—and feel a just pride in its standing, for it has been acquired without pandering to pernicious tastes, or aiding the trickery of fraudulent speculators—we feel none the less obligation to discharge our duty to the public in a proper manner: for an increase of circulation and influence, enhances our responsibility.

THE WEATHER AND THE SEASON.—The first half of the week closing Tuesday, was very cold and disagreeable. Friday, A. M., early, the first thunder shower of the year was observed. Saturday was mild—Sunday quite warm—insects made their appearance in the open air. Monday and Tuesday, both spring-like. Robins first heard on Thursday morning—blue birds on Saturday—thus do spring's harbingers begin to gladden the hearts of the lovers of Nature.—w.

## Deceptive Advertising—Briefly.

NO YOU DON'T, SIRS!—We have just received, thro' the Rochester post-office, an advertisement (accompanied with payment for its publication,) purporting to emanate from somebody, or bodies, in this city, which reads thus:

MOST VALUABLE INFORMATION—FOR EITHER SEX.—The Subscribers will communicate to any person INFORMATION (with explicit instructions) most valuable for EVERY FAMILY, and in constant demand throughout the length and breadth of the land; and by which, with a trifling outlay, a person of ordinary talent may earn from 10 to 30 dollars a day.

Rely upon every particular by return of mail, on the receipt of One Dollar. Address, post-paid,

——, —— & CO., Rochester, N. Y.

The names signed to this document (which is carefully written, with certain words marked properly for caps, small caps, &c.,) are quite *Frenchified*—and so foreign to this locality that we never heard of them before, and cannot find either of them (except Mr. & Co.) in the City Directory. They are undoubtedly fictitions. The note accompanying the adv't, says:—"You may be assured that the information it vouchsafes to convey, is of real worth. We shall want the advertisement continued, and will advise, remit, &c., in time."

Now, we beg to state to "the party of the first part," that we cannot, under any circumstances, become a party to any attempt whereby the public may be defrauded. Before aiding in any such matter as yours, we must be *fully assured* that you constitute a real, bona fide, genuine firm—that the names you assume are *your own*—and have more conclusive evidence than mere *ipse dixit* that you can make good your promise. Were we to receive such an advertisement from a well known firm, or any legitimate business man, we should view the matter differently—yet should demand to know the *great secret* before publishing. But JOHN SNOOKS and PETER PETTIBONE, cannot assume French names, and palm off their deceptions through these pages—no matter how much money they offer as a "consideration."

Honest business men, whose stores, &c., are within a stones-throw of our office, do not take the trouble to write letters, and send through the post-office, when they wish an advertisement published. They apply at the publisher's desk, and do their business like MEN. But there are miscreants among us, who advertise something similar to the above, in largely circulated eastern papers, over fictitious names, but who *dare not apply in person* to a Rochester publisher. We have recently learned the *real name* of one of these scamps, and shall probably "*dissect* the subject" in a week or two—as we do not purpose to allow this matter to rest here.

—Our attention was directed to the subject of deceptive advertising some weeks ago, by seeing an advertisement in an eastern paper, purporting to be from a resident of this city, and we intended to allude to the matter before. Our present hastily written article is called out as stated in its commencement. We shall return to the subject—and probably disclose certain "sells" which entitle their originators to *cells* of another character.

THAT MARK.—*A Suggestion.*—The allusion, a few numbers back, to our new mark, has been commented upon encourageingly by a number of agents. Friend PURPLE, of Brookfield, Wis., writes:—"'That mark' having been raised another 'peg,' and myself of Yankee stock, I feel bound to do my share toward reaching it. And in order to do so its friends have only to lay before their neighbors a copy of the RURAL, the perusal of which will be a sufficient recommend of its adaptation to the wants of community—and particularly to the wants of the husbandman—a reliable guide, social companion, and true friend. Let the experiment be tried, and the result will be that the neighbor will (unless afflicted with that 'awful' malady, 'hard times,') subscribe, and desire the loan of a paper until his arrives. Credit inclosed money, and send RURAL as below," &c.

Thanks to our friend, not only for his encouraging words, but for the handsome list of subscribers (over thirty) he has obtained in a town of small population. We trust that many of the readers of the RURAL will follow his example, and adopt his suggestion as to the manner of procuring subscribers.

## Northern New York.

WE had occasion the past week, to spend a few days in Jefferson county. Northern New York is every year becoming better known and more highly appreciated. Jefferson and St. Lawrence are fast taking rank as among the best grazing and dairy districts in the State. The completion of the Rome, Watertown and Cape Vincent Railroad, by offering increased facilities for sending produce to market, has stimulated the farmers to such an extent that few counties, comparatively, send more butter and cheese to market. In quality it will compare favorably with that from any other part of the State or the Union. Grain is grown with profit, especially spring wheat, which is so good as to be sought from abroad for seed.—The hay crop of last season was rather short, and that staple now commands from $14 to $15 per ton. Large quantities are brought from Canada, for consumption in this locality, and for shipment to New York. We are told it pays well. When pressed and properly bound, hay may be transported as easily as flour, shingles or butter and cheese.

We have no means of knowing how much butter and cheese were sent forward by Railroad from the different stations in Jefferson county—excluding Cape Vincent, where a large share of Canadian products are shipped,—but have no doubt they will be much larger than is generally supposed. The water power furnished by the Black River is immense, and easily available, and at no distant day, Watertown will be as noted for its extensive manufactures as it is now as the finest and most flourishing village in the State. Measures have been completed for building a Railroad from Watertown to Potsdam, St. Lawrence county, which must be a valuable auxiliary to the business facilities of the latter county. †

## Literary Notices.

THE PREACHER AND THE KING. Translated from the French of L. Bugener, by Rev. GEO. POTTS, D. D. Boston: Gould & Lincoln, 1853.

THIS work has attained large popularity in France—the translation having been made from the twelfth edition. Louis XIV., is the King, and BOURDALOUE the Preacher, who figure in its pages; and the pulpit eloquence of that era is introduced in a novel manner, but one of much interest.—FENELON, BOSSUET, Abbe MAURY, Madame DE MONTESPAN, and other noted personages are among the characters. SAGE & BRO. have it for sale.

VILLETTE, an Autobiography. By CURRER BELL. New York: Harper & Brothers, 1853.

THOSE who have read "Jane Eyre," will not need to be told that this is a remarkable book,—powerfully written, and full of those peculiar beauties which have made its author famous in both hemispheres. Sold at DEWEY'S, Arcade Hall in both book and pamphlet form.

THE NATIONAL MAGAZINE for April, has portraits and biographical sketches of BAYARD TAYLOR and of Rev. Dr. TYNG; a continuation of the series on the Life and Times of JOHNSON, and many other highly interesting articles. Dr. STEVENS has rare abilities as an editor, and no magazine is better adapted to delight and instruct the intelligent reader. New York: Carlton & Phillips. $2 per annum. DARROW, Rochester, agent.

THE NEW YORK TEACHER, an educational journal (published monthly, at Albany, at $1 per year,) is one of much value. If the Teachers of the State were aware how useful an auxiliary it is, their names would more generally be found on its subscription books. Six numbers are now issued and we believe they can still be supplied.—Address T. W. VALENTINE, resident editor.

GODEY'S LADY'S BOOK for April, has a very fine picture—a Gemograph engraving of "Wayside Gossip"—and numerous other fair embellishments. The reading matter is good and abundant, and any one who wishes a magazine of this character may be sure of getting his money's worth in GODEY. Sold at McMAHON'S and DEWEY'S; 25 cts.

ARTHUR'S HOME MAGAZINE, is a re-print in magazine form, of all the best matter in Arthur's Home Gazette. It is one of the largest and cheapest issued—each No. giving 80 pages of carefully edited matter, and furnishing the same, monthly, at $2, per year, with large reductions to clubs. Philadelphia: T. S. Arthur & Co.

THE NORTH-BRITISH REVIEW for February completes the twenty-eighth volume of this Quarterly. It is replete with value and interest, as usual. New York: L. Scott & Co. D. M. DEWEY, agent.

BLACKWOOD'S MAGIZINE for March is promptly before us. It is a good number. Published and for sale same as above.

COMMERCIAL AND MECHANICAL ARITHMETIC, is a work by which the author of Tracy's New Series of Arithmetics, has attempted to render arithmetical knowledge and training practical. We commend it to the notice of teachers. Published by Lippincott, Grambo & Co. For sale at D. Hoyt's.

GRAHAM'S MAGAZINE for April, commonces "The Pilgrims of St. Bernard," by T. BUCHANAN READ, and profusely illustrated. GRAHAM always makes a good magazine, and is especially prompt and liberal in all his dealings with the public.—Success to him. Sold at DEWEY'S. 25 cts.

THE LADIES' REPOSITORY for March, shows admirably the energy, ambition, and fitness of the new Editor, Rev. Dr. CLARK. If excellence can bring support to a magazine, this one must continue to prosper. Cincinnati: Swormstedt & Poe. New York: Carlton & Phillips. DARROW, agent.

THE NEW YORK MAGAZINE for March has a portrait of President PIERCE for its chief embellishment. Its literary contents are varied and interesting, and the "Editor's Centre-Table" is spread with rather spicy viands. Rochester: C. H. Mc Donnell. $2 per year.

"AGATHA'S HUSBAND," by the author of "Olive and the Ogilvies," forms No. 181, of Harper's Select Library of Novels. The name of the author, guarantees a well-written and entertaining book, and such we think it will be found on examination. SAGE & BRO.

THE FAMILY CIRCLE AND PARLOR ANNUAL commenced a new volume with March. It is one of the oldest and best of the dollar monthlies. Each No. contains a steel engraving and a fine colored flower. J. G. Reed, Publisher, 140 Fulton st., N. Y.

THE ILLUSTRATED MAGAZINE for March, has many beautiful embellishments, printed in superior style. It is a large quarto of 72 pages and well worth purchasing. DEWEY has it. $3 per year; 25 cts. per No.

CORNELIA, or the Deaf Mute, is the title of a biographical sketch of the life of a mute child, by H. W. LEE, D. D. Published and for sale by D. HOYT. A good Sunday School book.—w.

☞ Mr. King declined taking the oath of office when Mr. Rodney, the Vice-Consul, waited upon him for that purpose, saying that if he lived to reach Washington, and to take his seat at the head of the Senate, the ceremony might then take place. His friends have hopes that this may still be.

☞ The banks of Massachusetts now have a capital of forty three millions of dollars. They pay an annual tax of $430,000, [one per cent.] into the Treasury of the State. This tax is nearly two thirds of the ordinary revenue of that prosperous Commonwealth.

## Legislature of New York.

### Synopsis of Proceedings.

MONDAY, March 14.—*Senate.*—A number of bills were reported complete, and a debate occured on the subject of Commissioners of Emigration.

*Assembly*—After receiving various reports, the assessment law was debated at some length.

TUESDAY, March 15.—*Senate.*—One bill was passed and several reported.

*Assembly.*—The Municipal Reform in N. York city was discussed at length in the Assembly.

WEDNESDAY, March 16.—*Senate.*—The Assembly bill to impose taxes on Railroads was briskly debated in the Senate.

*Assembly*—The Pilot bill and several others of a local character were passed.

THURSDAY, March 17.—*Senate.*—Mr. Vanderbilt made an able speech in support of his proposition to amend the Constitution so as to provide for the completion of the Public Works.

*Assembly*—The Assembly received a communication from the Superintendent of Common Schools, announcing the refusal of N. Y. city to pay its share of the School-tax of 1852. Several bills were introduced and others ordered to a third reading.

FRIDAY, March 18.—*Senate.*—A large number of bills were reported complete. The law ordering the printing of the Colonial History was repealed in Committee. The Constitutional amendment was taken up, and Mr. Vanderbilt continued his argument in favor thereof

*Assembly.*—The Railroad Consolidation Bill was taken up, and Mr. Hastings made a long speech in favor of embracing only the old line of roads from Albany to Buffalo.

SATURDAY, March 19.—*Senate.*—Mr. Cooley supported the concurrent Canal Resolutions, but no action was had on them.

*Assembly*—The Railroad Consolidation bill was debated vigorously, but no final action was taken on it.

## Congressional.

### Synopsis of Proceedings.

MONDAY, March 14.—*Senate--Extra Session.*—The speeches of Messrs. Mangum and Clayton, on the Bulwer and Clayton Treaty occupied the day.

TUESDAY, March 15.—The Senate in Executive Session, ratified the Treaty of Indemnity between England and America, negotiated by Messrs. Everett and Crampton. The Treaty has particular reference to the claims arising from false seizures under the Slave Trade Treaty, and Custom-House regulations. Mr. Clayton concluded his speech and was answered by Mr. Douglas.

WEDNESDAY, March 16.—*Senate.*—Mr. Douglas concluded his speech, and several other Senators participated in the debate. In Executive Session a large number of nominations were confirmed.

THURSDAY, March 17.—*Senate.*—After further debate on the Bulwer Treaty and an Executive Session, the Senate adjourned to Monday.

### Topographical Survey of the State.

SOME time since, JOHN DELAFIELD, Esq., and others, proposed, in a memorial to the Legislature, to make a survey of the State, similar to that already made of Seneca and some other counties, and furnish maps on certain conditions. The Committee on Colleges, Schools, &c., to whom the matter was referred, have reported in its favor.—The petitions from Agricultural Societies, and the citizens at large, in favor of the project, have been reported on favorably by the Committee on Agriculture. From the latter we copy the paragraphs below:

"The importance of the proposed surveys does not, in the first instance, convey to the mind the public as well as the private advantages to flow from them, but which may be made more apparent in the fact that at this day more than *six millions* of acres remain unimproved; large areas are unexplored, and the mineral wealth of various regions is unknown. Within a few years the discovery of phosphate of lime in vast masses opened a source of wealth on the borders of Lake Champlain, and from its shores large quantities of this fertilizing material have been sent to New York, and also to England. It is reasonable to believe that the explorations made when engaged in the proposed surveys will open to view vast resources of this and other agricultural and commercial treasures, such as copper, lead and silver. These are not visions, but may be claimed as realities, devolving themselves under the fostering care of the agricultural society.

Your committee is disposed to concur in the general views of the petitioners, and do recommend that copies of the maps of counties be placed in the several schools houses, as also a map of the State; and that the patronage of the State be extended to the memorialists as prayed for."

PORK TRADE OF THE WEST.—The statistics of the Pork trade for the present and past seasons, have been made up by the Cincinnati Gazette, and stand thus:

| CROP IN HOGS, | 1851-52 | 1852-53. |
|---|---|---|
| Ohio | 547,373 | 603,152 |
| Indiana | 447,352 | 590,945 |
| Kentucky | 205,600 | 338,800 |
| Tennessee | 10,000 | 36,500 |
| Illinois | 231,519 | 324,856 |
| Iowa | 40,500 | 52,652 |
| Missouri | 69,436 | 87,200 |
| Michigan | 10,800 | 10,400 |
| | | 2,044,005 |
| | | 1,572,580 |
| Increase in number | | 481,425 |
| Crop of 1852-53, in lbs | | 404,712 900 |
| Crop of 1851-52, in lbs | | 325,016,640 |
| Excess in lbs | | 79,696,350 |

——The receipts of the Hudson River Railroad are stated to be about $4,000 per day.

## News Brevities.

——The population of Italy is three millions greater than that of the United States.

——Each member of Congress now receives $900 worth of books, or their equivalent in cash.

——We notice that many of our exchanges speak of Terra-culture as a humbug exploded.

——The total number of drinking places in New York city is 6,575, of which 851 are not licensed.

——Hon. Lorenzo Waldo, of Connecticut, has been appointed and confirmed, as Commissioner of Patents.

——By Lord Melbourne's death, Lord Palmerston has become possessed of twenty thousand pounds a year.

——It is stated that the editor of the Lockport Journal has become the possessor of $15,000 by bequest.

——A correspondent of the Buffalo Republic, says that coal has been found in Boston, Erie county.

——St. Patrick's Day was celebrated in New York by a military and civic procession, divine services, orations and festivities.

——The Life and Writings of Fisher Ames will form a work, to be published by his son, Mr. Seth Ames, of Dedham, Mass.

——Nearly every barrel of flour used in Cuba is imported from Spain; the duty on American flour being nine dollars per barrel.

——The State of Missouri has appropriated $4,000 to defray the expenses of transporting articles to the New York Crystal Palace Exhibition.

——The New York Home Journal says, there are frequently not more than six persons present at the week day services of Trinity Church!

——A house has been secured and furnished for Santa Anna in Mexico, and a commissioner has sailed from Vera Cruz to invite him to return.

——Mr. L. A. Grave, of St. Genevieve, Mo., starts for California in a few weeks with a drove of 500 head of cattle, and between 5,000 and 6,000 sheep.

——Rev. Mr. Johnson, who has served as a Missionary of the A. B. F. M. in Siam and China, for 20 years is about to return home on account of ill health.

——The Governor of Massachusetts, with the advice of the Council, has appointed Thursday, April 18th, as a day of feasting, humiliation and prayer.

——There is a baby in Maine, a girl six months and two days old, which weighs 35 1-2 lbs; measurement of the waist, 2 feet; thigh, 14 inches; arm, 8 1-4; wrist, 3 1-3.

——The Provincial Parliament of Nova Scotia, by a vote 67 to 16 refused to charter an opposition Telegraph line from Halifax to the New Brunswick Line.

——The Boston Atlas says the New York and Boston steamboat lines have agreed to raise the price to $3 to New York and back to Boston.—The freight to be 6 cents per foot.

——The Milwaukee Sentinel is informed that lead ore has recently been discovered in the town of Ottawa, Waukesha county, on the farm of Mr. D. Thomas, in great abundance.

——A revival is in progress in the Hedding Church, at Elmira, under the care of Rev. W. H. Goodwin, its pastor—recently of this city. More than fifty persons have joined the church.

——The yearly sales of oysters in New York city, it is estimated, exceed five millions of dollars. The number of persons employed in the business, directly or indirectly, is said to be about 50,000.

——The Litchfield (Conn.) Republican says that Henry Ward, a compositor in the office of that paper, wrote the beautiful hymn commencing "I would not live, alway." It has been attributed to Bishop Heber.

——Advices from Cape Town, South Africa, state that the war between the British and natives is by no means at an end, and is likely to continue for years. It is said that white men are directing the movements of the natives.

WEEKLY MAIL TO CALIFORNIA.—The amount of correspondence between the Atlantic States and California is immense. Several of the late semi-monthly steamers have each taken out over 40,000 letters besides enormous piles of newspapers, and the number of letters received every two weeks is correspondingly large. We are glad to notice that hereafter there is to be a weekly mail between New York and California: the steamers will leave New York on the 5th, 13th, 20th, and 28th of each month.

GOLD.—The golden resources of Australia are almost boundless, and from present indications bid fair to exceed those of California. A ship has just arrived at Boston from Cape Town which reports that the ship Rocksburg Castle, from Melbourne, Australia, put into Cape Town on the 6th of January. She has on freight *eight tons of gold*, valued at over five millions of dollars, being the largest lot ever shiped from Australia.

NEW COUNTERFEITS.—Counterfeit 2's on the Union Bank of Troy are said to be in circulation. This is, of course, a new counterfeit, and all would do well to be on the look out for them. The bill is described as unlike the genuine, viz: a steamship, on right, portrait of Washington. 3's on the City Bank, New York city, are also in circulation; viz: portrait of De Witt Clinton; on the right, rail cars, merchandize, &c., unlike genuine.

MAMMOTH OX.—The Elmira Republican describes "the great Dickinson Ox," weighing about 4,000 lbs., recently fattened by Hon. A. B. Dickinson of Hornby, and purchased by Geo. W. Brown, a market butcher of Elmira. The ox was brought from Ohio, about the time the canal contracts were on the tapis. Drover's name not given.

THE AILANTHUS TREE.—Congress has proscribed this tree in an especial act. To the item in the Civil and Diplomatic bill, providing for setting out the public grounds in Washington with trees, is this condition: "That no more ailanthus trees shall be purchased or planted in the public grounds."

MUTE CONVENTION.—A Convention of mutes was held at Montpelier, Vt., a few days since.—Some 70 or 80 present. The object of the Convention was to raise funds for erecting a monument to the memory of their teacher, and for *mutu*-al improvement generally.

☞ The Superintendent of the Lunatic Asylum at Utica, says that insanity is fearfully on the increase in New York. In five days of last week, seventeen new patients were admitted. The spiritual rapping humbug has been one of the most powerful causes.

# Foreign Intelligence.

## Arrival of the Canada.

THE Canada arrived at Boston on the 26th.

The news from England principally is in reference to England's position on the Montenegrin affair, and her policy regarding the refugee foreigners in her midst. The Stafford House has been placed at the disposal of Mrs. Stowe to give receptions in. Eight Members of Parliaments have been ejected from their seats for bribery. One million pounds in gold had arrived from Melbourne.

Nothing important from France, though the items furnished are interesting. It is rumored that the British Ambassador at Vienna had been robbed. Arrests and confiscations were still going on at Milan. The press is regarded with suspicion and the correspondents of foreign papers are watched carefully.

The Montenegrin war is ended. Austria has moderated her demands on Turkey, and so their difficulties are settled.

The Cape of Good Hope news is to the 24th of January, but nothing more of the Kaffir war than we had already heard. The number of killed were, of Kaffirs 500, of British 40.

The Australia receipts of gold were diminished. Provisions though yet dear were lower. Crews more easily obtained, and emigration unabated.—The King of Ava had been dethroned. Gold discoveries were reported at Malacca.

# News Paragraphs.

☞ The New Steamboat Law went into operation on the 1st inst., and the various steamboat proprietors, in their Spring arrangements, are industriously conforming themselves to it. The administrators of the law are said to be unflinchingly exact in enforcing its provisions, and boats undergo a thorough inspection. Engineers and pilots are strictly examined as to their qualifications. The boats are duly provided with fire-extinguishing apparatus, force-pumps, life-preservers, buckets, axes, &c., except as delay is occasioned by the insufficiency of the supply.

☞ It was stated in Syracuse the other day that one of the candidates for office, had employed a man for three days, up in the Cemetery, copying names off the tomb-stones on to his petition. From the fact that one of our candidates for Post Master has forwarded a petition backed up by over a thousand names, and it is impossible to find twenty living Democrats who signed it, it is strongly suspected that the "Cemetery candidate has been smoked out." So says the *Chronicle*.

☞ The household furniture of the late Hon. Daniel Webster, was disposed of at Washington on Friday by auction, and brought very high prices. There was great anxiety among those present to purchase, and everything was readily sold. Many of the relics were bought in at over double their value. Among other things an ordinary looking cane seat chair was sold for $15, an old common clock $39, and other things in proportion.

☞ The largest private library in Boston is Mr. Everett's, in whose house the Scientific Society holds its regular meeting. The door of the library is masked as in the Athenæum of London, with titles of unwritten or lost books, in a way which shows the feelings of Mr. Everett. We see here, for instance, the Art of Government, by Louis Bonaparte, in five volumes—viz: Artillery, of Infantry, Cavalry, Police, and Clergy.

☞ The apparatus which was sent out by the British government, some years ago, for distilling fresh water from Lake Erie, is still in existence at one of the Canadian Navy yards, and it is an undisputed fact, that all war vessels intended for the navigation of the Lakes in 1812, were well and thoroughly supplied with tanks and casks for containing a full supply of fresh water.

☞ Extensive preparations are making in England to give all possible *eclat* to Mrs. Stowe on her visit abroad. Stafford House has been placed at her disposal for giving receptions. Dislike of America will have quite as much to do in prompting these ostentations civilities, as dislike of Slavery,—and if Mrs. S. is wise, in our opinion, she will decline them all.

☞ Utah Territory is more deficient in fuel than anything else in the number of necessaries; but coal has been found in some localities, and the belief is that it will yet be found in abundant quantities. At the Desert they have an iron foundry and are already making hollow ware for their own use. Saleratus and brimstone are there in large quantities.

☞ A large meeting of those opposed to the transportation of mails on Sunday, was held at New Haven on the 16th inst., and a committee was appointed to devise such measures as they may deem the most efficient for resisting the recent establishment of a Sunday mail train between Boston and New York, and to report on Thursday evening, March 24th.

☞ There is a Submarine Telegraph in operation on this Western Continent, of some hundred and forty miles length. It connects Nova Scotia to Newfoundland, at Sackville. The Telegraph from France to England is not one-fifth its length, yet this has not caused half the noise with which the astounded world greeted that.

☞ The Boston Transcript found on examining several School lists, that of American children, eighty-three per cent had more than one Christian name. Only seventeen children in a hundred had a single name. Twenty-one per cent of these youths had three or more given names. The Irish population remain content with but one name.

☞ Ireland is giving tangible evidences of a gradual improvement in its agricultural condition. From 1847 to 1851, according to the most recent returns, the amount of capital invested in farm stock has been constantly increasing from £4,820,647 at the former period, to £27,770,597 at the latter.

☞ There is a bible still preserved, written on palm leaves in the University of Gottingen, containing 5,376 leaves. Another bible of the same material, is at Copenhagen. There were also, in Sir Hans Sloane's collection, more than twenty manuscripts in various languages, on the same material.

☞ Mr. Vanderbilt's Steamship, in which it is proposed to make a pleasure trip to Europe and the Mediterranean, has been named the "North Star." It is expected she will make the passage to Southampton, the first port visited, in twelve days. She is only 500 tons smaller than the Collins steamers.

☞ The death of Anthony D. Walker, Professor of Mathematics in Yale College, has been announced. He had for several years endured a pulmonary affection, and spent some time in Europe, and afterwards visited Egypt, seeking relief. He died at the age of forty-three.

# Market Intelligence.

RURAL NEW-YORKER OFFICE,
Rochester, March 23, 1853.

THE weather has been mild and spring-like the past week, and promises fair for an early resumption of business.

Auburn, N. Y., March, 1853. J. M. SHERWOOD.

MONEY TO LOAN on Bond and Mortgage, on improved farms. L. A. WARD,
[169-3m.] 36 State St., Rochester, N. Y.

## PUBLISHER'S NOTICES.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is ordered.

☞ ADVERTISEMENTS must be brief, appropriate to the objects of the paper, and accompanied with the cash.

ADDITIONS TO CLUBS—Are still in order. Having but few back numbers, agents and others can order additions to Clubs at $1 per copy from 1st of March or April to end of the year and volume New Clubs, or single subscribers, can begin 1st February, March, or at date of subscribing.

## SPECIFIC PREMIUMS!

In order to reach and reward *every one* who may lend a portion of influence in support of the RURAL NEW-YORKER, the following Premiums for subscribers obtained previous to the 1st of May next:

1st. FIVE DOLLARS, in CASH, or a copy of WEBSTER'S UNABRIDGED DICTIONARY, (or $6 in Ag'l. Books,) to *every person* sending payment for FIFTY or more yearly copies (six month subscriptions proportionably,) according to our terms, previous to the 1st of May next.

2d. FIVE DOLLARS, in Books, or four extra copies of the RURAL, to every person remitting payment for FORTY or more subscribers as above.

3d. THREE DOLLARS in Books, or a handsomely bound volume of the RURAL for 1852, to every person remitting payment for THIRTY subscribers.

4th. To every one remitting payment for TWENTY copies, we will give an extra copy of the RURAL, and four (the present and three past) volumes of THE WOOL GROWER AND STOCK REGISTER—or, if preferred, an extra copy of the RURAL and $1,50 in books.

5th. To every one remitting for TEN copies, an extra copy of the RURAL and three volumes (past or present) of the WOOL GROWER—or, instead of vols. W. G., $1 in books.

6th. To every one remitting for SIX copies, an extra copy of the RURAL and either volume of Wool Grower.

7th. To every one remitting for THREE copies (35.) either volume of the Wool Grower, *and* a bound volume of Gen. Farmer for 1848 *or* '49.

8th. To every person remitting for ONE copy, ($2,) we will give a copy of either vol. Wool Grower, *or* the Farmer for '48 or '9, as preferred.

All competitors for Premiums are expected to adhere trictly to the following

### TERMS,—IN ADVANCE:

TWO DOLLARS A YEAR. Three Copies, one year, for $5—Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Six month subscriptions in proportion. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different post offices if desired.

☞ Specimen numbers, &c., furnished free to all disposed to compete for the Premiums, or who desire to extend the circulation of the NEW-YORKER. Subscription money properly enclosed, may be mailed at our risk.

Address D. D. T. MOORE,
Rochester, N. Y.

**Ketchum's Patent Mowing Machine**

**Howard & Co., Proprietors and Manufacturers, Buffalo, N. Y.**

THIS justly celebrated Machine is rapidly advancing in public favor, for its simplicity, durability, and efficiency, and it has settled the question beyond a doubt, that grass can be cut by Horse Power equally as well, and at much less expense, than with the scythe; for during the past season five hundred of these Machines were sold by us, and were universally approved of by those who used them. It leaves the grass evenly spread, and requires no turning to cure perfectly. The Report of the Committee of the State Agricultural Society, at the late trial at Geneva, shows fully and conclusively that this was the only machine in the field which worked without clogging, or any interruption, and the only Machine which successfully cut the two acres required by the Committee, cutting the same in one hour and twenty-six minutes, doing its work admirably and in a far better manner than can be done by manual labor with the scythe. They also show in that Report that there is an actual saving of $13 per day by the use of this machine over hand labor. We have only to refer those who wish a perfect mowing machine to said Report, and judge for themselves.

This Machine received last fall the First Premium at the late trial at Springfield in Ohio; the Gold medal at the American Institute in New York: also the First Premium at the great Provincial Fair at Toronto, C. W.

They are so compact that one of them can easily be carried in an ordinary one horse wagon, and so very simple that it requires no machinist to put them together, as there are but two bolts (besides the pole bolts) to be secured, to have the Machine ready for use, which does not require over ten minutes time. They weigh about 750 lbs., and can be worked by any boy who can manage a team.

The great difficulty in Mowing Machines is their liability to clog, and thereby render them inefficient. But this difficulty has been entirely overcome in this Machine by a peculiar construction of the knives, which renders them impossible to clog. Another great advantage of this Machine over all others (which we have secured by Letters Patent) is the placing the knives on a line with the shaft, or tread of the wheel, (or nearly so,) which allows the knives to follow, with the wheel, the unevenness of the ground. Also, that the vibrations of the frame on uneven ground shall not materially elevate or depress the cutters.

All the improvements suggested by experience and use necessary for strength, durability, efficiency and ease of action, have now been made, and we offer them for sale under the following

**Warranty:** That said Machines are capable of cutting and spreading with one span of horses and driver, from ten to fifteen acres per day, of any kind of grass, heavy or light, wet or dry, and do it as well as can be done with a scythe, by the best of mowers. They are equally capable of cutting Barley, Buckwheat, Millet, &c.

It is much less trouble to keep the knives in order than a scythe, as farmers frequently cut from ten to fifteen acres without sharpening, which can be done on an ordinary grindstone in a few minutes. We can give any reference required for the full performance of our Machine as above stated.

Orders should be sent in early, as we shall manufacture but a limited number. The price of our Machine, including two sets of knives, extra knife blades and wrench, is $110 cash, in Buffalo, the Machine to be delivered on board of boat or cars free of charge. Office and shop, corner of Chicago street and Hamburgh Canal, near Eastern R. R. Depot, Buffalo, N. Y. HOWARD & Co.

[169-4t]

**Seneca Lake Highland Nurseries,**

*Catharine, near Havana Depot, Chemung Co., N. Y.*

CATALOGUE containing price and description will be furnished gratis to all mail applicants of this old and extensive establishment, which contains Standard and Dwarf Fruit Trees of all kinds. Ornamental trees and Shrubbery, Green House Plants, &c., &c.

Orders amounting to ten dollars or over, delivered free of charge at New York, Dunkirk, or any intermediate station on the N. Y. and Erie Railroad. Trees carefully packed and forwarded to any part of the United States, including California; also to the Canadas and Europe.

March, 1853. [169-3t*] E. C. FROST.

**A New, Fragrant Seedling Verbena.**

*Delicata Adorata, (Fahnestock.)*

FLOWERS a delicate peach pink, most exquisitely perfumed; truss large and erect, highly elevated on strong stems; foliage very large, deeply serrated and of a very spreading habit—the most intense sun and drought not affecting it, and can easily be detected in a bed of 100 varieties.

We forwarded last summer to Mr. Geo. C. Thorburn, of New York, a plant of the above Verbena, and after the most careful trial of its qualities, he wrote us thus:—"I have named your seedling 'Odorata,' implying its color and perfume; flowers delicate peach pink, of good form and substance, large truss, and of the most exquisite perfume; superior to any Verbena yet raised; has a larger and more serrated foliage than 'Defiance,' and of a more spreading habit. Flowers very high and erect. It stands at the head of light colored Verbenas, and exceeds all others in its delicate perfume."

Plants will be forwarded to all applications in the order received. Price 50 cents each.

THORP, SMITH, HANCHETT. & Co.

[169-2t*] Syracuse, N. Y.

**WHITE SHANGHAI FOWLS.**

EGGS for hatching carefully packed and forwarded by Express. Price $2 per dozen.

The fowls of the above named variety in my possession, were bred by Dr. E. Wight of Boston, and are some of the finest specimens of the breed.

Address, JOSEPH S. HILDRETH,
[169-3t*] 51 Court St. Boston.

**FARM FOR SALE.**

ONE AND A HALF MILES from Lockport, N. Y., containing 190 acres, on which is a spacious frame house, a bank barn 40 by 90 feet, two good houses for tenants, and other necessary buildings; a good orchard of grafted fruit, with Peach, Pear and Cherry trees, &c.; 20 acres timber, 10 of which is a beautiful grove of sugar maple; and a brook running through the farm. From one half to two-thirds of the purchase money may remain on bond and mortgage. The whole can be conveniently divided into two farms, to suit purchasers. Lockport has a population of 12,000, and is increasing rapidly, with good schools and an excellent market.

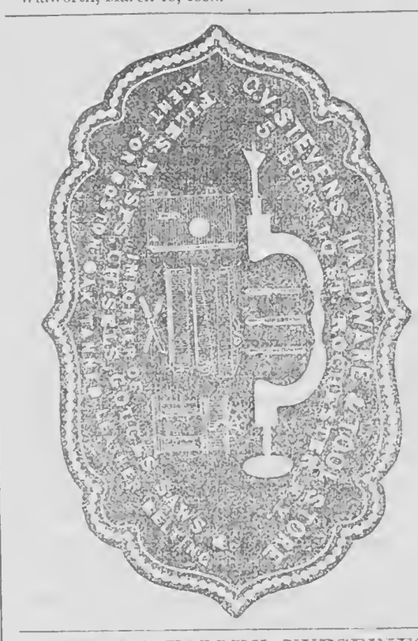
Inquire of JOSEPH TREVER on the premises, or J. W. REED, Lockport. 169-3t*

**WALWORTH NURSERY.**

THE Subscriber has for sale this spring a good stock of Fruit Trees generally, embracing Apples, Cherries, Peaches, and an extensive supply of Dwarf Pears, both of his own growing and imported from France. Also large Mountain Ash Trees. Also 30 bushels of the celebrated Poland Oats, which will be sold at $1 per bushel, and charging the expense of sacks additional.

T. G. YEOMANS.

Walworth, March 18, 1853. 169-1t*



**GENESEE VALLEY NURSERIES**

A FROST & CO., Rochester, N. Y., offer for sale the following, at low prices, which comprises a part of their large stock, that they will forward to any section of the country. Parties can depend that no second rate articles will be sent out, and that they will prove to be true to description.

MOORE'S RURAL NEW-YORKER is a capital paper. It is published at Rochester, one of the most beautiful cities in the country, is printed well, is judicious in its extracts and subjects for editorials, and opens rich, like a honey comb, —having sweets in every cell.—*New England Farmer.*

**VALUABLE FARM**

**FOR SALE AT AUCTION.**

BY order of the Surrogate of the County of Livingston, N. Y., the farm of Uri Webster, late of Lima, in the said County of Livingston, will be sold at Public Auction, to the highest bidder, at one of the clock, in the afternoon, on Saturday, the 2d day of April, 1853, the sale to take place at the North Dwelling House, situated in the said town of Lima.

The premises will be sold subject to mortgage and judgment incumbrances, amounting, at the time of sale, principal and interest, to the sum of four thousand and ninety-two dollars and twenty cents The balance of the purchase money over and above the incumbrances, is to be paid as follows, viz:—one fourth cash; and the other three-fourths in three equal annual installments, with interest annually; and secured by mortgage on the premises sold, and the bond of the purchaser.

The premises are described briefly as follows:—Beginning at the junction of the two roads near Lord Sterling's late farm, on the road leading south from Richard Peck's; and running thence north in the centre of the last named road to the south line of lands owned and occupied by the heirs of Ebenezer Rathbone, and by John Decker;—thence running east on said line to the east line of said John Decker's land; thence running north on said last line to the south line of the original portion of the Factory lot, sold for the flouring mill, known as the Eggleston Mill; thence east on said mill lot line, eighty-six rods across the Honeoye creek, one rod beyond the east bank; thence up the said creek on a line parallel with the said creek one rod east of the east bank eighty rods; thence up said creek upon the east bank to a small walnut tree near the old saw mill formerly owned by Thomas Peck, deceased; thence westerly to the corner of the Grey road so called, on a line which is a continuation of the road leading east from the point of beginning; thence up the centre of said last named road to said point of beginning, containing one hundred and sixty-six acres and forty-five rods of land out of which however are reserved one acre, situated on the Honeoye creek, heretofore deeded to Warren Pierpont, with a water privilege and easements sufficient to run a fulling mill with one stock, or one set of woollen carding machines; and reserving also one acre and one fifth, near the same, deeded to Holum Hutchinson and Ward Mann, with water power and easements sufficient for one run of stones with elevators and conveyors, after said Pierpont and the saw mill on the premises are supplied with water; and also reserving the privilege of carrying water from certain springs in pipes under ground across the premises above described.

The premises are in a compact form, and also capable of division into two farms. They will be sold together, or separately, as will appear to the undersigned most advantageous to the creditors and heirs.

There are on the premises two good houses, barns and outbuildings; a superb orchard of grafted fruit; an excellent saw mill privilege and saw mill, the dam of which however has lately been carried away by a freshet; and fifteen or twenty acres of timber and wood land. Besides the Honeoye creek which runs upon the premises, there are at least *three* never failing springs of pure water.

☞ Immediate possession will be given of the premises. The growing crops will be reserved out of the sale, and the privilege of entering to harvest, thresh and carry the same away. EDWARD WEBSTER,

MERCY WEBSTER,

Lima, N. Y., Jan. 31, 1853. Administrators.

N. B. The undersigned, in his individual capacity, for the benefit of the creditors and heirs, and for the convenience of purchasers, has made arrangements with Alexander Duncan, Esq., of Providence, R. I., the Executor of the Will of the late Cyrus Butler, whereby $1,600 which is secured to him by bond and mortgage on the premises, may remain three years, on the payment of interest semi annually, the purchaser giving his bonds as collateral security; with the further assurance from Mr. Duncan, that in all probability the same can be renewed after the close of the three years on the same terms if the purchaser should desire. Chas. Seymour, of Canandaigua, for a small percentage, will receive and receipt the interest, and transmit it to Mr. Duncan

On the payment in cash of a sum, which, together with the quarter of the surplus required by the surrogate, will make up a cash payment of two thousand dollars, the balance of the incumbrances, exclusive of the $1,600 above mentioned, will if the purchaser desire it, be so divided as to make with the other three-quarters surplus required by the Surrogate in three years, four annual installments, on which equal sums, interest will be required annually.

165w3. EDWARD WEBSTER.

**GENESEE VALLEY FARMS FOR SALE.**

I OFFER for sale my well known farm lying two miles south-west of the village of Mt. Morris, containing 221 43-100 acres—a choice wheat farm—under a high state of cultivation, extra fenced, good buildings, consisting of one dwelling and two sett of outbuildings throughout, 27 acres fine timber, admirably watered, good fruit, and one of the cleanest farms from all kinds of noxious weeds in Western New York—price $75 an acre

Terms, just as the purchaser wants, as to time, a part of the pay may be good bonds and mortgages and a part can remain on the premises any length of time. 40 acres of wheat on the ground.

Also, one other farm containing 100 acres, good buildings, good fruit, and a capital farm. Price $60 an acre.—30 acres of wheat.

Also, one containing 134 acres, choice buildings, well fenced—50 acres of wheat on the ground. Price $65 per acre.

Also, one containing 160 acres, fair buildings, good fruit, and well watered—price $55 an acre. 25 acres of wheat.

Also, one of 142 60-100 acres, buildings not so good, good wheat land, and 35 acres wheat on the ground.—Price $40 an acre.

One other farm containing 78 4-100 acres, good buildings, good wood lot of 18 acres—price $60 an acre. Title to all these lands is beyond question.

☞ Enquire of JNO. THOMPSON, Jr., Esq., Arcade Buildings, Rochester; DANIEL C. HOWELL, Esq., Cashier of Steuben Co. Bank, or of the subscriber, at Mt. Morris, Livingston Co., N. Y., where the lands are all situated. J. R. BOND.

# Poetical.

### THE OLD LOG HUT.

BY R. SINCLAIR.

Down by the river our log hut stands,
Where father and mother once dwelt,
And the old door latch that was worn by our hands,
And the church wherein we knelt.
Years, years have passed since that happy time,
But the river keeps rolling along,
And the rippling sound on the mossy bank
Is singing the same old song.
Row, row, row your boat,
Gently down the stream;
And all that's past, is gone you know,
The future's but a dream.

There stands the tree we used to climb,
And the mill with its rolling din,
And the old wharf-boat, there it used to float
Where the school-boys used to swim.
High grass grows on the master's grave,
And the river keeps rolling along,
And the birds and the bees, the blossoms, the trees,
Are singing the same old song.
Row, row, row the boat,
Gently down the stream;
All that is past is gone, you know,
The future's but a dream.

# Rural Sketch Book.

## NATHAN, THE WISE MAN.

TRANSLATED FROM THE GERMAN FOR THE RURAL NEW-YORKER, BY S. TUSKA.

[We have been furnished with a translation of a portion of this celebrated drama of LESSING. The whole is too long for our use, but we copy below a portion of the 3d Act, containing a fine oriental parable. To introduce it, we will give a brief statement of the preceding part of the drama. Sultan Saladin, hearing much of the wisdom of Nathan, a rich Jew of Jerusalom, calls him before him with the pretence of putting it to the test, but with the real purpose of extorting money, should he fail to satisfy all his questions. He asks him which religion or law appears the most just, that of the Jew, the Mussulman, or the Christian? declaring himself at a loss to choose between them, and anxious for information from a man so wise and just as Nathan. The Jew, seeing his whole purpose, replies by relating the story below:]

*Nathan.*—In former ages there lived a man in the East who possessed an inestimable ring, obtained from a beloved hand. The stone in it was an opal, which presented a hundred beautiful colors, and had the secret and miraculous power of making him who wore it, in good faith, pleasing to God and man. It is not surprising, therefore, that the man of the East never suffered it to come off from his finger, and determined to retain it in his house forever. This he accomplished as follows:—He gave the ring to the dearest of his sons, and commanded that he again should bequeath it to that one of his sons who was most dear to him, and that the most beloved, without regard to birth, should be the head and prince of the house.

Thus this ring descended from son to son; finally to a father of three sons, who were all equally obedient to him, and whom he consequently could not forbear to love equally. Only from time to time, sometimes the one and sometimes the other, (just as each happened to be alone with him, and the other two did not share his outpouring heart,) seemed to be worthy of the ring, and he had the gentle weakness to promise it to each. Thus the affair went on smoothly as long as it could. But when the hour of death came, the good father was very much at a loss. He is sorry thus to mortify two of his sons, who were relying upon his word. What must be done? He secretly sends for an artist, and orders him to make two rings like the one he possesses, and spare no expense or work to make them perfectly resemble the genuine. The artist succeeds in this, and having finished them, he brings them to the father, who cannot himself distinguish the genuine from the counterfeit. Glad and full of joy, he calls his sons, each separately, and having given each his blessing,—and his ring,—the father dies. Do you hear, Sultan?

*Saladin.*—(Who had turned aside perplexed,)—I hear. Only finish your tale quickly. Will it soon be at an end?

*N.*—It is already, for what follows is understood of itself. As soon as the father is dead each one of the sons comes with his ring, and wishes to be the head of the house. In vain do they examine, complain and quarrel. It was impossible to prove the genuine ring;—(after a pause, in which he expects the Sultan's answer,)—quite as impossible as now the true religion.

*Sal.*—What! is this to be the answer to my question?

*N.*—This will only excuse me if I do not venture to distinguish the rings which the father requested to be made, with the intention that they should not be distinguishable.

*Sal.*—The rings! Do not make sport with me. I thought that the religions which I mentioned to you, were distinguishable as far as dress, as far as food and drink are concerned.

*N.*—But not on the part of their foundations. For are they not all founded upon history, either written or handed down by tradition? And history must surely be accepted, only on its fidelity and credit. Now whose fidelity and credit do we hold the least doubtful? Surely our own, surely that of those whose descendants we are, and which from our childhood has left upon us marks of her kindness, and never disappointed us, except when disappointment was more salutary. How can I believe my parents less than you yours, or the other way? Can I require of you to distrust your ancestors, so as not to contradict mine, or the other way? The same remarks may be made of the Christian.

*Sal.*—(To himself.)—By the living, this man is right; I must remain silent.

*N.*—Let us return to our rings. As may be inferred, the three sons accused each other, and each swore to the judge that he had received the ring directly from the father's hand,—as was true,—after having for a long time been promised to enjoy the preogative.—which was not less true. The father, each assured, could not have been deceitful toward him, and rather than permit such a thing to be suspected of his beloved father, he would convict his brothers for the unjust play, though at any other event he is ready to believe them; likewise each affirmed he would know how to discover the deceivers, and to take revenge.

*Sal.*—And now I would like to hear what you would have the judge say. Speak!

*N.*—The judge said: If you do not bring your father to this place immediately, I shall order you away from my sight. Do you think that I am here to solve riddles? Or do you wait till the genuine ring opens its mouth? But, hold! have I not heard that the genuine ring possessess the miraculous power of making a man beloved and pleasing to God and man? This must decide, for the false rings will not be able to have this charm! Now, then, whom do two of you love the most? Be quick and tell me! You are silent? The rings act only backward, and not outward? Every one of you loves himself the most? Oh! then, you are all deceived deceivers. Not one of your rings is genuine. The genuine ring was probably lost. To conceal the loss and compensate for it, the father ordered three rings to be made for one.

*Sal.*—Wonderful! Wonderful!

*N.*—Wherefore, continued the judge, if you do not wish my advice but my judgment, *depart.* But my advice is this:—Take the matter entirely as it stands. If every one of you has his ring from his father, then let him consider his own ring the genuine.—Perhaps the father would no longer endure the tyranny of the single ring,—which is undoubtedly true,—since having loved all of you equally, he would not oppress the others by favoring the one. Let every one be zealous in propagating his love uncorrupted by prejudice. Let every one strive with emulation to disclose the power of the stone in his ring, and assist this power with gentleness, with benefaction, with a cordial reconciliation and with a sincere submission to God! And if the powers of the stones will appear to your posterity, then I shall summon you before this judgment seat after a *thousand thousand years* have passed away. At that time a wiser man than I will sit upon this chair, and will say, *Depart.* Thus spoke the discreet judge.

*Sal.*—Oh, Lord! Oh, Lord!

*N.*—Saladin, if you are sensible of being this wiser and foretold man——

*Sal.*—(Throwing himself upon him and taking hold of his hand, which he does not let go till the close.)—Dust that I am! comparitively nothing! O Lord!

*N.*—What is the matter, Sultan?

*Sal.*—Nathan, dear Nathan! The *thousand thousand years* of your judge has not yet passed. His judgment seat is not mine. Go! Go! But continue to be my friend.

---

THE MOOSE.—Prof. Baird, of the Smithsonian Institute, recommends the domestication of this animal, as they combine the qualities of the horse and ox. He says, "harnessed to a sled, a pair of them in Canada are reported to have travelled two hundred miles in one day," which may be regarded as a long story. A Swedish writer recommends their employment in time of war, for the cavalry and light artillery, from which he predicts great advantages would be derived in battle. At one time, their domestication was forbidden in Sweden, on account of their having been employed, from their extraordinary speed, to effect the escape of criminals. Recently, a law was passed to prevent their destruction for ten years.

---

THE worst of men would find themselves under some restraint, could they but obtain of themselves to sit down sometimes, and solemnly think of God.

### TO THE OLD FOLKS AT HOME.

THE St. Louis Intelligencer speaks thus of the warm-heartedness of the Irish immigrants at the West, and their remittances to the family at home:

"A statement went the rounds, not long ago, that the hired girls of Pittsburg had sent home $35,000 to their relations in 'the old countries' within the six months previous. Of its correctness we know nothing. But we have recently taken some pains to procure from authentic sources a reliable statement of the amount sent from St. Louis within twelve months past, in remittances by immigrants from Ireland. An aggregate of $110,000 has been purchased here, and thus remitted during the present year.

There is something worthy of a passing thought in such 'exchange operations' as these. Something beyond and quite different from the interest attaching to a day's heavy business at a prosperous banker's counter. His bills may count up by hundreds and thousands daily; his semi-monthly shipments of treasure at San Francisco, or New York, might purchase a Duke's estate. They mark the fluctuations of the great commercial pulse of the country; beating fast and high as the market rises, and speculation is rife, and this or that skillful operator makes—or loses—a fortune.—But these humble remittances! They are the tokens of slow and honest toil—coined of the sweat of the laborer's brow, and stamped with the careful economy of many weary days. 'Drafts on England from £1 upwards'—so the agent's notice reads. Only five dollars,—to be sent three thousand miles! The first fruits, perhaps, of the harvest reaped in the land of promise. The cluster of grapes, like those plucked of old at Eshcol, going back to assure the anxious, fainting hearts, still sojourning in the wilderness, that the spies sent out to see the new land, have found—not fruit for the more plucking, but what is better—work to do, and good wages for it, and something to lay by. Those slender drafts—how much of humble but genuine romance may not hang around some of them!

It is such homely messengers as these which contribute most to swell the tide of immigration yearly setting to our shores.—Books of travel, even newspapers, diffuse their information chiefly in higher circles; but these emigrants' letters inspire, as their small remittances encourage and enable, the thousands to come, who fill the steerages of packet-ships, and crowd the decks of our steamers. Thus is being infused an element of our composite national character, of which we already feel most seriously the influence. Incessant and extensive as is the communication of America with the Old World, there is perhaps, no part of it whose effects are so wide and so important as what may be called the immigration branch of our Foreign Correspondence."

### WOMAN.

THE following extract from a speech delivered in the California Senate, by Mr. SOULE, is touchingly beautiful. The subject was a bill authorizing women to act as sole traders. There are married men "out" of California, as well as in it, who may look in the glass and behold themselves:

When I reflect upon the conduct of many married men in California—their faithlessness to every vow which they made at the altar—how completly they fail in the performance of their duties—how virtuous and industrious, faithful and patient women are imposed upon by worthless brutes of husbands, as great tyrants at home as drunkards and debauchers abroad—my respect for the sex prompts me to do all within my power to protect her rights and secure her happiness.

I love woman,—I have loved her all my life, and dying hope to be faithful to the same high and inspiring sentiments. For amid all the varied scenes, temptations, struggles and hopes of existence, one star, brighter than all others, has lighted and guided me onward; if I ever had any high and noble ambition, the exciting energy has been in the approving smile coming from the eye of woman. And I judge her influence is thus upon others. Gentle in her affections, yet mighty in her influence, her medium rule is as powerful as the ballot box, and she only needs the protection of law against those who have no law in their habits and propensities. She has lulled me from my boyhood with the soft and winning influence of her virtues and beauty.

I remember my first love; my baby affections at four years of age. I have been in love nearly every month since—save the dark and rayless days and years which succeeded the desolate hearth and made the heart too desolate. And never, sir, while I remember my mother, long since in the grave—I remember the night when she died—never while I recollect my sisters and the abuses which might have been theirs—never while I hold in memory one other—and her memory is all that is left to me—shall I refuse to give my voice and my influence, and my vote, for any measure necessary to protect and cherish the weaker and better portion of creation against the oppression, neglect or abuses of my own sex. I hope the bill may pass.

---

HE who has a love for Nature can never be alone. In the shell he picks up on the shore—in the leaf fading at his feet—in the grain of sand and the morning dew—he sees enough to employ his mind for hours.—Such a mind is never idle. He studies the work of his Maker, which he sees all around him, and finds a pleasure of which the devotee of sin and pleasure can form no conception.

---

THE soul of liberty is the love of law, says the German philosopher Klopstock. A truly noble sentiment.

# Wit and Humor.

### LITERAL COMPLIANCE.

SOME years ago, the Yankee schooner *Sally Ann*, under command of one Captain Spooner, was beating up the Connecticut River. Mr. Comstock, the mate, was at his station forward. According to *his* notion of things, the schooner was getting a little too near to certain "flats," which lay along the larboard shore. So aft he goes to the Captain, and, with his hat cocked on one side, says:

"Cap'n Spooner you're gettin' leetle too close to them flats—hadn't you better go abeout?"

To which Captain Spooner replied:

"Mr. Comstock, jest you go for'ard and 'tend to your part of the skuner, and I'll 'tend to mine!"

Mr. Comstock went "for'ard" in high dudgeon, and hallooed out:

"Boys, see that 'are mud-hook all clear for lettin' go!"

"Ay, ay, sir—all cloar!"

"Let go then!" said he.

Down went the anchor, out rattled the chain, and like a flash the *Sally Ann* came luffing into the wind, and then brought up all standing.

Mr. Comstock walked aft, and, touching his hat very cavalierly, said:

"Well, Cap'n, *my* part of the skuner is to anchor!".—*Harper's Magazine.*

---

FOCUS.—A little girl, says the Knickerbocker, had seen her brother playing with his burning glass, and heard him talk about the "focus." Not knowing what the word "focus" meant, she consulted the dictionary, and found that it was "the place where the rays meet." At dinner, when the family were assembled, she announced, "as grand as could be," that she knew the meaning of one hard word. Her father asked her what it was; she said it was the word "focus."

"Well," said he, "Mary what does it mean?"

"Why," she replied, "it means a place where they raise calves."

This, of course, raised a great laugh; but she stuck to her point, and produced her dictionary to prove that she was right.

"There," said she, triumphantly—"Focus, a place where the rays meet. Calves are meat, and if they raise meat, they raise calves, and so I am right, ain't I, father?"

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

For Moore's Rural New-Yorker.

### RURAL ENIGMA.

I am composed of 24 letters.
My 4, 23, 5, 17, 24 loves the "RURAL."
My 1, 5, 16, 19, 8 is an enemy to the farmer.
My 11, 5, 14, 3, 6 is needed on every farm.
My 22, 5, 14, 8 my 2, 9, 23, 13, 15, 8 love.
My 17, 3, 20, 21, 9, 6, 24, 19, 16 brings pleasure to many rural homes.
My 20, 5, 21, 17, 15 is an excellent county for fruit.
My 6, 3, 13, 14 farmers must have.
My 17, 15, 11, 13 farmers ought to have.
My 3, 10, 4, 9, 16, 14 farmers can make.
My 11, 22, 6, 24 boys should try to love.
My 22, 5, 24 is a valuable timber.
My 20, 2, 12, 5, 14 is a staple product on many farms.
My 16, 9, 13, 3 is an ornament to any home.
My 18, 9, 5, 2 was an ancient planter.
My 7, 22, 18, 15, 21 the publisher of the "RURAL" makes.
My 14, 6, 21 will generally find out my whole.

My whole is a source of prosperity and wealth.

South Butler, N. Y., 1853. FRANK.

For the Rural New-Yorker.

### MISCELLANEOUS ENIGMA.

I am composed of 22 letters.
My 19, 8, 2, 3 is the king of the forest.
My 6, 4, 12, 16 indicates a trial.
My 12, 14, 19 is a kind of fish.
My 13, 18, 2, 6, 11 is a tent.
My 1, 18, 4 is a farmers' tool.
My 5, 6, 12, 14, 19 is a species.
My 9, 4, 4 is a seat of a Bishop.
My 17, 14, 3, 3, 7 is a small coin.
My 21, 18, 10, 6 is a small bed.
My 15, 11, 22 is keeping at a distance.
My 5, 20, 19, 10 is a salt marsh.

My whole is what we all should not forget.

Parma, N. Y. A. G. W.

☞ Answer next week.

### ANSWER TO ENIGMA, &c., IN NO. 12.

Answer to Puzzle—WWBWWWBBBBBWWBBWWWWBWBBBWBBWWB.

The rule for placing the kernels is this:

Two before one and three before five,
Two and then two, and four saved alive,
One and then one, and three to overcast,
One and twice two, and Jack comes last.

The way this puzzle occurred is this:—A ship at sea with fifteen hands, rescued a ship's company of the same number of men. After a while it was ascertained the provisions would last but half of the men to port, so the Captain arranged them after the plan above, thus saving his own crew, who are represented by the white kernels.

### READ THE SUBJOINED

**Credentials of the Rural, from Reliable Sources.**

IN order that those unacquainted with the RURAL NEW-YORKER may know the estimation in which it is held by the public, we annex a few voluntary notices of the Press:

MOORE'S RURAL NEW-YORKER—Is already making its arrangements for the new year. Reader, if after taking a home paper, you are in want of an eastern journal, one which will be invaluable to yourself and family, send for the one the name of which heads this paragraph. We venture to say it is not excelled as a family paper by any other, we care not the name or pretensions. Its various departments are calculated especially for each member of your family. Father, mother, son, daughter, may all find articles appropriate to their several pursuits and stations. If you wish to make the members of your household a present which will increase in worth as the year grows old, subscribe for the New-Yorker.—*Coldwater Sentinel.*

It is a family paper of intrinsic merit—just such a one as families ought to patronize, when they seek for papers away from home. It is worth ten times more than any of the flash papers in our cities, which circulate so largely through the country. The Agricultural, Literary, Moral and Religious character of the Rural, are well calculated to make it the most useful "Family Paper" we have seen. We thus speak, because we believe it worthy of our commendation, apart from all puffing considerations.—[Montgomery (Pa.) Ledger.

For judicious selection, mechanical execution, and ability in the preparation of original articles, we do not hesitate to pronounce the Rural New-Yorker "the best Rural, Family and General Newspaper," that we have my acquaintance with; and we are glad to learn that its merits are so well appreciated by the public as to warrant further improvements, and to stimulate yet higher exertions by its publisher in the forthcoming volume.—[Ontario Repos.

A few such papers as the Rural New-Yorker will convince the people that all excellence is *not* confined to the "Model Couriers," and the "Star Spangled Banners," and the "Waverly Magazines" of the day. The Rural is an admirable paper for the fireside and contains a vast amount of valuable information for the farmer and mechanic.—[Pittsburgh (Pa.) Saturday Visitor.

MOORE'S RURAL NEW-YORKER.—The number before us closes the third volume of one of the best Agricultural and Family Newspapers in the world. It is conducted by four able editors, at the head of whom stands D. D. T. MOORE, Esq., the enterprising publisher.—[Louisville (Ky) Journal.

The Rural New-Yorker is one of the most ably edited, interesting and successful papers of its class in this country, and during a period of the three years which it has been published, has acquired a very large circulation.—[Boston (Mass.) Journal.

The proprietor spares no pains to make the Rural New-Yorker one of the best Agricultural and Family Newspapers published in America, and we certainly think it is second to none that we have ever seen.—[Bowmanville (C. W.) Messenger.

The Rural New-Yorker has completed its third volume. It is a paper that we delight to praise—and should be in the hands of every citizen farmer. No better thing, in tone and various interest, meets our eye. To farmers it is almost indispensible.—[Youngsville (Pa.) Express.

We have been almost a constant reader of the "Rural," since its first number, issued three years ago, and can most cordially recommend it to all our readers as one of the very best Family Journals published in the country.—[Saturday Budget.

MOORE'S RURAL NEW-YORKER is the best Family Newspaper we know of, for the country, as it is devoted to Agriculture and Education, together with Literary and Miscellaneous reading. It is ably conducted and neatly printed, and will give satisfaction, we are confident.—[Elkhart (Ind.) Journal.

Its leading feature, perhaps is agricultural; but in the departments of the arts, the sciences, education, history, literature and the daily news, it is most ably and admirably sustained—is an honor to the newspaper family, as well as to its editor and proprietor.—*Mich. Chris. Herald.*

Independent of its being the very best agricultural paper that has ever come under our notice, its literary merits are unsurpassed. It is certainly the best and most useful paper of the kind we have ever seen.—*Pa. Whig.*

MOORE'S RURAL NEW-YORKER is one of our exchanges, which we always open with pleasure. It is free from politics and party, and always comes to hand filled with a choice variety of well written, and well selected matter.—*New York Observer.*

THE WOOL GROWER AND STOCK REGISTER, at Rochester, is one of the neatest printed, as it is one of the most valuable, of publications. We dip into its pages with interest. The NEW-YORKER, is also one of the best Agricultural publications in the world, and deserving the wide and increasing patronage it receives.—*Cayuga Chief.*

The RURAL NEW-YORKER, published at Rochester, N. Y., we consider the very best agricultural newspaper in America.—[Ladies' Repository, (Cincinnati.)

Important to Farmers
**PORTABLE MILL.**

[From the Ohio Farmer, December 2, 1852.]

ROSS' IMPROVED PATENT CONICAL BURR MILL STONES.—Our readers will many of them remember that Ross' Portable Burr Stone Mill took the First Premium at the Annual State Fair, held in this city a few weeks since.—This admirable invention must commend itself to every one who has witnessed its operation. In the first place it is easily portable, simple in structure, does not easily get out of order, and does its work with great rapidity and perfection. It may be used for grinding the coarsest food for cattle, or the finest meal for family use. It is also well adapted for grinding wheat, rye or buckwheat. It is indeed a perfect grist mill in miniature, and we would advise every farmer, if possible, to procure one. The expense of one of these mills, with the apparatus for horse power, can not be very great; or a number of farmers might club together and procure one, which would be sufficient for all.

Mr. Ross is, we believe, a resident of Rochester, N. Y.

N. B.—Any further information relative to the Conical Mill can be obtained by letter, post-paid, or by calling at the factory of CHARLES ROSS,
2d story Phenix Building, Aqueduct-st.,
151-tf opposite the Arcade, Rochester, N. Y.

**CARY'S ROTARY FIRE ENGINE PUMP.**

THE Inventor after thoroughly testing his engine pump (for the past two years,) feels confident that it is not equalled by any thing now in market, in the way of raising or forcing water—the motion being rotary, the stream is constant without the aid of an AIR vessel. The packing is self-adjusting, very durable, and cannot well get out of order.

These pumps are well calculated for all the purposes for which pumps or hydrants may be used, viz., Factories, Steamboats, Tanneries, Breweries, Distilleries, Railroad Water Stations, Hotels, Mines, Garden Engines, &c. The highest testimonials will be given.

No. 1 is a house or well pump and domestic Fire Engine, and will raise from 20 to 30 gallons per minute.
No. 2 will raise 100 gallons at 120 revolutions.
No. 2½ do 200 do 120 do.
No. 3 do 300 do 120 do.

The quantity raised can be doubled, by doubling the revolutions. These machines are manufactured and sold by the subscribers at Brockport, N. Y.

76-tf. CARY & BRAINARD.

**MOORE'S RURAL NEW-YORKER:**
A WEEKLY HOME JOURNAL,
**For both Country and Town Residents.**

TERMS, IN ADVANCE:

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

**Terms of Advertising:**

ONE DOLLAR per square (ten lines—100 words, or less,) for the first insertion, and 50 cents for each subsequent publition,—*in advance.* ☞ The circulation of the RURAL NEW-YORKER is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 14. ROCHESTER, N. Y.—SATURDAY, APRIL 2, 1853. WHOLE NO. 170.

**MOORE'S RURAL NEW-YORKER:**

A QUARTO WEEKLY

**Agricultural, Literary and Family Newspaper**

CONDUCTED BY D. D. T. MOORE,

WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page. ☜

## Rural New-Yorker.

### Progress and Improvement.

### STUDIES FOR THE FARMER.

WINTER has been called the most favorable season for thought and study, and this fitness has been ascribed to it, not only because of the greater comparative leisure then enjoyed, but for the absence of exterior disturbing influences. The stillness of this night of the year, when Nature is most quiet and unattractive in her operations, renders it appropriately the working day or summer-time of the philosophic student; but to the intelligently practical farmer, his text-books open upon their rarest and profoundest lessons with the advent of Spring. In winter he may pursue the study of abstract questions and sciences—important and useful in themselves, no doubt—but in Spring he becomes interested in the practical application of the knowledge already made his own, and of all which he can obtain having a bearing upon the subject before him. Thought is or should be, then, united with action, and a new importance attaches to the investigations which are at this season most appropriately and readily commenced.

The conditions necessary to fertility in a soil, and the adaptation of different soils and modes of treatment to the production of different crops, are among the most important questions which can occupy the attention of the farmer. They are questions which now, in some form or degree, have a share in the thoughts of every cultivator of the soil—every one who has upon his hands the management of a farm, or garden. He considers the question of preparation in its relations to productiveness, mechanically that is, in regard to plowing, subsoiling, rolling, &c.; and chemically, as it concerns the necessary manures, and the influence which mechanical preparation has on its present and needed chemical constituents. These conditions are studied in connection with those of the crop desired—of atmospheric influences—of moisture, heat, exposure, &c, —and also of adaptability to the requirements of the farm or market.

In some form or degree, say we, these questions are now considered. But it is not often done in that systematic form so necessary to thoroughness—to the degree or depth of attention which these subjects demand. They are complex in character, and, extending through every department of scientific research, furnish an ample field for the exercise of every mental as well as physical faculty. No pursuit, no employment, so calls forth the exercise of all the powers of humanity as that of Agriculture. We mean by this, that none will so well preserve the equal development of the whole man, as will this when entered into and carried out in its truest and most exalted spirit and signification.

Studies for the farmer! There is no lack of subjects—important, profitable, and interesting subjects—to occupy every faculty of the mind. The perceptive, the reasoning, the imaginative, and the executive powers, may have free play in observing and analyzing the varied relations and bearings of the wide range of facts ever challenging the attention, and in devising and carrying out plans for present and future operations. Nor need the mind be confined to the narrow range of one's own farm or neighborhood. While there are in Agriculture, so many problems unsolved in which nations and the whole world are interested, is there not ample room for the exercise of the noblest ambition, as well as the deepest wisdom and the purest philanthrophy? Assuredly there is.

One word in conclusion. Let every farmer resolve that he will, this Spring, go to work more understandingly and thoroughly than ever before,—engaging, with a deeper sense of the nobleness of his calling, in the great work of improvement, and what an aggregate of power will thus be exerted? How memorable to all future generations will be Eighteen Hundred and Fifty Three!

### APRIL.—FARM AFFAIRS.

—"THE poetic birds rejoice,
And for their nests and plenteous food,
Pay with their gentle voice."—COWLEY.

"THOU gentle herald of the flow'ry Spring:
Mother of violet and pale primrose,
(Whose beauty now on every wild bank grows,)
Hark! how the joyous birds thy welcome sing!
Some far up in the dewy sky, on wing
Well pois'd—some chattering on the hawthorn hedge—
Some deep embower'd in lonely glen or brake,
And others booming from the watery ledge,—
All join'd, a various concert for thy sake
Most musically and most fondly make!
Sweet April! whose dewy face so oft appears
The semblance of the brightest thing on earth,
(Which is a lovely, laughing girl in tears,)
Thy coming wakes the groves to bloom and mirth!"

APRIL was named by the Romans from the Latin verb, *aprire*, which signifies to open, in allusion to the opening vegetation of Spring; for the earth begins, now, to produce plants and flowers. The Saxons called it *Oster*, or Easter month, in honor of their goddess Easter. This is the most remarkable month of the year for the arrival of migratory birds. The notes of the robin, the bluebird, the blackbird, and the meadow-sparrow have already been heard. So has the buzzing of the insects — indicating that they have wintered well, and will soon be ready for their work.

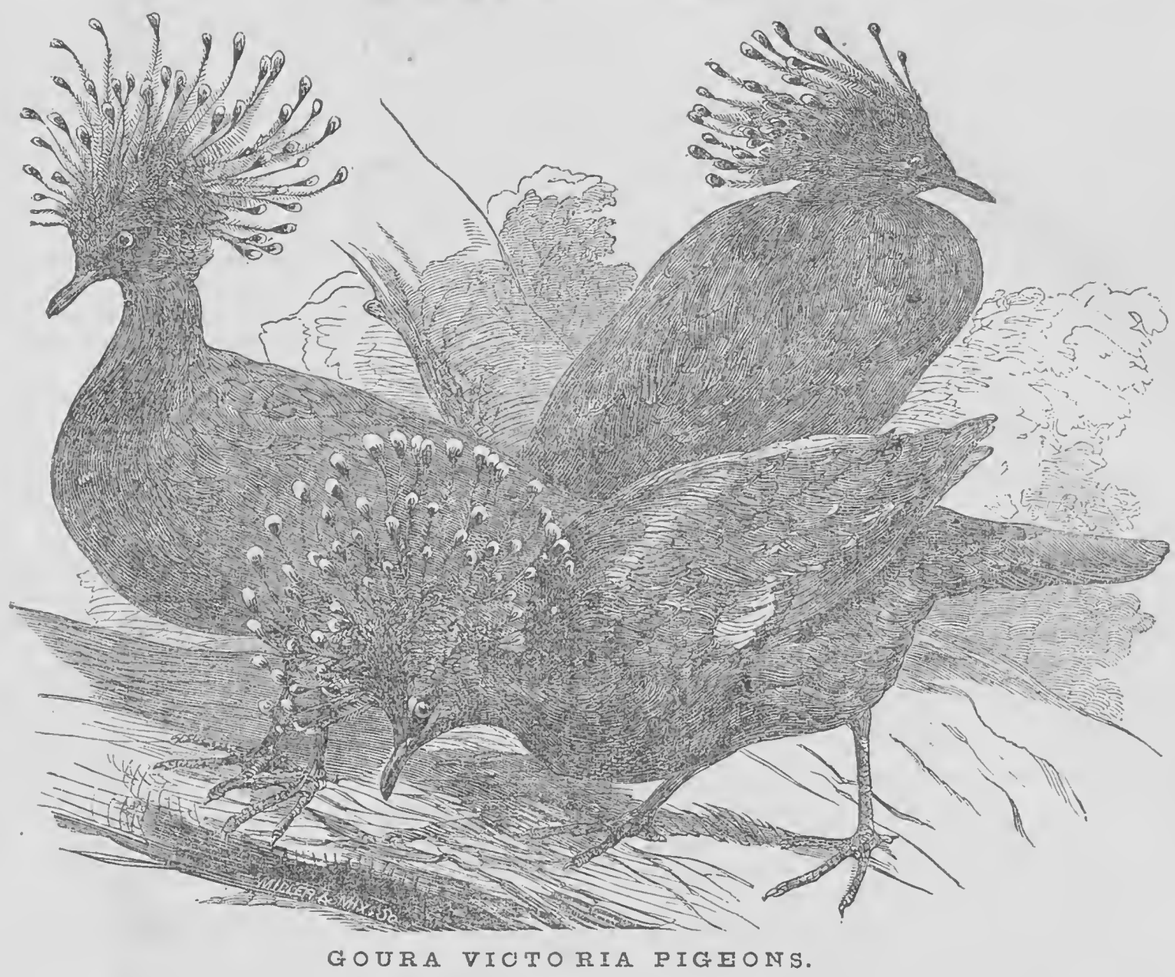
The prominent characteristics of April are frequent showers and sunshine; hence the household couplet,

"April showers,
Bring May flowers."

And yet who does not love April with all her fickleness, which is scarcely less than that of her elder sister. Every shower seems, as it were, to sow the earth broadcast with flowers. These, with the sweet and merry songs of the bird, seem to invite forth the farmer from his winter abode of comfort and ease, to begin anew the toil of the season. The temperature is variable; the thermometer stands above 40 as an average. This region is not subject to the cold east and north-east winds which prevail at this season in the Eastern States.

One of the chief and most important cares of the farmer now, is to properly tend his animals. That portion of the year "between hay and grass," puts even good husbandry to the test; and any other is hard to be endured—so seem to say the herds. Turning out cattle and sheep to feed during this month upon wheat-fields, and meadows, may be generally regarded as bad economy. Consequently good husbandmen avoid it, but from the direst need. The treatment of cows and ewes must be very similar to what it was last month. If these, and all other animals for which you provide, be well fed and littered this month, they will do well most likely through the summer.

No provident farmer will neglect to provide an abundance of good and nutritious food for his working horses or oxen. They should not only be fed with good hay, but with some grain or roots, or both, if you have them to spare. Your poultry needs to be well fed if you would have a good supply of eggs. Neglect not the swine — see that they are not only fed, but see also that they have a good, dry, warm place to rest and sleep. For animals of all kinds can be kept in a better condition with a far less expenditure of food, when they are protected from cold and storms, and thus have a comfortable place for repose, than when these things are neglected.



GOURA VICTORIA PIGEONS.

THERE are many species of pigeons, both wild and domestic, and among the most beautiful are those figured above. These handsome birds, (*Goura Scheepmakeri*—M. Temminck,) are found in the large islands of the Indian Archipelago and New Guinea. They live in the dense forests, and feed upon berries, seeds, grains, &c., which they seek for on the ground. The nest is formed upon a tree; and, like most of the species of pigeons, they lay but two eggs. The specimens here represented, were shown at an English Poultry Show. We believe, that a few of these pigeons are now bred in New England.

Among the different varieties of ornamental poultry, the pigeon or dove has long been a favorite on account of its sober and unpretending beauty. But such specimens as these need never lower their splendid crests to their most gorgeous competitors. We give this picture, not for the purpose of producing any "pigeon fever," but to show what may be had in the line of "fancy" Columbæ.

April is the month for plowing and seeding. Spring rye and spring wheat and barley should be sown, especially the two former, just so soon as the earth can be fitted to receive the seed. Fences that were not repaired, built or rebuilt last month, should be immediately attended to—let no time be lost, for unless the fences are put in good order in spring, you will be troubled all summer, either with cattle getting out or getting in, where they should not be. Remember that poor fences make unruly cattle.

If you would, fellow farmers, drive your work, and not be driven by it, through the season, begin betimes—get a good start, and with diligence you can keep it. Good and timely tillage has much to do in producing a plentiful harvest. It is no less your duty to provide food or nutrition for your vegetables now, than it was and is your duty to provide for the like wants in your animals, during the winter. There is now no more time for folding the hands, for they are needed to guide farming implements.—W.

### SPRING PLOWING.

THE attention of the farmer is now turned to the preparation of the soil for sowing and planting spring crops. Very many are in the habit of fall plowing all land desired for spring cultivation, and for sward or stubble land this cannot be too highly recommended. It will not be necessary now to offer any reasons in favor of a plan so largely practiced by all good farmers.

We desire to caution farmers against commencing plowing too early in the spring, before the land is sufficiently dry. It is natural to desire the early planting of spring crops by all farmers who have a large amount of work on hand, and to effect this they begin plowing too early; forgetting that a certain temperature is necessary before the soil can germinate seeds. Early plowing, while the ground is still wet, has the effect of making the land heavy and lumpy, and retards the very end it is desired to attain. Good farmers assure us that plowing the land when wet and cold, injures its productiveness quite as much as the raising of a crop. Land should be permitted to lay in the spring until dry and warm, after which it may be plowed and planted with a certainty that the seed will germinate and continue to grow in a healthy and vigorous manner.

Too little attention is paid to the state of the soil at the time of plowing. It is one of the requisites of good farming, which cannot be neglected without serious detriment to the life and vigor of the land.

### ANOTHER SUB-SOD CULTIVATOR.

PRUNING, AND VENTILATING GRASS ROOTS.

A SUGGESTION.—Make a plow without a mould-board; put on a wide-cutting, sharp share and coulter;—place a cross-bar of iron between the land-side and back corner of the share, for the double purpose of bracing the land-side, and receiving a number of strong spurs or short teeth, to harrow up the bed of the furrow. Gauge the depth to about two inches. A cheap substitute—for an experiment—may be made of an old, worn out plow:—Break off all the mould-board,—put on the fixtures as above,—take it into your old meadow, and into your old pasture—work a strip or patch in each, and if necessary, pass a roller over them. Then watch through the first and second seasons for the result, and report to the public.

Horticulturists tell us to prune and ventilate the thick tops of our old fruit trees; but who ever "heard tell" of pruning and ventilating old, matted, half-dead grass roots. It is true, that some have practiced and recommended harrowing the surface. But this mars and injures the most vital part of the roots, without reaching the disease. It is much like slashing into the outer portions of a tree-top with a long-sword.

It is a well known fact, that fruit trees, and most of the cultivated plants, thrive best when their roots are well ventilated by loosening the ground around them. The roots of plants need air, as well as their tops, though not so much of it. It is said that fishes cannot live in air-tight vessels, —although they may have plenty of pure water and food. And I do not believe that a plant, shrub, or tree, of any kind, can live with their roots encased in an air-tight vessel. Let botanists try the experiment and report the result.

The idea of pruning and ventilating grass roots in old meadows, &c., has led me to try to devise some plan, and a machine adapted to that purpose. I have thought of many, —but none so simple, cheap, and efficacious as that described here. Perhaps some will think that such an implement would prune the roots "with a vengeance." But I think there need be no fear of that in a "grazing district," where it is difficult to kill grass by plowing and hoeing. In "grain growing districts," nothing of the kind is needed.—Land that has lain long in grass is literally full of roots. They have too much life to rot, but not enough to produce a good crop of grass. Cut them off and let them rot and form food for the nourishment of a new set of roots.

The above machine is designed to peel off the surface sod, to scratch the sub-sod, and to leave the sod where it was, without breaking or turning it over. Let this be done in the fall or early in the spring, and I believe that a healthy and vigorous growth of roots would be formed, which would produce an enlarged crop, even the first season.

In the RURAL of February 12th, may be found a description of a machine for perforating the sod with innumerable holes by means of teeth attached to wheels. These teeth, while in the ground, would have a prying motion, calculated to tear and loosen the soil. Said holes would serve as ventilators to admit air among the roots. If grass land could be punched full of holes, six or eight inches deep,—late in the fall,—the winter frosts would enter, and quietly heave and loosen the ground in a way that could not be beat.

Mr. Editor, readers and correspondents of the RURAL:—The above contrivances and ideas, are not monopolized by a patent, or copy right. They are public property—and, if any of you have anything to say, for or against them, speak out,—investigation leads to truth. N. CAREY.

Westfield, N. Y., March, 1853.

SYSTEMATIC LABOR accomplishes far more than that without plan or order, and does its work with much greater ease to both mental and physical powers. Nor is sameness and monotony necessarily connected therewith, as many suppose.

THE GANG PLOW.—USE AND ADVANTAGES.

The gang plow, as represented by the accompanying engraving, is coming into general use in many parts of Western New York.

They are made to answer the purpose of the harrow and the grain drill. By fall plowing land designed for spring crops, and then crossing the furrows in the spring with the gang plow, the soil is better fitted for the seed than can be done in any other manner at the same expense. To do this, it is necessary that the fall plowing should be deep, and thorough, as shallow furrows would be turned over by the cross plowing in spring. Deep tillage is considered to be preferable, and any system of husbandry which will ensure its practice, cannot be too highly commended. Before crossing with the gang, the farmer should be certain that the land is dry and warm.

Another use of the gang plow is for putting in wheat. Instead of using a grain drill, the farmer harrows the field thoroughly, sows on the wheat and plows it in. The plow can be guaged so as to run the depth required, and many farmers assure us they prefer this method of putting in wheat, to any other they have tried. It is said to work well upon land where the action of spring frost has a tendency to throw out the roots, so that they are winter-killed. We hardly think plowing in wheat has been sufficiently tested, as compared with drill sowing, to enable farmers to judge which is preferable. We are confident the gang plow will be found useful for cross plowing for all kinds of crops, as they will enable the farmer to do more work in the same time, with but little more expenditure of means and power than is necessary to draw the plows now in use. The opinion is freely expressed by many who have tested both, that they will supercede the Wheel Cultivator in the preparation of the soil for the wheat crop. It is presumed they may be had at the agricultural warehouses here and elsewhere. †

## CONDENSED CORRESPONDENCE.

### Stowell's Evergreen Corn.

Numerous have been the inquiries thro' the agricultural press, respecting Stowell's Evergreen Corn. To such, I will freely give my experience. I have raised it for the last two years, and have found no difficulty in preserving it green and fresh any desired length of time. But I must say, for table use it is the most miserable corn I ever tried. I have used it fresh from the field, and at different periods afterwards, and have ever found it to be a hard, coarse, chaffy, tasteless trash—not worthy of a place upon a man's table. In fact, Prof. Mapes, who is a sort of step-father to it, has never recommended it for its good qualities, except for its long keeping, which is truly remarkable. It is not a *sweet* corn, as many suppose,—neither was it called such until lately. It formerly had the name of "Stowell's Evergreen Corn." Now, it has got to be Stowell's Evergreen *Sweet* Corn, which is at variance with my experience.

It was not recommended at the dinner by the managers of the American Institute, as being a great production for table use. But after picking their teeth awhile, they were unable to tell when it grew. As for the stalks, they make good browse; cattle are as fond of trimming them as they are the new born leaves of the forest. And unless a man has conveniences for crushing and steaming, as well as cutting, they will be of but little use to him. As for their being as sweet as sugar cane (as some pretend,) I think it a mistake; I have pounded them up while growing, and extracted the juice, and so far as taste is a guide, I found it no sweeter than common field corn. So far goes my experience. Now, if there are any who wish to test it for themselves — it will take but a few hills — I will forward them by letter, a sufficient quantity, free of all charges and expense, except the postage.—A. Tanner, *Palmyra, Wayne Co., N. Y.*

P. S.—A few words as to the Poland oats. I raised last season two bushels more by measure, off of half an acre, than of the common kind; each bushel weighing nine pounds more than the common kind, which I think is a difference worthy of notice. If any one wishes to try a few by letter, I will forward them as above, free of all charges except postage.—A. T.

### Crows, as "Scare Crows."

Mr. Editor:—A few weeks since I took the entrails of two or three hogs, which I had put aside for the purpose, when I butchered my porkers in December last, and carried them into the field, placing them at such distance from a stack of corn stalks as to give a good range for shot from a small double barreled fowling piece. Making a "*blind*," near the stack, I waited a day or two, until the crows in the vicinity had got a pretty general notice that a *tit bit* of offal was to be had, by calling for. When the congregation had become "large and respectable," I took my station in the "blind," very early in the morning—I had not to wait long ere there was a general rush of crows, something like that usually witnessed among a certain other class of bipeds on board steamboats, and at Hotels, when the dining room door is opened for dinner.—After the usual preliminaries about precedence, and who should sit here, and who should sit there, were somewhat noisily, if not amicably arranged, and the "*gen'men* in black" pretty comfortably settled, I opened upon them from the two barrels of my fowling-piece, fired simultaneously.

I confess that it appeared to be hardly "fair play," thus to take them by surprise, after having, in such winning manner, invited them to take an early breakfast. But I make no pretensions to any thing of that kind, in such cases—indeed, I may as well make a "clean breast" and confess that I intended "foul" play, from the beginning of this business! So, I fired away, regardless of consequences. The carnage was dreadful; more so, I opine, in proportion to the magnitude of the death-dealing weapons made use of, than at the battle of New-Orleans. How many of the wounded escaped I know not, but I picked up, from that field of death, three and twenty crows, killed at that one shot. I have heretofore, in like manner, frequently killed 22, and 23 crows at a shot, but have never been able to exceed the latter number. The "pests" appear to have become pretty well used to being "used up" in that way, and they don't mind it.

Finding this to be the easiest and most effectual way of preventing the "stealings" usually practiced by those saucy imps, I have, for many years, in this manner, procured sufficient "*scare crows*," with much less labor than by the old modes of putting up "clack-mills," twine, and cut-throat looking effigies. Scattering a few *dead crows* over a corn-field, soon after planting, effectually prevents *live ones* from pulling up the corn, or ever *alighting on the field.*—J. H. Osgood, *Lodi, N. Y.*

### Farmers, Look to your Wheat Fields.

Brother farmers, have you examined your wheat fields, to see if any water stands upon them? If not, do not let another day pass before it is done. Most lots in the Spring have more or less water upon them that cannot readily drain off, and by long standing the wheat is either killed, or the roots so much injured that it easily heaves out by the Spring frosts and "turns to chess" A few hours labor in digging small drains and letting off surplus water, will save you many bushels of wheat and add much to the appearance of a wheat field by relieving it from the barren spots of weeds and chess scattered through it. "A hint to the wise

And, by the way, dont forgot when the wheat gets up a little, to go through and pull out every stalk of that worst of wheat grower's trouble, red root. In the name of all common humanity and good farming, if your farm is not already overrun with it, do not let it have a foot-hold on the soil. And if you have time, it will not hurt the crop or injure the farm, to pull out all scattering plants of thistles, dock, charlock, &c. You may save yourself some hard work hereafter, and perhaps your cradler some hard words for breaking a piece out of his scythe against a dry sprig of dock.—F. W. L.—*Greece, N. Y. March* 1853.

Lampas.—To a "subscriber," says the Boston Cultivator, who inquires for the best mode of treatment for a horse that has the Lampas, which is a swelling of the roof of the mouth adjoining the front teeth, we would say, feed with soft mashes, and wash the mouth with an infusion of bay-berry bark, two ounces of bark in one quart of boiling water, left to macerate for one hour—no burning with red-hot irons!

## AGRICULTUAL INTELLIGENCE.

### Agricultural Mass Meeting.

The Farmers of Middlesex, Mass., recently held a Mass Meeting for the discussion of various questions of interest to the Agriculturist, of which an extended account is given in the *New England Farmer*. It was held under the auspices of the Concord Farmers' Club, and was an occasion of much interest to the large number present. Simon Brown, Esq., editor of the N. E. Farmer was chosen President, and Dr. J. Reynolds, Secretary.

After some preliminary business, the subject of farm buildings was taken up and Wm. D. Brown, of Concord, read an essay full of useful hints and suggestions on the subject of barns. The remainder of the morning session was occupied in a discussion on cattle, in which Hon. Seth Sprague, Maj. Wheeler, Drs. Reynolds and Bartlett, Messrs. Walker, Smith, French, Nash, Robinson, and others, participated. Many facts of value were elicited.

Mr. Amasa Walker next addressed the meeting on the subject of Agricultural Education. It was an intelligible, instructive, and highly interesting lecture—such an one as influences the minds of thinking men.—Root crops were then discussed by Messrs. Brown, Wheeler, Sprague and A. G. Cemings, of Mason, N. H., and the afternoon proceedings were closed by remarks from Hon. J. W. Proctor.

The evening session was opened at half past seven, by a lecture from Mr. H. F. French, of Exeter, N. H. Scientific Agriculture, and its real claims upon the farmer, was the subject treated by Mr. F., in his usual simple and lucid style. He was followed by Prof. Nash, of Amherst, who lectured on the most important elements of Manures, illustrating his remarks by specimens, &c.

This is the first time the experiment of a Farmers' Mass Meeting was ever tried. It was most perfectly and encouragingly successful, and will doubtless be followed by others in all parts of the country. Shall the next one be in Western New York?

### MAPLE SUGAR.

It must be evident to every one that liquid filtrated through solid maple timber cannot be otherwise than pure. It also must be evident that sap caught in old, half-decayed wooden troughs with a liberal infusion of leaves and dirt, impart a great impurity to the sap. Rain water, decayed vegetable matter, &c., add chemical ingredients to the sap, is troublesome to extract, and injurious to the quality if not removed. Consequently cleanliness is the principal secret of making nice maple sugar—cleanliness both in vessels, kettles and everything else pertaining to the business. My buckets are mostly tin, and are a cheap and neat article. Sugar made from sap caught in such vessels cannot be otherwise than clean, and if no dirt of any kind gets into it, the consequence is I have nice sugar. If I wish to have extra nice, I do not boil it so long but that it will drain; consequently if there is the least impurity or dark color in it, it drains out. Sometimes a wet cloth wrapped around a cake (except the bottom) helps to make it white. The syrup I let stand and settle, through a flannel strainer, and cleanse with milk and eggs. Four eggs, well beat with about four quarts of milk is sufficient to cleanse syrup for a hundred weight. Sweet does not rust anything.—Tin as well as wood should be painted on the outside, and when done using them for the season serve them as a dairy-woman does her milk-pans, and they are sweet and clean for use again.—*Transactions State Agricultural Society.*

### STUDY THE SOIL.

It is in vegetable as in animal life; a mother crams her child exclusively with arrow root—it becomes fat, but, alas! it is rickety, and gets its teeth very slowly, and with difficulty. Mamma is ignorant, or never thinks that her offspring cannot make bone—or what is the same thing, phosphate of lime, the principal bulk of bone—out of starch. It does its best; and were it not for a little milk and bread, perhaps now and then a little meat and soup, it would have no bones and teeth at all. Farmers keep poultry; and what is true of fowls is true of a cabbage, a turnip, or an ear of wheat. If we mix with the food of fowls a sufficient quantity of egg-shells or chalk, which they eat greedily, they will lay many more eggs than before. A well fed fowl is disposed to lay a vast number of eggs, but cannot do so without the materials for the shells, however nourishing in other respects her food may be. A fowl with the best will in the world, not finding any lime in the soil, nor mortar from walls, nor calcareous matter in her food, is incapacitated from laying any eggs at all. Let farmers lay such facts as these, which are matters of common observation, to heart, and transfer the analogy, as they may justly do, to the habits of plants, which are as truly alive, and answer as closely to evil or judicious treatment, as their own horses.

Signs of Health in Sheep are, a skittish brightness, clear azure eye, florid ruddy eye-strings and gums, teeth fast, breath sweet, nose and eyes dry, respiration free and regular, feet cool, dung substantial, wool fast and unbroken, skin of fine florid red, particularly on the brisket.—*Lawrence*

## AGRICULTURAL ADDRESSES.

### "The Prejudices of Farmers."

The topic chosen by Wm. S. King Esq., for his address on the occasion of the third of annual Exhibition of the New Hampshire Agricultural Society, was "The Prejudices Farmers." No theme could be better suited to the style of our friend than than this.—That it was most ably discussed, the following interesting explanation of the true meaning of Scientific Agriculture will show:

Scientific Agriculture is the cultivation of the earth by rule, and not by guess-work. Indeed, when and where guessing ends and system begins, then and there is the birth, and the birth-place of Science.

How many farms, gentlemen, within the reach of your observation, are, by this definition, scientifically cultivated? On how many is the depth of the plowing gauged by the depth of the soil, the character of the subsoil, and a wise intention to render the fertile loam deeper year after year, inch by inch? How many farmers of your acquaintance, who enter on a farm with a soil three inches deep, undertake, as they well and easily might, to render it in ten years, twelve inches deep? I would tell you here, that the experiments of thousands of farmers have proved, that thrusting the point of your plow one inch, or three-quarters of an inch deeper at each plowing and bringing to the surface so much of the inert subsoil, to be operated on by the atmosphere and to be benefited by the manure year after year, you will to this extent increase your active fertile soil, and gradually create another farm, as it were, under your old one. But this would be scientific farming; and, consequently, in the opinion of too many farmers, mere nonsense—notwithstanding that facts, plenty as blackberries, confront them with evidence.

On how many farms in this State, or in any State, is the manure applied with sufficient knowledge of the component parts, and consequently of the wants, of the soil? On how many is the manure itself prepared and preserved, so that it retains all of its valuable constituents? Why, gentlemen, if one were to say that plants, to thrive, require food in certain proportions; and that if one of the necessary substances is not present in the soil, and is not supplied in the manure, the plant cannot thrive; and that in proportion as you have or apply the precise quantity of each ingredient necessary, so nearly do you come to getting the maximum crop,— you would set it down at once, in scorn, as scientific farming! And yet how else do you account for the fact, that one man grows a hundred bushels of corn to an acre and another but twenty? Why, clearly, because the land whereon grew the hundred bushels was naturally, or by scientific treatment, in a proper condition for corn bearing,—had in its womb all the necessary kinds, and enough of each kind of food, that the young and the growing plant required for its leaves, its stalk, its tassel and its ear. And how do you account for the fact, that you do not get an equal crop on the same ground the next year? Why, because the first crop has eaten up a good share of the food in the ground-pantry; and the third season, (if any man is silly enough to try corn again on the same ground, without having supplied food by manure,) the third crop would find the shelves pretty well cleaned; and the progeny of that year would be pigmies.

On how many farms in New Hampshire is an accurate calculation made of the cost of growing different crops, so as to decide which is the most profitable to raise? On how many farms is an account kept of outlay and income from each field and each animal, that the prudent husbandman may know where is the mouse-hole in his meal-bin? This is not done, because self would be scientific farming. To be sure, a merchant who pretended to carry on an extensive business without keeping books, and without taking now and then "an account of stock;" or who continued to deal in certain styles of goods, without knowing whether he was making or losing money by the operation, would be held insane. But surely that is no reason why a man, who prides himself on being a plain practical farmer, should farm by arithmetic.

Do farmers hereabout, or farmers generally anywhere, attempt gradually to improve their seed by early and judicious selection; and by always planting the best, instead of reserving the worst for that purpose; or do they sell all that is fit to be sold, and keep the poorest for home use and for seed?—This gradual improvement of seed, such as Mr. Brown, on an island in Lake Winnepesaukee has made in corn—known as Brown corn—and as many others have made in many plants, and fruits, and flowers, by the simple selection of seed, with judicious cultivation,—this smacks rather too much of Science, for a practical farmer.

Scientific Agriculture recognizes the fact, that manures are not economically applied, to exert their influences upon soils where water too much abounds; and recommends drainage. "And so," say you, "does every practical farmer, who knows beans." Well, perhaps every practical farmer does not "know beans," or he would recognize them in a good share of the ready-burned *coffee*, that he buys! At any rate, how different the operations of the systematic and of the guess-work drainer. The first discovers the secret springs, that supply the superfluity of water; and so locates his drains, and so to cut off the vein before it opens on the surface. While nine-tenths of your practical men dig ditches in the lowest part of the meadow, where the water stands — forgetful that an ounce of prevention is worth a pound of cure. This subject of drainage opens too vast a field for me to venture upon it at this time.

This same rule of prevention causes your scientific farmer to do *all things in season.* He stirs up the earth between the drills of his crops, with the hoe or cultivator, to kill the weeds, before they attain to great size, and strength, and appetite. There is no such gluttons as your weed. Like a sharper among honest folks, it defrauds the legitimate owner of what rightfully belongs to him. With coolest impudence, it steals from the young and tender plant three inches to its one; Mr. Weed over-tops it; he bullies it, as it were, after reducing its strength by starvation. By and by, he claims the ground as his own, and flourishes in undisturbed possession. He becomes seedy at length; establishes a large family, in good quarters, to rob succeeding crops of potatoes and carrots; and is only uprooted and punished when he has about run the length of his evil course.

Agriculture is understood to express, not merely the cultivation of the land, but also all the operations incidental to it, or consequential upon it. Accordingly, we find Science in the Stock-yard. The same enlightened system, that prevails in the field, is introduced here. Acting upon the well-established rule that "like begets like," she selects fit moulds, and builds up breeds of cattle for the shambles, square and ponderous, like the lordly Durhams: and again for the yoke she prepares the beautiful and agile Devon; for the milk-pail she reserves families of each of these breeds, in which big udders and profuse secretions of milk are hereditary. For the churn she shows the gentle Jersey cow, seven quarts of whose milk will yield a pound of butter.

Among Swine, this same wise System,—a synonym for Science—has produced the Suffolk, the Middlesex, and other breeds, that run to fat, as naturally as a turtle-fed alderman;—they eat, they grunt, they sleep their lives away, until they have attained to a very Lambertism of obesity; and then, with a gurgling in the throat, they change into pork and are laid down in the barrel.

These noble horses, too, whose ardent neigh comes even now to our ears, were fashioned by Science! Ask the breeder if the fine points of his prancing steed are come by chance? and he will indignantly tell you, No. He was bred systematically, or, as we choose to call it, "for short," *scientifically.* He has regard to the best *points* of sire and dam, and with careful consideration has produced the animal we admire.

Science is at home in the manger and in the manure cellar. She tells us what feed goes to the making of bone and muscle for the young and growing calf, and what makes fat on the stalled ox. She tells us what gives speed,—because it supplies the wear and tear of tendon and bone,—to the racer; and what will lap the lazy pig in Elysium, until he wakes to the sight of the gleaming knife, struggles, groans and dies.

So with the manure heap, she is a safe and learned counsellor. She tells you that, when exposed, its strength is washed away by the rains; and darkening the current of yon bubbling brook, is carried away from you, forever. She bawls in your deaf ears, "house it; prepare a cellar beneath your barn, or at least, a roof to protect it from the thievish element." She points out to your wilfully blind eyes the escaping gases, disengaged by the sun, and flying off upon the wind's wing. Doing nothing by halves, she holds out to your closed and retracted hand, absorbents and divisors—such as charcoal dust, and peat, and muck. She tells you of the value of Guano and other fertilizers, and instructs you in the mode of applying them.

In the Garden, and the Orchard, and the Green-house, Science has been made welcome, and we see her doings there. The mean *Crab* has become the blooming Baldwin; the bitter *Sloe*, or the *Wild-Bullace*, has been changed into the precious Plum; the *Beam-tree* has no longer its small and acrid berries, but bears bouncing Bartletts. The wild *Cole-wort*, that grew, small and thriftless, on the sea-shore cliffs, has been improved into the big-headed Bergen Cabbage. Pitiful weeds or insignificant field-flowers are made blooming ornaments of the garden and the green-house. Here, in Horticulture, may be seen some of the rarest triumphs of Agricultural Science.

In view of what has been said of Scientific Agriculture, many of my hearers will say, —"Why, if this is your scientific farming, we have been scientific farmers all our lives without knowing it. We plow, we manure, we drain, we breed cattle and swine and horses, we house our manure, we prune and scrape our trees, and everything—just as you say Scientific Agriculture commands, —upon a system that practice has proved to be correct."

Gentlemen, fellow-farmers, I am fully aware of the fact, that many of the sturdiest opposers of Science are, *practically*, Scientific farmers, denouncing Science as a name without examination or inquiry.

We have been favored with other Agricultural addresses and shall continue our extracts hereafter. Among those on our table, we may mention that of Isaac J. Allen, Esq., before the Licking Co. (O.) Ag. Society; that of Col. S. D. Harris, before the Medina Co., (O.,) Ag. Society; and that of Hon. T. Jenkins, before the Madison Co. Ag. Society.

Good Cow.—The New England Farmer says:—Elijah M. Reed, of Tewksbury, informs us that he is now making butter from his Ayrshire cow, and obtains one pound from *four quarts* of milk! She was on exhibition at the Middlesex show in October last, and was then an animal of fine appearance. He did not state to us the manner of feeding in obtaining this product. One cow producing this amount must be of as much value as two, at least, ordinary cows.

# Orchard and Garden.

### BE THOROUGH.

If you plant but one tree, do it well. If an orchard, do it equally well. If you contemplate putting out a large number of trees, you will not lose but gain time by waiting a year while you prepare the soil by deep and frequent working and manuring. One who has not learned by practice, has no conception of the growth and vigor of trees in well and ill-prepared ground. The advance of the former will be scarcely checked, and at the end of even the first season they will have added a good quantity of well ripened wood and look thrifty, full of sap and healthy, while the latter will be hardly at all larger than they were when planted, and appear stunted and unpromising, and this difference is plainly observable for years.—*Be thorough*—do your work well, and attempt no more than can be performed properly.

Dig deep, plow deep.—No man should plant a garden or orchard, without having first trenched or sub-soil plowed the land deeply. This is as needful for vegetables and small fruits as for trees. Do this and you will never regret it, but will thank the star which guided you in that way.

### SUMMER FLOWERS.

If you desire beautiful, bright flowers, that are of easy cultivation, and rejoice in the burning sunshine—that will endure the summer heat, and gladden your eyes with brilliancy when most others are parched and withered—plant Verbenas, Petunias, and Portulaccas. The last, once grown, will perpetuate itself—you need have no trouble to sow again. The others are obtained in pots each spring from Nurserymen, at a trifling cost. We give a list of twelve choice varieties below:

Chauviere—rich scarlet, very fine. Defiance—fiery scarlet, brilliant. Satelite—rosy scarlet. Kossuth—rose, with white centre. Rosy Morn—purplish rose. St. Marqueritte—rosy crimson. Genl. Prea—dark maroon. Tyrian Purple—rich purple. Sir Seymour Blanc—white. Odorata—blush, sweet scented. Madame d' Gournay—blush, striped and mottled with rose and crimson, superior. Madam Clovet—rose, with crimson eye.

### GRAFTING LARGE TREES.

Cut only so many branches as may properly have scions set in them. A too severe reduction of the top forces numerous latent buds into activity, and sprouts to shoot up in great number and injure the tree. For the same reason, be in no hurry to get rid of the remaining limbs. The following season take off only a part, say one-third, and these I would not cut all at one time, but a part early in the spring and the rest in June—and in doing this do not prune all close to the trunk, but only shorten a portion of them. By the third spring after the scions are inserted all the old top may be removed,—not sooner if you regard the well being of the tree. The wounds should be covered with some suitable preparation, to protect them from the weather.

### CLOTH FOR COVERING HOT-BEDS.

Eds. Rural:—Some two or three years ago I saw it stated in some Agricultural paper that factory cloth spread over sash, was preferable to glass for hot beds. The factory has to undergo some process of course? Will some of your readers give the desired information what the process is—(in case it is good for anything)—whether it will answer to start early with? if not, will it answer for a screen towards the close of cold weather?—T., *Palmyra, N. Y.*

Remarks.—A friend who has tried cloth for this purpose, says that frames thus covered if made of large size, answers very well in the early part of the season, but are not equal to glass, and taking durability into account, cost nearly as much. The cloth, (thin factory) may be used without any preparation, or saturated with linseed oil.

### THE CORE WORM.

The New England Farmer has an article on this subject from a Maine Correspondent. We copy below its essential points:

So far as I have investigated the matter, the *core-worms* of the apples in this country are in no particular different from the piratical apple depredators of France, England, Portugal, and South America, and are the offspring of a brown miller, somewhat larger than the moth er of our common moths, which deposits her eggs at night in the dried blow of the apple, when about half grown.

In the island of Jersey, a place famous for its fruit, the depredations of the "*pippin worm*"—as they are called—is entirely avoided by the farmers placing among the branches of their apple trees, sometime in April, tufts of pea straw, or what is better still, bean stalks, which have been kept through the winter for that purpose. In the cavities of these, the miller deposits her eggs, which in due time becomes a grub, of an altogether different character apparently, from the apple-bred offsprings of the same miller.

These grubs never enter an apple, and what few of them escape the keen observation of the black hornet or the speckled *girdler*, find their way to the ground, in which they burrow, lying dormant for about ten months, when they become changed to millers in time for the next crop of apples.

I have seen in the island of Jersey, the apples from a tree unprotected by the simple precaution mentioned, literally alive with worms, while those of all the other trees in the same orchard were entirely free from the plague.

I have tried the experiment in South America frequently, with the most complete success; and as I believe the North American worm is identical with the apple-worm of other countries, I would advise that farmers generally try the experiment. It does not cost much, and if successful, is just as good as a more expensive remedy.

ROSES.—THE "VILLAGE MAID."

Roses—in themselves a garden—furnish the subject of a treatise, rather than the brief paragraps we can now give them. "Every gentle feeling, every exquisite thought—every delicate allusion is embodied in the rose." Anacreon, who gave his own name to a class of poems of sentiment, sung nearly two thousand years ago:

> Rose! thou art the sweetest flower
> That ever drank the amber shower;
> Rose, thou art the fondest child,
> Of dimpled Spring, the wood nymph wild.

There are innumerable varieties of the rose and the number is constantly increasing. Of course, professed florists alone, can speak "like a book" on this matter.

Among our hardy garden roses, that figured above—"The Village Maid, or *La Belle Villageoise*"—is spoken of as a desirable variety. Its color is rose, striped with lilac; it is a good grower and bloomer, and easy of cultivation.

The present month is a good time for pruning hardy roses. The old wood—that of three or four years growth—should be cut away and all shoots shortened back, if fine large roses are desired. Compost or rich loam should be dug in around the roots about this time, as the rose loves a good, fresh soil. No flower better repays care and attention.

### A WORD ABOUT GARDENING.

How many of our readers have selected their seeds and made all the necessary preparation for gardening? The season is rapidly approaching when garden seeds should be in the ground. Many require to be planted early, in this latitude, that the plants may be matured before they are exposed to early frost.

A first and important consideration in the formation of a kitchen garden is

The Situation.—It is perhaps better, all things considered, that it should have a gentle inclination toward the south-east; yet a northern aspect is, for some purposes, perhaps preferable. Some vegetables, such as cauliflower, peas, spinach, &c., yield more abundantly when not exposed to the direct action of the sun.

A moderate elevation is preferable to either hill or valley. Convenience of access should also be duly considered. But the most important matter, in selecting a location, is as to

Soil.—This should be a rich sandy loam. A depth of two or three feet is desirable.—If this cannot be obtained, and a stiff clay or gravel soil is selected, see to it that it is corrected by a judicious admixture of fine loam. A sandy soil is improved by the addition of lime, plaster, ashes, and vegetable manure; while a stiff clay soil demands such vegetable and animal manure as tends to the separation of its particles. Hence the necessity of litter, and other animal and vegetable manures. Lime and plaster also operate favorably, and charcoal is esteemed by many as a very fine fertilizer. It has the power of absorbing various gases from the atmosphere and readily yields them to growing plants. But remember that manure of some kind is essential to the garden; with it the gardener can do every thing; without it nothing.

Depth and Mellowness of the Soil.—This must be secured; it is the secret of all successful gardening. The roots of garden plants extend themselves to a great depth in the soil in search of nourishment. Their delicate horns have been traced to the depth of several feet. Downing remarks:—I have seen the roots of strawberries extend five feet down in rich, deep soil, and these plants bore a crop of fruit five times as large, and twice as handsome and good as the common product of a soil one foot deep."

A deep loam has other advantages. It not only permits the escape of water after a heavy rain, but by its capillary attraction absorbs and therefore furnishes a supply of moisture during a protracted drought. In fact the only soil suitable for the garden is a deep mellow loam. A cold clay soil, or a rich loam of a few inches in depth, resting upon a clay substratum, is not worth the trouble and expense of cultivation.

Water.—In the selection for a garden, it is well to have reference to water. An abundant supply of water is absolutely necessary. Loudon remarks, that "Many kitchen crops are lost or produced of very inferior quality for want of watering. Lettuce and cabbage are often stringy; turneps and radishes do not swell; onions decay; cauliflowers dip off; and, in dry seasons, become stinted or covered with insects, even in rich deep soils. Copious waterings in the evenings, during the dry seasons, would produce that fullness and succulency which we find in the vegetables in the Low Countries, in the Marsh Gardens at Paris, and in England at the beginning and latter end of the season.."

Selection of Seeds.—After you have gone to the expense and trouble of laying out and preparing your garden, be careful in the selection of the choicest seeds.—Many of the seeds annually offered for sale are worthless; they are either of an inferior variety, or have lost their vitality. This is exceedingly vexatious to the gardener, and we know no way of avoiding it but by knowing from whom you procure your seeds.—Possibly an enterprizing neighbor, or regular seedsman, may be able to supply you.—If not, you are liable to be decieved.

Garden Tools.—We need scarcely remind the reader that the gardener should be well provided with the implements of his art. Of these, the spade, the hoe and the rake are indispensable. Others will be found valuable assistants, and in their selection, much discrimination should be exercised. And see to it that they are kept in a conspicious position, and at the same time bright and clean. Remember the old standard maxim: "*have a place for everything, and every thing in its place.*"—*Ohio Farmer.*

### CULTURE OF THE ROSE.

In its demand on cultivation, the rose is modest, in proportion to the remunerative satisfaction it affords. It loves a deep loam; so, if the soil is shallow, it should, by all means be trenched. If straw, or coarse manure is laid in the bottom of the trench, a benefit will be found from the continued lightness of the soil it will afford, and by its drainage in taking off superfluous water in heavy storms. The soil around the roots should be kept light and free from weeds. Like all plants and animals, it must have a sufficient territory to occupy, and healthy ailiment. To afford a desirable supply of food, rotten manure should be forked into the soil, round the roots, to give an abundant and healthy food for the next year's bloom. Mulching with leaves or coarse manure, after the ground is put in order for the season, is highly beneficial, as it preserves an equilibrium of cold and heat, dry and moisture, essential to the health of the plant.

Its greatest enemy, of the insect tribe, that we know of, is the slug, which fastens to the under side of the leaf, and feasts upon its juices, until it is reduced to a skeleton, disfiguring the plant. The best remedy we know of for its ravages, is found in keeping the plant in good health, so as to insure a vigorous flow of nutritive sap, and a firm growth of leaves and wood. With us, it has succeeded admirably, and we commend it to all whose bushes are affected with a troublesome and wasting enemy.—*Horticulturist.*

Cranberry Roots.—A Subscriber wishes to know where Cranberry Roots can be obtained, the price, &c. Any one who can answer, will please do so through the columns of the Rural.

The noblest remedy for injuries, is oblivion. Light injuries are made lighter by not regarding them.

# Mechanic Arts, &c.

### LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending March 22, 1853.

Horatio N. Black, of Philadelphia, Pa., for Improvement in Hydraulic Steam Pumps.

John P. Comly, of Dayton, Ohio, for Improvement in Separating Paper by single sheets.

Roswell Enos and Bela T. Hunt, of St. Charles, Ill., for Improvement in Tanning.

Mills A. Hackley, of Bellville, N. Y., for Improvement in Cheese Presses.

Wm. Mansfield, of Dracut, Mass., for Improvement in Knitting Machines.

James Riley and Wm. Allen, of Southfield, N. Y., for Improvement in Processes for Distilling Rosin Oil.

James Stranbrough, of Newark, N. Y., for Improvement in Harness.

Seth D. Tripp, of Rochester, Mass., Assignor to Edward L. Norfolk, of Salem, Mass., for Improvement in Machines for Pegging Boots and Shoes.

### IRON PUMPS.

Friend Moore:—Much vexation and not a little expense is incured by the users of this indispensable article, in consequence of the leather band encircling the upper box becoming worn out; obliging them to lay the pump aside when otherwise as "good as new," and procure a new one, because of inability to get the box repaired. It may not be generally known that this box is composed of two pieces, which are screwed together. The only difficulty in repairing, is the danger of breaking the box, by applying force sufficient to unscrew it. The box being made of iron, this danger may be avoided by applying a moderate heat; then by the aid of the vice it is easily and safely unscrewed—when with a jack knife and a piece of an old boot leg, the leather hand may be replaced in five minutes time, making the thing go again "like a book," and rendering the possessor, so far as pumps are concerned, perfectly independent "of all the world and the rest of mankind."

Gates, Monroe Co., N. Y. CALVIN SPERRY.

### TO MAKE DRYING OIL.

Take any quantity of linseed oil and put it in a clean iron pot, and hang it over a slow fire, and when it attains to a good heat add litharge and white vitriol (sulphate of zinc) in very small quantities, until the whole is added, when it should be boiled slowly for two or three hours. Twelve parts of litharge to three of the sulphate of zinc, are employed, and two ounces of this mixture to one pint of oil, does very well.—If these drying materials were added hastily to the oil, it would fume over on the fire.—Care must be exercised to prevent such an accident. After the mixture is boiled for two or three hours, the oil is taken off, and suffered to cool, when a sediment falls to the bottom, and the clear is poured off as drying oil. The sediment when mixed with whiting or ground chalk, and dry sand, makes a capital cement for filling in seams in the roofs of buildings, or any crack to render the same impervious to water. It becomes as hard as stone in the course of a few weeks, and is especially adapted for the joints of stones in exposed situations. We have been inquired of by three or four correspondents lately respecting the above drying oil; we have only to add that if an ounce of resin be added to every pint of oil when boiling, it will improve the quality of the oil in no small degree.—*Sci. Amer.*

### STFETY CROSS BAR.

A cross bar of an improved description for safes or bank vaults, doors, &c., has been invented by F. C. Goffin, of New York City, who has taken measures to secure a patent. In this improvement the cross bar is hinged in the middle, one half being fixed and the other movable, and when closed either into a groove or flanches, so arranged that its outer surface shall be flush with the door. The object of this is to prevent the possibility of its being forced by any instrument to which this kind of security, as at present employed, is very liable, and as an additional safeguard the cross bar is merely placed against the outer surface of the doors, and is secured by a padlock, which, as well as the cross-bar may be easily forced or wrenched off by a lever. But by this arrangement, there is no way that the cross-bar can be drawn back, and as it is so placed as to cover the key-hole of the safe lock, the latter cannot be exposed otherwise than by picking the lock of the cross bar.

The Genesee Whig contains a very favorable notice of "Ketchum's Mowing Machine." It is described as a very simple machine, which a boy of 16 can manage, and cut from ten to fifteen acres per day. This mower has been on trial three years.

India Rubber Horse Shoes.—Among the many articles which are now manufactured from India rubber perhaps there is none of a more useful as well as novel character, than horse shoes. Experiments made previous to the present cold weather indicate that they will prove fully as durable as iron. Their lightness will especially adapt them to the race course, and having all the toughness, without the brittleness of iron, they will be of equal service, while devoid of the danger of breaking when the horse is under motion.

Copper is found in Cherokee.

### NEW GAS REGULATOR.

A. W. Kidder has invented a very curious and yet simple machine for regulating the supply of gas burners, by which a very important saving in this article may be made with very little trouble. Under the full pressure, which, without any artificial restraint, drives the gas into the burners, a very large amount passes through without combustion, and of course is wasted. Innumerable experiments have been made to remedy this evil, without success, until Dr. Kidder hit upon the device which now bears his name.

It has been tried in several public edifices and private dwellings in this city, and has proved eminently satisfactory. The proprietors of the Astor House and Metropolitan Hall use it, and say that they have found that it saves them full twenty-five per cent. Stewart is about introducing it into his famous dry goods establishment. Professor Torrey, one of the most accomplished *savans* in the country, speaking of it says:

"In another point of view the economical value of this instrument to the gas-consumer is most striking. In consequence of the great length of mains connected with any extensive gas establishment, it is necessary for the purpose of insuring a sufficient supply to remote consumers, to employ a force which delivers it at a much greater pressure than is advantageous for its economical consumption.

We have satisfied ourselves by many trials, that, as a general rule, three cubic feet of gas burned at the pressure of five-tenths of an inch, will burn as long a time, and give a quantity of light equal to that of four cubic feet burned at a pressure of one and five-tenth inches, which is a fair average pressure for street delivery; and, as a general result, the employment of a low pressure than that at which the gas is delivered to the consumer, will produce a great saving to him."

We have seen the regulator in operation at the office of the company, in Centre street, corner of Canal, and a very few minutes' observation satisfied us that twenty-five cents upon every dollar's worth of gas consumed, was a very moderate estimate of the saving which it insured. It is very simple, not costly, and should be procured at once by every gas consumer, however inconsiderable may be the amount of his annual consumption. Let those who have a particle of doubt upon the subject step in at the rooms of the company, and witness the tests by which they prove its advantages.—*N. Y. Evening Post.*

New Plan of Applying Power to a Steam Engine.—We saw in operation, a day or two since, at the machine shop of Mr. Archambault, North Second street, a small engine, the plan of which was invented by Nathan Atherton, Jr., of this city, to avoid the necessity of using a fly wheel to pass the crank centres, with an even and steady motion. Indeed this invention is intended to avoid the use of the ordinary crank altogether, by substituting a slotted or grooved surfaced cylinder, and meeting and uniting at each end, upon opposite sides of the cylinder, are traversed alternately backward and forward, by a small friction roller, connected directly with the piston rod at its end.—The piston rod being held firmly in line by means of cross head and slides, or otherwise, it follows that as it moves forward and backward, beneath and above the grooved cylinder, with its friction roller moving within the grooves, the cylinder must revolve to accommodate such movement.—*Philadelphia Ledger.*

### TO REMOVE PAINT FROM CLOTHES.

Many persons by misfortune get paint on their clothes, and from the want of proper knowledge to remove it, their clothes are spoiled for decent purposes. This is a great loss, especially when fine clothes are spotted or daubed with paint. Many fine and excellent coats have, to our knowledge, been laid aside for common purposes, because of a few spots of paint. Paint can be very easily removed from woolen clothes, although it may be quite hardened. The way to do this is to pour some alcohol on the cloth, saturating the paint, and after it has remained on it for about ten minutes, pour a little more, and then rub the cloth with the paint spots between the fingers. This cracks up and breaks the paint from the surface, after which a piece of clean sponge dipped in the alcohol, should be rubbed on the cloth, with the grain. Paint can be taken out of silk in the same way, only it is best to steep the part of the silk with the paint on it, in a cup containing the alcohol; and it will not do to rub the silk between the fingers, for fear of breaking and creasing its surface. This is true, as it respects lute string or any hard surfaced silk, but figured soft silk, may be gently rubbed.—The way to treat the painted silk, is this:—after it has been steeped for about 15 minutes, then it should be spread out on a board, and rubbed along the grain with the selvage, by a sponge dipped in the alcohol. This seldom fails to remove all the paint.—Some use camphone for removing paint, but alcohol is more cleanly.

The Scarlet Fever.—Arthur's Home Gazette recommends very highly the following prescription for this disease:

"One grain extract of Belladonna, dissolved in a fluid ounce of rain water. Dose, two drops for a child under one year. Given twice a day for a week."

It is certainly a very safe prescription, and is sustained by great weight of medical testimony.

## OUR GENTLE SPRING.

Poetry by Miss HAZARD.

# Educational.

### AS THE BOY, SO THE MAN.

IT is hard for those whose duty it is, whether in the relation of parent, guardian, or teacher, to phrsuade boys to believe in the days of their childhood and youth, that, as is the boy, so will be the man. Or, in other words, that the character of boyhood is the foundation of future manhood. If the boy be truthful and dutiful, industrious and virtuous, reverent and obedient, honest and just, persevering and loving, faithful and truthful, patient and chaste, temperate and sober, though not dull and melancholly—loving his book or some useful employment better than the company of idle companions, loving school as the best place, home excepted, and regarding his teacher next to his parents, as his greatest benefactor—such a boy, and what boy under ordinary circumstances may not be such a boy, will *surely make a man* in the true sense of the word.

It was a very common custom some years ago in Massachusetts and Connecticut, for the minister of the town or parish to receive boys into his family and fit them for College, or professional life. There was one such minister in Massachusetts—who instructed a large number of boys, and while they were with him kept a journal, in which he recorded the general outlines of their characters. Several years after he left off teaching, and when time had carried these boys, such as lived, into the active scenes and employments of life, he said that he was forcibly struck with the fact, that in nearly every case, as was the boy, so now is the man.

The following fact was related a few years ago in a public meeting, by an old teacher. In his preparatory course, he said, there were two boys attending the same Academy, with apparently the same opportunities to rise to eminence and distinction. One of these boys, he said, paid very little attention to any thing but his books and teachers—was always in his place, and ready to recite when called upon for his lesson. The other was not fond of his books, nor school—and if there was a party, or ball any where within inviting distance, he was always sure to get an invitation, and just as sure never to send a regret—consequently very popular among these ladies and others who scarcely know how to pass off their time without these and similar amusements. Time passed on. The boys left the Academy—the former went to College, graduated with high honor, studied law, was sent to Congress—and was finally appointed Judge of the Supreme Court of the United States. And while he was thus enjoying the honors justly bestowed upon him as the fruit of a well spent boyhood, his former dancing and party-going, and pleasure-hunting companion had also found his place. And boys, where do you think it was? You shall hear. He was employed as *street scavenger* in a country village not far from the metropolis of New England. Thus you see that whatsoever a boy soweth, that shall he also reap even in this life—to say nothing of that which is to come.

The late Governor Ritner, of the Key Stone State, was, when a boy, apprenticed to a farmer—and what do you think his old master said when he heard that Ritner was made Governor by the votes of the people? The remark was, "Yes; *Joseph was always a good boy.*"

President Fillmore, when a boy, was apprenticed to a clothier. After learning his trade, his ambition prompted him to study law. His master remarked that he was very foolish to do so—"for," said he, "Fillmore *was the best journeyman in the shop.*"—W.

### CONSTITUTIONAL TALENT.

THERE is nothing that floats a man sooner into the tide of reputation, or oftener passes current for genius, than what might be called *constitutional talent.* A man without this, whatever may be his worth or real powers, will no more get on in the world than a leaden Mercury will fly through the air; as any pretender with it, and with no one quality beside to recommend him, will be sure either to blunder upon success, or will set failure at defiance. By constitutional talent I mean, in general, the warmth and vigor given to a man's ideas and pursuits by his bodily *stamina*, by mere physical organization. A weak mind in a sound body is better, or at least more profitable, than a sound mind in a weak and crazy conformation.

How many instances might I quote!—Let a man have a quick circulation, a good digestion,—the bulk, and thews, and sinews of a man, and the aclarity, the unthinking confidence inspired by these—and without an atom, a shadow of the *mens divinor*, he shall strut and swagger and vaper and jostle his way through life, and have the upper hand of those who are his betters in everything but health and strength. His jests will be echoed with loud laughter, because his own lungs begin to crow like a chanticleer, before he has uttered them; while a little hectic, nervous humorist shall stammer out an admirable conceit that is damned in the doubtful delivery—*vox faucibus hoesit.* The first shall tell a story as long as his arm without interuption, while the latter stops short in his attempts from mere weakness of chest; the one shall be empty and noisy and successful in argument, putting forth the most common-place things "with a confident brow and a throng of words, that come with more than impudent sauciness from him," while the latter shrinks from an observation "too deep for his hearers," into the delicacy and unnoticed retirement of his own mind.—*Hazlit.*

TWENTY-FOUR letters of the alphabet may be transposed 620,448,401,733,239.360,000 times. All the inhabitants of the globe, on a rough calculation, could not, in a thousand million of years, write out all the transpositions of the twenty-four letters, even supposing that each wrote forty pages daily, each of which pages contained forty different transpositions of the letter.

# For the Young.

### BENEVOLENCE AND GRATITUDE.

IT was a raw, bleak night; the rain was falling while the wind blew in violent gusts. A Portsmouth night-coach stopped at the principal inn of the town to change horses. The cold and wearied travelers alighted for a few minutes to enjoy the comfort of a blazing fire, as well as to take refreshment.

"Will you give a poor fellow a night's shelter in your hay-loft?" asked a weather-beaten sailor, addressing one of the hostlers who was fastening the harness.

"No, not to such as you," answered the man; "you had better make the best of your way off, or you'll get more than you look for, if you prowl about here any longer."

"Perhaps, young man," replied the tar, "you may one day be set adrift upon the world, without a penny to keep your head above water; and as to honesty, I know better than to take what is not my own, if I have not a shoe to my foot."

"I wouldn't trust you farther than I can see you," said the hostler; "and if you don't be off, I'll make you."

Poor Jack was turning away, hungry any foot-sore, when he was tapped on the shoulder by a lad who acted as stable boy.

"If you were to go down the road to the first little shop you come to," he said, "widow Smith would, I dare say, let you sleep in her wood-house; she is a good creature, and is always ready to relieve any one in distress."

"Thank you, thank you," said the sailor.

These few words caused a revulsion of feeling in the breast of the forlorn stranger; they told him that there still were hearts in which kindness flowed.

John Willis, on coming ashore, had been robbed of his all, a thing of no uncommon occurrence, and he was now compelled to beg his way to London. He deeply felt the rebuffs he frequently met with. The prevalence of imposture frequently renders it hard for those who are really in need to get help, for their truthfulness is often questioned.

Jack followed the directions given; but he found the shop closed. He felt that it was an unseasonable hour; still the favorable account he had received of its owner, encouraged him to tap gently at the door. His summons was answered by the worthy dame, who, having listoned compassionately to his tale of suffering, bade him enter and share her frugal meal. The tar entertained his benevelent hostess with a recital of the shipwrecks he had witnessed, and the narrow escapes he had himself had.

The repast over, the widow placed some clean, dry straw in one corner of a shed attached to her dwelling, and, with a thankful heart, the weary traveler stretched himself upon it, and slept as soundly as if on a bed of down.

Before continuing his journey in the morning, Jack looked in to thank the good woman for the shelter she had given him; he found, however, a warm meal awaiting him. Having partaken of it, and accepted a few pence to help him on his way, he departed, with a hearty benediction from his hostess.

Ten years passed, and the little incident here recorded had long escaped the memory of all save one of the parties concerned. One morning, a large, official looking letter was put into Mrs. Smith's hands by the postman. Its purport was to beg her attendance in London on the following day, when, the writer said, she should receive gratifying intelligence, which it was wished to communicate to herself personally. She started by the first coach which passed thro' on the morrow, and reached London to meet the appointment.

The address given her was at an inn, and on arriving there, she was immediately ushered into a private apartment, where two respectable men were waiting to receive her. The widow's surprise was increased when one of them accosted her with the familiar phrase, "How do you do, mother? Don't you know me, my worthy!" added he, in answer to her half-frightened, inquiring glance. "I am Jack Willis, the sailor you housed and fed ten years ago, when he had neither money nor friends. I am now captain of a merchant-man; and this gentleman," turning to his companion, "will, in my name, do the needful to settle an annuity of fifty dollars upon you."

The widow, unable to give utterance to the emotions of her swelling heart, burst into tears.

Widow Smith returned to her cottage home, and never after did she listen to a tale of suffering without thinking of poor Jack Willis.—*London Tract Magazine.*

### DON'T BE "STIFF."

DON'T be stiff in your manner. We hate to see a man as precise in all his movements as the "dancing jack," which is made of pasteboard, and jerked up and down at the pulling of a string. We hate to see him go up and down street, head set like a market woman's, carrying her basket; elbows so far behind him that to get a peep at them you must fall in the rear; and his whole outward man looking "for all the world," as if himself and his linen had been "done up" in starch together.

Don't be stiff in your gait, nor in your bow; but above all don't tax your memory to bring forth twenty of the most gigantic words in the dictionary every time you meet an old acquaintance. Two-thirds of all the so called haughtiness in the world proceeds from diffidence, the other third from a bump of self-esteem as tall as "Mt Popocatapel."

To you, who are "stiff" from diffidence, we would say, if you imagine any one your superior, don't seem to know it; "ten to one" he is approaching you with his "heart in his mouth," thinking he is about to encounter that *human rarity* a "perfect genius."

We have known persons of indifferent abilities and educations, to "pass" at fifty per cent, just because they had an easy carriage, and pleasing address, and a sort of seem to say—I have seen the world before I saw you. And we have known scholars, divines, lawyers, doctors, of whom the "grim king" himself stood in awe, passing along in society at a lamentable discount, because they were "stiff" as pokers.

Take our advice—don't kiss everybody you meet with indiscriminate fondness; nor pass anybody you knew without polite recognition. Win admiration *if you can*, but let respect content you. Here endeth our chaptor on stiffness.—*Mrs. Hopkins.*

THERE is hardly any bodily blemish which a winning behavior will not conceal, or make tolorablo,—and no external grace which illnature or affectation will not deform.

[Written for Moore's Rural New-Yorker.]

### THE SAINTS IN PRISON.

THE world has never relished an earnest Christianity. The saints of God have always been assailed with obloquy and reproach; and too often bonds, stripes, imprisonment, confiscation of goods, general out-lawry, and an ignominious death, have been the portion of the suffering subjects of Christ's kingdom. It is interesting to contemplate the children of God, when separated from friends, deprived of Christian privileges, robbed of freedom, and confined within the four walls of a dungeon. Their limbs are fettered, but their souls exult in the liberty of the gospel. They are shut out from the light of the sun, but cheering beams of mercy and grace gladden their hearts. They have been driven into poverty and called to pass through great tribulations, but they are rich in faith and love and hope—in the earnest of a fadeless and immortal inheritance, and they enjoy, even when exiled and imprisoned, such consolations as the world cannot afford.

The apostles of our Lord were often thrust into prison, for the offence of the cross; but, at midnight they prayed and "sang praises unto God," and the Lord appeared in their behalf and accomplished their deliverance. The great apostle to the Gentiles wrote some of his most precious epistles, while he was in prison in Rome; and he assures the Philippians, that the things which happened unto him had "fallen out rather unto the furtherance of the gospel," inasmuch as many had grown confident by his bonds, and were bold to speak the word without fear.

The imprisonment of LUTHER, in the fortress of the Wartburg, was one of the most fortunate things which could have happened for the great Reformation. Here, in silence and solitude, and pressed by sufferings which threatened death, the dauntless monk was preparod for that gigantic work of reform, which required such vast resources of faith and heroism.

RICHARD BAXTER, renowned not less for the sweetness of his disposition and the gentleness of his spirit, than for his faith, integrity and devotion to the interests of Christ's kingdom, sought comfort and consolation, while in prison, in meditating that incomparable volume, "The Saint's Rest." How natural, that, in the midst of his trials and persecutions, he should think of that rest which is in reversion for the people of God! And how many Christian hearts have since been enriched and comforted in contemplating, with BAXTER, the goodly portion of the saints on high.

The "Pilgrims Progress,"—as a work of genius, second only to the "Paradise Lost," of MILTON, and as a book of devotion ranking next to the Holy Scriptures,—was written while BUNYAN was confined in jail.—Never before came such glorious visions to a tried and tempted soul! Never before were the four walls of a prison illumed by such gorgeous imaginings! Surely Satan was a loser by that piece of malignant persecution, which shut up JOHN BUNYON in prison. His immortal work has been translated into nearly all languages, and has imparted spiritual instruction and delight to millions of sin-burdened souls. Its mission of mercy and love is not yet completed, and eternity alone can disclose the vast amount of good accomplished by the "Pilgrim's Progress."

The book of Revelation, "with its seven fold chorus of hallelujahs and harping symphonies," was written while JOHN "was in the isle that is called Patmos, for the word of God, and for the testimony of JESUS CHRIST;" or when, in other words, he was exiled and imprisoned for preaching the gospel of the Son of God.

We are taught, by these facts, that God can use his servants for his own honor and glory, even when they are placed in circumstances of extreme difficulty and embarrassment; and that in the greatest trials which befall them in consequence of their devotion to his cause, they will be supported by heavenly consolations, and crowned, at last, with immortal honors.

Rochester, March, 1853. A. C. G.

AN IMPORTANT TRUTH.—The misery of human life is made up of large masses, each separated from the other by certain intervals. One year, the death of a child; years after, a failure in trade; after another longer or shorter interval, a daughter may have married unhappily; in all but the singularly fortunate, the integral parts that compose the sum total of the unhappiness of a man's life, are counted, and distinctly remembered. The unhappiness of life, on the contrary, is made up of minute fractions—the little, soon forgotten charities of a kiss, a smile, a kind look, a heartfelt compliment in the disguise of a playful raillery, and the countless other infinitesimals of pleasurable thought and genial feeling.—*Coleridge.*

Written for the Rural New-Yorker.

## MY YOUTHFUL DAYS.

My youthful days I do remember,
Ay, yes, I love them well;
From blooming May till bleak December,
I own their magic spell.

My sister's love, my mother's prayer,
My brother's buoyant glee,
My father's counsel and his care,
They are fresh to me.

The smiling brook, the murm'ring rill,
The thicket o'er the way,
Where chick-a-dee and whip-poor-will
Were mingled with my play.

The meadow where the hay-cock stood,
The sickle and the plow,
The cattle grazing near the wood,—
Ay, yes! I see them now.

The school-house standing on the hill,
Near where the cross-roads met;
The garden, shop, the store, the mill,—
Oh, who can these forget?

The old stone church, its gleaming spire,
God's bless-ing on it rest!
E'en now I feel the sacred fire
There kindled in my breast.

The grave-yard—sainted, solemn spot,—
My brother's earthly home!
Ah! who upon this earth has not
*Some* friend beneath the tomb?

*All* youthful scenes I do remember;
Ay, yes! I love them well!
From blooming May till bleak December
I own their magic spell.

Albany, March 16, 1853. T. H. B.

## HEALTH.—ITS APPRECIATION.

How few who enjoy health and the benefits of a good constitution, know how to appreciate the blessing. It is but natural to the vigorous and streng to rise from their couch at morn, refreshed by "Nature's sweet restorer," and go about the duties of life, without one thought of these inestimable gifts. It is their accustomed privilege, and calls not forth strange sensations of pleasure and gratitude. The cares and perplexities of the busy world press heavily upon them, even in their strength, without the conviction and thankfulness that they are capacitated for the burden, and more favored than others.

It is the feeble invalid alone, with form emaciated from suffering, and mind distressed with gloomy forebodings, that can truly estimate the value of health. How thankful is such an one for any cessation of pain, and how the heart o'erflows with gratitude for the hours of ease and activity that occasionally gladden life's pathway. With what welcome pleasure do they leave the monotony of the sick chamber to inhale the air of Heaven, long denied, and how refreshing the balmy breeze to their fevered brows and exhausted natures. With what emotion do they again participate in scenes of outer life, and how full of interest every trifling change. Words cannot portray the sense of happiness with which the whole being is filled, and the feeling of entire dependance upon its Author, and adoration of His goodness. Never can these be realized to their full extent, but by those who have suffered—those who have passed long, sleepless nights, and wearied days in vain anticipation of health's returning glow, and each succeeding moon but deepening the disappointment of hope deferred.

Not only does the invalid realize the barrier of ill-health to the enjoyments and pleasures of life, but the unfitness for the performance of its duties. With languid frames, and inability for employment, they are under the necessity of intrusting all supervision of affairs, and discharge of duties to disinterested persons; and, as no one can be happy without some occupation, the mind becomes desponding, the spirits depressed, and the weakened energies give up to the depths of melancholy. Without power of exercising physical strength, the mental faculties are keenly susceptible to the apparent entire uselessness of their lives. How dear would be the privilege of ministering to the wants of their own families and performing services which are unavoidably committed to others. What a happiness to be the means of promoting the comfort of one's own household, and to be looked upon as their dispenser, by the objects of their solicitude. What entire desolation steals over them when they know they are debarred from these offices. The spirit, strong in desire, longs to break from the imprisonment of its weakly tenement and fulfil its mission, while a feeling of inquiry cannot be repressed, why they should be so much afflicted, and others of no more kindly intentions, deeper sympathies, or active temperament, have powers given them to carry into execution? The stricken heart is led to exclaim, "Why am I left to tarry here, unserviceable, of no benefit to any one, enjoying so few of earth's pleasures, and enduring so much pain and suffering?" That same heart, thankful for every sun beam that gilds the darkened horizon,—happy, (never does the child of health know how happy,) in any renewed hour of restored energy, learns to bow in humble submission to the inscrutable ways of Providence—meekly kiss the rod, and await the time when all mysteries shall be unravelled.

Could the robust but appreciate the pleasures of a life of usefulness,—of a life free from suffering—their hearts would be poured out in grateful acknowledgements, and most blessed would they deem their lot.

Rochester, 1853. AZILE.

## THE BIOGRAPHY OF STEAM.

The N. Y. Times, in an article on Steam and Heat, gives the following graphic picture:

And who shall write the biography of Steam itself, that giant of the nineteenth century—the only full-grown giant the world has seen; for the giant that is to be, is yet a babe, its bones still in the gristle, and rocking in its cradle of the wave, scarcely yet conscious of existence denied by many credible people.

The old giant will die slowly. He will not willingly surrender the sceptre of power. It will be no easy thing to push him from the stage. His grasp on the sources of vitality is not to be relaxed without a struggle that will startle the nations. His claims upon our gratitude will summon us to his rescue. He has borne us through storm.—Insensible to cold, we have seen him all night scattering the snow that blockaded our path. With his month full of fire, and his nostrils expanded with smoke, we have heard him laugh defiantly at the solstic rays that would have melted any other laborer. He has plowed his was through the billowy brine for millions of miles, and interchanged for us the products of the globe. He has spanned the earth with bridges. He has entered the factory, and, seizing its central crank, has plied its complicated machinery with inconceivable velocity and power. He has multiplied our thoughts in newspaper and book, and shot them through the world. He has bored his way through rock and mountain, and left an avenue for the passage of commerce. He has ground the grain of continents, and carried it to meet the necessities of man. He has clenched the tough quartz, and, crushing it in his iron fist, has compelled it to surrender the golden treasures it so tightly held. He has lifted and excavated, planed, sawed, and hammered, and yet with infinite and etherial delicacy, he has pointed the finest needle and drawn the metallic threads.

No labor was too undignified for him to perform—no task too heavy for him to accomplish. He delights in noise and dirt and soot and smoke. He is not afraid of his dainty fingers. Wherever work was to be done, there was his home. Whenever a difficult job was placed before him, his iron muscles fairly thrilled with joy. A rare old Titan was he, and well might our eyes bedew with tears to see him stripped of his authority and power, and sepulchred in the past. Let it be our consolation that an expensive ally has gone, and a cheaper one has come. In the few years of his wonderful activity he has devoured our forests; not merely grazed upon their leafy boughs, but masticated trunks and all. Such provender we could afford his multiplying jaws but little longer. He has, indeed, begun to eat his way into those treasures of combustion which Providence has stored under our hills. Let us remember, too, that he was a most destructive agent. He cared little for human life. One of his boilers he sometimes thought worth a hundred lives. He has strewn our rivers with bones—sent many a man to the home of the whale and the shark, and sometimes shaken a building into ruin upon its helpless tenants.

## A MAN OF SUBSTANCE.

We often use the phrase, that such a man was a "man of substance," meaning thereby that he was a man of wealth. Better that we applied the term in reference to substance of genius and force of character, and uprightness of mind, and purity of thought; for it unfortunately happened that in the kingdom in which these "men of substance" were to be judged, no cognizance would be taken of the weight or bulk of the mere goods of this world, because they did not attach to humanity. A man's worldly substance could not constitute a claim to merit there; by their spiritual substance would they be adjudged. Herschel and Newton were men of intellectual substance; Fenelon and Wesley, of spiritual substance; Luther was a man of moral substance; Howard of benevolent substance. Without some such substance as these, at the bar of future judgment, the possession of all the doubloons in money-broker's vaults, would not make us look any thicker than thin mush.

Some men are weighty in substance because they were fat; but the weightiest of all was the high, noble-minded man influenced largely by spiritual force; for all men are weighed in the moral world according to their energy, morality, goodness of heart, greatness of soul, and Christian humanity. All men's selfishness, assumption, pretensions, oppressions, &c., attracted from the true substance of the man, would be deducted from his weight accordingly. Wellington, when he was born, perhaps did not weigh more than ten pounds, but when he died, he weighed down England and more than half of Europe. The same thought might be applied to our own Thomas Jefferson; and so of Newton, who hung lightly on the steelyard when he went on his tour of investigation among the planets; but before he died he weighed the planets on the steelyard of his logic.

The world's waste should supply the world's want.

Men's arguments often prove nothing but their wishes.

## GARDENING.

Blackwood for Febuary has a leading and excellent article on the subject of Gardening, from which we extract a few sentences.

"The Poets, blessings on them! have done more to awaken a love of nature and of flowers, and to cherish a taste for floriculture, than all the professional horticulturists. We like to see a taste for simple, modest flowers. We have a dear friend who has set his affections on the cowslip. He has long borders verged with it, and sloping banks covered with it. How the pets do sport with one another! and what pretty freaks they play—of which they seem half conscious—in timidly turning aside from your ardent gaze their bright emblems of primrose, pink and purple!

We are continually told by certain sapient economists, that they do not care for a garden and do not posess one, because they find it cheaper to buy their fruits and vegetables. Who doubts it? The pleasure of gardening depends not upon economical considerations. The fascination is in the very art of cultivation—in the very growing of your own fruit and flowers, and watching their opening blossoms—in nursing the sickly, and rejoicing over the strong—in culling a well-chosen boquet for the adornment of your *cara sposa!* Is there no pleasure in being able to send well ripened grapes or peaches to a sick neighbor who has them not—in bestowing a cap-full of rosy-cheeked apples on a rosy-cheeked boy—in inviting the children of the village to partake of your gooseberries—in sending, at the close of a severe winter, a hundred cauliflower plants to the minister of the parish? Is there no pleasure in exchanging rare flowers—in getting and giving floral gifts? Does your heart not leap up when the first snowdrop—bold chider of lingering winter, and adventurous invader of his reign—shows its welcome face on the green? Is there no transport when the seedling hollyhock bursts on your astonished vision in unexpected beauty? Thousands there are who are doomed by dire necessity never to have a garden of their own; but these who can and ought, and yet have not, for the sake of cheapness and from motives of a mean economy, ought to be banished to some desert wilderness, where the green earth and nature's flowers may not waste their sweetness on them.

## SAVE YOUR EARNINGS.

The practice which apprentices, clerks, and others, have of spending their earnings as fast as they accumulate, is one great reason why so many never attain a position above mediocrity in life. A person who receives but a small compensation for his services, will, with a little care over his exchequer, and a system of regularity in his expenditures, find that at the end of the year he is prepared to encounter any emergency or mishap. But, as a general thing, they manage to get rid of their earnings quite as quick as they are due, thus leaving them wholly unprepared for emergencies, by sickness or otherwise. A system of curtailing unnecessary expense, if adopted by our younger folks, would bring around the most happy and gratifying results, and be the means of raising to eminence and standing in society, many who now have contracted the habit of parting with their earnings so readily and foolishly—for, the habit of keeping continually in debt, begets indifference and dissipation, a lack of self-respect, and an utter disregard for future prospects.—The real cause for a great deal of crime may be traced to the habit of a foolish expenditure of money in earlier days.—*Alb. Trans.*

## EXTRAVAGANT SPEECH.

The late (Methodist) Bishop Hedding used to tell an incident, in his episcopal career, strikingly illustrative of the despotic power of a long-indulged habit. At one of the Conferences where he presided, a young preacher was charged with indulging in too great excess in exaggeration. He was not said to be guilty of positive falsehood, but superlatives flowed so freely from his tongue that truth had all the semblance, and frequently did all the mischief of a lie. The young man was sentenced to be publicly admonished by the Chair. He stood up in the presence of his brethren, and the Bishop with the greatest kindness, pointed out the evil resulting from the habit. After hearing him through, the accused, bathed in tears, requested permission to say a few words. He commenced by a candid acknowledgment of his admonition. Turning to his brethren in the ministry, he assured them of his determination to conquer his besetting propensity. "I regret it as much as any of you; I have struggled against it; yes, brethren, by night and by day I have wept on account of it: and I can truly say, it has already caused me to shed *barrels* of tears."

Royal Dining Hours.—Louis Philippe dined generally at seven; the Queen of Spain dines, or used to dine, at five; the Sultan at sunset; the late King of Sardinia dined at three; the Emperor of Russia eats when he is hungry—the state dinners are between five and six; the Emperor of Austria dines at five; the King of Prussia at three; the King of Hanover at five; the King of Sweden at five. It is said Queen Victoria dines with her children at two o'clock, and the state dinner at eight is a mere pageant.

Each of the cardinal virtues is a brilliant gem in the character, and consistency is the string on which the whole are strung; without consistency a character is like a broken necklace—perfectly valueless.

He declares himself guilty, who endeavors to justify himself before accusation.

# For the Ladies.

## PASTORAL MELODY.

BY RICHARD M. MILNES.

I wandered by the brook-side,
I wandered by the mill,—
I could not hear the brook flow,
The noisy wheel was still;
There was no bur of grasshopper,
No chirp of any bird,
But the beating of my own heart
Was all the sound I heard.

I sat beside the elm-tree,
I watched the long, long shade,
And as it grew still longer,
I did not feel afraid;
For I listened for a foe fall;
I listened for a word,—
But the beating of my own heart
Was all the sound I heard.

He came not,—no, he came not,—
The night came on alone,—
The little stars sat one by one,
Each on a golden throne;
The evening air passed by my cheek,
The leaves above were stirred,—
But the beating of my own heart
Was all the sound I heard.

Fast silent tears were flowing,
When something stood behind,—
A hand was on my shoulder,
I knew its touch was kind;
It drew me nearer—nearer,—
We did not speak one word,
For the beating of our own hearts
Was all the sound we heard.

## HOME'S BRIGHT STAR.

"Though helpless and dependent, a little child has enough brightness in his eyes and gayety in his prattle to fill a household with joy. When he awakes first at the "peep of day," and imprints kisses on his parents lips, their fragrance is sweeter than that of the morn. The music of his voice is like the song of birds at the approach of light; his smile more sunny than the first entrance of sunbeams into the room. His little arm chair, on high stilts, is scrupulously placed when the fast is broken, and he is no unimportant member at the family board. During the day, how pleasant the pattering of his feet on the stair-case, his voice in the court-yard, his frequent bursting into the the room with some new tale! At night he kneels down, whitely clad, as before some holy alter, at his mother's knees, and his little prayer goes straight to heaven from a child's heart. "Out of the mouth of babes and sucklings, Thou hast ordained praise." Not unfrequent, when he sleeps, are the mother's pilgrimages to his couch, while under his long lashes and sealed lids, the spirit of a cherub seems to dwell. But O, it God, in His wise providence, should change that repose into the sleep of death, and the white flowers are placed upon his breast, and his little clasped hands, the tears which sparkle on his brow are bright, but the bitterest ever shed.

Dear little C. is dead! I remember the last time I saw him was on a beautiful evening in autumn. We all sat in the summer-house. The moon arose, and the stars twinkled, and were reflected in the waves which beat below the cliffs. The child looked up to the brightest star of all, and said:

"Twinkle, twinkle little star,
How I wonder what you are,
Up above the world so high,
Like a diamond in the sky!"

His seemed like a prophetic voice. But a few moons have waned, and little C. is now a star in heaven. Before he died, he sang the very strains which had delighted him, and he now sleeps in peace near the river's brink, where, in spring time, the flowers shall bloom above him which he has so much loved, and where they will not cease to be watered by a parent's tears." How many a bereaved heart will be touched by this!—*Knickerbocker Magazine.*

## RUNAWAY MARRIAGES.

There is a great amount of good, sober truth in the following remarks from the New York Tribune, upon runaway matches, which we are glad to see are now generally discountenanced in all good fictions, except in those very extreme cases which render them justifiable:

In a great majority of cases, the elopement of a young lady is unwise, giddy, ungrateful, immodest, and evinces a lascivious appetite and reckless disposition. Why should she desert and distress those who have loved, nurtured and cherished her through all her past years, to throw herself into the arms of a comparative stranger, who has done nothing for her, and whose protestations of affection have yet to undergo the first trial? It is every way unworthy of pure and gentle maidenhood.

We can imagine but one excuse for her elopement—namely, the efforts of parents or guardians to coerce her into marrying some one she does not love. To avoid such a fate, she is justified in running away; for no parent has or ever had a right to constrain a daughter to marriage against her will. But where the parents are willing to wait, the daughter should also consent to wait, until her choice is assented to or she attains her legal majority. Then, if she chooses to marry in opposition to her parent's wishes, let her quit their home openly, frankly, in broad daylight, and in such a manner as shall kindly but utterly preclude any pretence that her act is clandestine or ill-considered. No one should be persuaded or coerced to marry where she does not love; but to wait a year or two for the assent of those who have all her life done what they could for her welfare, no daughter should esteem a hardship.

There is some truth to be told about the "common run" of masculine prowlers by night about garden walls and under bedroom windows, in quest of opportunities to pour seducing flatteries into the ears of simple misses; but we have not time to tell it now. As a general rule, they are licentious, good-for-nothing adventurers, who would much rather marry a living than work for it, and who speculate on the chances of "bringing the old folks round" after a year or two. A true man would not advise, much less urge, the woman he loved to take a step which must inevitably lessen the respect felt for her, and violate the trust reposed in her by those who had loved and cherished her all her days.

The Heart's Flowers.—A human heart is like a garden hedged with thorns. You must pass through the difficult enclosure before you can pluck its blossems. As one will take most pains to secure a violet that flourishes in a dangerous place, so the fair growths of the heart, when gained after seeking, become of exceeding value. They are worth striving after—for where are the flowers with tints so exquisste, with odors so transporting, as those that sheet from the soil of the human heart.

Miss Bremer says—"If I carry with me to my beloved home in Sweden, no other knowledge than that of many good and beautiful homes on earth, it is no small gain for my long wandering."

It is not wise to seek a secret, nor honest to reveal it.

# Wit and Humor.

## CRAZINESS vs LAZINESS.

While at Augusta, recently, we visited the Insane Hospital. It was just at the time when the Democratic Senators had trigged the wheels of Government, and the business of legislation had come to a stand. One of the patients—probably a retired politician—seemed to feel a great interest in the matter, and questioned us very closely as to the causes of the delay and the circumstances attending it.

"Have those *critters*, ever there, organized yet?" said he.

"No! not yet!" was the answer.

"Well!" he replied, "they'll have to send for *us* to come over and help them! But why don't they organize? What's the cause of it? Is it laziness or craziness? I think it's a little of both. That's just the way it is here—there's just about as much laziness as craziness here, and I think it's just about so over the other side."

We assured him however, that in the particular case alluded to, it was craziness and not laziness.—*Portland Advertiser.*

Quite Natural.—It wasn't a bad trick that was put upon a law student by his fellows, when, having observed that he read always by quantity, and of course very superficially, they used every night to put back the mark which he left in his Blackstone about three-fourths the distance of that day's reading. The consequence was that, without knowing it, he read the work through several times, and, on being questioned at last as to how he liked its author, replied that "Blackstone seemed to him rather a pleasant writer, but he *must* say there was rather too much *repetition* for a good style."—*Boston Post.*

Proud Flesh.—John G. Saxe says many witty things in rhyme, and not always without a moral. Here is one of his "drives" at proud flesh:

Because you flourish in worldly affairs,
Don't be haughty and put on airs
With insolent pride of station;
Don't be proud, and turn up your nose,
At poorer people, in plainer clothes,
But learn for the sake of your mind's repose,
That Wealth's a bubble that comes and goes!
And that all Proud Flesh, wherever it grows,
Is subject to irritation.

A Puzzle for Chemists.—A Chemist in Albany, a few days ago, expatiating on the discoveries in chemical science, observed that snow had been found to possess a considerable degree of heat. An Irishman present at this remark observed, "that truly chemistry was a valuable science," and anxious that the discovery might be made profitable, inquired of the orater "what number of snow-balls would be sufficient to boil a tea-kettle."

A Good One.—A young lady at the Odd Fellow's Festival last evening, who was decorated with several artificial flowers about her person, was approached by a young man whose breath gave evidence of his having imbibed a little too freely. He addressed her with—"Miss——, have not those flowers lost their fragrance!" "If they *have not*," she replied, "they certainly *will* if they come in contact with your breath!"—*Troy Times.*

Hurried Indeed.—A clam merchant, meeting one of his own fraternity the other day, whose pony might be considered a beautiful specimen of an engine skeleton, remonstrated with the owner, and asked him if he ever fed him.

"Ever fed him! That's a good un," was the reply; "he's got a bushel and a half of oats at home now, *only he ain't got time to eat em!*"

An Affair of Importance.—*Harriet.*—"Oh! I'm so glad you are come, Blanche! I have been so perplexed I could hardly sleep all night."

*Blanche.*—"Well, what is it, dear?"

*Harriet.*—"Why, I don't know whether to have my new merino frock violet or dark blue!"

Some men think themselves inspired when they are only inflated.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, APRIL 2, 1853.

*SPECIAL NOTICE—NEW QUARTER.*

THE SPRING SERIES OF THE RURAL, *commencing April 2d, will be opened with vigor, and a determination to improve as we advance. Without making any pledges, we can safely say that the immediate future of the paper will indicate no deterioration. Those who wish to subscribe, or renew their subscriptions, will bear in mind that* NOW IS THE TIME. *We shall add largely to present edition, in order to supply orders from the beginning of the new quarter. See Publisher's Notices, Premiums, &c., on next page.* March 26.

### Postage of the Rural New-Yorker.

IN answer to various inquiries on the subject we re-publish the legal rate of postage on the RURAL NEW-YORKER, as follows:

Within the County of Monroe, *free.*

Within the State of New York, if pre-paid yearly or quarterly, [by the subscriber,] *Thirteen cents per year.*

Within the United States, if pre-paid as above, *Twenty-six cents per year.*

The distance of the post-office where the RURAL is received from its place of publication has nothing to do with the rate of postage. If the post-office is in this county, the paper goes *free*—if in this State, at 13 cents a year—and if within the United States, at 26 cents a year, if pre-paid as above.

One P. M. in this county has decided that a subscriber can receive but *one* paper free! Such is not the law. A man may receive a copy of every *weekly paper* published in the county, free of any postage whatever.

### Trade.—Spring Prospects.

To the business man, the prospects of trade and the causes which influence it favorably or otherwise, are subjects for much inquiry and attention. There is no reason why they should be neglected by farmers.

From the best data we have been able to obtains the amount of flour west of Buffalo, which will be likely to come forward this spring is as large as it was a year since. It is not probable it will come forward very freely, early, as it has cost millers and holders too high to sell at much profit at present rates. The amount of wheat in store has been ascertained not to be large—not as much as usual. At some points west, farmers are still holders, and will not sell freely unless the price is liberal. Of corn, the amount may fall somewhat short of last year,—the high price of pork having induced its feeding more than formerly. The great trouble with Western corn is, its coming forward in bad order, from being heated. It can hardly sustain prices, so as not to result in loss to many who have bought largely. The prime yellow corn of Western New York and Pennsylvania, will be in good demand. The stock of oats along the lake shore is light,—considerable short of the usual supply—and we shall not expect much reduction in price. Barley has been freely marketed. Sales will be light, with little change in prices. In the article of pork, it seems hardly possible to prevent a decline, which will be a great loss to packers and those now holding.—Lard and hams will partake somewhat of the same decline, though probably not to so great an extent. Butter will be dull early in the season unless there is more than usual demand, as the "bite" which buyers got last fall and winter, will make them careful. We do not look for an advance in cheese, as the price of last year was unusually high. Wool will unquestionably bear a good price, but as it is to be the chief article of speculation, it will be likely to go down in price early, to compensate for some purchases made in advance at high rates. Farmers will do well to keep posted and sell when good prices are offered, rather than to hold to compete with the large operators. Fat Cattle—choice animals—will be in active demand, while common to inferior will be low. Many are calculating on high prices in consequence of the attractions at New York, but beginning so early to provide, will probably prevent exorbitant rates.

As a whole, the prospect for business is good. There is some tendency to speculation if money should be very abundant, which would result in no general benefit. Look well before you venture, should be a motto heeded in every business operation at the present time. †

### Back Volumes of the Rural.

"I WANT the Rural New-Yorker, just as every man does who has read it much. I want past, present and future volumes. How much, (or rather, how little,) money will buy the 1st, 2d and 3d volumes, plainly and substantially bound?"

To the above inquiry, just received, and similar ones of recent date, we reply.—1. We cannot supply any complete volume, except the 3d, and the price of that, bound, is $3. We have no complete copies unbound; but a few copies of all the numbers (except one—No. 18,) which we will furnish at $1,50 each.

2. Of vol. 2 we have no complete copies, either bound or unbound, to spare—but can furnish a few copies of most of the numbers (all but two, we believe,) at the above price.

3. Our edition of vol. 1 is entirely exhausted.

☞ If any of our readers can furnish one or more copies of No. 18, vol. 3, the favor will be appreciated. We will pay at least one shilling each for from one to twenty copies of that No.

## Literary Notices.

COUNTRY RAMBLES IN ENGLAND; or Journal of a Naturalist; with notes and additions, by the author of "Rural Hours." Buffalo: Phinney & Co.

"The Journal of a Naturalist" is one of the choicest books of English Rural life, ever written. It is also one of the most unambitious. The author, Mr. KNAPP, tells us of the trees which shadowed his way, of the grasses and flowers which fringed his path, of the products of the fields around his home, of the birds which gladdened his heart with their songs, of the butterflies and moths which come and go with the summer flowers—of the thousand forms of nature which meet the eye of her lover and observer. Miss COOPER'S notes add much to the interest of the work for American readers. For sale at DARROW'S.

THE GREAT ORATIONS OF DANIEL WEBSTER, are now issued in form for the library in a handsomely bound volume, embellished with the best portrait of Mr. W. extant. The Orations comprised in this valuable and popular book, are among the choicest specimens of eloquence ever given to the world. As models in this respect, and as memorials of patriotism, they have never been surpassed. The young will find them worthy of careful study, and the old may read them and revive the glorious associations of the past. Price 50 cts. All orders should be addressed to the publisher, WILBER M. HAYWARD, Rochester.

PUTNAM'S MONTHLY for April, has a variety of interesting articles. Among them is another on the Bourbon Question, and "Our New Livery," which touches up the fashionables rather amusingly. "New York Daguerreotyped," is continued with numerous illustrations. 25 cts. per No. E. DARROW, Main st., Bookstore, agent.

THE ILLUSTRATED MAGAZINE OF ART for April, has a large number of well executed wood engravings. The subjects are generally selected with judgment, and have that appropriateness not always found in pictorial papers and magazines. New York: Alex. Montgomery. 25 cents per number; $3 per year. D. M. DEWEY, agent.

"APPLETONS' MECHANICS' MAGAZINE and Engineers' Journal," is the name of a large monthly quarto, of which the March No. has been sent us. It is illustrated with engravings on wood and steel, and discusses questions of much interest to scientific mechanics. New York: D. Appleton & Co. $3 per year. DEWEY, agent.

THE TRANSACTIONS OF THE NORFOLK AGRICULTERAL SOCIETY, for 1852, have been sent us by SANFORD HOWARD, Esq. The work is full of valuable matter and we shall draw from its stores hereafter.

### Change of Residence, &c.

CHANGE OF ADDRESS.—Those who wish the direction of their papers changed should give us the name of the *paper*, and both post-offices—*the one where now sent*, as well as the new address. Within a few days we have received several requests, in this wise: "Send my paper hereafter to ——," or "to this place;" and as many of the letters are dated, if dated at all, at the new residence of the subscriber, we have no intimation as to where the paper is now addressed. The consequence is that we cannot comply with the request, without also continuing the paper to former address, or searching for it among thousands of names on our books. And, as we publish two papers, it is essential also that the name of the paper be given—and if the applicant receives both papers, each should be specified. The whole matter may be arranged in two lines, whether your letter is dated or not, thus:—"Change the address of my paper, the Rural New-Yorker, from ——, N. Y., to ——, Ohio," or Michigan, as the case may be.

A suggestion, here, to subscribers who are changing their residences. Many of you locate, or are about locating, in sections where the RURAL is nearly or quite unknown. Will you, as hundreds have already done, introduce our paper to the notice and support of your new neighbors and acquaintances?—and thus become, individually, RURAL missionaries? To any and all so disposed we will send specimen numbers, post-paid, (so that their copies may be preserved entire,)—for we find that those who *take* and *read* the RURAL are most successful, when disposed to exercise their influence, in augmenting its circulation and consequent usefulness.

ACKNOWLEDGMENTS.—We are indebted to Mr. P. W. PECK, of East Bloomfield, for superior samples of *Maple Syrup* and *Sugar;* and to Mr. GEO. C. GAUSS, of the same town, for a fine sample of the former. To Mr. B. WHITE, of Barre, for a cake of Maple Sugar of extra quality. Mr. PECK informs us that he manufactures from 800 to 1,000 pounds of sugar, each season, and finds it the most profitable item of farm production. He makes it in small cakes, well clarified, and obtains from 16 to 18 cents per pound. His syrup sells readily in this market at $1 per gallon.

*Lettuce.*—On Saturday last, our friend, C. F. CROSMAN, Seedsman and Gardener, favored us with fine, full-grown and well-flavored Lettuce—one head weighing over 6 ounces. Mr. C. is decidedly *a-head*, as usual.

ADVERTISING TERMS.—From and after this date, our charge for advertising will be $1 per square (ten lines Nonpareil, or 100 words,) for *each insertion.* This is far less, in proportion to circulation, than is charged by the majority of Agricultural and similar journals.

A MODEL FARM—Is offered for sale by E. W. PENDILL, of Byron. Those who desire such an one will govern themselves accordingly. See advertisement in this paper.

## Congressional.

### Synopsis of Proceedings.

MONDAY, March 21.—*Senate--Extra Session.*—Mr. Everett spoke on Mr. Clayton's resolutions calling for certain information relative to Central American affairs. An Executive Session was held and the Senate adjourned.

TUESDAY, March 22.—A message was received from the President transmitting Diplomatic Correspondence relative to the French Revolution of December, 1851. It was ordered to be printed.

WEDNESDAY, March 23.—*Senate.*—Public extravagance was the main topic in the U. S. Senate. There were no startling developments made which we generally expected when that subject is broached. An amendment offered by Mr. Chase, was adopted by a strong vote, to the effect that hereafter no allowance of any kind beyond the regular compensation shall be made to any officer of the Senate.

THURSDAY, March 24.—*Senate.*—The Senate talked about an adjournment but lacked a quorum to act on the question.

FRIDAY, March 25.—No quorum present.

SATURDAY, March 26.—The Senate further discussed the proposition to empower a member of the Committee on Indian Affairs to examine, during the recess, the charges against Gov. Ramsay, of Minnesota, and finally laid it at rest upon the table. No important business was transacted in open session.

### Letter from Illinois.

TISKILWA, Bureau Co., Ill., March 21, 1853.

EDS. RURAL:—We have had a delightful winter—a little snow—a very little mud—neither too hot nor too cold.

March, so much distinguished for being disagreeable and changeable, has thus far been a perfect pattern of propriety,—clear, coolish nights and bright sunny days, bringing out the frost and drying the surface so gradually, that we could not distinguish the dividing line of winter and spring.

This is a time of unparalleled activity in our State. Hundreds of miles of railroads are graded, much of it laid with iron—numberless new charters granted, and no end to those projected. There are about 1,500 miles of bona fide roads now in the course of construction. The Rock Island and Chicago road, is located through this place, and it is already in operation to Peru,—a distance of 100 miles from Chicago and 20 miles east of here. It is nearly graded to Sheffield, (a new town, "that is to be,") 14 miles west. They are now surveying a branch from this place to Peoria, 40 miles south.

Considering the facilities, there are yet good opportunities for farmers and others along these works. Lands near here can be bought, unimproved, for from $10 to $12. There is considerable vacant land here, called "barrens," (the Michigan oak openings,) which are for sale at about $5 per acre. They are partially timbered with scrubby oaks, are finely watered with springs and brooks, have a sufficiency of timber to fence and to furnish fuel, and the soil, though not as deep black as the prairie, is probably more favorable for wheat and grass. They have been passed by, for the smooth prairie; but in my opinion they will yet make some of the most profitable farms in the country. They are generally somewhat rolling, well set in grass and interspersed with trees, reminding one of the descriptions of English parks. They afford many pleasant and picturesque building places. There are more than a thousand acres of this land for sale within three miles of this place.

Having said what there is around us, I ought to say a little about our village, Tiskilwa. It sounds rather Indiany, and well it may, as it is an old Indian village. There are now three stores, one grist and saw mill, and a large flouring mill in the course of construction, three blacksmiths shops and a plow factory near by. What is unusual in this country, they have erected here a fine brick school house, at an expense of $1,200, furnished with a bell and competent teachers.

Stock and produce are very high, and under this stimulus it is expected that greater efforts than usual, will be made to produce large crops. The fall wheat, it is supposed, has suffered from the winter, but a large breadth of spring wheat will be sown to supply its place. L. D. W.

### St. Mary's Canal.

THE Legislature of Michigan, has passed a law in accordance with the act of Congress, accepting the right of way and public lands, to aid in the construction of a canal around the Falls of St Marys, thus rendering navigation unobstructed between lakes Superior and Michigan. It is an enterprise of much importance to all the Lake Superior region, as its tendency will be to speedily develope not only the mineral and forest, but also the agricultural wealth of that vast country.—Copper, iron, lead, and other minerals are found there in abundance, and many of the mines are being successfully and profitably worked. The opening of the canal named, will at once give these enterprises new impetus, and bring forward quite cheaply to market the heavy products of those mines.

This Canal is important in a commercial point of view, as the means of bringing forward large amounts of freight which will pass through our canals on its way to tide water and a market.—The State of New York is interested, as she must share largely in the increase of trade of the growing west. We trust the encouragement and aid proffered by the General Government will be sufficient to ensure at an early day the completion of the St. Mary's Canal. †

## Legislature of New York.

### Synopsis of Proceedings.

MONDAY, March 21.—*Senate.*—The following bills passed, also several others of minor importance: Relative to the People's Bathing and Washing Association in New York. To amend an act in relation to Railroad Corporations. [Authorizes the commencement of work under the general law on payment in of 10 per cent. of the $10,000.]—To amend the charter of the Pacific Mail Steamship Company. Several petitions were presented and referred, and other bills reported.

*Assembly.*—Several bills were reported complete, among which was the repeal of the Registry act, which the Senate killed.

TUESDAY, March 22.—*Senate.*—The Senate discussed the affairs of Union College, upon which Mr. Beekman made a sharp speech, and heard the Liquor bill read.

*Assembly.*—The Assembly took up the Railroad Consolidation bill, and negatived by 63 to 28 a motion for postponement. The bill was then ordered to a third reading. Also several other bills of interest.

WEDNESDAY, March 23.—*Senate.*—Several bills were ordered to a third reading.

*Assembly.*—The Railway Consolidation bill passed 79 to 34. Several other bills were reported.

THURSDAY, March 24.—*Senate.*—The subject of Constitutional amendments was discussed in the Senate. The bill to Consolidate the Public and Ward Schools of New York city was passed.—Also, the bill for the construction of a Ship Canal around the Overslaugh.

*Assembly.*—The following bills were passed:—To promote medical inquiry and investigation, and for the better security of burial grounds and cemeteries. To amend the act requiring the registry of births, marriages, and deaths. To regulate the assessment of taxes on incorporated companies. To amend the act regulating the incorporation of Ocean Steamship companies.

FRIDAY, March 25.—*Senate.*—Little was done in the Senate.

*Assembly.*—Among the bills passed are the following:—Relative to the debts incurred by women before marriage. [It releases the husband from paying the debts of his wife incurred before marriage, beyond the amount of her property.] To provide for the education of the Tonawanda Indians. To authorize the formation of Ferry companies.

SATURDAY, March 26.—*Senate*—The time of the Senate was occupied by Mr. McMurray in a speech on the canal policy of the State.

*Assembly.*—The House, in committee of the whole, acted on the bills to secure a more just valuation of property for taxation; in relation to the expenditures on the canals; and to provide for the completion of a refuge for juvenile delinquents in New York. A large number of bills of a local or private nature were introduced and referred to select committees to report complete. Mr. Gale introduced a bill in regard to convict labor in State prisons, giving the convict the full benefit of his earnings during incarceration.

### Southern and Western Bank Notes.

For the benefit of our readers generally, and particularly those in the South and West, we give the annexed list of Bank Notes rejected by the St. Louis Board of Bankers since the 18th of February, and most of which have gone out of circulation. Clark's Counterfeit Detector, of St. Louis, cautions the public against touching any of the irresponsible rag currency mentioned among the rejected notes—remarking that, though some of it may be good for a year or two, it is as liable to burst as an air bubble. The list of rejected Notes is as follows:

The Bank of America, Washington City, and all other banks of the District of Columbia, too numerous to mention, except the following:

Bank of the Metropolis, Bank of Washington, and Patriotic Bank of Washington, and Farmers and Mechanics' Bank, Georgetown, which are the only legal banks of the District.

Wisconsin Marine and Fire Insurance Company.

Bank of Macomb County, Michigan.

Farmers and Mechanics, Bank, New Brunswick, N. J.

Illinois River Bank, Peru, Illinois.

M. B. Osborn's checks on the Rock Island Bank, Illinois.

Merchants and Mechanics' Bank of Chicago, Illinois, not registered.

Bank of Commerce, Chicago, Illinois, not registered.

Chicago Bank of J. H. Burch & Co., dated Little Falls, N. Y.

Bank of Chicago, Seth Paine & Co. Since failed.

Memphis Savings Institution, Memphis, Tenn.

Exchange Bank, New Orleans, Horace Bean, Manager.

Ohio Savings Institution, Tiffin, Ohio. Since failed.

Illinois and Rock River Railroad Company.

Fox River Bank, Dundee, Illinois.

Oswego and Indiana Plank Road Company.

Farmers and Merchants' Bank, Quincy, Illinois, Longansport Insurance Company.

Union Plank Road Company, Michigan City, Indiana.

Belvidere Bank of Alex. Nealy, Pittsfield, Mass.

Richmond Exchange Bank, Wisconsin.

Illinois Safety Fund Company, Napiersville.

Oswego Plank Road Company checks, Joliet, Illinois.

COMPENSATION OF POST MASTERS.—One of the acts passed on the night of the 3d of March, to establish certain post routes, &c., contains a section fixing the following as the commissions of Postmasters after the 1st of April inst:

| | |
|---|---|
| On a sum not exceeding $100 | 50 per ct. |
| " " between $100 & $400 | 40 per ct. |
| " " $400 & $2,400 | 35 per ct. |
| " " exceeding $2,400 | 15 per ct. |

Where the mail arrives regularly between 9 at night and 5 in the morning, 60 per cent. is allowed on the first $100.

Those officers, whose compensation shall not exceed $500 a quarter, are allowed one cent. for every "free" letter delivered out of their office, and each Postmaster is allowed two mills for delivery from his office to a subscriber, of each newspaper not chargeable with postage.

## News Brebities.

—— O. W. Holmes, the poet and lecturer, has realized over $3,000 from lecturing this winter.

—— A Post Office has been established at Java Centre, Wyoming county, Patrick O'Conner, P. M.

—— Counterfeit $3's on the Hollister Bank, of Buffalo, are in circulation, so well executed as to deceive the best judges.

—— Chang and Eng, the Siamese Twins, are to make a tour through the States, and will be in Boston some time during April.

—— The Albany Register says the Hudson River and Buffalo Creek have opened together for thirty years past.

—— A recent advance of £5 per ton has taken place in English tin. This makes an advance of £15 per ton during the last month.

—— One dollar notes of the Rhode Island Union Bank, at Newport, altered to twenties, are in circulation.

—— The peach crop of West Jersey, for the succeeding summer, is thought to be highly promising.

—— Two hundred and fifty young trees are to be set out on Boston Common this spring by the forester.

—— There are sixty-six babes in Charlestown Mass., who have Frank. Pierce attached to their names.

—— The Canadian House of Assembly has passed a bill increasing the representation in that body from 84 to 128 members.

—— Messrs. Ellwanger & Barry have recently sent a package of fruit tree scions to Oregon by mail, the postage upon which was $32.

—— The city of Mexico, with a population of 60,000, supports but one apothecary's shop. Persons are rarely ill there.

—— Of forty-two papers which have been commenced in Syracuse, nine only remain, says the Star.

—— Col. Colt, the inventor of the revolving pistols bearing his name, has amassed a splendid fortune by their sale.

—— A Statue of Dewitt Clinton, is talked of, to be erected in the Capitol Park at Albany, at a cost of $20,000.

—— The late S. S. Howland, who died in Italy, bequeathed $20,000 to eleven charitable institutions in New York.

—— The new Liquor bill, Maine, embracing amendments of increased stringency to the law, has passed the House by a vote of 94 to 43.

—— A drove of three hundred cows was at St. Louis on the 19th, on the route from Illinois to California across the Plains.

—— "The Echo of the Pacific" is the name of a new daily paper, which is now published in the French language at San Francisco.

—— A correspondent of the Buffalo Republic, writing from Lewiston, says the shock of an earthquake was felt at that place on Saturday, 13th ult.

—— The cost of running a passenger train from New York to Albany (one hundred and fity miles) is about thirty-two dollars.

—— The Methodists of this country have built churches nearly at the rate of one per week, during the 87 years of their existence as a denomination.

—— It appears from an official report that the Directors of the East India Company have spent £53,000 in house dinners during the last eighteen years.

—— The Deerfield river, through the village of Shelburne Falls, has not been frozen over this winter—a circumstance unknown for many years before.

—— The value of coral taken last year on the coast of Algeria was $400,000; one hundred and fifty vessels were engaged in the business; most of the coral was sold at Naples.

—— The whole number of convicts in the prisons of the State at the close of the year was 1,843. In 1851 it was 1,714. In 1850, 1,611; and in 1840, 1,522.

—— An ingenious fellow in New York, buys all the rats he can find, and manufactures gloves similar to the most delicate kid, from their skins.

—— The Emancipation Belge, says there are at present 700 French exiles in Belgium, of whom only 10 figure on the list of pardoned at the Emperor's wedding.

—— Wm. Rufus King was sworn in as Vice President of the United States on the 4th ult.—The ceremony took place at the Cumbre, near Matanzas.

—— A Bookseller of Washington has sold, the past week, upwards of one thousand copies of his "List of Offices in Washington, with the Salaries annexed."

—— The rumor that Jenny Lind Goldschmidt is about making a visit to this country, because of troubles between herself and husband, is positively contradicted by the N. Y. Courier.

—— There are three thousand two hundred and twenty-eight McDonnells and McDonalds in the county of Glengarry, Canada, among a total population of only seventeen thousand.

—— The barbers of Rochester have entered into a combination and raised their prices. They now charge for shaving 10 cents, cutting hair 20 cents, and for other services in proportion.

—— Rev. Thos. K. Beecher, another of "the family," has been delighting the New Yorkers with a very entertaining lecture upon the subject of "How to manufacture American Citizens."

—— One of the most interesting relics in Philadelphia may be seen in North Second street, viz: the first lightning-rod erected by Dr. Franklin, which still stretches its attenuated fingers towards the heavens.

—— Florida has a white population of less than fifty thousand—smaller than any other of the thirty-one States—yet St. Augustine is the oldest town in the United States, having been founded in 1564.

—— Deacon Hart Massey and Moses Bacon, both of Watertown, and both deacons in the First Presbyterian Church at that place—the one 86 and the other 76 years of age—died one Sunday morning recently, in the same hour.

—— It is stated that the whole number of books published in the United States during the year 1852 was 1,288. Of these 322 were re-prints of English books and translations, leaving the 966 as the number of American books.

—— Of the 128 members of the present Assembly, 47 are farmers, 22 lawyers, 18 merchants, 7 physicians, 2 printers, 2 teachers, and 5 are put down as *gentlemen.* 87 are natives of New York and 21 of New England.

—— In the year 1852, Gov. HUNT, granted 8 respites, and 4 commutations to persons condemned to death; and 153 pardons for various States prison offences. Besides these there were 73 pardons from local prisons for minor offences.

# News Paragraphs.

☞ The people of the United States smoke up in Spanish cigars, the whole export of wheat, and drink down, in French Cogniac, the entire export of Indian Corn. For the rest of our bread-stuffs, the flour sent abroad suffices for something like two-thirds of the interest on the foreign debt. It requires all the hog meat—$3,765,470—to support our watch-fobs; and we annually guzzle more champagne and port, and such like mixtures of grape and alcohol, than all or beef and butter export will pay for. There is a "*model* Republic" for you!

☞ The London police numbers 5,492 persons, consisting of 1 inspecting superintendent, 18 superintendents, 129 inspectors, 601 sergeants, and 4,743 constables. The first class constables 1,258, have £45 12s. a year; the second class, 2,359, £49 8s.; and the third class, 1,089, £44 4s. a year. The sergeants and constables have clothing; coals, 40 lbs. weekly to each married man all the year; 40 lbs. weekly to each single man during six months, and 20 lbs. weekly during the remainder of the year.

☞ The American Bible Society has commenced issuing the new edition of the Scriptures, as revised by the committee on Versions. Many misprints have occurred in the former issues, and the revision of these errors, was some time since confided to a committee, whose labors here begin to show fruits. It is to be understood that this is not a new version, but a more correct copy of the King James translation, purged of the errors of punctuation and orthography.

☞ The Utica Gazette has an article giving reminiscences of the great snow storm that prevailed in this State and elsewhere from abont the 23d to the 25th of March, 1843. That storm, when the snow fell to the depth of five or six feet, and blocked up the railroads and avenues, for several days, is fresh in the remembrance of the people. As late as the second week in April the snow covered the tops of the fences.

☞ The two best residences for persons who go to Italy for the relief of pulmonary complaints, are now said to be Como and Venice. The summer climate of Lake Como is most admirably adapted for invalids. Genoa is exceeding bad for persons with chest diseases. Florence is also very prejudicial. The climate of Rome and Pisa is also liable to objection.

☞ The advance on iron has imparted a good deal of animation to the business of the iron men in Essex county. The fires for several years extinguished in the furnaces, rolling mills and other works, are to be rekindled the present season.—There is a brisk demand for ore and ore beds, and some that not long since sold for $10,000, cannot now be purchased for $40,000.

☞ Arrangements are being made in Bangor, Me., by the natives of New Hampshire, for a grand festival, to which all who first saw the light in the Granite State are invited. The Bangor Jeffersonian estimates that there are nearly three hundred native born New Hampshire people in that city, and about 3,000 in the valley of the Penobscot.

☞ The N. Y. Tribune expresses a wish for a law whereby every passenger in a train behind time, might demand 25 cents an hour at his journey's end, for the time taken from him by detention at some stopping place awaiting the arrival of another train. We can feelingly respond in favor of the proposition.

☞ The whole number of clerks in the several departments of Washington is 730, and their annual compensation $931,600. They are divided into four classes—those in the first class have a salary of $1,500: and those in the fourth, $800. There is also a chief clerk in each department, whose salary is $2,200.

☞ The New York Herald, says a gentleman exhibited a pork ham which he avowed had been cured by a new process without salt. He stated that the operation was not expensive, as he would guarantee to cure 1,000 lbs. at a cost of $2.50.—The ham was smoked, and looked remarkable sound.

☞ By the arrival of the Isabel at Charleston we have news from Havana and Key West to the 22d inst. Mr. King's health was no better. There were rumors at Havana of a difficulty between the officers and men of a company stationed in the eastern part of the Island, and of farther landings of slaves.

☞ The net income of the Massachusetts Railways has fallen from 7,94 per cent. in 1847 to 6,-05 in 1852. During the same period the cost has run up from $32,796,363 to $53,076,013—the total receipts from $4,964,532, to $6 885,517—and the expenses from $2,372,453, to $3,673,410.

☞ The Savannah News is credibly informed that a company of twelve women and girls, in Taylor county, near the line of the Muscogee Railroad in that State, are felling the largest pines in the forest, sawing them into blocks, and riving and drawing shingles for market.

☞ A church was recently desroyed by fire, at Doncaster, England, the oldest portion of which was built about the year 1070. The whole of the magnificent building was reduced to a mass of ruins in a few hours, and the total loss of property is estimated at £100,000.

☞ The block of marble for the Washington Monument, ordered by the Common Council of New York, has been completed. It is the largest yet sent, being 8 feet wide by 5 feet 6 inches in height, and weighs four tons.

---

New York Peach Crop.—The peach, in this State, has passed the ordeal of winter in safety. We have now the prospect of an abundant crop from the orchards and gardens of Western New York. The danger from spring frosts, in that section, is comparatively slight. The whole crop sometimes perishes from untimely cold in New Jersey and farther South, during the season of bloom, whilst along the shores of Lakes Ontario and Erie no loss is experienced. The peaches of Western New York are of unsurpassed beauty and flavor.—*Albany Journal.*

---

Wool.—The Ashtabula Telegraph says:—"Little has been done the past week in Ashtabula county, by wool operators. About 25,000 lbs. of the first quality has been contracted for, and at this point Agents have advices from their principals east, 'to hold up.' There has been some alarm in the wool, as well as in the money market; or rather the money panic has borne down heavily on the wool men, and kept them in check."

---

The Lember Business.—A friend who is engaged in the lumber business near this place, informs us that there will be 14 or 15,000,000 feet more lumber shipped from the Bay the coming season than during the previous one. We never have had a better winter for getting out logs, and lumbermen have improved it to the extent of their means and force.—*Green Bay Advocate.*

Capital Punishment in Michigan.—It will be recollected that death, as a punishment for crime, was some years since abolished in Michigan. It has frequently been reported, that crime had since been fearfully on the increase. The editor of the Free Press, Detroit, says, "Such is not the fact, and that the people are satisfied with the law."—In New York, where the death penalty is still in force, capital offences are increasing to an alarming extent. The public may with propriety desire to have a trial of a law which will dispense with taking life for crime, that they may know the working of both systems. It is a matter of much importance, claiming an unusual share of the feelings and sympathies of the human heart. We hope by another year the matter will be bro't to the favorable consideration of the Legislature at an early period of the session. †

---

The weather and the Season.—The first part of the week closing to-day, Tuesday, was very cool and squally. On Tuesday afternoon, one week ago, Chickweed was in blossom. Alder is nearly in full blossom. Meadow sparrows and blackbirds have made their appearance—first seen about a week ago. The weather is fine—breezes a little at night.—w.

---

The Music given in this number was published in a previous volume of the Rural. We re-publish it by particular and urgent request. It was composed by T. H. Bowen, Esq., of the State Normal School.

---

School Teacher.—Trustees of school districts in want of a well-qualified female teacher, may hear of one by addressing H. C. White, at this office.

# Foreign Intelligence.

## Arrival of the Asia.

The Asia arrived from Liverpool at new York on the 25 ult., bringing three days later news.—No recent steamer has brought dispatches so interesting.

In the British House of Commons the Ministry has sustained an unimportant defeat on a bill to take off certain taxes imposed on lawyers. As this measure was one of domestic free trade, and the Ministers are in favor of foreign free trade only, they opposed it of course, and were beaten. They were triumphant, however, on the Jew bill, to them a matter of more consequence, which has passed to a second reading in the Commons, in spite of warm opposition.

From France the news is that the Empress is in a delicate situation. In Spain unexpectedly strong opposition to the Ministry is found to exist in the Cortes.

In Germany, the eminent philosopher of Heidleberg, Gervinus has been acquitted of treason, but found guilty of sedition, and sentenced to two months imprisonment. His crime is the writing and publication of a book, to prove that the best political constitution is that of a federal republic.

In Italy the cruelties of the Anstrian Government exceed all former bounds; hanging, shooting and confiscation without reason given, are the order of the day. The Piedmontese Government has taken up the cause of the Lombard refugees, naturalized as its subjects, and will resist the confiscation of their property in the Austrian Territory. As if to balance the account, the King of Naples has been shot in the leg by an assassin, and the limb is so injured as to render amputation necessary. The agitation which these events cause in Italy, is naturally very great, and partial revolts of the people in different places, are probable. Of Mazzini's escape we have nothing further than was brought by the last Collins steamer.

The Emperor of Austria has got well of his wound, but it is said that his mind, never beyond the usual strength of the Hapsburg family, is seriously affected. The difficulty with Turkey is said to be entirely settled, and it is now reported that the Porte has determined to cede Kleck and the Suttorina to Austria. This report needs confirmation. On the whole, there has been no time since the suppression of the Hungarian Revolution, when Europe has worn so stormy and threatening an aspect.—*N. Y. Tribune.*

Liverpool, March 11.

The morning's market was very poorly attended, at a reduction of 1d per bushel on wheat.—There was a very limited inquiry, and even a fair reasonable concession did not appear calculated to produce a greater demand, in the prevent inanimate state of the trade. The pressure of flour was greater to-day, and several parcels were obtained at a decline of 1s. per bbl., but we found no general demand for American, and sack flour ruled very dull, and nominally the same reduction.

Indian Corn offers 1s. lower for both white and yellow.

Several cargoes at calling ports have been taken during the week. The demand appears about equal to the supply, but should buyers hold off, prices would give way a little.

Western Canal flour 23s.@25s. Ohio 25@ 26s. Canadian 23s.@24s.

Corn—mixed 30s.@31s. Red wheat 6s. 10d. @7s.—wheat 7s.@7s. 2d.

McHenry's provision circular says: We have no bacon or cheese—and both are very much wanted.

Beef arrives freely and accumulates. The value of every thing under first qualities is nominal.

There have been no transactions in Pork.

Lard rallied—all offering at 52s.@53s. had been taken. Tallow is quiet.

Clover seed has been in more demand, but without change in value.

**1,000 BOOK AGENTS WANTED.**

INTELLIGENT and industrious men wanted in every part of the United States, to engage in the sale of the best assortment of Illustrated POPULAR AND USEFUL BOOKS published in the country.

Men of good address, having a small capital of from $25 to $100, can do well by engaging in this business, as the inducements offered are of the most favorable character.

For further particulars, address, (postage paid,) ROBERT SEARS, Publisher, 181 William street, New York.
170w4

**Sheppard, Cherry & Co.,**
PROPRIETORS OF THE RIVER BANK NURSERY, Rochester, New York.

OFFER for sale the following, comprising all the principal varieties of fruits:
10,000 Apples, fine thrifty trees.
5,000 Pears, standards and dwarfs.
5,000 Cherries, do do do
3,000 Peaches, one and two years old.
1,000 Plumbs.
Also, a general assortment of small fruits—Gooseberries, Raspberries, Currants, &c.,—and a few thousand of those superior Cherry Seedlings, which can be furnished, if applied for soon.
Orders for the above respectfully solicited. 170w2t*

# Market Intelligence.

Rural New-Yorker Office, Rochester, March 30, 1853.

The market for the week just closed, has been without activity. Preparations for Spring trade go forward rapidly. The funds have been rather "close," but the business wants of citizens have been met without going from home.

Flour—Limited retail demand only.

Grain—Wheat is nominally worth $1,06 with very few sales. Other grains remain unchanged with moderate supply.

Seeds—Clover is sold at $6,50 for medium, $8 for large. Timothy seed $2,25@3,00, and for very choice $3,50 is asked in small parcels.

Wool—A sale of 150 lbs at 45cts. has been reported.

**Rochester Wholesale Prices.**

NEW YORK, March 29.

FLOUR—A better feeling for the low grades of State and Western Flour. Demand more active for the east, and at better prices. Canadian dull and nominal. Sales Western Canal Flour 2800 bbls at $4 81@37 for common to straight State; $4 50@81 for mixed to fancy Michigan and Indiana, and common to good Ohio.

GRAIN—Better demand for Wheat, but at lower prices. Prime lots are not plenty. The shipping inquiry is fair.—Sales 12,000 bu white Michigan on p. t. 3,100 bu prime Genesee, Niagara county, $1 17. Barley in better demand. Sales 1,500 bu mixed Western at 65c; 3,500 do. of four-rowed on p. t. Oats in good demand; 46@49 for State. Corn firm and in fair demand. Sales 1,200 bu—[quotations lost.]

PROVISIONS—A limited demand for Pork, and market steady $15 25 for mess; $14 for prime.

BUTTER and CHEESE steady.

STOCKS—Market opened easier and quiet, but closed with a better feeling. Money in active demand at 7@9, on call, and short first class paper.

## ALBANY MARKET.

ALBANY, March 28—The market for flour is quiet and heavy, the sales being mostly of a retail character. Operators are awaiting the opening of canal. Transactions in grain light, little wheat offering, and prices nominal—Barley, two rowed sells at 72c; Barley malt 90c. Hops 21@22. Beef and pork in moderate request, without change of prices. Clover seed selling at 11@11¼ for medium, large 13, Timothy seed 2,75@3,50.

## BUFFALO MARKET.

From this city we have no regular market reports, as the lake navigation has furnished no supplies There and at the various ports on Western Lakes, there is much activity, which in a few days will give animation to Buffalo.—Every prospect is very encouraging.

## NEW YORK CATTLE MARKET.

NEW YORK, March 21.—At Washington Drove Yard—Offered, 2,000 Beeves, (1,000 Southern and Western, remainder from this State.)

Prices range at from 7 to 9¾c per lb., as in quality.

At Browning's—Offered 2,500 Sheep. All but 100 sold at from $3,50 to 5,50@7.

Cows and Calves—90 offered, and all but 15 sold at from $25 to $35. Extra $45.

At Chamberlain's—Offered 500 Beef Cattle; all sold, at prices ranging as follows:—Common, $7,00; good quality, $8@8,50, and extra at from $9 to $9,50.

Cows and Calves—35 offered, and all sold at prices ranging at from $25@35 to $50.

2,800 Sheep offered—Sales at from $3,50@4,50 to 5,75@7. 250 left over, unsold.

## CAMBRIDGE CATTLE MARKET.

CAMBRIDGE, March 23.—At market, 1116 Cattle, about 1033 Beeves, and 83 Stores, consisting of Working Oxen, Cows and Calves, yearlings, 2 and 3 years old.

Prices—Market Beef—Extra, per cwt. $7,50@7,75; 1st quality, $7@7,25; 2d do, $6,50; 3d do, $6; ordinary $5,75.

The Seeds from this establishment can be relied on as being of the very best quality. They are mostly imported, or grown by the Eastern Shakers, and are warranted.—Full directions for cultivation printed on each Paper and Package. VAN ZANDT & BOWDISH.
Rochester, N. Y., 1853. 170m6.

## PUBLISHER'S NOTICES.

☞ Agents.—Any person so disposed can act as agent for the Rural New-Yorker,—and all who remit according to terms will be entitled to premiums, &c.

☞ The Rural is published strictly upon the cash system—sent no longer than paid for—and all orders should be in accordance with terms.

☞ Our *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is ordered.

☞ Advertisements must be brief, appropriate to the objects of the paper, and accompanied with the cash.

---

Additions to Clubs—Are still in order. Having but few back numbers, agents and others can order additions to Clubs at $1 per copy from 1st of March or April to end of the year and volume New Clubs, or single subscribers, can begin 1st February, March, or at date of subscribing.

---

### SPECIFIC PREMIUMS!

In order to reach and reward *every one* who may lend a portion of influence in support of the Rural New-Yorker, the following Premiums for subscribers obtained previous to the 1st of May next:

1st. FIVE DOLLARS, in Cash, or a copy of Webster's Unabridged Dictionary, (or $6 in Ag'l. Books,) to *every person* sending payment for fifty or more yearly copies (six month subscriptions proportionably,) according to our terms, previous to the 1st of May next.

2d. FIVE DOLLARS, in Books, or four extra copies of the Rural, to every person remitting payment for forty or more subscribers as above.

3d. THREE DOLLARS in Books, or a handsomely bound volume of the Rural for 1852, to every person remitting payment for thirty subscribers.

4th. To every one remitting payment for twenty copies, we will give an extra copy of the Rural, and four (the present and three past) volumes of The Wool Grower and Stock Register—or, if preferred, an extra copy of the Rural and $1,50 in books.

5th. To every one remitting for ten copies, an extra copy of the Rural and three volumes (past or present) of the Wool Grower—or, instead of vols. W. G., $1 in books.

6th. To every one remitting for six copies, an extra copy of the Rural and either volume of Wool Grower.

7th. To every one remitting for three copies ($5,) either volume of the Wool Grower, *and* a bonud volume of Gen. Farmer for 1848 *or* '49.

8th. To every person remitting for one copy. ($2,) we will give a copy of either vol. Wool Grower, *or* the Farmer for '48 or '9, as preferred.

All competitors for Premiums are expected to adhere trictly to the following

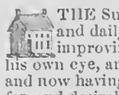
### TERMS,—IN ADVANCE:

Two Dollars a Year. Three Copies, one year, for $5—Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Six month subscriptions in proportion. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different post offices if desired.

☞ Specimen numbers, &c., furnished free to all disposed to compete for the Premiums, or who desire to extend the circulation of the New-Yorker. Subscription money properly enclosed, may be mailed at our risk.

Address D. D. T. MOORE,
Rochester, N. Y.

**LOOK AT THIS!**
*A Great Bargain! If Attended to in Time!*



THE Subscriber, by five years incessant labor and daily toil, has accomplished his design in improving and fitting up his farm to satisfy his own eye, and make it all right and productive; and now having an opportunity to purchase a long-sought for, and desirable location in Michigan, at a low rate, is induced to offer his farm for sale on the most reasonable terms. The farm is located ¾ of a mile north-east of Byron Centre, on a good road, and about the same distance from North Byron, in Genesee county; 150 rods from a good Custom and Flouring Mill, and a good Saw Mill, and Plaster Mill. Said farm contains about two hundred acres in a square body—175 acres improved, the rest wood land. The soil rich and fertile. In a natural state will produce as large crops as any farm in the county, and no one acre of it but that will produce good corn. Fifty acres of good wheat land, eighty acres of handsome meadow, that cannot be beat, all fitted for the mowing machine. The fences are all new, or newly laid over—every length staked and capped; 17 gates, hung to good oak posts. Every field is furnished with running water.

The buildings are, a large Cottage House, with wing and wood-house, and a cellar with cement bottom; an ash and smoke house; a large dairy house, with all the apparatus complete for making butter and cheese; barns sufficient to hold 150 tons of hay, and stable-room for eight horses, and fifty or sixty cows, or the same number of fatting cattle; work shop and open shed; barn-yard well paved with stone, all convenient to the house. A good horse power in the barn for cutting feed, churning, &c., and a water wheel that drives, with a force pump, a sufficient quantity into the feeding barn, and also into five yards and lots in which are large vats, where cattle, sheep and hogs can drink at leasure—likewise into the garden, so that a boy ten years old, can water the whole garden with a shower of creek water in five minutes, in the dryest time in the season. A beautiful yard in front of the house, ornamented with choice shubbery, evergreens, grapes, &c. The garden on the right, and fruit yard on the left. Two good orchards of choice cultivated fruit, a comfortable house for a tenant, or hired man, 40 rods from the dwelling.

The farm may be bought between this and the 30th of April inst., lower than any other in this county, taking all things into consideration. Terms of payment easy.—Please call and see. E. W. PENDILL.

**REMOVAL!**

HALLOCK'S AGRICULTURAL WAREHOUSE has been removed from No. 50 State street, to
**No. 24 Exchange St., Rochester,**
in the Store formerly occuiped by J. E. Chesey as a Stove Store. The new store is well supplied with Implements, Seeds, &c.—comprising a larger and more complete assortment than heretofore. Former customers and farmers generally are invited to call at the new establishment and examine for themselves. E. D. HALLOCK.
169-4t. 24 Exchange St., Rochester, N. Y.

**DURHAM BULL FOR SALE.**

THE subscriber offers for sale a fine Durham Bull, one year old this spring. For size, color and beauty said bull cannot be surpassed. Also, a
FARM FOR SALE,
Containing 103 acres of choice land, 25 acres of it well timbered; buildings good, and a good supply of fruit; 3 good wells of water and a living spring on said premises. All within old Genesee, and one half mile from Le Roy village. For further particulars inquire of the owner on the premises. Possession can be given immediatley if desired. DANIEL WARD, Jr.
Le Roy, March, 1853. 168w3*

**GENESEE CO. FARM FOR SALE.**

THE undersigned offers his Farm for sale. It is situated one and a-half miles south-east of the Village of Le Roy,—contains 169 acres, with good buildings, and is well watered. For further particulars inquire of the subscriber on the premises, by mail or otherwise.
BENJ. SHEPARD.
Le Roy, N. Y., March 7, 1853. 167w4*.

**GREAT PRIZE MEDAL.**

THE WORLD'S FAIR AT LONDON, awarded us a Mammoth Silver Medal for the Best Hats.—Gents wishing the Spring and Summer style, will call. We are prepared to serve you with a superior article, and of the most becoming style.
CLARK & GILMAN, 23 State St.,
[169-3m.] Rochester N. Y.

**SALE OF SHORT-HORNS.**

I WILL sell by Auction, on Wednesday, 8th June next, at 1 o'clock, P. M., about Thirty of my improved Short Horned Cattle, mostly all the get of my imported Bull—Up set price from $150 to $300. [169-9t*]
Auburn, N. Y., March, 1853. J. M. SHERWOOD.

**WHITE SHANGHAI FOWLS.**

EGGS for hatching carefully packed and forwarded by Express. Price $2 per dozen.

The fowls of the above named variety in my possession, were bred by Dr. E. Wight of Boston, and are some of the finest specimens of the breed.
Address, JOSEPH S. HILDRETH,
[169-3t*] 51 Court St. Boston.

**MONEY TO LOAN** on Bond and Mortgage, on improved farms. L. A. WARD,
[169m6.] 36 State St., Rochester, N. Y.

**FOR SALE,—20,000** Seedling Apples for stocks.
170w3t S. MOULSON, Rochester.

**Ketchum's Patent Mowing Machine**
**Howard & Co., Proprietors and Manufacturers, Buffalo, N. Y.**

THIS justly celebrated Machine is rapidly advancing in public favor, for its simplicity, durability, and efficiency, and it has settled the question beyond a doubt, that grass can be cut by Horse Power equally as well, and at much less expense, than with the scythe; for during the past season five hundred of these Machines were sold by us, and were universally approved of by those who used them. It leaves the grass evenly spread, and requires no turning to cure perfectly. The Report of the Committee of the State Agricultural Society, at the late trial at Geneva, shows fully and conclusively that this was the only machine in the field which worked without clogging, or any interruption, and the only Machine which successfully cut the two acres required by the Committee, cutting the same in one hour and twenty-six minutes, doing its work admirably and in a far better manner than can be done by manual labor with the scythe. They also show in that Report that there is an actual saving of $13 per day by the use of this machine over hand labor. We have only to refer those who wish a perfect mowing machine to said Report, and judge for themselves.

This Machine received last fall the First Premium at the late trial at Springfield in Ohio; the Gold medal at the American Institute in New York; also the First Premium at the great Provincial Fair at Toronto, C. W.

They are so compact that one of them can easily be carried in an ordinary one horse wagon, and so very simple that it requires no machinist to put them together, as there are but two bolts (besides the pole bolts) to be secured, to have the Machine ready for use, which does not require over ten minutes time. They weigh about 750 lbs., and can be worked by any boy who can manage a team.

The great difficulty in Mowing Machines is their liability to clog, and thereby render them inefficient. But this difficulty has been entirely overcome in this Machine by a peculiar construction of the knives, which renders them impossible to clog. Another great advantage of this Machine over all others (which we have secured by Letters Patent) is the placing the knives on a line with the shaft, or tread of the wheel, (or nearly so,) which allows the knives to follow, with the wheel, the unevenness of the ground. Also, that the vibrations of the frame on uneven ground shall not materially elevate or depress the cutters.

All the improvements suggested by experience and use necessary for strength, durability, efficiency and ease of action, have now been made, and we offer them for sale under the following

**Warranty:** That said Machines are capable of cutting and spreading with one span of horses and driver from ten to fifteen acres per day, of an ykind of grass, heavy or light, wet or dry, and do it as well as can be done with a scythe, by the best of mowers. They are equally capable of cutting Barley, Buckwheat, Millet, &c.

It is much less trouble to keep the knives in order than a scythe, as farmers frequently cut from ten to fifteen acres without sharpening, which can be done on an ordinary grindstone in a few minutes. We can give any reference required for the full performance of our Machine as above stated.

Orders should be sent in early, as we shall manufacture but a limited number. The price of our Machine, including two sets of knives, extra knife blades and wrench, is $110 cash, in Buffalo, the Machine to be delivered on board of boat or cars free of charge. Office and shop, corner of Chicago street and Hamburgh Canal, near Eastern R. R. Depot, Buffalo, N. Y. HOWARD & Co.
[169-4t]

**A New, Fragrant Seedling Verbena.**
*Delicata Adorata, (Fahnestock.)*

FLOWERS a delicate peach pink, most exquisitely perfumed; truss large and erect, highly elevated on strong stems; foliage very large, deeply serrated and of a very spreading habit—the most intense sun and drought not affecting it, and can easily be detected in a bed of 100 varieties.

We forwarded last summer to Mr. Geo. C. Thorburn, of New York, a plant of the above Verbena, and after the most careful trial of its qualities, he wrote us thus:—"I have named your seedling 'Odorata,' implying its color and perfume; flowers delicate peach pink, of good form and substance, large truss, and of the most exquisite perfume; superior to any Verbena yet raised; has a larger and more serrated foliage than 'Defiance,' and of a more spreading habit. Flowers very high and erect. It stands at the head of light colored Verbenas, and exceeds all others in its delicate perfume."

Plants will be forwarded to all applications in the order received. Price 50 cents each.
THORP, SMITH, HANCHETT. & Co.
[169-2t*] Syracuse, N. Y.

**Seneca Lake Highland Nurseries,**
*Catharine, near Havana Depot, Chemung Co., N. Y.*

CATALOGUE containing price and description will be furnished gratis to all mail applicants of this old and extensive establishment, which contains Standard and Dwarf Fruit Trees of all kinds. Ornamental trees and Shrubbery, Green House Plants, &c.. &c.

Orders amounting to ten dollars or over, delivered free of charge at New York, Dunkirk, or any intermediate station on the N. Y. and Erie Railroad. Trees carefully packed and forwarded to any part of the United States, including California; also to the Canadas and Europe.
March, 1853. [169-3t*] E. C. FROST.

**FARM FOR SALE.**

ONE AND A HALF MILES from Lockport, N. Y., containing 190 acres, on which is a spacious frame house, a bank barn 40 by 90 feet, two good houses for tenants, and other necessary buildings; a good orchard of grafted fruit, with Peach, Pear and Cherry trees, &c.; 20 acres timber, 10 of which is a beautiful grove of sugar maple; and a brook running through the farm. From one half to two-thirds of the purchase money may remain on bond and mortgage. The whole can be conveniently divided into two farms, to suit purchasers. Lockport has a population of 12,000, and is increasing rapidly, with good schools and an excellent market.

Inquire of JOSEPH TREVER on the premises, or J. W. REED, Lockport. 169-3t*

**CLYDE STALLION FOR SALE.**

THE Subscriber offers for sale the thorough bred horse Young Clyde. He is a beautiful dapple bay, with dark legs, black main and tail,—stands full 17 hands high, with great bone, muscle and action—and is 4 years old this spring.—Was raised in Darlington, Canada West. He was sired by the far-famed horse, Old Clyde; dam the well known bay mare Messenger.

For further particulars as to pedigree, &c., Inquire of the subscriber at Hayward Place, or of S. B. GRANT, ½ mile north of the race course, in Irondequoit, near Rochester, where the horse may be seen. If not sold by the 1st of May, a trusty man is wanted to take charge of him, and travel the north part of this county.
167w6* EDWIN S. HAYWARD.
Brighton, near Rochester, N. Y., March, 1853.

**Important to Farmers**
**PORTABLE MILL.**
[From the Ohio Farmer, December 2, 1852.]

ROSS' Improved Patent Conical Burr Mill Stones.—Our readers will many of them remember that Ross' Portable Burr Stone Mill took the First Premium at the Annual State Fair, held in this city a few weeks since.—This admirable invention must commend itself to every one who has witnessed its operation. In the first place it is easily portable, simple in structure, does not easily get out of order, and does its work with great rapidity and perfection. It may be used for grinding the coarsest food for cattle, or the finest meal for family use. It is also well adapted for grinding wheat, rye or buckwheat. It is indeed a perfect grist mill in miniature, and we would advise every farmer, if possible, to procure one. The expense of one of these mills, with the apparatus for horse power, can not be very great; or a number of farmers might club together and procure one, which would be sufficient for all.

Mr. Ross is, we believe, a resident of Rochester, N. Y.

N. B.—Any further information relative to the Conical Mill can be obtained by letter, post-paid, or by calling at the factory of CHARLES ROSS,
2d story Phenix Building, Aqueduct-st.,
151-tf opposite the Arcade, Rochester, N. Y.

**CARY'S ROTARY FIRE ENGINE PUMP.**

THE Inventor after thoroughly testing his engine pump (for the past two years,) feels confident that it is not equalled by any thing now in market, in the way of raising or forcing water—the motion being rotary, the stream is constant without the aid of an air vessel. The packing is self-adjusting, very durable, and cannot well get out of order.

These pumps are well calculated for all the purposes for which pumps or hydrants may be used, viz., Factories, Steamboats, Tanneries, Breweries, Distilleries, Railroad Water Stations, Hotels, Mines, Garden Engines, &c. The highest testimonials will be given.

No. 1 is a house or well pump and domestic Fire Engine, and will raise from 20 to 30 gallons per minute.
No. 2 will raise 100 gallons at 120 revolutions.
No. 2½ do 200 do 120 do.
No. 3 do 300 do 120 do.
The quantity raised can be doubled, by doubling the revolutions. These machines are manufactured and sold by the subscribers at Brockport, N. Y.
76-tf. CARY & BRAINARD.

**CLOVER AND TIMOTHY SEED.**

200 Bush. medium Clover Seed; 100 bu. large or late Clover seed; 200 bu. Timothy seed, on hand and for sale at the lowest market price, at the Genesee Seed Store, 65 Buffalo st., Rochester, by
163-tf J. RAPALJE & CO.

# Poetical.

### THE LIFE GUAGE.

They err who measure life by years,
With false or thoughtless tongues,
Some hearts grow old before their time;
Others are always young!

'Tis not the number of the lines
On life's fast filling page;
'Tis not the pulse's added throbs
Which constitutes their age.

Some souls are serfs among the free,
While other nobly thrive;
They stand just where their fathers stood;
Dead, even while they live!

Others, all spirit, heart and sense;—
Their's the mysterious power
To live, in thrills of joy or woe,
A twelvemonth in an hour!

Seize then, the minutes as they pass—
The woof of life is THOUGHT!
Warm up thy colors, let them glow,
By fire or fancy fraught.

Live to some purpose—make thy life
A gift of use to thee!
A joy, a good, a golden hope,
A heavenly argony!

### AN ORIGINAL NOVELETTE.

[Written expressly for Moore's Rural New-Yorker.]

## THE PLEBEIAN.

BY KATE KOOLEY.

"THE boon that is granted in recompense of virtue, gives a glow of honorable triumph to the heart, that never shall visit the cold breast of him who owes to blind fortune unearned success."

As the "solitary horseman," who is about to appear in these pages, is not one of those already appropriated by the prolific pen of G. P. R. JAMES, I do not deem any apology necessary, but shall proceed at once to enlighten the reader touching the identity and character of said horseman.

One bright May morning, in the year 18—, a solitary traveler was wending his way over a narrow road which traverses one of the most beautiful of our Western States. There was an air of melancholy and abstraction in his appearance that indicated a mind ill at ease; it might have been habitual, or perhaps memory had at that moment called up from the past, some event of deep and absorbing interest. Perhaps the chain of circumstances which had made him a wanderer were passing in review before the eye of his mind. Be that as it may, he had suffered the reins to fall on the neck of his horse, and seemed unconscious of aught but the presence of his own thoughts. For some days previously his route had been through what seemed to him an interminable forest — unbroken, save where "the town," composed of a cluster of log houses, an occasional "clearing" and solitary cabin of the settler, varied the monotony of the scene.

My story dates back to the time when space was much farther from being annihilated than at present,—before the sound of the steam-whistle roused the echoes of the far-off forests and prairies, where the spirit of the red man looks on in amazement and thanks the Great Spirit that he was removed before the iron track had crossed the hunting grounds of his youth. The journey of our traveler had been a long and weary one, occasionally relieved by an hour's rest by the side of some gushing spring, or sparkling rivulet. On the morning in question, his good steed had borne him many miles, but not till he suddenly stopped, was the rider recalled from the reverie into which he had fallen. Perceiving he had diverged from the main road, he found himself on the margin of a brook whose crystal waters probably attracted his horse to the spot. Reproaching himself for his neglect of the faithful companion of his journey, he alighted and permitted him to partake of the cooling refreshment he so much needed.

As he seated himself on the bank, he was struck with the singular beauty of the place; intermingled with the short grass was a profusion of wild flowers which exceeded in variety and delicacy all he had before seen. Our western forests are in this month peculiarly beautiful and fragrant. The lofty trees waving in primeval grandeur; the tender foliage, just bursting into new life, present tints, if not as rich, almost as varied as those of Autumn. The delicious fragrance of the blossoms of the wild apple and sweet-briar, together with the numerous flowering trees and shrubs with which these forests abound, have long been the admiration of travelers, and could not fail to interest so ardent a lover of Nature as now gazed on them for the first time. The scene was well calculated to call forth the enthusiasm of his nature. "What a glorious place—fit abode for sylvan deities," he exclaimed; and as the echo of his own voice startled him, he almost fancied that some wood-nymph would cross his path; but the solitude was undisturbed, except by the music of the birds and the babbling of the brook that leaped from rock to rock at his feet. In this lovely retreat, he thought, with —— by his side—but checking himself he said aloud, "I have *fame* and *fortune* to win before I can hope." As he reseated himself in his saddle, he resolved to revisit this beautiful spot, as it was but a few miles from the flourishing town of C—, where he contemplated making to himself a name in the practice of the law.

Having introduced the hero of our story, it is proper to go back a few years, and give the reader a history of his origin, and early life, to afford a better understanding of the position in which he has already been seen. This is the more necessary, as even in this republican community, where we affect to disclaim all distinctions conferred by the circumstances of birth, none can deny that the social position and character of parents materially affect the interests of children.

Edward Mullet was a native of one of the Southern States, his parents occupying a very humble station in life. His father, like many of the lower class of the white population of the South, was illiterate, with little of the energy that characterizes the Yankees. A restless and rambling disposition led him to visit various sections of the country, and at last the bleak hills of New-England, where his stay would doubtless have been short, had not the attractions of a farmer's blooming daughter for a time kept him stationary. The prize was won,—his rambling propensities returned, and he commenced a series of removals with his young wife, that at last brought them to the place of his birth. "The flower that might long have bloomed in its native soil, if transported to an uncongenial clime will fade and die." So with the fair New-Englander; the roses faded from her cheek, her bright blue eye no longer beamed with health and happiness. After struggling a few years with poverty and ill-health, she sank to an early grave, but not till she had taught her little Edward, (their only child,) to read, and had thoroughly imbued his young mind with the importance and advantages of education.

Years rolled away, and the poor, neglected boy passed unheeded on, until the teacher of a school in the vicinity, observing a ragged boy often waiting at the door of the school house till his scholars were dismissed, was induced by curiosity to inquire his errand; and on learning that some of his scholars loaned him books at night, which he returned in the morning, was so struck with surprise that one so young should be so studious under such disadvantages, he kindly offered to assist him in his pursuits. The intelligent face of the poor boy beamed with pleasure as he expressed his gratitude for so great a favor;—and so rapid was his progress in learning, so amiable and conciliating his behavior, that he not only won the heart of his teacher, but became an especial favorite with the boys. Happy days! tho' his food and clothing were coarse and scanty, he had not yet learned that any were despised on that account.

Some two years after Edward's reception as a scholar, on a pleasant summer evening the boys from the school were assembled near an inn to enjoy one of their favorite games. They had not played long before dissensions arose—the question of fair play was discussed so warmly that the affair seemed likely to have a very unpleasant termination.

In the parlor of the inn, sat an elderly gentleman with his head resting on his hand. He appeared to muse sadly and deeply, till the merry laugh from the juvenile group under the window dissipated his unpleasant reverie. Recollections of happy days stole over him. But soon the angry words of the disputants met his ear; then a sweet voice, in mild and pursuasive tones entreating them to be reconciled and continue their play. The correctness of the language, and the ability displayed by the young advocate, surprised him. He seated himself nearer the open window, to obtain a view of the speaker, who was apparently about fourteen years of age. The high, fair forehead contrasted finely with the ruddy glow on his bronzed cheek, while his chestnut hair, fell in curly masses about his neck and temples. His figure was good, but his dress was awkward and ragged.

Calling the landlord, Mr. Wells (the gentleman above alluded to,) made many inquiries respecting the child, in whom he already felt a deep interest, and ended by requesting him to tell the lad a gentleman wished to speak with him. The landlord was no stranger to the character of his guest; he, therefore, complied with alacrity, certain that some good to the poor boy, who was a general favorite, would result from the interview. Our ragged hero soon made his appearance at the door, with the remnant of a crushed hat under his arm; making a respectful bow, he stood awaiting the gentleman's commands. Being often employed by persons at the inn to execute some little commissions, he supposed that was the purpose for which he was wanted at this time.

"My son," said Mr. Wells, in a kind, familiar tone, "I have been listening to the debate which has been carried on with so much spirit, beneath my window; the eloquent and successful manner in which you defended the cause of right and justice, led me to fancy you might make a good lawyer. I am a lawyer myself, and partial to the profession. I live some sixty miles from here. How would you like to go home with me, go to school a few years, and then study law?"

"I should like to go to school above all things," said the poor boy, his eyes brightening with pleasure.

"Will your parents be willing to part with you?" inquired Mr. Wells.

"My mother, sir, is dead," said Edward, in a low voice, while his eyes, moistened with tears, sought the floor, — for that mother's dying prayer, that God would watch over and protect her child, and raise up to him friends who would save him from ignorance and all the vices which follow in its train, at that moment returned with peculiar vividness to his recollection. He thought of all the kindness he had received from the old school teacher, and when he raised his eyes to the stranger's face, and saw it beaming with benevolence, could he doubt for a moment that Heaven had indeed heard and answered his mother's petition?

"You have no doubt sustained a severe loss in the death of your mother," said Mr. Wells, in a soothing tone; "but if you are a good boy, you will not be without friends."

"Had she but lived to thank you, sir!"

"*You* shall thank me, my dear fellow," returned Mr. Wells, giving way to the generous and ardent impulses of his nature; "but cannot I see your father, and learn what will be his decision?"

Edward went out and soon returned with his father, who showed some reluctance to part with his son, because, as he said, he was now able to help him in getting a living.—But as he had promised his deceased wife that he would either send him to school or take him to her parents, he thought he ought to accept the gentleman's offer, as he had not the means of fulfilling that promise.

A short time sufficed to equip Edward for his journey, but before he departed his kind benefactor enabled him to bestow a gift on his father, and what gave Edward still more exquisite pleasure, to remunerate his kind teacher for the valuable services he had rendered him. As the school-master was poor, and in the decline of life, this token of gratitude was exceedingly welcome. The parting between the two was exceedingly touching; the old man placed his hand on the head of the boy and prayed to his Father in Heaven to keep him in the ways of virtue, and that the seed sown in his mind might ripen and bring forth fruit in his future life. That parting, and that prayer, Edward ever remembered.

On their arrival at Mr. Wells' place of residence, Edward was placed at school in the University, where his progress was even more rapid than his kind friend had anticipated. It had been the intention of Mr. Wells, as soon as Edward's preparatory studies had been completed, to send him to College — but before that time arrived, the society of his protegee had become so necessary to happiness he could not bring his mind to consent to a separation; and where was the necessity for such a step? Mr. Wells himself was fully competent to educate him, and believed he could manage and guide any boy, better than many of his friends did theirs — an opinion quite common among bachelors.

With all his amiable and social qualities, our friend had not married. In early life he was engaged to a lady every way worthy of him, to whom he was in a few weeks to have been united, when she perished by one of those fearful accidents that shroud whole communities in mourning and gloom. This calamity fell with a crushing weight on Mr. Wells, who for a time gave himself up to despair,— but when reason resumed her empire he became sensible of the sinfulness of spending his life in useless regrets, and permitting his talents to remain unemployed. Possessed of wealth, his large benevolence prompted him to seek out the children of want and misfortune, to raise up and encourage poverty—crushed genius,— and that he might the more effectually aid the oppressed against the strong arm of the oppressor, he applied himself to the practice of the law. Though he had measurably recovered his cheerfulness, and was surrounded by warm and adoring friends, there was still a void in his heart, and his hearth was lonely. His affections, he believed, would ever be a sealed fountain — but the pure waters of that fountain again gushed forth, and he lavished on the child of his adoption that intense love that is called forth by guileless youth from the unoccupied heart of advanced age. He was charmed with Edward's quick and lively perceptions, the depth and purity of mind, but above all with his amiable and affectionate disposition. The seared leaf was again expanding, life was invested with new charms, and Mr. Wells set about the "the delightful task" of training and cultivating the mind of his young pupil, with a degree of interest and pleasure of which he scarcely believed himself capable. No — he would not place him at College, where he might lose that freshness and purity of mind he loved to cherish.

Every day Mr. Wells discovered some new excellence in his pupil, who, anxious to evince his gratitude for such solicitude, tasked his energies to realize all his tutor's expectations. A room back of Mr. Wells' office was fitted up to serve for a study, that opened into a small garden which was filled with shrubbery, rare and fragrant flowers, both natural and exotic. For exercise and relaxation from study, Edward was entrusted with the care of the flowers; he was likewise at liberty, whenever inclined to do so, to stroll in the woody environs of the town: he therefore became familiar with every secluded and romantic spot, knew where the wild flowers grew in the greatest profusion, "and could tell where the soft twilight of the arching woods fell with the most tempting beauty." There, with book in hand, he would pursue his studies, and breath the "inspirations of the forest,"—"and thus by nature was his mind illumined and made pure." Years glided away in the pursuit of knowledge—years of happiness, both to the tutor and the pupil.

Nothing's so hard, but search will find it out."

### BALANCE FIGURES.

AMONG the novelties which scientific investigation has added to our toys, are several figures, which will raise themselves upright whenever they may have been thrown down, and regain the erect position, notwithstanding their equilibrium is disturbed. To make one of the simplest of these toys, mould the figure of a man out of any very light substance, the pith of the elder-tree, for instance, which is soft, and can be easily cut into any form. Then provide a hemispherical base, of some heavy material, such as the half of a large leaden bullet, and take away all inequalities which may be on the convex part. Fasten the figure to the plane surface of the bullet, and in whatever position it is placed, when left to itself, it will immediately rise upright.

### MISCELLANEOUS ENIGMA.

I am composed of 37 letters.
My 1, 13, 8, 36, 1, 13 is where all should go.
My 2, 8, 15, 8, 19, 12 is a month of the year.
My 3, 13, 23, 2, 3, 36, 18 a place of amusement.
My 4, 5, 25, 33, 7, 35, 12, 10, 36 is a quadruped.
My 5, 8, 1, 37, 35, 17, 34 is a girls name.
My 6, 22, 25 is a bird of prey.
My 7, 20, 6, 36, 15, 18 a lake in New York.
My 8, 29, 33, 6, 34 is strength.
My 9, 3, 26, 36, 17, 33, 3, 27 never ends.
My 11, 33, 15, 13, 3, is what we should not do.
My 12, 35, 3, 3, 25, 26, 36 will come to a bad end.
My 13, 6, 8, 30, 31 is what we live in.
My 14, 5, 32, 33, 36, 28 name of a village.
My 16, 2, 30, 12 one of the points of a compass.
My 24, 28, 12, 8, 36, 29 one of the planets.

My whole contains the names of different individuals residing throughout the country.

### GREEN-MOUNTAIN HEROES
OF '76.

BY HENRY W. DE PUY, author of "Louis Napoleon and his Times," "Kossuth, &c."—428 pages 12mo. with a steel engraving of Kinney's Heroic Statue of Gen. Ethan Allen, a Map showing the route of Gen. Burgoyne, previous to his surrender at Saratoga, Oct. 17th, 1777, and a view of Old Ticonderoga

This book, full of thrilling interest, should be in the hands of every American. Independent of its being historically valuable, it contains many accounts of hair-breadth escapes, hardships, and sufferings, almost past belief, and of bloody battles where the heroic Green-Mountain Boys fought in the defense of their homes, their children, and their wives. Although Ethan Allen is the principal subject of the work, brief historical and biographical reminiscences of many others, who are identified with the early history of New England, are given; thus weaving all together into one succinct and interesting historical narrative.

AGENTS WANTED.— This work affords a rare opportunity for Agents, and others, wishing to engage in a light and profitable business, as a liberal percentage will be allowed to all persons canvassing for the work.

Single copies, done up in substantial wrappers and delivered free of postage to any post-office in the United States, will be furnished for $1.25.

Address, *post-paid*, BEADLE & BROTHER,
*Buffalo, N. Y.*

### GENESEE VALLEY NURSERIES

A FROST & CO., Rochester, N. Y., offer for sale the following, at low prices, which comprises a part of their large stock, that they will forward to any section of the country. Parties can depend that no second rate articles will be sent out, and that they will prove to be true to description.

The packing is done in the most secure manner, that plants may reach their destination in perfect safety.

Standard Apple, Pear, Peach, Cherry, Apricot, Nectarine and Quince Trees.

Dwarf and Pyramidal Pear Trees, on imported Quince.

Dwarf and Pyramidal Apples; Bushes, 1 and 2 yrs. old for Gardens.

Dwarf and Pyramidal Cherry Trees, 1 and 2 years old.

Grape vines, native sorts.

Grape vines, Foreign sorts, in pots, comprising 18 best varieties.

Currants; White and Red Grape, Cherry, May's Victoria, White and Red Dutch, Black Naples and English, and 8 other sorts.

Gooseberries of 40 Prize Lancashire varieties best suited for cultivation in this climate.

Raspberries, Strawberries; Esculent Roots, such as Rhubarb of sorts, Sea Kale, Asparagus, etc.

Hedges.—Privet, 1 and 2 yrs; Buckthorn and Osage Orange, 1 year.

The *Ornamental Department* of Hardy Trees, Shrubs, choice Roses, Herbaceous Plants, etc., is very extensive.

*Bedding Plants.*—Their stock of Dahlias, Verbenas, &c., &c., of extensive and choice varieties of the respective kinds, can not be excelled, if equalled, in the U. States.

100,000 Norway Spruce Firs and other hardy evergreens, 3 to 15 inches high. Price low by the quantity.

The following *Descriptive Catalogues*, lately published, and containing the prices, will be mailed free, upon application, when one cent postage stamp is enclosed for each catalogue wanted.

No. 1. A descriptive catalogue of Fruits, Ornamental Trees, &c., &c.

No. 2. A descriptive catalogue of Dahlias, Verbenas, and other bedding plants.

No. 3. A wholesale catalogue or trade list, for Nurserymen and others who wish to buy in quantities. 167w6

### POLAND OATS BY MAIL & EXPRESS.

PACKAGES of 10, 20 and 40 lbs. of these oats will be put up in strong muslin sacks, and sent by Express to any part of the country as follows:—10 lbs. for $1; 20 lbs. for $1,75; 40 lbs. for $3; all orders to be pre-paid, enclosing the cash, and directions for sending. The sacks will be delivered in Canandaigua or Rochester. I will send ½ oz by mail (as before offered.) for 9 cts., each additional ½ oz., 4 cts., pre-paying all sent at this rate. Postage stamps will be received for small amounts. All remittances will be entered on a book in the order they are received and promptly responded to, or the money returned if my stock should become exhausted.

Address I. W. BRIGGS,
March 12, 1853. West Macedon, Wayne Co., N. Y.

### Credentials of the Rural, from Reliable Sources.

IN order that those unacquainted with the RURAL NEW-YORKER may know the estimation in which it is held by the public, we annex a few voluntary notices of the Press:

For judicious selection, mechanical execution, and ability in the preparation of original articles, we do not hesitate to pronounce the Rural New-Yorker "the best Rural, Family and General Newspaper," that we have any acquaintance with; and we are glad to learn that its merits are so well appreciated by the public as to warrant further improvements, and to stimulate yet higher exertions by its publisher in the forthcoming volume.—[Ontario Repos.

MOORE'S RURAL NEW-YORKER.—The number before us closes the third volume of one of the best Agricultural and Family Newspapers in the world. It is conducted by four able editors, at the head of whom stands D. D. T. MOORE, Esq., the enterprising publisher.—[Louisville (Ky) Journal.

The Rural New-Yorker is one of the most ably edited, interesting and successful papers of its class in this country, and during a period of the three years which it has been published, has acquired a very large circulation.—[Boston (Mass.) Journal.

Its leading feature, perhaps is agricultural; but in the departments of the arts, the sciences, education, history, literature and the daily news, it is most ably and admirably sustained—is an honor to the newspaper family, as well as to its editor and proprietor.—*Mich. Chris. Herald.*

Independent of its being the very best agricultural paper that has ever come under our notice, its literary merits are unsurpassed. It is certainly the best and most useful paper of the kind we have ever seen.—*Pa. Whig.*

MOORE'S RURAL NEW-YORKER is one of our exchanges, which we always open with pleasure. It is free from politics and party, and always comes to hand filled with a choice variety of well written, and well selected matter.—*New York Observer.*

THE WOOL GROWER AND STOCK REGISTER, at Rochester, is one of the neatest printed, as it is one of the most valuable, of publications. We dip into its pages with interest. The NEW-YORKER, is also one of the best Agricultural publications in the world, and deserving the wide and increasing patronage it receives.—*Cayuga Chief.*

### MOORE'S RURAL NEW-YORKER:
A WEEKLY HOME JOURNAL,
For both Country and Town Residents.

PUBLICATION OFFICE,
BURNS' BLOCK, CORNER STATE AND BUFFALO STS.,
ROCHESTER, N. Y.

TERMS, IN ADVANCE:

TWO DOLLARS A YEAR — $1 for six months. To Clubs and Agents as follows:— Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

Terms of Advertising:

ONE DOLLAR per square (ten lines—100 words, or less,) for each insertion,—*in advance.* ☞ The circulation of the NEW-YORKER is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 15. ROCHESTER, N. Y.—SATURDAY, APRIL 9, 1853. WHOLE NO. 171.

**MOORE'S RURAL NEW-YORKER:**
A QUARTO WEEKLY
**Agricultural, Literary and Family Newspaper**

CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

The Rural New-Yorker is designed to be unique and beautiful in appearance, and unsurpassed in Value. Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ For Terms, &c., see last page.

## Rural New-Yorker.

### Progress and Improvement.

### INDIAN CORN.—ITS CULTURE, &c.

Indian Corn, in these sections of our country adapted to its production, is becoming one of the most surely remunerating crops which can be grown, and each year it attracts more and more the attention of the farmer. The large use which may be made of this product in feeding and fattening cattle, swine, &c., renders it an article of much importance for consumption on the farm, and the demands of both foreign and home markets are such, that any surplus may usually be disposed of at fair prices. The product per acre is more in proportion, as a uniform rule, with the attention given to the preparation of the soil, the planting and culture, than most other grains,—the crop not being so liable to blights and diseases and the ravages of insects.

No plant bears better or repays more richly, an abundant supply of manure. Its growth on a suitable soil, is large, rapid and healthy, and it is a gross feeder—one not often injuriously affected by the quantity or quality of the fertilizers supplied. Tho', like others, this crop has its favorite aliment, yet it possesses greater power of assimilating the different manures to its use than most grains. Hence, as a preparatory—as one in a series of crops in which it is intended to give large quantities of the coarser manures—it is one of the best which can be employed. To restore worn-out lands quickly, to a high state of fertility by this means, and yet to produce constant returns, the corn crop is often employed by our most intelligent farmers.

We are aware that no course can be marked out, suited exactly to the circumstances of many of our readers, but from the plan which even one man pursues successfully, others may gather hints which they can adapt to their own use, appropriately and profitably. Let us instance, then, one case of corn on green sward.

During the present month, upon the old meadow, pasture or clover ley, intended for corn, place from thirty to fifty, two-horse loads of barn-yard manure, and about the close of the month plow the same under, as neatly and perfectly as possible, at least nine inches deep. Then, with a harrow or cultivator, or gang plow, perhaps, reduce the surface to as fine tilth as may be without disturbing the sod. Early in May, plant well-selected, well-saved seed, in straight rows, about three and a-half feet apart each way, and when it is up so that it can be easily seen, pass through with a one-horse cultivator and then dress with a mixture of ashes, plaster and salt; a handful to each hill. Cultivate again and dress carefully with the hoe, leaving four or five plants to each hill; and keep the soil by frequent harrowing and hoeing, light and clean as long as the size of the corn will admit of the passage of the horse and cultivator between the rows. And, keep the soil clean throughout the season, allowing no weeds to steal the fertility of the land and rob the present and future crops of the nutriment properly their due. A good crop will be the result, if the season be not remarkably unfavorable, and, if it is, this course alone will produce any return.

An examination of the reports of premium or remarkable corn crops, convinces us that a well-manured, rich soil, and thorough culture are, more than anything else, the requisites for raising the same. The variety must be suited to the locality—our short summers, needing a kind that grows rapidly and matures early, while south and west the larger, coarser kinds are more productive. A well-drained loam is perhaps the most congenial soil for the corn plant. Upon sour, wet land it will not flourish, nor will the manures it requires, there produce the effect desired. If also, the soil be deep and frequently worked drouth or its opposite has little effect upon the growth of the corn crop. In short, thorough farming is appreciated and repaid as well by this, as by any product to which the farmer can turn his attention.

### AN ESSAY ON LIQUID MANURES.

BY N. DAVIDSON REDPATH.

#### Second Article.

There are now no fewer than seven farms in Scotland, besides several in England, which are conducted entirely on the new system of liquid manuring. While it receives the unqualified approbation and approval of some of the most distinguished farmers and Professors of Agriculture, yet, like every thing new, it has to contend with all the prejudices peculiar to all innovations on established customs. The expense and trouble consequent on erecting the requisite machinery appear the greatest obstacles in the way of its introduction generally, but when once the "way to wealth" is perceptible, these difficulties will entirely disappear. Prof. Johnston, of Durham,—a name well known in the United States, and the Agricultural world, generally,—at a meeting of the Berwickshire Farmers' Club, said: I will now make a few observations in reference to the system itself. The principle upon which the profits of the system depends, involves three considerations, viz., first, upon the application of manures in the liquid form; secondly, the application of this manure to the raising of certain crops; and, thirdly, the mode of using up these crops in feeding cattle under cover. Now, in regard to the application of manures in the liquid form, it is the result of experience all over the world, that the application of a certain quantity of manure in a liquid form produces greater results than when in a solid form. This is clearly shown in the application of dissolved bones when used in a diluted and undiluted form. Now, at Myromill, (see report in first part of Essay.) it is not merely the liquid manure that is used, but also the solid droppings of the sheep, pigs, and cattle, which are dissolved in the tank. The effect of liquid manures depends upon the condition of the land and the kind of crops to be raised. It does not produce the same effects upon ordinary rye grass, and clover, that it does on Italian rye grass, on which the effects are very extraordinary. On cabbage, also, its effects are very remarkable and highly beneficial. Another observation I would make on this subject is, that the produce of a large quantity of grass appears to show that the amount of produce is not dependent so much on the nature of the land itself, as upon a sufficient quantity of manure being applied to it. Mr. Kennedy maintained to us, that he cut 50 tons of grass an acre per year, and though he did not tell us what quantity of guano he applied after each cutting, Mr. Telfer says he could apply as much as 20 cwt. with a profit, he using his grass altogether for the purpose of converting it into milk.* Now, you will observe that the principle of applying it in a liquid state is founded not only on a sound theoretical basis, but is attended with sound practical results.

The question, however, to be considered by practical farmers before adapting the system is, can a sufficient profit be realized to justify them, or their landlords, in erecting such machinery as we saw at Myremill? My impression is, that such expensive system of applying the manures, could not by itself, yield a profit. I do not mean to say that a more economical method of applying the liquid manure may not be desired, when its benefits may be extended to all.*

So great is the enthusiasm entertained by some agriculturists on the subject of liquid manure, that, to quote the language of Prof. Anderson, in a speech delivered by him before the Highland Society, as reported in the *Scotsman*, of 25th December last,—*every pound of liquid manure lost, is a bushel of wheat lost.* This, if true, is only true in theory, and must be received with necessary deductions; nevertheless, the superiority of liquid manure over farm-yard dung is established, both by experience and the testimony of Agricultural Chemists. It should be remembered, that tank manure contains a larger proportion of salts, particularly urea, than farm yard dung. Urea, says Prof. Johnston, is far richer in nitrogen than flesh, blood, or any of those other fertilizing substances, of which the main efficacy is supposed to depend upon the large proportion of nitrogen they contain. It is evident that 10 tons of farm-yard dung, and 10 tons of tank manure together, form unitedly, a richer compound than 20 tons of farm manure alone. And there is this additional consideration, which was hinted at in the first part of this paper, that the manure being soluble, the whole can at once be appropriated to the roots of the plants. This is peculiarly advantageous in turnip-culture. It is stated in the Board of Health Report, that one lot of Swedes (*rute-baga*) on the farm of Myremill, dressed with 10 tons of solid farm manure, and about 2,000 gallons of the liquid, having six bushels of dissolved bones along with it, was ready for hoeing ten or twelve days earlier than another, dressed with *double* the amount of solid manure without the liquid application, and were fully equal to those in a neighbor's field which had received 30 loads of farm yard dung, together with 3 cwt. of guano and 16 bushels of bones, per acre.—The yield was estimated at 40 tons the Scotch acre. The cost of manure and these Swedes, by the pipe, was 6 shillings and 6 pence, English, ($1 43,) per acre; and by carts and horses, 10s. ($2,42,) in the one case, and 11s. 6d. in the other, showing therefore, a saving of from 3s. 6d. to 5s. English, per acre on the turnip lot.

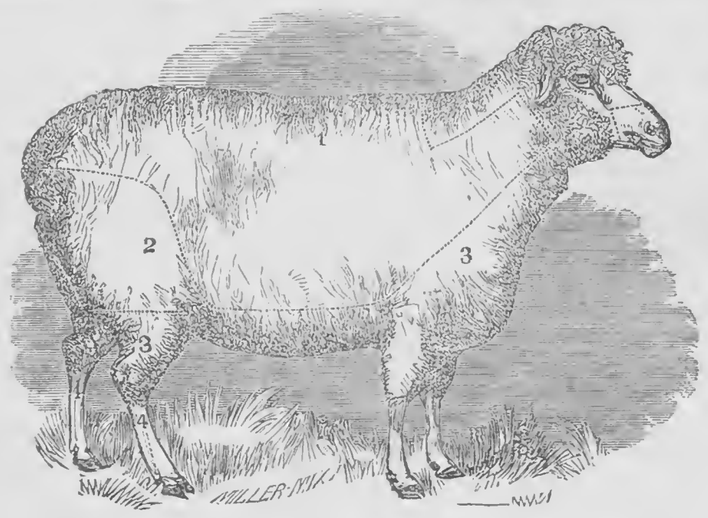
The system of liquid manuring is yet in its infancy—probably no farm in the United States is entirely conducted on this irrigating principle—it appears, however, to be worthy the attention of farmers generally, and particularly, of grazing and dairy farmers in the neighborhood of large cities.—On farms, therefore, all under grass or other green crops, where no cereals are produced, liquid manuring would pay better than any other kind of husbandry, particularly as large crops can be produced without deteriorating the soil.

With regard to stall feeding of sheep, there seems to be but one opinion of its superiority over all other methods. Not to speak of the value of the droppings of the sheep—which are allowed to fall through slatted bottoms into gutters beneath, and which are regularly flushed into the tanks, there to ferment†—the superiority of the system of stall feeding is evinced in the better health of the animals, and their greater rapidity in fattening, especially in winter—One interesting fact is stated by Mr. Kennedy, that the fleeces of sheep confined in pens, weigh on an average two pounds more than those which have pastured during the previous year out of doors, besides being improved in the staple of the wool.

*An American ton is 2,000 lbs.; a British ton 2,240 lbs., avoirdupois weight,—the English hundred weight being 112 lbs.

*When Homesteads are situated on heights the liquid manure would require no machinery for lifting and forcing, as it would distribute itself along the pipes, by gravitation, when required. The Scotch farmers consider the distribution of the liquid by pipes as decidedly the most economical, and view the distribution by water barrels as utterly ruinous.

†Mr. Kennedy estimates the value of this manure at 5 to 6 shillings English, yearly, for each sheep. He believes that it contains more ammonia than the dung of other animals, as it ferments more rapidly in the tanks.



MERINO EWE.—WOOL SORTING ILLUSTRATED.

In "Youatt on Sheep," we find the following remarks on sorting Merino wool, as practiced in Spain. The cut is among the illustrations of the Wool Grower and Stock Register for April:

The Merino fleece is in Spain sorted into four parcels. The above cut, while it contains the portrait of a Merino ewe, points out the parts whence the different wools are generally procured. The division can not always be accurate, and especially in sheep of an inferior quality, but it is more to be depended upon in the Merino sheep wherever found, for the fleece is more equally good, and the quantity of really bad wool is very small.

Both Lasteyrie and Livingston agree in this division. The *refina* (fig. 1,) or the pick-lock wool begins at the withers, and extends along the back to the setting on of the tail. It reaches only a little way down at the quarters, but, dipping down at the flanks, takes in all the superior part of the chest, and the middle of the side of the neck to the angles of the lower jaw. The *fina* (fig. 2,) a valuable wool, but not so deeply serrated, or possessing so many curves as the *refina*, occupies the belly, and the quarters and thighs, down to the stifle joint. The *terceira* (fig. 3,) or wool of the third quality, is found on the head, the throat, the lower part of the neck, and the shoulders, terminating at the elbow; the wool yielded by the legs, and reaching from the stifle to a little below the hock, forms a part of the same division. A small quantity of very inferior wool is procured from the tuft that grows on the forehead and cheeks—from the tail, and from the legs below the hock (fig. 4.)

Thus we have written, with a view rather to report agricultural progress, than to achieve agricultural changes. Prejudice, and even ingenuity are ever arrayed against innovation or preconceived notions, and many are so pugnacious that they would rather contend for victory than for truth.—These things, however, ought not so to be. Are any of the readers of the Rural informed on the subject of liquid manuring? Let them relate their experience. Are any ignorant, or are any desirous of fuller information? Let them propose their difficulties, and if they cannot be instructed by abler hands, we may be induced, at some early date to follow up this attempt, by a third article on this interesting branch of Rural Economy.

### ALLEGANY COUNTY, N. Y.

ITS TOPOGRAPHY, PRODUCTIONS, ETC., ETC.

Allegany County is situated in the southern and western portion of the State of N. York. It originally extended from the Pennsylvania line north 40 miles, and about 30 miles in width. A few years ago the northern tier of towns were detached and annexed to Wyoming and Livingston counties. The county is traversed from south to north by the Genesee river, which, with its branches, affords abundant facilities for watering purposes, as well as powers, and privileges, for grist and saw mills. The northern portion is less rugged and uneven than the southern, which is quite elevated, and the whole county, except the Valley of the Genesee, is considerably higher than that portion of country bordering upon Lake Ontario. Consequently the climate is moister and cooler than other parts of the United States, in the same latitude.—Situated at the eastward of the great lakes, it is subject to high winds, and lowering weather.

This portion of country, in its primitive state, possessed all of the varieties of timber usually found in the northern States.—The hills and ridges were covered with pine, intermingled with varieties of oak, as well as chestnut, from which large quantities of the best kinds of lumber have been procured. In the valleys and upon the hill-sides, maple, beech, basswood, elm and cherry, were found in great abundance. In no other portions of country were sugar orchards to be found to so great a degree as in this. And from its first settlement, it has been celebrated for the quality and quantity of maple sugar made within its borders.

The varieties of soil are numerous. In the valley of the Genesee, as well as those of its numerous branches, alluvial soil is found, justly celebrated for its productive qualities. In the northern portion and upon those portions of soil covered with pine and oak, the soil is yellow loam, deep and favorable to the cultivation of winter wheat and yellow corn. Upon that portion more particularly occupied with beech and maple, the soil is a shallow,—much of it lying upon a subsoil of clay and gravel, usually denominated hard-pan. This has generally been considered the poorest soil for grain, but luxuriant for grasses. The introduction of subsoil plows, together with under-draining, will, it is believed, do much, and have done much, to change the nature of this kind of soil. When treated in this manner, it is found to contain nearly all of the constituent properties necessary for producing heavy crops of all kinds of grain, except winter wheat. The absence of lime, perhaps, is the reason why this soil fails in this respect. As before remarked, the moist nature of the climate, causes it to excel in the grasses, and crops of potatoes and oats.—In consequence, the best interests for the farming community to pursue in this region, are dairy products, and the raising of various kinds of stock. And, in these branches of agriculture much money has been made in this county, for the last 15 years. The increase of capital in this respect, will continue to increase as the amount of land brought under cultivation is augmented.

Prior to 1810, but little of this county had been settled. A few of the hardy pioneers of that day had ventured into its almost impenetrable wilds. The fertility of the Genesee Valley, early attracted settlers, but the best portion of the valley still belonged to the red man. Like many other portions of Western New York, its settlement was slow. Far removed from any thing like a market, the rugged nature of the soil combined to make the progress of the farmer a slow one. Again, the tenure of the soil was in the hands of companies, who were desirous of making ample fortunes out of its sale. In consequence, the price per acre, was so enhanced that immediately after the United States surveys of the Western lands, and their offer of those lands at $1,25 per acre, the tide of emigration was diverted, and a large portion of the lands of this county remained unoccupied for many years. The amount of toil, the suffering

and privation endured, can only be realized by those called to face the same. For a long period, from its first settlement up to 1825, but little progress was made in wealth, except that of improvements upon the land. Stock, the greatest item then raised, which the settlers could part with, had no sale; barter was the lawful tender of those times. About 1825, the agents of the Holland Land Company commenced buying cattle of the settlers in payment for their lands. This circumstance introduced drovers, and from that period there has been no lack of buyers of neat cattle. For further particulars of the history of this region, I would refer the reader to TURNER'S Histories of the Holland Purchase and Phelps and Gorham's.

Indirectly, this section was benefited by the building of the Erie Canal. But it is within a few years that this region has had an accessible and ready market. The completion of the New York and Erie Railroad, which runs through the southern part of this county, was the dawn of a new era to that portion, hitherto a benighted region.—The Genesee Valley Canal is finished about midway of the present limits of the county. The New York City Railroad, from the Erie Railroad at Hornellsville to Buffalo, crosses the north-east part of the county, which, together with several plank roads, in different parts of the county, now affords abundant facilities for commercial purposes.

In the progress of settlement, several flourishing villages have arison. Among which may be named Angelica, the county seat, Cuba and Wellsville, upon the line of the N. Y. & Erie Railroad, Oramel and Belfast, at the head of the finished portion of the Genesee Valley Canal; and Rushford and Alfred, with their academies for the instruction of the youth of the surrounding community. Alfred Academy has been in existence for quite a number of years, and is now one of the best and most flourishing institutions of the kind in Western N. York. Rushford Academy has been in opperation little more than a year and bids fair to become, from the spirit displayed by the community around it in the construction of the building, as well as the character of teachers employed, an institution of permanence and ability. Besides the above institutions of learning, there are connected with several of the villages in this county, Union Schools, in which more or less are taught many of the branches usually pursued in academies. Societies and churches of the various religious bodies prevalent in Western New York, are found in almost every town and village, most of whom have comfortable and comodious houses of worship. The character and intelligence of the population of this county will compare favorably with those of other counties in Western New York.

Although for a long time this portion of country was esteemed but of little value in comparison to other portions of the State, and oftimes held up as a place of derision and contempt, by the more aristocratic neighbors of the highly favored (by nature,) regions around Lake Ontario, yet perhaps no section of country at present holds out so many advantages for acquiring wealth, as Allegany. The value of its real estate has not yet arrived to that height to which it has in more favored regions. While grain growing counties, in Western New York, have become exhausted or require a great outlay to keep them up to a proper state of fertility, the lands in this region are growing more and more valuable. It has been carefully estimated that more per cent. profit, according to the present value of real estate in the different counties, has been made during the past year in the county of Allegany, than in the county of Monroe—aside from the city of Rochester. Be this true or not, the condition of the agricultural population of this region is far in advance of 15 years ago. Of one thing, (and it is no small one,) this county can boast, that it has never been subject to any great degree to bilious and intermittent complaints. The air of its hills is always pure and bracing, and the appearance of its population hale and robust. Farms can be procured, but all that they are worth will have to be paid for them. Persons wishing to change their locations would do well to make this region a visit. WM. BLANCHARD.

Centreville, Allegany Co., N. Y., March, 1853.

---

TO CURE RINGBONES.—The horse must be cast. Behind the first joint above the foot is a tuft of hair, growing upon the point and called the fetlock; in the centre of this point an incision must be made, an inch and a half long, perpendicularly through the skin, and a white skinny substance presents itself, resembling a bladder; insert a hook in this tough substance, and a little cutting, on either side, takes it out. Experience in hundreds of cases, has proved that this method will cure the lameness, positively, but will not remove the bunches, which, probably, cannot be moved by any external application whatever.

---

RICH soils grow large crops.

## POULTRY:

ROYAL COCHIN CHINAS.—BRAHMA POOTRAS.

IN the rivalry to gain precedence among the varieties of foreign fowls, we beg leave to interpose a word in regard of the Royal Cochins. Between this variety and the Shanghai, there is very little difference.—The Cochins, ordinarily of a buff color, are considered to be rather more full and plump in the breast, and sometimes the larger, and generally, though not uniformly, to have clean limbs. The Shanghais, as a characteristic trait, are understood to have feathered limbs, although there are frequent exceptions. But without making invidious comparisons between the two varieties, where both are so near alike and both excellent, it is our present purpose to speak a word in favor of the Royal Cochin Chinas. They have derived this title, in distinction from those of other importations, from the fact, that Mr. BURNHAM, of Boston, obtained them from Europe, derived immediately from the stock of her Royal Highness, Queen VICTORIA. From the circumstances of such ownership, it is fair to conclude, that they were bred to the highest perfection.—And the size, color, and form of the birds here, entirely favors this opinion. There are other varieties that have recently put forth great claims to popular favor, on account of extraordinary size. But we greatly doubt, whether, in the public sentiment, on trial, they will be found to secure and maintain the reputation and standing of the Royal Cochins.

The birds of this breed that were exhibited in the Arcade, a few weeks since, and then noticed in the Advertiser, bred and owned by MILES DECKER, of this city, were splendid specimens of this variety. We hazard the opinion, that it would be difficult to surpass or even equal them, by any other specimens of the breed to be produced in the city. For beauty of form, for size according to their age, and for uniformity, richness and beauty of plumage, (a deep buff,) they excelled any birds that have hitherto come under the eye of the writer. Fowls bred from such stock cannot fail to meet the expectations of those who wish fine birds of genuine blood—though efforts are now making by interested persons, to introduce the Brahma Pootras, and to secure for them an entire supremacy. Their claim to this position, is based upon the single fact of their extraordinary size. Allow this fact to its fullest extent, and we beg to know, if it is a recommendation and not an objection. It is impossible for a pair of fowls to weigh 25 or 26 lbs., and not be proportionably costly to sustain, and not incur the hazard also, of being coarse indeed.—For a hen to weigh 7 to 8½ lbs. and a cock 9 to 11 lbs. at 12 months old, (the mark reached by good samples of Cochins and Shanghais,) ought to be considered entirely satisfactory. It is as large, we think, as is consistent with all the other desired excellencies of the domestic fowl.

But what are the Brahmas? And how immeasurable is the community imposed upon, in the birds palmed off as such! Mr. MINER, author of the new poultry book, (who is paramount authority,) says, "they are white, with black tails and wing tips, and a slight penciling of black in the neck feathers." We accept the description. It is doubtless correct. But we have seen Brahmas sent from the East, brown as a partridge;—others there are "steel mixed,"—"pepper and salt mixture," "silver grey"—white with scarce a black feather upon them—and others again with all the blendings of black and white that constitute the grey Shanghai, worth it may be three dollars the pair—and these are the Brahmas for which twenty dollars are charged. It might be wise for the man whose money costs him anything, to wake up from this reverie, and know what he buys, and of whom he buys. There are genuine birds of this breed beyond a doubt; but the difficulty is to know when they are such. What, except size, is their distinctive and superior excellence, is yet to be discovered. So far as uniformity and beauty of plumage is concerned, they bear no comparison to the raven black, the pure white, and the rich buff of the Shanghai, and Cochin China.

The late Metropolitan Show of Fowls in London produced great excitement. An English paper states, that one gentleman, near London, sold a pair of Cochin Chinas for 30 guineas, and another pair for 32 guineas. He has been offered £20 for a single hen; has sold numeroas eggs at one guinea each, and has been paid down for chickens just hatched, 12 guineas the half dozen, to be delivered at a month old. This speaks largely, for the Royal Cochin Chinas.

HONG KONG.

THE brightness of the plow-share will prove a better security to our republican institutions than all the windy patriotism of long speeches in Congress.

## CONDENSED CORRESPONDENCE.

### The Jointer Plow.

EDS. RURAL:—In No. 12 of the present volume, is an inquiry for more information respecting the Jointer plow, described by LINUS CONE, of Troy, Oakland county, Mich., and farther recommended by myself. Several months after I received the Jointer, I learnt it was a patented article—the patentee, Mr. SMITH, residing in Oakland county, Michigan. From a neighbor of Mr. SMITH, I learnt that Mr. S. was the patentee of the Michigan Sub-soil plow, also. But to make farther improvements, he got up the Jointer to be attached to the beam of a common plow. It is made of cast iron, in shape similar to any plow, with a mouldboard, land side and a coulter point. The standard is fastened to the beam of a common plow, with a gripe, the same as a coulter. It cuts a furrow about six inches wide, and does the work the best when set to cut a furrow about 1½ inches deep. Straw, cornstalks, stubble, or a heavy growth of clover, are but little hindrance to the Jointer's doing good work. It lays its furrows so close to whore they gather before it, that it catches and lays them on the outer edge of the main furrow. The main plow turns them completely out of sight, and their falling under the centre of the main furrow elevates that part of it from which the Jointer took its furrow slice, just right for the harrow and cultivator to pulverize into a fine soil.

Farmers, the first opportunity, get a Jointer. Give it the same pitch the plow has, and set to work one inch more to land than the main plow. The point of the Jointer should be sharp enough to cut the roots of the various grasses easily, and the main plow should have a gague wheel on it to give uniform depth of furrow. I would refer all for farther information, to the patentee. The Jointer should, and I think will, come into general use for breaking green sward, and covering up manure.—ALVIN WILCOX, *West Bloomfield, N. Y.*

### Saving and Applying Manures.

FRIEND MOORE:—Much has been said in regard to saving and applying manure; not only the solid but the liquid portion seems to claim some attention. I have tried a plan differing from any that I have noticed. It is this:—My stables are kept well littered; the floor being tight so that the liquid will not leak through. When the stables are cleaned, I come around with my team, throw on and take the manure to the field, and spread it where I want it. Having practiced this plan four or five years, and pleased with it, I would cheerfully recommend it to brother farmers generally.—R. S. RANSOM, *Perryville, N. Y.*

---

WHEN TO SUB-SOIL PLOW.—*Inquiry.*—I wish to inquire of you or some of your correspondents when is it best to use the subsoil plow for wheat, the first or last time plowing? Please inform me through the RURAL, and you will oblige—A YOUNG FARMER, *Yates, N. Y.*

REMARKS.—We should recommend "a young farmer," to use the subsoil plow, the first time plowing, and let that "*first time*" be as early in the season as practicable.—The sub-soil plow is used for the purpose of breaking up the stiff soil below the reach of the common plow. This lower strata is rich in many of the essentials of good crops, and only needs breaking and pulverizing so as to allow the roots of grain and plants to penetrate it and draw therefrom a more rich and abundant supply of what is necessary to sustain vegetable life, and perfect the grain.

We should plow early while the ground is yet moist, (not wet,) that it might be done with less labor, the plowing be deeper and the work more thoroughly performed.—Another reason would be that the rains of summer might permeate the sub-soil, and render it more mellow, thus enabling the tender roots to reach down into its rich stores of organic and mineral manures. If it was desired to drain land by breaking up the subsoil, the earlier in the season the work was done, the more effectually would the end be attained. †

---

PAINT FOR BRICK HOUSES.—A correspondent of the Ohio *Farmer* has used a cheap and very durable paint for the exterior of brick dwellings, which has already stood several years, and is now quite as fresh as when first applied. It consists simply of limewash, with sulphate of zinc as a fixing ingredient. Any requisite shade is given by adding the colors used by house-painters.—a clear and rich cream color may be obtained by applying yellow ochre to the common new brick; a livelier and warmer shade will be added by a little Venetian red. Burnt sienna may likewise be used. This paint is far cheaper than oil paint, costs but little more than common whitewash, and nothing will remove it but the severest friction.

INVETERATE youth is one of the worst infirmities of age.

## AGRICULTURAL ADDRESSES.

### The Appreciation of Agriculture.

WE have been favored by S. P. CHAPMAN, Esq., of Clockville, N. Y., with the Address of Hon. T. JENKINS, before the Madison Co. Ag. Society last autumn. It was well received, as it deserved to be, and the following extract will repay perusal:

The due appreciation of all men, occupations and callings, evinces a high state of mental culture. By this I do not mean so much an extensive acquaintance with books, as a thorough knowledge of men and their pursuits, and the value of which each calling imparts to all others. We look at the dark side of our own pursuits, and covet the occupations of others as seen in the full blaze of sunlight. What professional man has not longed, from the bottom of his heart to exchange his condition for the quiet labor and peaceful repose of the farmer?—The farmer, on the other hand, thinks it an agreeable thing to dose patients with physic, plead law, and preach. To him the task might well, at first view, appear so easy as to create the impression that he in his own person could fill all three professions, at least for one or two townships, and carry on a pretty good stroke of farming at the same time. Whoever supposes that it is an easy thing to be a good and successful farmer, mechanic, merchant, doctor, lawyer, or clergyman, has himself no enviable attainments in either avocation. I pronounce that employment the hardest which is the most negligently followed, and that the easiest which is the most laboriously and perseveringly pursued.

Among a well informed people, the different employments naturally tend to encourage each other. Farming lies at the foundation; and it is entitled to the first rank, not because it is farming, but because it is indispensable. The time has been when this noble occupation, in every part of the world, was in the hands of slaves. It was then regarded as abject and unworthy of freemen. Now it has risen to a rank inferior to no other pursuit. The dissemination of knowledge, and its attendant consequences, has brought about this great revolution. Every other occupation, and all the professions, instead of being antagonistic to the well-being of the farmer, contribute in various ways to his elevation and advancement. Business alliance, family association, and benevolent and religious organizations, bring together, daily, persons engaged in sundry employments, and each draws from the other lessons of practical wisdom.

Whoever, in any employment, rises above the common level, becomes in some sense public property. He sheds lustre upon all around him; and his neighbors more or less share his fame. The works of elegance and taste which his superior enterprise enables him to acquire, creates a spirit of laudable emulation in the circle of his acquaintance, and one after another, by increased diligence and energy, is thereby induced to ascend, step by step, in the great business of improvement. This is teaching by example. This is reducing theory to practice.—This also is the influence of knowledge upon industry. No matter where knowledge shall come from, whether it be gleaned among the musty records of antiquity, or drawn from the store-house of modern thought: no matter whether it be sent forth in the rough, from the cogitations and experience of the hardy plowman, or shot from the burnished quiver of the scholar; high or low, it acknowledges one universal brotherhood, and moves the heart to deeds of virtue and usefulness.

## THE AGRICULTURAL PRESS.

### Hints about Harness.

WE find the following hints on the treatment of carriage and working harness, in the *Zanesville Aurora*, but do not know whether credit is properly due to that paper or not:

For several years past, we have adopted the following plan of treating *Carriage Harness*, with so much comfort and success, that we have concluded to recommend it to you for working and carriage harness.

The whole thing may be comprised in a few words. "With hot water, soap, brushes and scrapers, make your harness perfectly clean. Next saturate with oil; lastly, a water proof elastic polish and blacking."

For your information, we detail to you how we go about accomplishing these results:—Select some afternoon with a prospect of a fair day following. Take your harness and take it to pieces, as far as you can unbuckle it. Put them into a tub or barrel, and pour boiling soap suds over them and let them stand all night. In the morning take a stiff brush, or corn cobs, or something else of the same sort, and with a smooth board in place of a wash board, with fresh water and soap, rub the coat of grease and dirt off each side of the leather. Sometimes it is necessary to use a dull old knife to scrape with. Pass each strap through a second clean water, and hang up on a line, exposed to the sun. As soon as they begin to dry, begin to oil them. Neat's foot oil is best, but fish oil will do very well. Make a brush by wrapping some flannel round a stick and tying it with thread, dip this in the oil, and pass over both sides. As it dries in, go over them again and again, until they will absorb no more oil. Let them stay out over night.

In the morning, if they are all soft and pliable, you may proceed to apply a varnish. If not, put on more oil until they do get soft and pliable.

The polish is made as follows: take a pint of fish or neat's foot oil, add four ounces of beeswax, four ounces clean beef tallow, one ounce rosin, and an ounce of lamp black. Melt;—when melted, add about two table spoonsful turpentine, and with flannel cloths, commence rubbing the harness both sides, draw the straps through and through the flannel. The polish must always be applied warm as the hands can bear it. Let your harness hang out one night. Take warm water and soap and wash all the black off, which will come off, with sponge or cloths. Hang up and in an hour or so, you can buckle together again, and it is fit for use. You will now have soft harness, with a dull shiny jet black surface, which will keep so for a whole year, if you have put oil enough on them to render them as soft as woolen cloth. They will retain this dull shiny black all summer, and mud will never stay on long after it is dry.

Any persons who will treat their harness so, once a year, will never regret the trouble.

If they need repairing, either do it yourselves or have it done, before the spring work comes on.

### Care of Carts and Wagons.

THE *New England Farmer* has the following sensible remarks on the subject of housing and painting farm vehicles:

It is strange what a difference there is among farmers with regard to the importance of housing their wagons and carts.—Prudent, economical men, in most things, are wholly insensible to the great loss they experience by allowing their expensive vehicles to be beaten upon and soaked by the storms, and checked, and shrunk by the blazing sun.

Wagons and carts from the maker's shop are seldom well-painted. The owner gets so anxious to be using his new cart, and the old one seems so unbearable, that the cart is taken from the shop before the little openings in the wood and the joints are half filled with paint,—the farmer "guesses it will do," and away it goes to commence a straight-forward course to decay. A few days after, it rains. The cart body is soaked through. The joints absorb water and swell. By-and-by, when the water has dried out, after having been dragged about the farm for several days, the joints become loose. This process needs only to be repeated a sufficient number of times to give you a heavy, rickety body, which, in a few years, breaks up and sends you to the mechanic again.

But the wheels are the most important part. Upon them has the most labor been expended in proportion to their weight, and of them should the most care be taken.—The hubs, generally, are made of elm. Elm, exposed to the weather, is of short duration. It is used because it is difficult to split it in driving the spokes. White-oak hubs invariably check and open, when uncovered by paint, and exposed to the weather.—White-oak timber,—indeed all timber, loses its strength and tenacity after being again and again exposed to rain and air. The hub then grows soft, the spokes settle into it a very little, and the consequence is that the tire is loose, and the blacksmith's aid is needed.

A wagon left out of doors will in a few years become a spongy, heavy mass, unprofitable to use. As proof of the correctness of these remarks, we know of a farmer who has run down three sets of wheels by exposure, and not by work, while another has a pair of wheels perfectly sound, built a year or two before his neighbor's first pair. In the first case the wheels have never been housed, winter nor summer; but have been left by the road-side, as if impregnable as the stone wall to injury from the weather. In the other case the cart has been uniformly housed, and always well painted. It must be very intelligible to the reader which is the wiser course.

### Spring Irrigation.

FROM a communication to the *New York Farmer* we copy the following seasonable paragraphs:

What are the circumstances which admit of the introduction of irrigation in our agricultural operations? Not certainly where large expenditures in damming and turning streams will be required, and still less where machinery is needed to accomplish the result. There are, however, hundreds of farmers whose lands are traversed by small streams, which are entirely within their control, and may be used with very little expense to the owner, for promoting the fertility of adjoining lands. Such are the small brooks, streams meandering though our farms, and carrying with them the elements of fertility for various crops, but more especially for the different grasses.

As a proof of the benefits to be derived from irrigation in a small way, I may mention an example which fell under my notice several years ago. A small stream crossed the road near the house, and on the farm of a poor farmer, and wound its way down to the lowest part of a meadow lying by the road side. By constructing a very slight dam just below the road, the whole stream or a part as might be desired, was turned at pleasure through a flood gate, and conveyed along an artificial channel near the road for a considerable distance, from which it was allowed to discharge at numerous side openings, and to flow gently and evenly over the meadow, and find its way gradually to the bed of the stream below.

The months of April or May were generally selected for the process, and until the grass became too large, the ground was pretty well deluged with water, and although in other respects poorly cultivated, and on other parts of the field not at all productive, here produced on the irrigated parts uniformly a heavy crop of hay. That it was the result of irrigation did not admit of a doubt. The whole expense was not five dollars, and probably after the first outlay of labor, less than three dollars per year, while the result was several tons of good hay in addition to the ordinary crop.

## GATHERINGS.

### Shanghai Sheep.

Geo. W. Kendall, of the N. O. Picayune, in the prosecution of his purpose to establish an extensive sheep farm in Texas, has recently returned to New Orleans with a pair of Shanghai lambs, which the Picayune announces in the following strain:

Sheep all the way from China, good reader!—Something of a novelty that! We are accustomed, thanks to Yankee adventure, to the terms Shanghai chickens, Shanghai eggs, &c., but we had no idea that the subjects of the Brother of the Sun, and fifty-third Cousin of the Moon, had any knowledge of the wool-clip or the taste of mutton chops. One would imagine that Chinese sheep would be like everything else that is Chinese—queer, odd, quizzical; but no such thing. These two lambs—for they are young 'uns—are quite as simple, and wooly, and dirty, and respectable-looking, as the most civilized of their European or American brethren. It's no use saying "chow-chow," or "Tehi ki" to them. They don't understand the green-tea language. A long voyage they have had of it, from Shanghai, on the other side of the globe, to New York—which is already a trip long enough to frighten any sheep—and then from New York to this city of abominations. They appear to take it quite quietly however, and thoroughly to understand the difference between people who wear tight inexpressibles, and those who sport baggy ones. The two innocent little big lambs propose emigrating to the prairies of Texas shortly, and we expect to hear of their lying down peaceably in the same flock with Mexican and Vermont specimens of their tribe! So ba-a it!

### Wool Growing Profitable.

The importance of Wool as a staple, is but just beginning to be realized among the farmers of Michigan and other States of the West. The repeated failure of the wheat crop in this section of the country, and its low price during an abundant season, have been causes for great discouragement to the agricultural community, and has compelled them to seek for relief from impending ruin, in some other of the gifts which Dame Nature lavishes so bounteously on her industrious votaries. The attention of the farmers of the North-West having been fortunately directed to the breeding of sheep, the experiment has been found to work admirably, and there has, for the past three years, been a continually increasing clip of wool sent forward to market from the interior of Michigan, in the aggregate amounting to some millions of pounds. The prices, so far, have been higher, more uniform, and better sustained than those of any other product of the farm, and, as the Paw Paw Free Press remarks, it is becoming pretty certain that wool is to be the leading agricultural product. The market for this article is very brisk, and the manufacturers have not a supply on hand, and importations to some extent have taken place the past season.—*Detroit Free Press.*

Chapped Teats.—We have had some experience with this difficulty, and never found anything better as a preventive and cure, than washing thoroughly in clean, cold water. If the weather is very raw, a thin coat of pure lard, applied after milking, is useful in addition to the washing.—Soft butter is said to be excellent for that purpose. In corroboration of the value of this treatment, we quote the following from a communication in the Prairie Farmer:

"I have used various liniments, and many kinds of ointment, but none in my experience came up to the mark like *clean cold water*. My practice is to take water to my cattle yard, as much as my milking pail. Every teat, and the lower part of the bag, whether sore or sound, is washed clean. The teats are then soft, the cow stands quietly, and no dirt falls into your pail."

Ringbone.—This disease so termed because it constituted bony growth round the pastern-bone, is of two kinds, which are distinguished by horsemen as true and false ringbones. The former occurs at the pastern joint, and generally arises from strain of these ligaments; but the latter consists in ossification of the cartilages of the sides of the foot, which become enlarged, as well as converted into bone. The best treatment for ringbones of either kind is, after the inflammation has been in a great measure removed by cooling applications, to fire the part, or otherwise rub in the iodide of mercury ointment, washing off the effects on the following day, and thus repeating it again and again. We have by such means succeeded in removing the lameness, diminishing the enlargement, and restoring the animal, in many cases, to a state of usefulness.—*Spooner.*

Wounds on Horses should be washed twice a day with clean, soft water, or with a little Castile soap, and then rub with whale oil. This answers for all seasons, keeps off flies, restores the hair, and of the original color. So says the author of "Domestic Animals."

Words of Approval and encouragement are daily received in letters ordering the W. G. & S R. We are often favored with remarks similar to the following, which we extract from a Virginia letter containing payment for the Wool Grower and the Rural New-Yorker:

"I esteem the Wool Grower as a very valuable paper indeed—one very much needed at the present time: for it is most manifest that the wool growing business is about to assume a very high stand in the ranks of agricultural pursuits; and I consider that paper well adapted to the wants of the country in this wise. I am no flatterer, but will say in regard to "Moore's Rural New-Yorker" that I think it comes nearer fulfilling its prospectus engagements, than any paper with which I have ever met. It is truly a *family paper* of much worth. Its literary and scientific parts are highly respectable, and its mechanical parts are most excellent."

# Orchard and Garden.

## APRIL.—KITCHEN GARDEN AFFAIRS.

In the eastern States and New York, as well as the States lying west on the same latitude, nothing as yet has been done in the Kitchen Garden. The spot of earth having been determined on, where the garden shall be made this season—you must be guided by the nature of the soil, and forwardness of the season, in working it. If the soil be of clay formation, do not work it with spade or plow, until the water is drained off or removed by evaporation—because, if you do, it will be full of hard lumps all summer—thus rendering your garden unproductive.

On the other hand, in case your soil be sandy, it may be worked while wet—for such soil does not, like the former, possess the kneading qualities of dough. By working sandy soil, when wet, you render it more compact, consequently more retentive of moisture, which is a very desirable quality in such a soil. Such a garden should be top-dressed with clay-soil and stable manure, or rather cattle excrements—whereas, your clay soil should receive a top-dressing of sandy-soil and horse-dung, and compost manure.

That earth, or soil for a garden that comes the nearest to perfection, is that which will retain its moisture the longest without leaking or becoming hard. This is loam, the medium between sand and clay. If your garden spot be sandy, mix clay-soil until you convert it into a loam—if clay, use sand until you have produced a like change.—Having prepared the soil, begin to put in the seeds, for early vegetables, just so soon as the temperature of the season and other circumstances will allow. Peas, you can scarcely plant too early, after the frost is out of the ground. Cabbage of the different varieties, lettuces, radishes, potatoes, early beans, and corn. Carrots, and parsneps, and onions, should be sown early, if you would maturely grow roots and bulbs. Forget not to sow a few early turneps.—Peppers should be sown towards the end of the month. So of tomatoes and kidney beans.

No precise day can be fixed on for planting—the gardener must be guided by observation and judgment, in this, as in most other kinds of business. There is a time as well as a place for all things, in the garden as elsewhere. Nick that time and you will be called one of the lucky kind, otherwise you will be denominated unlucky.

Take good care of your fruit trees. The pruning you have already done, if not, it is not too late to do it this season. Destroy the caterpillers as soon after they appear as you can.

If you intend to plant fruit trees this spring, it is high time that it be done. In doing this, procure good thrifty trees—plant no others. So of your garden roots, bulbs and seeds for planting—be sure to get the best—for it is a well established law of nature, that like produces like. Men do not gather grapes of thorns, nor figs of thistles—nor good strong, vigorous, plants from imperfect embryos of their kinds.—w.

## TORONTO HORTICULTURAL SOCIETY.

The friends of Horticulture at Toronto, C. W., met at Beard's Hotel, March, 23d, and organized a Horticultural Society; chose officers, adopted by-laws and regulations, and voted to hold three public exhibitions during the year. The first exhibition will be held early in June, for which a prize list has been prepared. Toronto is well situated for the production of the best fruits and vegetables, and from the known character, skill and enterprise of those who have been active in organizing this Society, we have every reason to expect it will prove vigorous and useful.

## HARDY ROSES.

The follwing may be relied on as being every way desirable and satisfactory:

*Hybrid Chinas*—Fulgens, fiery crimson; Chenodollo, light crimson; George the 4th, (Rivers') dark violet crimson; Aureti, dark purple; Cericetto, light red.

*Climbers*—Elegans, (Boursault;) Baltimore Bello; Queen of the Prairies, best of all.

*White*—Madame Hardy, beautiful; Striped Unique; Old English White.

*Moss*—Common, Rosinolla, Gen. Drouot.

*Perpetual*—La Reine, Baron Provost, Madame Laffay.

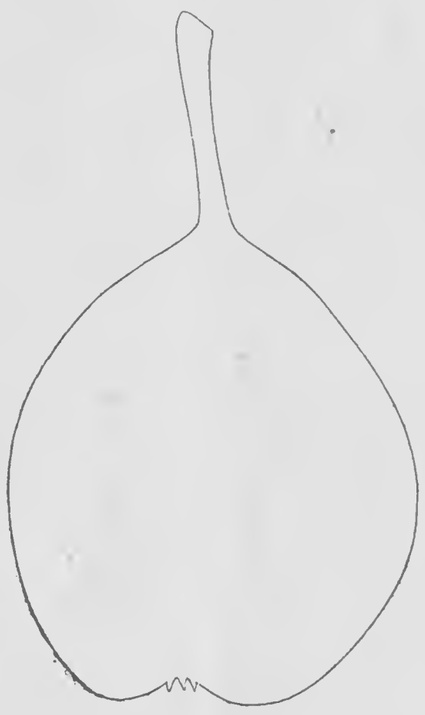
*Yellow*—Double Harrison, Persian.

Lilium Longiflorum.—A *long flowered* White Lily, very beautiful and of easy culture. Late in the autumn cut a sod, say a foot square, and lay it over the plant, grass down, and this will be ample protection from frost. The plant grows about two feet high. Try one.

## PLANTING ORCHARDS.

In planting orchards, whether of apple, pear or peach, we recommend the following course:—Having prepared the ground, as before advised, by *deep* and *thorough* working, put out the trees a liberal distance apart, setting them no deeper than they stood in the nursery, and then plant the field with corn. Mark out the ground in such a manner as to plant each tree to stand in the place of a hill of corn, and in cultivating and hoeing treat the trees as corn, and give them as much attention as you do the growing crop. If you hoe once more than is common, no harm will result. Under this treatment the trees will grow apace and thrive.

Pæonies.—Many new and elegant varieties have been produced within a few years past. They are of almost every shade of color, and some of them fragrant. People ought not to be satisfied with the old crimson sort, which has been a conspicuous and showy object, in gardens, since the earliest recollection of the "oldest inhabitant." One or two, or more, of different hue should also adorn the border. They like good culture as well as other plants, and pay back in "glory."



THE DILLER PEAR.

"Diller" is among the very best August pears, and deserves a place in every collection in this State. It is named after the person on whose property it grew and by whom it was most probably raised from seed, one hundred years since. Tradition says he brought the tree or scions from Germany; but this is extremely doubtful, because of long voyages and want of horticultural knowledge. It is more probable he brought seed of some favorite pear, planted it, and raised this tree. Its growth much resembles the Bloodgood, short jointed, wood reddish brown, not a rapid grower, but bears regularly and abundantly. Fruit of medium size, obovate irregular or one-sided, thickening abruptly into the stalk, which is an inch long and obliquely inserted. Skin, at maturity, golden yellow, sprinkled, and one side mostly covered, with light cinnamon russet. Calyx mostly open, set in a slight, smooth depression. Flesh yellowish white, buttery, with rich sugar luscious flavor; a little gritty at the core, which is small. Seed long, black and pointed.—J. K. Esh-leman, *in Pa. Farm Journal.*

## CULTURE OF ASPARAGUS.

A correspondent over the signature of "A Gardener," in the last number of the *Germantown Telegraph*, gives some practical hints on the culture of Asparagus, which we annex:

Next to green peas, asparagus is the most generally admired garden esculent raised. Every farmer should have a bed of it, to supply the wants of his own family, it being a very easily propagated vegetable, and one that is almost certain to do well in any soil possessing the attributes of fruitfulness and natural warmth. Mr. Pond, the celebrated Horticulturist, gives the following directions for its cultivation.

"In the latter part of the month of March, or in April, select a spot of ground sufficiently large to plant the number of roots intended. If the plantation is to be large, and intended to supply the market, the ground should be plowed to a good depth; if for a common kitchen garden, it should be trenched to the depth of fourteen inches. Make the surface of the bed level; after this is performed, proceed to mark places, to dig the trenches for your roots; they should be two and a half feet apart: then throw the soil out, twelve inches wide, and as many inches deep, laying it up in ridges between the trenches. After this is done, throw in three or four inches of manure; level it, and add about one inch of soil on the surface, scraped from the sides of the trenches; level this also, and all is ready for planting."

The roots taken from old beds are better to propagate from than seed, as they produce sooner, and require much less care and labor in the cultivation. The plan I have pursued is the following:—In autumn, I dig my trenches, either in green sward land, or that which has been cultivated—making the trenches eighteen inches deep, by twenty-four wide, filling them to within six inches of the top with good old manure, or compost. On the top of this I place four inches of garden mould, and plant my roots or slips six inches apart, covering them with two inches of soil which has been previously saturated with house ley or salt. A sprinkling of salt is given early in the spring, and repeated at intervals of a fortnight through the season. Salt is an indispensable agent in the cultivation of asparagus, which is a saline marine plant, and cannot be brought to perfection without it. An occasional dressing of chip manure, or compost, formed of pond mud and forest scrapings, is highly advantageous. If the beds become weedy, pour on pickle. It will destroy the weeds and grasses without injuring the asparagus. All blanching of the spires, I consider injurious; they are thereby rendered more tender, it is true, but they are less sweet.

## THE GARDEN.

The older we grow, the fonder we become of our garden. The time was, "in our hot youth, when George the Fourth was King," that we haunted the stream, and loved to drop the lure, softly as thistle-down, on the dimpled pool. But the love of the "gentle craft" subsides somewhat with the advance of years, and seems disposed to pass away imperceptibly into a pleasure of the imagination. With the return of the sweet vernal season, the piscatory passion, indeed, duly revives, and we betake ourselves strenuously to repair our tackle, and to study "Stoddart." But were it not that then, too, Piscator junior returns home from college, and excites the weaker flame in the paternal bosom by the ardor of his angling enthusiasm, and succeeds in hurrying us away to Lochard, or some cherished upland stream, we doubt exceedingly if weather the most inviting, and streams of the most perfect tint, and reports the most propitious regarding the inclinations of the finny tribes, could withdraw us from our glowing polyanthuses and bright-eyed auricular. We feel, indeed, that our affections are gradually concentrating themselves on our garden; and we have satisfied ourselves, on the high grounds of philosophy, that it is wise that they should do so.

Cicero gives it as his opinion, that the superintendence of a garden is an employment appropriate to mature years; and although the Tusculan sage has left his theory undeveloped, it is not difficult to see how the pursuits and pleasures of horticulture should be in unison with a disciplined understanding and a calm breast. Perfect Wisdom placed the perfect man in a garden, to dress and keep it. The place and the duty must have been divinely congenial with the exercises of an undepraved heart. The love of man's primeval calling seems yet to linger fondly in the bosom of the exiled race. The first pleasure of children is to gather fresh flowers from the daisied mead, or to play their little hands in the allotted patch of garden-ground. "Heaven lies about us in our infancy"—some faint visionary gleam from Eden seems yet to rest on the infant soul, and, with the dawn of reason, the first voice of childhood seems to say that Paradise should have been its home, and horticulture its proper vocation. It is sadly true, no doubt, that adverse lessons in gardening have come to us from Paradise—promptings of an apostate kind from beyond the Euphrates. Boy-hood, and the succeeding period of immature manhood, with their tumultuary passions and noisy pleasures, show themselves alien to the tranquil delights of the garden. But "years that bring the philosophic mind," and that chasten humanity with their mildening influence, conduct the belated pilgrim back to the garden, and teach him there to find pleasures serene and unalloyed.—*Blackwood's Magazine.*

## GRAFTING WAX.

We made some remarks last week, in relation to cutting and preserving cions. We will give this week, a recipe for making the best kind of *grafting cement.* Take three parts of the best quality of rosin; two parts of bees-wax; and one part of tallow; melt them thoroughly together, and pour the composition while hot into cold water, and then work it like shoemaker's wax, till it will spread as thin as paper, or draw out as fine as gosamer. Should the rosin precipitate when cooling in the water and remain in the wax in small lumps, it must be melted over and worked again. In such case care must be taken that no water remains in the vessel that the composition is melted in, as water will remain at the bottom, and when the cement becomes heated to a certain temperature, the operator will witness a rather unpleasant experiment upon the expansive power of steam.

In rather cold weather, a little more tallow than in the above proportion may be added, and the cement will work very well, and in very warm weather a little more rosin will harden the wax, without material injury to its good properties. But for all seasons and all kinds of weather, we have never found any kind of grafting wax, that worked as well as wax made according to the above proportions. In cold weather, we keep our wax in warm water, in order to have it work well,—and in very warm weather it is necessary to keep it in cold water. Care should be taken to procure pure bees-wax for making cement. Much of the bees-wax that is purchased in the market is adulterated with tallow; such may be detected, by placing it in a temperature that will melt the tallow and not the wax.—*Keene (N. H.) News.*

Grape Vines.—Loosen the earth about their roots and give them manures. Swamp muck which has been decomposed by the salt and lime mixture answers a good purpose. Whole bones buried near the roots of grape vines will soon be appropriated, and, during the summer rest, a little potash water will hurry up their action.—*Working Farmer.*

# Mechanic Arts, &c.

## LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending March 29, 1853.

Luther Atwood, of Boston, Mass., for improvement in preparing lubricating oils.

Schuyler Briggs and John G. Talbot, of Sloansville, N. Y., for improvement in winnowers of grain.

Lewis W. Colver, of Louisville, Ky., for improvement in machines for breaking hemp.

Wm. Ennis, of New York, N. Y., for improvement in hot air furnaces.

Moses G. Farmer, of Salem, Mass., for improvement in electric telegraphs.

Benjamin Fenn, of Hartford, O., for improved pendulum balance for quick weighing.

Isaac H. Garretson, of Clay, Iowa, for improvement in seed planters.

Jno. Maxwell, of Galesville, N. Y., for improvement in knitting machines.

John McAdams, of Boston, Mass., for improvement in paging bound books. Ante-dated Sept. 29, 1852.

James H. Swett, of Boston, Mass., for improved arrangement of die rollers in spike machines.

Geo. Traeyser, of Cincinnati, O., for improvement in vertical pianos.

Thos. C. Thompson, of Ithaca, N. Y., for improvement in sewing machines.

Matthew Walker, M. Walker, Jr., and Daniel S. Walker, of Philadelphia, Pa., for improvement in wire fences.

RE-ISSUE.

Thos. J. Sloan, New York, N. Y., for machine for arranging and feeding screw blanks. Patented Feb. 25, 1851.

## BARREL-MAKING MACHINE

We accepted an invitation yesterday to pay a visit to Wilder's Machine Shop to examine the operations of a newly invented patent-right machine for making barrels.—The machine is the invention of Mr. Trapp, of Elmira, New York, and the agent for the sale of the machines in this vicinity has got one now at work in Wilder's shop. The machines are of different sizes, according to the size of barrel wanted to be made; but the size does not vary the principle of the invention at all. We watched the workmen select out the rough sawed staves, joint them, set them up, polish the outside, cut the notch for the heads, bevil the chimes, cut the heads, put on the hoops and present a well made, neat, and handsomely finished fifty pound paint keg in the space of twenty minutes. This was all done by one man who is no cooper. Of course a regularly bred cooper, practiced with the machine, could have done the work much quicker.

The machine for jointing the staves, tho' connected with the other portions of the machine, may be worked entirely separate. It consists of a series of planing irons set into the rim of a wheel at certain angles.—Connected with this, is a small iron frame, called a jointing iron, which must be seen to understand its operation; it bends the stave into the precise shape it will occupy in the cask, and in which the stave is held while it is jointed by the planes fixed in the rim of the jointing machine. The other portion of the machine consists of a table on which are a series of lathes that perform the different work of sawing the staves the proper length, of plaining the outside of the barrel after it is set up, of cutting the notch for the heads and making the chimes, in a simple manner, and do the work better than it can be done by hand.

The agent informed us that with three men to attend it, the machine would turn out 100 flour barrels per day, and about sixty beef or pork barrels, or butter firkins. The price of a machine for turning out flour barrels is about $600. To see the operation of the machine is well worth a visit from any one.—*Detroit paper.*

## SAWING MACHINE.

Measures to secure a patent for an improved construction of the above, by which it is rendered more suitable for certain kinds of work, have been taken by Thomas J. Alexander, of Westerville, Ohio. The advantage of this plan is that logs can be sawn directly into broom handles, chair rounds, &c., without having been previously sawn into planks, thus economising an important item of expense. One horizontal and two vertical saws adjusted in relative positions, serve to cut the sticks from the logs, the vertical saws being placed underneath the horizontal saw and nearly touching it. The log is secured between screw rods passing through the cross-piece of a reciprocating frame, and which are raised or depressed by turning a crank so that the log can be adjusted with facility.

Water Frozen by Boiling.—The following beautiful experiment may easily be performed by any one having an air pump, and cannot fail of being exceedingly interesting to those who take delight in the science of chemistry:—Take a small, thin glass jar, fill it half full of good ether, then place it within another jar half filled with water. Let this be then under the receiver of an air pump, and as soon as the air is exhausted the ether will boil, and the water will freeze. The reason is that when the pressure of the atmosphere is removed by the air pump from the surface of the ether, its own latent caloric occasions its expansion, and absorbing caloric from the water, it becomes converted into gas; and the water having now lost all its caloric of fluidity, is converted into ice.

# Educational.

## IMPROVEMENT OF THE MIND.

We should not seek for improvement merely for the sake of excelling, but for that development which is of lasting benefit, and to which every one may attain, if he will, in a greater or lesser degree.

Whatever condition one may be placed in, he may gain knowledge by observation.—The greatest truths have been discovered in this way. Newton, following up his observation of the apple's fall, by reflection and reasoning, discovered the truth of gravitation—the great yet simple law that governs the motion of the heavenly bodies. In the works of nature the field for observation is unlimited—there is a continual unfolding of something new. As the verdure of spring deepens and waxes old, we meet the golden fields of grain, and the rich autumnal fruits, rewarding the husbandman's care and toil and furnishing sustenance for man and beast, whilst the frosts follow and change the greenness to sere and yellow. These, the skies, the earth's crust, the animal creation and even the insects and creeping things, and the tiny creatures hardly large enough to be recognized, are, with a vast multitude of other objects, fruitful subjects for exercising and employing the mind.

It can hardly be possible that there are persons who cannot avail themselves of the help of observation, though it is true that some are more fortunately situated in this respect than others, so far as regards the works of nature. We may all, however, observe and learn of one another, by shunning each others vices and imitating the virtues. Every occurrence of life, the change of families and the mutability of nations, may teach us many a moral, and show us the certainty of our own change, and the impossibility of avoiding death. Again, we may observe and try to know ourselves—a knowledge which has been said to be the hardest to truly and well acquire, yet it is one of the most important kinds of knowledge.

Another means of improving the mind, and one which is met at every turn, is by reading. By this means we become acquainted with the manners, actions and thoughts of those who lived in remote ages. We learn the best sentiments of those authors, we gather the results of much study and great experience. Thus we gain knowledge which could be acquired in no other way. And we may gather, likewise, knowledge of the present from every corner of the globe, and with books for our guide, fathom the most occult science. The world is full of books, and as there are so many useless and pernicious ones, it is necessary to be very circumspect, and make a wise selection of the very best.

As all knowledge is to be treasured up in the memory, it is, therefore, of the utmost importance that this facility be rightly cultivated, also; for of what avail can be all wisdom if there be no memory to hold it in charge, for the times and occasions that shall call for it? Without diligence, fixedness of purpose, and a thorough understanding of the subject we investigate, there will be but little retained in the mind.

Where there is a fondness for any particular study, a knowledge of it is more easily acquired and retained. Truth cannot always be seen at a glance; it is gained by a close and persevering attention. As the muscles of the body increase and are strengthened by vigorous exercise, so it is that the faculties of the mind are strengthened by mental exercise. A mental sloth insures a decay of the mental faculties. Wherever it may be, the time spent in receiving instruction from the living instructer, from books, or from whatever source, will be worse than lost, unless a corresponding effort be made to retain it and assimilate it with our common stock.

We should, therefore, strive for improvement, that our influence in the world shall be the greater for truth and right,—that our words and deeds may have the more power to help along the progressive elevation of our race. We are endowed with reasonable faculties for some higher purpose than the mere gratification of self, and it should be our high endeavor to make the best and most use of every moment, that we may live to fulfil the purpose for which we are called. So shall we grow better, and those in contact with us be imbued, in some measure, with the same spirit. E. H. W.

## THE TEACHER.

In this communication, I propose to offer a few suggestions relative to the *literary* qualifications of a teacher. Not a teacher for either our most backward, or most forward schools; not for a school in a rural district, or a large village or populous city, but an individual who shall not only be *legally*, but actually, positively well qualified to teach thoroughly, and so far as a knowledge of the several sciences to be taught is concerned, acceptably in any of common schools of the State.

Allow me to say, before entering into detail, that I consider thoroughness in every thing taught, or attempted to be taught, to be of the utmost importance. The teacher should *know* perfectly what he is endeavoring to communicate to others, and know too, that his pupils understand the principle under consideration—that they have something more than a vague, unintelligible, indefinite idea about some of the matters pertaining to the lesson. This superficial teaching—this smoothing over the rugged asperities of science, and then administering whole volumes at a dose—this external show of learning for the sake of a *polite, genteel* or an *accomplished* education, while the real principles of every subject studied, or swallowed undigested, are untouched, and the mind is made averse to every thing solid, or that requires close thought or rigid investigation—I have no charity or sympathy for. The person who thus teaches, or attempts to teach, is, in my opinion, doing irreparable injury to his fellow creatures.

The teacher should above all things be a good *speller* and *reader*, and should be familiar with the power of letters, the elements, the very beginnig, not only of our language, but of all education. So self-evident is this, that to present an argument in its favor, would appear like attempting to demonstrate an axiom. It long ago passed into a proverb "that although it was no honor to spell well, it was a great disgrace to spell badly."

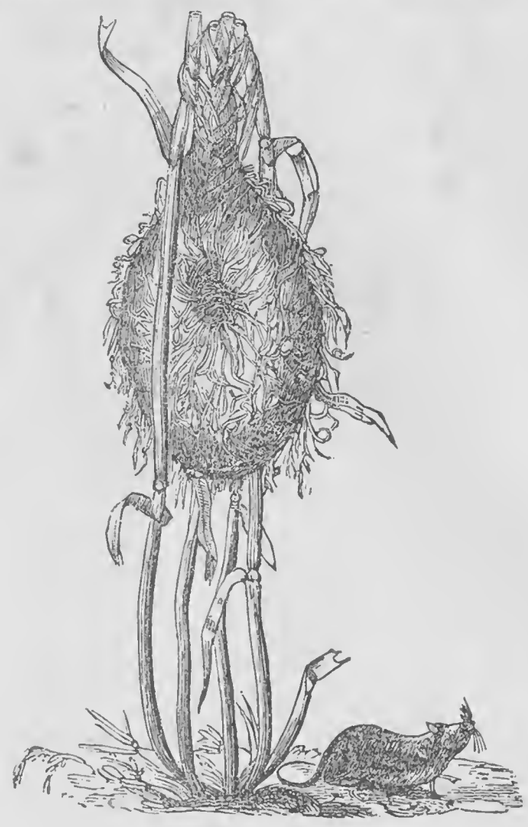
To be an easy and agreeable reader is a very rare, but at the same time a very desirable accomplishment—the attainment of which requires long and patient application, together with continued practice, but the teacher should never relax his efforts to obtain so desirable and important a desideratum, until the object is accomplished. I regret that truth requires me to say, that these fundamental branches are shamefully neglected in our schools, of all grades, from the primary school, to the academy; and what is still worse, the evil is constantly growing, and teachers are becoming more and more lax in regard to the teaching of these branches. Other sciences, with high sounding names, are permitted to drive spelling and reading into the back ground, when in fact, they should occupy the most prominent position in our schools. Bad spelling even among teachers is becoming common, and good reading very uncommon.

It is important that our youth be at least fair pen-men, and as the common school affords the only opportunity that most of them have for learning to write, it is highly necessary that the teacher be able to write a plain, neat, business or copy hand.

A knowledge of geography and history is absolutely essential to a good English education. No person can appear well in company with educated individuals, or converse even for a short time intelligently without it. No person, therefore, should think of teaching a common school without an accurate knowledge of the geography of every part of the known world, together with the history of the United States England and France. These branches are both sadly neglected, at least in many of our schools, and very many of our youth are growing up to manhood ignorant of the geography and history of their own State even. Of the thirty-eight schools visited by the writer during the year 1851, but a small proportion of the pupils were engaged in studying geography, and not one in studying history of any kind. This evil can be remedied by the teachers, and it becomes them to set themselves about the work. First by becoming thoroughly acquainted with these interesting subjects themselves, and also the most approved methods of teaching them to others, and secondly by insisting that their pupils study them.

Inasmuch as all of our business transactions are performed by the aid of *arithmetic;* the teacher must of *course* be thoroughly acquainted with every thing pertaining to this important branch of mathematics.—Intellectual and written arithmetic should be perfectly familiar to him; not merely the method of solving the problems in the book that he studied; but the *principles* of the science should be known, so that he could teach arithmetic if every work upon the subject now in existence were destroyed.—Not only should he understand the abstract principles of the sciences, but he ought to be able to point out to his classes, their application to the various departments of industry. It is not good teaching, to teach the "*science of numbers*" by specific and written rules merely, or exclusively; the person who assumes to teach, must be able to make rules for himself, or to give the "*whys*" *and* "*wherefores*" for those already made. He must be qualified to explain, amplify, illustrate and demonstrate until each student, however dull, can and does understand. The elements of algebra, geometry, and surveying should also be familiar to the teacher. It is true that those do not so immediately and directly enter into our daily business transactions as does arithmetic either intellectual, or written; still there is hardly any department of industry, the intelligent and successful prosecution of which, does not involve at least a practical application of one or more of the branches of mathematical science.

Besides, a perfect knowledge of arithmetic can never be acquired by the student who knows nothing of algebra, or geometry. Mensuration, or practical geometry, together with drawing and sketching, are also of much importance to men engaged in most of the occupations of life; it is therefore important that those who instruct our farmers, and mechanics, our engineers and artizans should have some knowledge of these subjects.—*N. Y. Teacher.*



## THE HARVEST MOUSE AND NEST.

The Harvest Mouse is a species of this little animal, of which we find the following mention in "Country Rambles in England." The engraving is also copied from that work:

The harvest mouse (*mus messorius*) in some seasons is common with us, but, like other species of mice, varies much in the numbers found. I have seen their nests as late as the middle of September, containing eight young ones, entirely filling the little interior cavity. These nests vary in shape, being round, oval, or pear-shaped, with a long neck, and are to be distinguished from those of any other mouse, by being generally suspended on some growing vegetable, a thistle, a bean-stalk, or some adjoining stems of wheat, with which it rocks and waves in the wind; but to prevent the young from being dislodged by any violent agitation of the plant, the parent closes up the entrance so uniformly, with the whole fabric, that the real opening is with difficulty found.

They are the most tame and harmless of little creatures: and, taking shelter in the sheaves when in the field, are often brought home with the crop, and found in little shallow burrows on the ground after the removal of a bean-rick. Those that remain in the field form stores for the winter season, and congregate in small societies in holes under some sheltered ditch-bank. An old one, which I weighed, was only one dram and five grains in weight.

Written for the Rural New-Yorker.

## CULTIVATION:

### ITS POWER EXEMPLIFIED IN THE BRUTE CREATION.

In a recent communication on the instinct of the lower animals, it was intimated that this innate gift seems, in some instances, to be improvable by observation and experience. Example must recur to the mind of every reader. It is no uncommon thing for cats and dogs to learn to lift a latch, and thus open a door. I once knew one of the former animals, which would invariably and immediately start up when asleep behind the stove or on the window sill, on the ringing of the tea-bell in the second story below, and would repair to the door to be in readiness to go down stairs with the family. Travellers mention that birds accustomed to build their nests in the cleft of rocks or on shrubbery, when there is no danger, will, in countries infested by monkeys and other rapacious animals, build on slender and inaccessible twigs. Ravens, it is known, feed on muscles and other shell fish, and when unable otherwise to break their hard covering, will carry them up in the air and let them fall upon a rock, and thus accomplish their purpose. Naturalists state that wasps, in attempting to carry the corpse of a companion from the nest, finding the burden too great, will cut off its head, and make two loads instead of one.*

The most striking example of the power of cultivation, are witnessed in the improvement in the quality of the breed of animals, and their habits and dispositions. Let the reader look into Mr. Lewis F. Allen's work on "Rural Architecture," and observe the drawing of a sheep in its natural state, and then contrast it with the appearance of one of the same animals in the highest state of improvement, and he will have an illustration of what culture can do. This domestic animal is derived from a stock called the Mouflon, which is comparatively large, very fleet, and covered with coarse hair. It has also large horns, and strong hoofs, is fierce in combat, and will flee from or conquer the wolf, the terror of domestic sheep. "In the warmest climates of Africa and Asia, the mouflon, which is the common parent of the sheep, appears to be less degenerated than in any other region. Though reduced to a domestic state, he has preserved his stature and his hair, but the size of his horns is diminished."

It is well known that the domestic hog is derived from the wild boar, which for ferocity is excelled by few animals. Some breeds of the bristly tribe, in the domestic state, are, it is evident, less civilized and tame than others. I recollect that, many years ago, my father had several hogs of the speckled breed—deep black and white—which were of an ugly disposition, and seemingly untameable. Efforts were made to subdue their ferocity, but they remained so wild that shooting was the method resorted to for "butchering" them. No doubt, by extra attention, the breed would have so improved in gentleness that the second or third generation might have been caught and slain in the ordinary way; but bullets made clean work of the speckled-coated, and fiery-eyed family, leaving no opportunity to experiment on heirs.

The dog, in a native state, says Mr. Knapp, the English Naturalist, "is a wretched creature, a common beast of the wild, with no innate magnanimity, no acquired virtues; has no elevation, no character to maintain but passes his days in contention and want; is base in disposition, meagre, in body, a fugitive and a coward."* This description, save in the quality of cowardice, answers very well for a couple of dogs which I saw several months ago, chained near the walls of the county jail at Geneva, Illinois, and which were kept there to keep prisoners confined in the basement, from escaping, in case they should succeed in removing the underpinning—as they had done a short time before I was there. But the portrait which Mr. Knapp has drawn above, does not possess a feature recognizable in domestic, well educated dogs. Several breeds are capable of being improved to a degree which is astonishing and almost irreconcilable with absence of mental endowment. Anecdotes of elephants and monkeys, illustrating the marvellous change in their natures wrought by education, are found in many of our text books, and must recur to every reader. The ourang-outang—which in its physical structure approaches nearest to man—can be instructed so that it will act very much like a rational creature.—Speaking of this species of animal, M. de la Brosse says that "they have the instinct of sitting at table like men. They eat every kind of food without distinction. They use a knife, a fork or a spoon to cut or lay hold of what is laid upon their plate. They drink wine and other liquors. We carried them abroad. At table, when they wanted anything, they made themselves understood by the cabin-boy, and when the boy refused to give them what they demanded, they sometimes became enraged, seized him by the arm, bit and threw him down. The male was seized with sickness on the road. He made himself be attended like a human being. He was even twice bled in the right arm, and, whenever he found himself in the same condition, he held out his arm to be bled, as if he knew that he had formerly received benefit from that operation." There is a species of the same animal called the Baris, which Francis Pyard says can be trained so as to work like a servant. It can be taught to walk on its hind feet, with much more grace than the monkey.

The Ape has been educated to a degree equal to the ourang-outang. There was one at the Island of Java, many years ago, which daily made her bed with neatness.—When her head ached, says Guat, as quoted by Smellie, "she bound it up with her handkerchief, and it was amusing to see her thus in bed."

Illustrations might be added, *ad infinitum* showing what culture can do in the way of taming, refining and improving the breed of the lower animals: but it is needless to multiply them. It is an interesting subject to contemplate, and a profitable study to pursue. The more we reflect on the instincts of animals—the more we observe their gradual improvement, and watch the operations of the animals themselves, in their educated state, the more, it appears to me, we shall adore Him who made all things, endowing each living creature with faculties exactly suited to its position in the scale of being. J. C.

Buffalo, Feb. 21., 1853.

**Journal of a Naturalist, Boston edition, p. 154.*

# Sunday Reading.

[Written for Moore's Rural New-Yorker.]

## TO THE SLANDERER.

Hast thou but heard the rumor'd tale
That would thy brother man impeach,
And did'st no pitying voice within
Thy tender sympathies then reach?
If not, then of thy cold heart beware,
For sin hath made a lodgemnt there.

Or hast thou given utterance
To a malicious, cruel word,
Design'd to stain thy brother's fame,
And blast him, ruin him unheard?
If so, of thy foul heart beware,
For sin and Satan dwelleth there.

Or is there in thy secret soul
A strong, a fiendish, fierce desire,
A vengeful wish, a spiteful hope
That fills it with tormenting ire?
If so, that strong, that fierce desire
Is Satan's hope,—beware, beware!

Beware, nor let thy poison'd ear
To "Madam Rumor" longer list,
Beware, nor let thy babbling tongue
To spread her tales no more assist;
And of thy cruel heart beware,
No more let slander harbor there.

Know that thy God will deal with thee
For every scand'lous word or thought,
Each wicked act, each wary deed
Will into judgment soon be brought.
Then own thy fault, for pardon pray—
And God's rich grace—nor dare delay. Mac.

## A HIGHER GOOD.

In Coleridge's "Aids to Reflection" we find the following aphorism and comment:

Your blessedness is not,—no, believe it, it is not where most of you seek it, in things below you. How can that be? It must be a higher good to make you happy.—*Leighton.*

Every rank of creatures, as it ascends in the scale of creation, leaves death behind it or under it. The metal at its height of being seems a mute prophecy of the coming vegetation, into a mimic semblance of which it crystalizes. The blossom and flower, the acme of vegetable life, divides into correspondent organs with reciprocal functions, and by instinctive motions and approximations seems impatient of that fixture, by which it is different in kind from the flower-shaped Psyche, that flutters with free wing above it. And wonderfully in the insect realm doth the irritability, the proper seat of instinct, while yet the nascent sensibility is subordinate thereto—most wonderfully, I say, doth the muscular life in the insect, and the musculo-arterial in the bird, imitate and typically rehearse the adaptive understanding, yea, and the moral affections and charities, of man. Let us carry ourselves back, in spirit, to the mysterious week, the teeming work-days of the Creator: as they rose in vision before the eye of the inspired historian of *the generations of the heaven and the earth, in the days that the Lord God made the earth and the heavens.* And who that hath watched their ways with an understanding heart, could as the vision evolving still advanced towards him, contemplate the filial and loyal bee; the home-building, wedded and divorceless swallow; and above all the manifoldly intelligent* ant tribes, with their commonwealths and confederacies, their warriors and miners, their husband-folk, that fold in their tiny flocks on the honeyed leaf, and the virgin sisters with the holy instincts of maternal love, detached in selfless purity—and not say to himself, Behold the shadow of approaching humanity, and the sun rising from behind, in the kindling morn of creation! Thus all lower natures find their highest good in semblances and seekings of that which is higher and better. All things strive to ascend, and ascend in their striving. And shall man alone stoop? Shall his pursuits and desires, the reflections of his inward life, be like the reflected image of a tree on the edge of a pool, that grows downward, and seeks a mock heaven in the unstable element beneath it, in the neighborhood with the slimy water-weeds, and oozy bottom-grass that are yet better than itself and more noble, is as far as substances that appear as shadows are preferable to shadows mistaken for substances?—No! it must be a higher good to make you happy. While you labor for anything below your proper humanity, you seek a happay life in the region of death. Well saith the moral poet—

Unless above himself he can
Erect himself, how mean a thing is man!

*See Huber on Bees, and on Ants.

He that cannot forgive others, breaks down the bridge over which he must pass himself; for every man hath need to be forgiven.

# Miscellaneous.

For the Rural New-Yorker.

## OUR HOME.

My heart is sad and lonely
In its childhood's home to-day,
For save my little children
The loved ones are away;
And, now that nestling in his bed
Each quiet sleeper lies,
My heart is busy with the past,
And tears are in my eyes.

I'm thinking of the dear old time
When all of us were young,
And when around this humble home,
Our best affections clung;
And fondly do we love it yet,
Though many a change has come
And we are scattered far and wide
Each in another home.

I'm thinking of the dear ones laid
To rest beneath the sod,
Who, mingling no more with us here
Have found a home with God.
The bright, glad little one with whom
We were first called to part,
And she who filled the dearest place
Within a brother's heart.

The guardian of our early years
Is sleeping with them now,
The seal of death upon his lips,
The cold earth o'er his brow;
My thoughts are lingering with him
And tears are falling fast,
Oh! many a painful memory
Is round my old home cast.

And many a cherished blessing, too,
Is interwoven there,
No happier children ever grew
Beneath parental care.
Ere long our home will pass away
To stranger hands, and we
Will have of all it's been to us
Naught but a memory.

Jan. 1st, 1853. S. WEBSTER LLOYD.

Written for the Rural New-Yorker.

## THOUGHTS ON ORNAMENTAL TREES.

RIDING in the cars a few days since, my eyes were greeted at last by the sight of a tree before a house — one evergreen, ornamental tree. Its presence seemed enchanting — though it was no great of a tree—not more beautiful, and not nearly as large as many I that day saw in swamps and forests. It was its situation before that house, to ornament that home, which made me observe it so closely, and remember it so well. That tree told me something, though I was passing rapidly by; it whispered me that there was a home, and that some occupant of that home had possessed enough taste, enough love for trees, to plant this *one* evergreen, ornamental tree. He who planted that tree, may now be far away — may be dead — yet there it stands, telling to each beholder its simple tale of love for trees, and recommending the character and taste of him who planted it.

Why are not more trees planted before our homes, the homes of our farmers and laboring men?—more evergreen, ornamental trees. Man works but an hour in planting them, and then, if they retain life, Nature works on for years—perhaps for ages, in perfecting their growth and beauty, and in making trees that shall remain ever progressing, and ever repeating their mute yet plainly spoken lessons of virtue, peace and love. Why it is, that all do not plant trees, I cannot imagine. If I were to attribute it to expense, people would hoot me. Is it through negligence, or want of taste?—Whatever the cause may be, let us strive to have it removed.

In Genesis XXIst, 33, we read.—"And ABRAHAM planted a grove in Beersheba, and called there on the name of the LORD, the everlasting GOD." Thus we see that we have a good example for the planting of trees, and let us strive to create a taste, a love in ourselves, our neighbors, and all about us, for ornamental trees. Mothers and sisters should aid in cultivating this taste. Mother, fill up the heart of your child with the love of trees, birds, flowers, and other beautiful things of nature, and I must believe that there will be less of love in their hearts for the many vitiating practices which creep in and poison, soar and 'freeze men's hearts, until they have no taste for the beautiful in nature. Remember that your child loves naturally the beauties which nature produces — foster that love, encourage it by your example, and you will stand far greater chance of seeing that son a happy, home-loving man. Teach your son to appreciate the varied scenery of earth and sky, and you will do much toward fortifying him against the vices of life. Make home inviting, and he will be far less likely to yield to the temptations so alluring and so injurious to the young. JOHN SANFIELD.

Hill Farm, Steuben Co., N. Y.

SET not your judgment above that of all the earth; neither condemn that as falsehood which agrees not with your own apprehension. Who gave you the power of determining for others? Or who has taken from the world the right of choice?

YOUR character cannot be seriously harmed except by your own acts. If any one speaks evil of you, let your life be so that none will believe him.

## FRANKLIN.—THE HOME OF HIS BOYHOOD.

THERE are a few places yet left in Boston, of universal interest. Do you see that house on the corner of Union and Hanover street, with a gilt ball protruding from its corner, diagonally into the street? It has no architectural pretensions to arrest a passer-by.—It is a plain brick house, of three stories, with small windows, close together, and exceeding small panes of glass in them, the walls of a dingy yellow. Yet it is a house swarming in associations interesting to well nurtured minds throughout the civilized world. Read the name upon the bell, and you will get an inkling of my meaning—"Josias Franklin, 1698." Yes, that is the very roof under which Benjamin Franklin grew up. He was not born there, but his father removed there when he was but six months old, so that all his recollections of home must have been connected with those walls. The side of the house on Union street remains as it was in the days of Franklin's boyhood; but that on Hanover street has been shamefully treated. Nearly the whole of the front has been cut out to make room for two monstrously disproportioned show-windows. And this house, so full, as I have just said, of associations, is fuller yet of bonnets! Yes, by the head of the prophet, of bonnets! It is a bonnet warehouse, and from the inordinate windows, aforesaid, bonnets of all hues and shapes ogle you with side-long glances, or else stare you out of countenance, while mountain piles of band-boxes tower to the ceiling of the upper story, eloquent, like faith, of things unseen. Heaven forbid I should say anything in derogation of bonnets, any more than of the fair heads that wear them, but I would that they had another repository.

It was my good fortune to go over this house, before it had undergone this metamorphosis. It was occupied, in part at least, some eight or ten years ago, by a colored man, of the name of Stewart, a dealer in old clothes, who thought of buying the premises, and wanted my advice about it. I gladly availed myself of the opportunity to view them. The interior of the house was then, I should judge, in the same condition that it was when the worthy old soap boiler, and that sturdy rebel—in youth as in age—his world-famous son, lived there. There were the very rooms in which the child Franklin played, the very stairs up and down which he romped, the very window seats on which he stood to look out into the street. The shop on the street was unquestionably the place where he used to cut wicks for the candles, and fill the moulds and wait upon the customers. I pleased myself in imagining which room it was in which the father sat, patriarch like, at his table, surrounded by his thirteen children, all of whom "grow up to years of maturity, and were married." And you may be sure I did not fail to take a peep into the cellar where Poor Richard, in his infantile economy of time, proposed to his father that he should say grace over the whole barrel of beef they were putting down in the lump, instead of over each piece in detail, as it came to the table,—a proposition which inclined the good brother of the Old South Church to fear that his youngest hope was given over to a reprobate mind, and but little better than one of the wicked.

And I would have given a trifle to know which of the chambers it was that was Franklin's own, where he educated himself, as it were, by stealth. Where he used to read 'Bunyan's works, in separate little volumes, and, Burton's Historical collections,'—'small Chapman's books, and cheap; forty volumes in all'—and Plutarch's Lives, not to mention 'a book of De Foe's called 'an Essay on Projects,' and, 'Dr. Mather's called an 'Essay to do good,' and where, too, his lamp—or more probably his candle's end—was 'oft seen at midnight-hour,' as he sat up the greatest part of the nights devouring the books which his friend, the bookseller's apprentice, used to lend him over night, out of the shop, to be returned the next morning. How the rogue must have enjoyed them! Seldom have literary pleasure been relished with such a gusto, as by that hungry boy.

It will not be many years before this monument of the most celebrated man that Boston, not to say America, ever produced, will be demolished, and the place which knows it will know it no more unless something be done to save it. It will be a burning shame, and lasting disgrace to Boston, with all its pretensions to liberality, and its affectations of reverence for its great men, to suffer the most historical of its houses to be destroyed, when the rise of real estate in that neighborhood shall seal its doom.—It is a shame that it has been left so long to take the chances of business. It should have been bought years ago, and placed in the hands of the Historical Society, or some other permanent body, in trust, to be preserved forever, in its original condition. It is not too late to restore it to something like its first estate, and to save it from utter destruction. If it be not done, it will be a source of shame and sorrow when it is too late.

The house in which Franklin was born has been destroyed within this century.—That house stood in Milk street, a little below the Old South Church, on the other side of the way, and the spot is marked by a 'Furniture Warehouse,' five stories high, which forms a fitting pendant to the Bonnet Warehouse, in Hanover street. The printing office of James Franklin—where Franklin served his apprenticeship, where he used to put his anonymous communications under the door, where he used to study when the rest were gone to dinner, and where he used sometimes to get a flogging from his brother—was in Queen, now Court street, nearly oppsite the Court House, on the corner of Franklin Avenue, which, if I am not mistaken, derives its name from the circumstance.

## SPRING.

SPRING is coming, flinging first a sunbeam and then a snow-wreath. Season of newness, vigor and hope! how many thousands have sung of thee. And the theme is not worn, nor will be while the human heart loves beauty. The story of spring will never grow tame, so long as between the death of the flowers and their resurrection, meek-eyed babes are laid to sleep in snow-covered grave-yards. So long as the bride, the wife, the mother, the silvery-haired old man, are laid upon a couch on which spring will weave many a wild-wood garland.

Spring has come. The river with its mossy fringe wears the blue livery of the season. The larch is just budding; large, moist and waxen, the pink clusters exude a pleasant gum. The path from the door shows its pebbly face, and in sheltered nooks, where solitude has nursed them, hide little tufts of soft, green grass. The water trickles pleasantly from the smoking roofs, and glad voices are heard, and warm sunshine enter through open doors and windows. How deliciously mellow the azure of the sky! how clear and white the tiny clouds that float by like bubbles, their edges goldened by the sun.

Spring has come to gladden the hearts of the lowly. Sitting by the poor house corner, yon old man can enjoy the scents of field and meadow, can watch the kine with their brown noses trailing on the ground, and see the thin vapors curl up from the dew distilling hills, with as happy a heart as the poet who sings "they all belong to me."

Every day the sky will gather blueness, and the fields a brighter emerald. From little crevices, invisible to-day, blooms, laden with the breath of May, will spring, and shoot into stems, leaves and flowers. Thicker and brighter the fairy robes of summerland will flake the limbs of the pear, peach and apple tree, all jeweled with blossoms.—Juno will hang tassels on the larch, and embroider the willow till it droops from very weight of beauty and weeps that it cannot woo the sky.

Spring is here. Come weary student; come maiden, pale with heart sorrow, spring will breathe the breath of life upon your languid frames, and with her magical dyes, paint your cheek with health. Come happy child, seek flowers bright as your youth; come matron, wearied with winter cares, come out in the broad sun-light, and repent that you have thought life all a shadow, because its pulse beat under the frost.

Glorious spring! exhaustless pleasure wait upon thy presence. Welcome! thrice welcome.—*Olive Branch.*

## DEEP AND EARNEST THOUGHT.

IT is a rare attainment to get the power of close and consecutive thinking. No man can do it but with great pains. It is one of the great ends of education and mental discipline to confer this power.

The romances and other trash of the teeming presses of our day are hostile to this habit. The excitement of fiction is pleasurable. Deep thought requires painstaking and self denial. Thousands had rather sail over the sunny seas of romance, and under its bright skies, even though they reach the port penniless, than to encounter adverse gales and rough waves, though the rich cargo shall be the recompense.

But deep and earnest thought, the power and practice of it, is of vast advantage in many ways. It secures sure and great advances in valuable knowledge. It strengthens and invigorates all the mental powers. It causes the mind to take large and comprehensive views of things, by enabling it deliberately to gather all the facts and principles pertaining to any particular subject, and to view them in their various relations. It gives amazing power to all moral subjects. "I thought on my ways, I took heed unto thy testimonies."

Deep and earnest thought is the parent of deep religious emotions. The unthinking can never feel deeply.

## A TEMPERANCE LECTURE.

AT a temperance meeting held in Alabama, about six years ago, Col. Lemanousky, who had been twenty-three years in the armies of Napoleon, addressed the meeting. He arose before the audience, tall, erect, and vigorous, with a glow of health upon his cheek, and said—"You see before you a man seventy years old. I have fought *two hundred battles:* have fourteen wounds on my body; have lived thirty days on horse-flesh, with the bark of trees for my bread, snow and ice for my drink, the canopy of heaven for my covering, without stockings or shoes on my feet, and only a few rags of clothing. In the deserts of Egypt, I have marched for days with a burning sun upon my naked head; feet blistered in the scorching sand, and with eyes, nostrils and mouth filled with dust, and with a thirst so tormenting that I have opened the veins of my arms and sucked my own blood! Do you ask how I survived all these horrors? I answer that under the providence of God I owe my preservation, my health and vigor to this fact, that *I never drank a drop of spirituous liquor in my life;* and" continued he, "Baron Laray, chief of the medical staff of the French, has stated as a fact that the 6,000 survivors who safely returned from Egypt, were all those men who abstained from ardent spirits."

ALL the true honor of happiness there is in this world, follows labor. Were it not for working men, there could be no progress in either science or art. Working men are earth's true nobility. Those who live without work are all paupers.

Do you wish to learn how gite ve anything?—then fancy yourself in the place of the receiver.

# For the Ladies.

## THE CHILD'S GARDEN.

BENEATH the budding lilacs
A little maiden sighed—
The first flower in her garden
That very morn had died.

A primrose tuft, transplanted,
And watered every day,
One yellow bud had opened,
And then it pined away.

I thought, as that child's sorrow
Rose wailing on the air,
My heart gave forth an echo,
Long bound in silence there.

For though time brings us roses,
And golden fruits beside,
We've all some desert garden
Where Life's first primrose died!

## A MODEL WIFE OF THE 17TH CENTURY.

THE world has heard much of the admirable ELLIOT, commonly known as the "Apostle of the Indians:" but little mention has been made of his very excellent wife, who contributed not a little to the great triumphs which attended his labors. Mrs. SIGOURNEY has just issued a book, entitled "Examples of Life and Death," in which she gives a very interesting and graphic account of that much-honored woman, to whom justice has at last been done. The following are some of the main points of her amiable and exemplary history:

*Days of Early Marriage.*—John Elliot and Ann Mountfort were married immediately after her arrival, and commenced their housekeeping in what was then called Roxborough about a mile from Boston. Simple, almost to rudeness, were the best accommodations that the pastor had it in his power to offer. But the young wife was satisfied, for the home that her presence illumined was a paradise to her husband. * * * Sometimes the wintry winds swayed the branches of the naked trees, swept them against their lonely roof with a melancholy sound. The apostle might perhaps be absent among his Indian flock at Natick, fifteen miles distant, for the elements stayed him not. Then nearer to herself she gathered her nurslings, "a nest of five brothers, with a sister in it," teaching and cheering them. In the hushes of her loved voice, or in the pauses of the storm, they listened for the father's footstep, and piled higher the fire of logs, with blazing brushwood, that as the evening deepened, his own window might gleam out to him as a blessed star.

*Housekeeping.*—Mrs. Elliot, amid her devotedness to the care and nurture of her six children, found time for those many duties that devolved on a New-England housekeeper of the olden time, when it was difficult, and almost impossible, to command the constant aid of domestics. To provide fitting apparel and food for her family, and to make this care justly comport with a small income, a free hospitality, and a large charity, required both efficiency and wisdom. This she accomplished without hurry of spirit, fretfulness, or misgiving. But she had in view more than this—so to perform her own part as to leave the mind of her husband free for the cares of his sacred profession. This she also performed. Her understanding of the science of domestic comfort, and her prudence, the fruit of a correct judgment, so increased by daily experience, that she needed not to lay her burdens upon him, or to drain the strength with which he would fain serve at the alter. "The heart of her husband did safely trust in her," and his tender appreciation of her policy and its details was her sweet reward.

*Activity, Energy, and Judgment, Social and Domestic.*—Among the multitude of employments which a systematic division of time enabled her to discharge, without omission or confusion, was a practical knowledge of medicine, which made her the guardian of the health of her young family.—The difficulty of commanding the attendance of well-educated physicians, by the sparse population of an infant colony, rendered it desirable, and almost indispensable, that a mother should be neither unskilled nor fearful amid the foes that so thickly beset the first years of life. The success of Mrs. Eliot in the rearing and treatment of her own children, caused her experience to be coveted by others. In her cheerful gift of advice and aid, she perceived a field of usefulness opening around her, especially among the poor, to whom with a large charity she dispensed safe and salutary medicines. * * * Often they found themselves side by side at the couch of suffering, and a double blessing from those ready to perish came upon them.

*Decline and Departure.*—He would fain have hidden from himself her visible decline. Yet day after day he saw the light from heaven's windows beam more strongly upon her brow, and felt that she was to reach home before him. He who had borne all other trials firmly had not strength to take a full prospect of this. He could not willingly unclasp his hand from hers, and lay it in the cold grasp of the king of terrors. His prayer was, that if it were possible, they might go together down through the dark valley of the shadow of death, and up to the great white throne, and Him who sitteth thereon.

But her hour had come, and in that, as well as in the duties of life, she was enabled to glorify God. Serenely she resigned the burden of this failing flesh, and entered a world of spirits. The desolate, mourning husband, it would seem, had never before fathomed the depths of grief. She who had not only been his helpmate, but his crown, whom he had so long prized and cherished, rejoicing in her good works, and in the honors she received, had gone and left him alone.

"God," says a contemporary writer, "made her a rich blessing, not only to her family, but to the neighborhood; and when at last she died, I heard and saw her aged husband, who very rarely wept, yet now with many tears over her coffin, before the good people, a vast confluence of whom were come to her funeral, say, 'Here lies my dear, faithful, pious, prudent, prayerful wife. I shall go to her, but she shall not return to me.' And so he followed her to the grave, with lamentations beyond those with which Abraham deplored his aged Sarah." Touching and eloquent eulogium! and justly deserved.

*Sympathy of the Pastor's Flock.*—The sympathy of his flock was freely accorded to the smitten shepherd, for each one felt that the loss which bowed him down was their own. This popular affection was signified in a beautiful and somewhat unique form,—a vote to erect a ministerial tomb, and a unanimous and quaintly expressed resolution, that "Mrs. Eliot, for the great service she hath done this town, shall be honored with a burial there."

Sincere tribute from honest hearts!—More to be coveted than the plumed hearse, and all the splended mockery of woe. So to the keeping of that tomb "wherein man was never yet laid" were entrusted the mortal remains of that saintly woman, whose consistent example of every duty pertaining to her sex and sphere will be remembered throughout future generations.

## A RIDICULOUS ASSERTION.

"The deadliest foe to love is not change, but custom."—BULWER.

SUCH language will do for Bulwer; he could invent no better when he wrote that. He was the son of satiety, the foster-brother of voluptuousness. A golden chalice was given him; he distilled a dew from the bitterest herbs that grew rankly along his pathway, and filling his chalice, called it a balm. He threw out his poison broadcast; sons and daughters—the sunny-haired and the white-browed—drank, oh! too deeply drank, and—died a death too horrible to mention; a death from which virtue fled shrieking.

"The deadliest foe to love is not change, but custom." We love the being who gave us birth. The last sweet name upon icy lips is "Mother, mother." Because we grow accustomed to her gentle voice, do we therefore weary of her who has made our path to manhood and womanhood as light and beautiful as was in her power? Is custom there the deadliest foe to love?

In groups all over the world sit families together; the father who has toiled and grown grey; the matron whose life has been one long labor of love; the youth, the bold boy, the happy-hearted girl, the son just on the threshold of manhood; the maiden blooming into ripened beauty. There they sit, caring for each other, living in each other's love. Mark how sickness enters; seizes the fairest of the little flock. Look at the chamber where they have laid her; how still and sheltered! how white the linens; how fresh the cool red flowers that touch her feverish lips. The table is covered with delicate porcelain, all the vials are put out of sight, and soft fingers press the flushed brow, and smooth back the damp locks, that they may not lie too heavily against the throbbing temples.

Mark the silence of that household; see the springing tears when little voices whisper "Minnie is sick." How they glide like angels around that couch. Carefully the massive door is swung to when the father steps into the street; the bell-wire is loosened. Why should that father care if a great shadow with awful portent stands on the threshold? All her life has he been accustomed to the sweet one's smile; why does his cheek pale when he returns, hardly daring to breathe, much less to ask, "Is it well with the child?" Has custom deadened his love?

And why, when the last change comes, and the still plaits of the shroud lie upon the little bosom, do they all weep and moan, so that one would think their hearts were every one breaking with the sorrow? They were accustomed to the little one; they knew every phase of her character, and could almost divine what her rosy lips opened to say to them. Why did they not weary with that heart survey—that sameness of kisses, and twining of arms, and lisping love-words? If it was all so common, why did they miss her so?

Because true love never wearies of its objects, be it mother, father or child, betrothed or wedded.

Hand in hand go many a couple through a long, long life; loving at the first, loving at the last. One by one the rough places are made smooth; little defects of character which, alone, neither would have sought to remedy, are brought into harmony with the softer traits of the other. Beautiful union! who will say, that has had a reasonable experience of happiness, that "familiarity begets contempt?"

"What all passion, the soul demands something unexpressed, some vague recess to explore or to marvel upon," says Bulwer. This sublimated nonsense was written by one who was a most wretched example of connubial woe. Such things from such sources, strike us as unpleasantly as the howling of a dog on a moonlight night.—There's no sense in them.—*Olive Branch.*

ONE of the prettiest of Christmas customs is the Norwegian practice of giving, on Christmas-day, a dinner to the birds. On Christmas morning, every gable, gateway or barn-door, is decorated with a sheaf of corn fixed on the top of a tall pole, wherefrom it is intended that the birds shall make their Christmas dinner. Even the peasants will contrive to have a handful set by for this purpose, and what the birds do not eat on Christmas-day, remains for them to finish at their leisure through the winter.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, APRIL 9, 1853.

*SPECIAL NOTICE—NEW QUARTER.*

THE SPRING SERIES OF THE RURAL, *commencing April 2d, will be opened with vigor, and a determination to improve as we advance. Without making any pledges, we can safely say that the immediate future of the paper will indicate no deterioration. Those who wish to subscribe, or renew their subscriptions, will bear in mind that* NOW IS THE TIME. *We shall add largely to present edition, in order to supply orders from the beginning of the new quarter. See Publisher's Notices, Premiums, &c., on next page.* March 26.

### The Reason Assigned.

IN consequence of the breaking of machinery in the mill from which our printing paper is obtained, we are compelled to issue a part of this week's edition on paper of inferior quality.—Those who happen to receive numbers with extra margin, are informed that such enlargement was forced—and not submitted to until we had traveled some two hundred miles, and applied to three paper mills, in different places, in the hope of obtaining an article of proper size and quality.—They can also discover the difference in quality of paper upon which the RURAL is usually printed, and that used by the generality of newspapers in this section, (as we are compelled to "borrow" of a neighbor;)—and we assure them that there is as great a difference in *price*, as in appearance.—And therein, also, they may perceive *one* of the several reasons why we cannot, as many suppose, furnish this paper at one dollar a year.

### "Strike, but Hear!"

ADDRESSED TO THE COUNTRY PRESS.

UNDER the head of "Please Notice," a paper published in Northern New York, has a savage article upon the course of certain popular newspapers. We have not room for the entire article, but quote what is most pertinent, and *personal* to ourselves. Speaking of largely circulated journals, it avers that "there are *very* many that 'kick away the ladder' that raised them up,—courting the good will of the Country Press just so long as it is necessary to get them under way, and no longer." After specifying in the above category certain eastern papers, the redoubtable editor swoops upon us in this would-be destructive, but not quite annihilating, manner:

"Moore's Rural New-Yorker, at Rochester, was also praised and petted by the newspaper Press throughout the country, and made a boastful display of these commendations, but when it found access to the thousands of families throughout the State, it forgot its friends to a great extent, throwing away the humble staff on which it leaned in its infancy."

Now, that the RURAL has been "praised and petted by the newspaper press throughout the country," is to a considerable extent, most true, and hence, (in justice to all parties, to say nothing about giving Satan his due,) that "maize" is gratefully acknowledged. That we have "made a boastful display of these commendations," is not exactly the truth; yet we will leave the question to the judgment of our readers. We prefer to deal with this emphatic (and *unfounded*) count, to wit—"but when it found access to the thousands of families throughout the State, *it forgot its friends to a great extent, throwing away the humble staff on which it leaned in its infancy.*"

This is the point—the *gist* of the whole matter. On this allegation we join issue, and demand the proof. Meantime we assert, without the fear of successful contradiction, that we have never, knowingly, done injustice to the Country Press. Instead of forgetting former friends our attachment has proved so strong that we have, *at an expense of hundreds of dollars*, continued to send the RURAL free to numerous country editors, without any return except their papers—from which, tho' valuable local and political journals, we can derive little or no benefit. It is true, that we have asked such (and shall again,) to mention the RURAL, giving terms, where published, &c.—and stated that those who also inserted a brief prospectus would receive our paper *without sending theirs in return*. But we *continue sending to scores of former exchanges* which have not, to our knowledge, done either. This is "kicking away the ladder," and forgetting early friends, with a vengeance!—but not in the most *economical* manner imaginable.

The Country Press will bear witness that we have treated it honorably—that we have never fawningly coaxed or begged favors, nor *promised* without *performing*. Holding that every editor is, or should be, a gentleman, we have endeavored to treat all our contemporaries with due courtesy and respect. What our friends have kindly said of us and our enterprise, is sincerely appreciated: we gratefully acknowledge the favors rendered, and have sought to make a more substantial return. That we labored incessantly during its infancy, and *expended thousands of dollars over and above its receipts*, to make a paper which should *merit* a large measure of support, lessens not our obligations to those who aided the enterprise: it simply proves that the RURAL could not have been established permanently and successfully without such sacrifice, in addition and advance of complimentary notices. Editors and publishers can easily understand this, and we are confident that no one will thank our self-constituted modern Ajax for his crocodile tears in behalf of the Country Press.

—But we *have* thrown away the staff of our Northern caviller—(whose paper, by the by, was not in existence until *after* the infancy of the RURAL, and hence the latter never leaned thereupon)—and for a good and sufficient reason. Please mark the why and wherefore. Said paper is *quasi*-agricultural. Its matter pertaining to rural affairs is principally taken from other journals, and much of it without credit. We have received number after number of it containing articles which originally appeared in the RURAL, re-published without the least credit, and some of them leaded out as editorial, etc.! *This, and this alone*, is the reason that the paper from which we have quoted the above "elegant extract," was struck from our exchange—not however, until we had patiently waited weeks and even months in the hope of witnessing a reformation. It was in accordance with a rule we have adopted, and our Northern friend (?) is not the only one who has been affected by its action. Let the Country Press, and our readers, decide whether or not our course in the premises was fair and justifiable. And we trust this hastily-written and perhaps too wordy article will not only exonerate us in the eyes of the public, but convince our combative brother that, instead of "kicking *his* ladder away" for the reason alleged, a *white horse of a darker hue* has deprived him of a continued exchange with the RURAL NEW-YORKER!

### Notes from the Capital.

ALBANY, April 4, 1853.

THE session of the Legislature is drawing rapidly to a close, and as a matter of course, both Houses begin to *work*. Many bills have been passed, and the discussions on the great questions are nearly completed. Probably the Canal resolutions originating in the Senate will be voted on in a few days, and they will then take up the plan from the House.

The committee appointed to examine certain charges agginst Canal Commissioner FITZHUGH, have brought in a report entirely exonerating him from any improper conduct.

The bribery case came up on Saturday last, and Mr. TARBOX, the officer who attempted to bribe one of the members, was discharged from his office and ordered to be imprisoned for the remainder of the session.

Whatever may be said of many of the discussions and manoeuverings in our Legislature, no one will charge members with wasting time while occupied on measures designed to to check bribery and log-rolling in legislation or preserve the purity of elections. It is to be hoped that the labors of the present session may be productive of good in these respects.

Considerable interest has been felt in the Senate's proceedings with reference to Union College. After a long discussion, that body appointed a committee to re-examine the whole affair.—It is to be hoped that the venerable president of the College (Dr. NOTT,) may be able to vindicate himself in all the various transactions to be investigated.

Business on the river is becoming more active, and preparations are making for the opening of the Canal, which is to take place about the 20th inst. *Owe*

### Letter from Tioga Co., Pennsylvania.

WELLSBOROUGH, Pa., April 2, 1853.

MR. MOORE:—I see you inquire for Cranberry plants. There are several acres of Cranberry marsh three miles from our Borough. If there is much demand for them, it might be well to send an agent for a supply. I will put him in the way of getting them. They are along the Wellsboro' and Tioga Plank Road, which connects with the Blossburg and Corning Railroad at Tioga. So you see there would be no difficulty in getting at them, or if the persons who wish them, will send on an order, enclosing cash for expenses of getting them, I would undertake to get a parcel of them put up and sent per Railroad, via. Corning, to Rochester. I do not know what the cost of getting them would be, but you can judge as well as I.

There is an uncommon opening for farmers and capitalists in our region this Spring. The Railroad to Corning is re-built, and doing a fine business in coal, lumber, &c. There are a great many farms to be bought cheap, as our *un*settled Yankee settlers "want to move." There is no finer country in the world for dairy and stock farming; and several young farmers from Rochester, or its vicinity, have come out to look, and concluded to stay. They have settled on the Tioga river. The rolling land in this part of the country, grows better grass—then our hills abound in iron, coal and limestone, and we have a "splendid article" of fire clay, which a Connecticut Stone-Ware maker has pronounced the best in the United States.

Yours truly, JOSEPH P. MORRIS.

ACKNOWLEDGEMENTS—Are due to Mr. G. M. REYNOLDS, of Spencerport, for some very beautiful specimens of a good apple, now a little past its time—"Steele's Red Winter." Also to ALFRED FITCH, of Riga, for choice maple molasses, with the real *maple* flavor; and to JOHN J. BOWEN, of this city, for specimens of Isabella grapes, excellently well preserved.

ALFRED ACADEMY.—Our attention has been called to an error in this paper of March 26, relative to the amount of the Literary Fund apportioned to the above institution. Instead of $338,-10 as stated, the amount was $624,63. In this connection we would direct attention to an advertisement of this Academy, in our present number, referring to important departments of study.

DEATH OF AN OLD RESIDENT.—We should have mentioned last week the death of one among the early settlers of Rochester—JARED NEWELL, Esq. Mr. N. has long ranked among our most useful and prominent citizens, and his decease is universally lamented. He died on the 24th ult.

—Large quantities of clover and Timothy seed are arriving in this city by the Canada boats.

## Legislature of New York.

### Synopsis of Proceedings.

MONDAY, March 28.—*Senate.*—The debate on Constitutional amendments was continued.

*Assembly.*—The Code was the main topic in the Assembly.

TUESDAY, March 29.—*Senate.*—Various motions were debated, and Mr. Vanderbilt's resolutions made the special order for Wednesday.

*Assembly.*—Nothing of very special interest.

WEDNESDAY, March 30.—*Senate.*—Among the bills passed, the following are the most important: For the enrolment of decrees in Chancery. To amend the general Plank Road Law. To amend the existing law in relation to bribery.

*Assembly.*—Bills passed, to amend the Militia Act, repealing the fifty cents commutation tax; to incorporate the New York Agricultural College; to amend the Homestead Exemption Law, and several others of less importance.

THURSDAY, March 31.—*Senate.*—Among the bills passed we note the following:—To amend the Railroad Act, and providing for the incorporation of Library Companies.

*Assembly.*—The Assembly passed several bills, among them the following:—Relative to the Assessment of Property for Taxation. To extend the time for the collection of Taxes when stayed by an injunction or otherwise. To regulate the formation of Ferry Companies. To secure greater safety in running Railroad trains, in signals and turnouts.

FRIDAY, April 1.—*Senate.*—The Agricultural College bill was referred, to report complete.—Several bills were reported complete, and the debate concluded on Constitutional amendments.

*Assembly.*—The most important bills passed in the House are named below:

The bill to provide for the construction of a Railway from the outlet of Seneca Lake to the New York and Erie Road. Authorizing the formation of Building Associations. To amend the Act regulating the formation of Rural Cemetery Associations.

SATURDAY, April 2—*Senate*—The New York Tax bill, the Agricultural College bill, and the Excise bill were reported complete to the Senate. The amendment to the Constitution was further discussed.

*Assembly.*—Various matters were before the House, and many bills were passed, mostly of local interest.

## Literary Notices.

LETTERS TO COUNTRY GIRLS. By JANE G. SWISSHELM. New York: J. C. RIKER, 1853.

EVERYBODY has heard of Mrs. SWISSHELM and her "Saturday Visitor" newspaper, and nearly everybody has heard of the contents of this volume. In it she talks to the country girls in a lively and agreeable style on all sorts of subjects,—fingers and flowers, house-keeping and the heart, carpets and cleanliness, belles and butter, piety and pincushions, cooking, coffee, churning, coral baskets, catsup and consumption,—dropping, for the while, those eccentricities, which have given her the most unenviable portion of her notoriety.

A CHILD'S HISTORY OF ENGLAND. By CHARLES DICKENS. Vol. 1., England from the Ancient Times to the Reign of Henry the Fifth. New York: Harper & Brothers, 1853.

THE name of the author is a sufficient guarantee for the entertaining character of this volume. What it is, is shown by the title, and will further appear from the author's dedication:—"To my own dear children, whom I hope it may help, by-and-by, to read with interest larger and better works on the subject." Sold by SAGE & BRO.

THE HISTORY OF NERO. By JACOB ABBOTT. With engravings. New York: Harper & Bros., 1853.

THE eventful life of the Emperor NERO—whose name has long been a synonym for cruelty and recklessness—is the subject of this volume. It is uniform in size and character with the series of historical biographies written by the brothers ABBOTT, and already published by the Harpers. As a writer for the young, the author of "Nero" has few if any, superiors. SAGE & BRO.

THE BOURBOUN PRINCE. The History of the Royal Dauphin, LOUIS XVII, of France. New York: Harper & Brothers.

THIS little book presents a condensed sketch of the personal history of the much discussed Dauphin, taking the side that he died long ago—in 1775—in prison. Revolutionary France exhibits no drama with greater variety of movement, or with deeper tragic interest, than the sad yet brief life of the Royal Dauphin. SAGE & BRO.

REPORT OF THE STATE AGRICULTURAL CHEMIST OF MARYLAND.—We are indebted to the author, JAMES HIGGINS, M. D., for his third Report as State Agricultural Chemist of Maryland, an unpretending volume of some 160 pages, devoted to the analysis of soils, minerals and fertilizers, connected with the science and practice of agriculture.—It is an able and systematic continuation of the subjects treated in a former Report, from the same source. We have never been able to obtain the first Report, but judging from the two received, the whole forms a text-book in scientific farming, alike creditable to the author and the State. †

HARPER'S MAGAZINE for April, gives valuable illustrated articles on Copper Mining in the Superior Region, and the Mormons and Mormondom, or the Salt Lake country and its settlers.—This Magazine has reached a circulation of 115,000 monthly, and may be had of HAYWARD, or at McMAHON'S Waverly News Room.

THE KNICKERBOCKER for April, an excellent number, can also be obtained as above.

## Congressional.

### Synopsis of Proceedings.

MONDAY, March 28.—*Senate—Extra Session.*—A resolution was adopted calling upon the Secretary of the Treasury to report at the next annual session the average prices of iron for a series of years, at home and abroad. After some debate the Senate went into Executive Session, and then adjourned.

TUESDAY, March 29.—An Executive Session occupied the day.

WEDNESDAY, March 30.—Nothing of note done in open session.

THURSDAY, March 31.—Several resolutions were offered and the Senate expressed a desire to adj.

FRIDAY, April 1.—After an Execution Session of four hours the Senate adjourned to Monday.

### Central R. R.—Summer Arrangement.

THE Central Line of Railroads from BUFFALO to ALBANY, have announced their summer arrangement, which takes effect April 11th. Trains will run as follows:

*Going East.*—Express trains will leave Buffalo 5,30 and 8 A. M., 5 and 11 P. M. Leave Rochester, 8,15 and 10,27 A. M., 8,15 and 11,20 P. M.

Mail train leaves Buffalo 10 A.M., Rochester 1 P.M.

Emigrant train leaves Buffalo at 12 noon.

Through freight leaves Buffalo 5,30, Rochester 11,20 P. M.

*Going West.*—Express trains will leave Albany at 6,30, 7,30, 11,30 A. M., and 6.30 and 11 P. M.—Same trains leave Rochester for the West at 4, 5 and 6,29 P. M., 6 and 8,04 A. M.

Mail train leaves Albany at 9 A. M., reaches Rochester 8,30 P. M., and Buffalo 12 midnight.

Emigrant leaves Albany 12 M., Rochester 7 A. M. and reaches Buffalo at noon. Freight trains leave Albany for Express and through freight at 1,30 and 5 P. M., Rochester 9,33 A. M. and 5,30 P. M.,—reaching Buffalo at 3 A. M. and 3 P. M.

Accommodation and way freight and passenger trains will run each day over different portions of the road. The arrangement of trains is ample, and must secure to the Central Line a preponderance of the through travel. Our Eastern and Western friends will find this a very pleasant route through the State.

### Death of Mrs. Fillmore.

THE wife of Ex-President FILLMORE died in Washington on the morning of the 30th ult. She had been suffering with Pneumonia for some time past, but no serious apprehensions were entertained until a few days past. The immediate cause of death was suffocation, caused by the accumulation of water upon the lungs. Mrs. F. was the daughter of Rev. LEMUEL POWERS, of Aurora, Cayuga county, in this State, where she was married to Mr. FILLMORE, then a young lawyer just beginning the practice of his profession, in 1826. Speaking of the death of Mrs. FILLMORE, the Tribune very truthfully remarks:

Mrs. FILLMORE was not fitted by nature to dazzle in a ball room nor to win admiration from casual observers; nor did she find delight in crowds or ostentatious display. Few, however, can have known her without being impressed with the blending in her character of good sense with high principle, of refined womanly feeling with active beneficence. As a wife and mother, none could be more exemplary; as a Christain, few have more happily combined earnest piety with unaffected humility. Her death leaves a void in the better society of Buffalo which will not soon be filled—not to speak of the narrow circle to which it is irreparable.

DEATH OF MRS. CASS.—The telegraph informs us that still another eminent man has been called to mourn. The venerable Gen. Cass has lost his wife. She is spoken of as a lady of great worth, and her death will be deeply mourned in the city of her residence, by thousands rich and poor—who were daily witnesses of her virtues, charities, and benignity of heart.

THE WEATHER AND THE SEASON.—This, (Tuesday) morning, snow is falling fast. It began to snow yesterday afternoon about three o'clock, before which the day had been very rainy. The preceding days of the week were favorable for the advancement of Spring work, and the coming forth of the vegetable world. Plowing was commenced here on Thursday last—peas were sown on Saturday.

The maple, liverwort, dandelion, and some other plants and trees or shrubs, were in flower during the week. The Spring is now considerably in advance of what it was, either one or two years ago. It is an adage that Spring snow is the poor man's manure. It contains carbonic acid and ammonia which slowly penetrates the soil, and insinuate themselves through every clod, ridge and furrow, thus giving nourishment to the plants.—W.

PLAGIARISM.—Early last winter we published a poem entitled "A Father's Grave," which was furnished us as original by "A Farmer's Daughter," dating at Trumansburgh, N. Y., whose real name was given us. We have since learned that these lines were copied almost *verbatim* from the "Union Magazine" for 1848, to which they were contributed by F. B. GRAHAM, under the title of "The Widow and her Son." We have since received various articles from the same person, but shall give them no attention; for, whatever ability "A Farmer's Daughter" may possess, she has forfeited all claims to courtesy by her former deception.

FROM HAVANA.—Advices from Havana state that Santa Anna had arrived there on the 28th ult., in the British steamer Avon, and left next day in the same for Vera Cruz. His wife and daughter, together with a large number of Mexican officials, comprised his suit. Vice President King intended to leave Cuba for Mobile about the 6th of April. His health was still very low.

## News Brebities.

—S. C. Cleveland has become sole proprietor and editor of the Yates County Whig.

—A whale was taken off East Hampton, L. I., a few days since, which yielded forty barrels of oil.

—Hon. Joseph L. Richardson, a much respected citizen of Auburn, died on Friday, aged 86 years.

—Sir Henry Bulwer is sinking under the effects of a disease, the seeds of which were received at Washington.

—A firm in Binghampton advertise for fifty canal boats, to engage in the coal trade during the coming season.

—Mr. Pitman, the English phonographer, has been giving expositions of his science in Philadelphia.

—Hon. John P. Hale will remove to New York city next month, and there resume the practice of the law.

—The Massachusetts Legislature refused to adopt a General Banking law in place of the present system.

—Fine specimens of copper ore have recently been obtained from mines a few miles east of Leesburg, Virginia.

—The steamship Yacht, on her last passage from Galveston to New Orleans, brought $70,000 in specie from Brazos.

—The Crystal Palace, N. Y., will not be ready for the reception of articles before the first of June next.

—The Boston Post says the price of ice in that city will be higher this year than it has been for several years previous.

—Mrs. Harriet Beecher Stowe, accompanied by her brother, Rev. Chas. Beecher, of Newark, N. J., left Boston for Liverpool recently.

—The celebrated trotting horse, called Mac, was sold a few days since for the sum of $8,000, to Mr. Jewell, of Boston.

—The United States possess a hundred million of acres of public land that the foot of the white man never trod.

—The King of Siam has become a subscriber to the Maulmain Times. His subscription was sent under convoy of a military escort.

—The Prussian booksellers are, it is said, about to establish a grand book fair at Berlin, in order to be independent of that of Leipsic.

—The population of Savannah is 23,508.—Of this number, 7,276 are white males, 6,488 white females, 4,173 colored males and 4,571 do. females.

—There have been some large auction sales of real estate in New Orleans, at fully 15 per cent. advance on the prices obtained last year.

—The excess of females over males in England, is 400,000; in Scotland, 150,000; in Ireland, 120,000; in the United States, 500,000.

—The Principal of the Normal School, at Albany, writes to a gentleman here, that the "school is literally full, there being scarcely a vacant seat."

—Barnum is putting up a tower in the vicinity of the Crystal Palace, 300 feet high, to the top of which visitors are to be lifted by a steam engine.

—A Mrs. Hannah Allen, was burned to death in Stockbridge, Mass., on Monday week. Her clothes were set on fire by the explosion of a lamp of burning fluid.

—The Poughkeepsie Telegraph states that the double track of the Hudson River Railway will be laid entirely through its whole length by the first of August next.

—Eighty thousand bales of cotton were sold in New Orleans during the week ending the 12th inst.—the greatest quantity ever sold in the same time in that city.

—It is said that the Unitarian churches of New York are discussing the propriety of introducing a liturgy upon the plan of the Episcopalian form of prayer.

—The Medina Whig says:—"Never has our village presented such striking illustrations of prosperity, increase and growth, as it does the present season."

—The Secretary of the American Bible Society is of the opinion that there are not less than one million of families in the United States without the Bible.

—The total receipts of gold from Australia in all this year, are estimated at twenty millions of pounds sterling, or about one hundred millions of dollars.

—The bridge over Chautauque Creek at Westfield broke in on Saturday week, while a quantity of cattle were crossing, and twenty oxen were killed.

—The Indians in Texas are said to be actually dying from starvation. The failure of the wild game, on which they have been in the habit of subsisting, is the cause.

—Look out for altered 1's on the Rome Exchange Bank. The alteration is well executed, and a good judge of money has to keep his eyes in good order or he may be "taken in."

—The people of New Haven have decided by a close vote to petition the Legislature for authority to introduce water into their city, at an expense not to exceed $325,000.

—It is stated in an exchange, that among the applicants for office under the National Administration, there are no less than thirty-three Ex-Governors of various States.

—A German boy in St. Louis stole some phosphorus, and putting it in his pocket, it ignited, setting fire to his clothes, burning him so badly that he died the next day.

—Some writers state that if the present prices of pork in New York shall continue, there will be a loss of $2 on every hog slaughtered in the West this season.

—Counterfeits, 3s of the Oneida Valley Bank, so well done that the officers of the Bank have been deceived by them. Altered 1's of the Rome Exchange Bank.

—A large meeting was recently held in the village of Le Roy, and measures were adopted to put a stop to the illegal sale of liquors. A vigilance committee of 150 persons was appointed.

—The Government and Assembly of Nova Scotia have decided upon a plan for a Railway of 320 miles, with a capital of £1,750,000, the Company to be organized within four months.

—The shower of yellowish dust, resembling sulpher, was noticed at Cincinnati and Louisville. The Courier thinks it was the pollen of the pine and cypress, which trees abound in Louisiana and Mississippi.

—Mr. Wood, Superintendent of the House of Refuge, states that the whole number of boys that have been admitted to that institution since its commencement, is 254, of which 105 were from this city.

# News Paragraphs.

☞ It is stated in the Boston Herald, that Gen. Abner Curtis, a great shoe manufacturer at East Abington, Massachusetts, has issued proposals to some twenty or thirty young men in his manufacturing ware house, that if they will, the current year, be prudent, economical and faithful in their duties—show a balance sheet of savings, individually, of one hundred and fifty dollars, and consummate marriage on or before the first day of January next ensuing, then, he will, in all and every such case being made to appear, and proven unto him, add, as a New Year's present thereunto, a house and lot upon his vast domain, and therewith one hundred dollars, for the purpose of assisting in the erection of a cottage house, severally, to his corps of assistants aforesaid.

☞ It is now beyond a doubt that Rosin Oil will explode. A brass lamp with four burners exploded, a few days since, at the house of Dr. Downs, Grand street, New York. It appears that but one of the burners was in use, and that the wicks in the others being rather small, the escaping gas ignited and explosion ensued, which came near doing great mischief, blowing the lamp to pieces and sending the fragments to a distance of ten feet round the room, firing the furniture, &c. Fortunately there was no person injured, and the flames were quickly extinguished.

☞ The U. S. Mint at Philadelphia is now engaged night and day in striking off the new silver coinage. The denominations are three, five, ten and twenty-five cents. The new quarter of a dollar weighs precisely four pennyweights, and is 7½ grains less than the former piece. As compared with the current Spanish quarters, the new coin is decidedly heavier and somewhat finer.—None of the new dimes or half dimes have been struck.

☞ A drove of forty mules, purchased in Georgia for use on the canal, passed through Syracuse on Monday. The Journal says, many of them were sixteen hands high, and their average height was not less than fifteen and a half hands. They have a great partiality for a grey horse, and will follow one for any distance. These animals will be put on the tow-path this Spring, and will doubtless be found quite as servicable as horses of a higher breed.

☞ It is said that the English Ivy can be successfully cultivated with us. Washington Irving has a vine brought from Melrose Abbey, Scotland, which covers his house at Sunny Side. Mr. Breckenridge, the successor of the late A. J. Downing, in the employment of the Government, on the Capitol Grounds, informs a correspondent of the Waterbury American, that it can be cultivated with success in Connecticut. The ivy is found to preserve the building it grows on.

☞ The Sandusky *Register* says that seven hundred tons of ice taken out west of the Mad River docks is now being shipped to Cincinnati. It is in beautiful clear cakes of eight and ten inches in thickness, and if properly stored, will stand any Cincinnati weather. Its cost, delivered in the Queen City, is about $8 per ton; owing to the great scarcity of the article in that locality, it readily sells for $30 per ton, leaving a snug little margin for the fortunate speculators.

☞ The arrangements for the internal management of the New York Crystal Palace have all been made. The general superintendence has been given to Captains Dupont and Davis of the Navy. B. P. Johnson, of Albany, will have special charge of the Agricultural department. Joseph E. Holmes of the machinery, Edward Vincent of the fabrics, Prof. B. Silliman, Jr., of mineralogy, and Felix Piatti of the products of the sculptor.

☞ Dr. Allen states in his pamphlet on the opium trade, that China expends more than $10,000,000 for the single article of opium, annually: this is nearly as much as the whole amount of the revenue of the United States, from all sources whatever, and a larger sum than any nation of the globe pays to another for a single raw material, with the exception of what Great Britain pays to this country for cotton.

☞ At the sale of the household furniture of the late Daniel Webster, which took place at Washington on the 18th inst., so great was the desire of persons to possess memorials of him, that an ordinary cane-seat chair, with castors, (generally occupied by Mr. Webster,) was sold for $15, and a time piece, that could have been put into his overcoat pocket, for $39,50.

☞ There is in the library belonging to the Academy at Germantown, Pa., the identical telescope used by General Washington at the battle of Germantown, October 4, 1777. It is a cumbrous instrument, and must have required considerable muscular power for its use. There is in the same library a copy of the Bible, Geneva edition, 1610.

☞ A species of hemp made from the fibers of the okra or gumbo plant, is spoken highly of by the New Orleans papers. ' Its merits consist in the cheapness of its culture, the abundance of the raw material, and the quickness with which it grows. It is also stated that the article can be produced at the North as well as at the South, though not so profusely.

☞ The Illustrated London News establishment is clearing annually about £25,000 for its proprietors. Most of their engravings are executed in their own office by their own artists. The sale is so enormous that, besides making their own presses, each of which prints 10,000 an hour, they actually manufacture their own paper.

☞ During the year 1852, the total number of deaths in New York, as shown by the Inspector's report just published, was 21,601. Of this number, 19,114 died in consequence of disease, and the remaining 2,487 from premature birth, malformation, old age and casualities, such as suicide, murder, drowning, &c.

☞ The Syracuse Central New-Yorker is informed on good authority, that hundreds, if not thousands, of the parcels of land given away by Hon. Garret Smith, to poor and worthy white and colored people in the State, were advertised to be sold for taxes, 7th of December last.

☞ The editor of the St. Paul Minnesotian, who was at one time one of the only three white men in what is now the State of Iowa, "hopes yet to travel in a Railroad car on a continuous route from the Minnesota river to New Orleans, and very probably to San Francisco."

☞ William Sturgess, of Zanesville, a Presbyterian gentleman of great business tact and ample fortune, offers to the trustees of the Delaware (Methodist) College, the sum of $10,000 for the endowment of a library, if they can raise $15,000 for the erection of a proper building.

☞ It is estimated that New York wholesales and retailes clams to the value of $600,000 per annum. Some 2100 craft of various sizes, valued at $150,000, are engaged in the clam trade.—About 8,000 persons are variously employed in the trade.

# Foreign Intelligence.

## Arrival of the Niagara.

Our latest European intelligence is by the Niagara, which arrived on the 30th ult. The Arctic was due on the 4th.

Louis Napoleon has offered the War Ministry to Gen. Canobert again, but he refused to accept it unless Changarnier, Lamoriciere, Bedeau and Lofio be amnestied. The pensions to Polish refugees have been withdrawn.

Twenty new peers had been created in Portugal to carry through the new measures of the Government.

The state of things between Switzerland and Austria is growing interesting. The report of the death of Haynau is confirmed, but no particulars are given. The Turks have evacuated Montenegro. A dispatch stating that Prince Menchikoff had met with a repulse from the Sultan, and the latter had implored the aid of France and England, had depressed the English and French funds.

The British fleet had been ordered from Malta to the Archipelago. Buenos Ayrean dates to the 2d February, state that the civil war was still in progress.

New York Wool Market.—Sale reported of 100 bales Entre Rios, at 15@17c. Quotations continued as follows, being the lowest range in that market:

| | |
|---|---|
| American Saxony Fleece, | 55@60 |
| American full blood Merino, | 49@53 |
| American ½ and ¾ Merino, | 45@48 |
| American Native and ¼ Merino, | 40@44 |
| Extra pulled, | 48@52 |
| Superfine pulled, | 44@46 |
| No. 1 pulled, | 40@42 |

No change in foreign varieties. From other markets we have have no sales reported.

## Railroad Fares.

From an article in the N. Y. Times, on low and uniform rates of fare on Railroads, we extract the following:

A moment's reflection and reference to experience, will show that the rates at which a passenger or a ton of freight can be profitably carried at one time, is the rate at which it should be carried at all times. There are constantly recurring evidences that passengers can be transported at one half the customary fares. Every excursion ticket issued—and they are occasionally issued by every Company—is a proof that the Company *can* afford to carry the bearer upon those distinguished terms. If it can be done on one occasion, it may be done on every other, and habitually. That any railroad exacts double fares in winter, to those it collects in summer, not only proves that its public spirited management is quite willing to take all possible advantage of the absence of competition, but that it obtains at least twice as much for its winter work as it is worth. It costs no more to carry the passenger in January than in July; and whatever difference is made is at the expense of justice. And again; the rate at which passengers and freight can be transported for one hundred miles is the rate at which they can be transported for any fraction of that distance. If a Company is paid with a dollar for carrying a passenger through, it is paid with a half dollar, for taking him half way. If it charges more, it takes ungenerous and exhorbitant advantage of defective competition.

A Mammoth Corporation.—The Erie Railroad, according to Mr. Loder, President, including all its assets, property, and effects of every name and description, has cost the stockholders up to March 1, 1853, $30,277,522. There are, of main road, of a solid and permanet character, nearly all well fenced, 446 miles. Newburgh branch 13 miles; sidings or switches, 96 miles; double track, 139 miles; making in all 701 miles of iron rail laid.—The working machinery is, 149 locomotives; 131 passenger and baggage cars; 1,855 freight and burden cars; with steamboats, storehouses, depots, telegraph line, &c.

Beef and Pork.—"Wisconsin Beef" stands as high in the New York market as any produced in this country. Cattle are as good in respect of Stock, as well fattened and as well packed, as the best from their neighbors of Illinois. The total amount packed during the season was 10,151 bbls. The total number of barrels of pork, packed during the last season amounts to 23,707 barrels.—The pork generally has brought a high price, and farmers have reaped a rich harvest, the current rates having been $5@6 75, during the season.—*Milwaukee Wisconsin.*

War in Honduras.—Letters received in Boston dated Honduras, March 1, say:—"War is now openly declared between the States of Guatemala and Honduras. The latest news states that one hundred and fifty men of Honduras have beaten five hundred of Carrera's troops. It is said that the inhabitants of that State dislike this man, who has taken the whole power into his hands. If such is the case, it is expected that Honduras will be entirely triumphant and bring a speedy close to this exterminating war."

Honduras.—There are two countries called Honduras, in the same region of territory. First, the Republic of Honduras, which contains 72,000 square miles and 310,000 inhabitants. The Capital of this Republic is Chiuuimuli, and the Governor Juan Reale. Second, the Colony of "British Honduras," so called, containing 62,740 square miles and 10,000 inhabitants. The Capital of this Colony is Belize, and the Governor Philip S. Woodhouse.

☞ Good Friday and Lady Day this year fell on the same day. An ancient prophecy, alluding to this very rare occurrence says:—

"When our lord shall lie in our lady's lap,
Then England shall meet with some great mishap."

### PUBLISHER'S NOTICES.

☞ Agents.—Any person so disposed can act as agent for the Rural New-Yorker,—and all who remit according to terms will be entitled to premiums, &c.

☞ The Rural is published strictly upon the cash system—sent no longer than paid for—and all orders should be in accordance with terms.

☞ Our *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is ordered.

☞ Advertisements must be brief, appropriate to the objects of the paper, and accompanied with the cash.

Additions to Clubs—Are still in order. Having but few back numbers, agents and others can order additions to Clubs at $1 per copy from 1st of March or April to end of the year and volume New Clubs, or single subscribers, can begin 1st February, March, or at date of subscribing.

# Market Intelligence.

Rural New-Yorker Office,
Rochester, April 6, 1853.

The unfavorable state of the weather has prevented the usual amount of business during the past week. Few teams with produce have been in from the country and transactions as well as prices are nominal.

Flour and Grain.—Prices remain unchanged. No sales beyond supplying home demand.

Provisions—Very light sales at former rates, and little activity. Household supplies come forward in quantities to meet all wants, and vegetables have fallen off in price. Butter is scarce, and commands 15@17c. Eggs 12½c.

Seeds.—Clover has advanced, and now retails at $6,75 for medium. Large is not plenty, and sells at $8@8,50.—Timothy $2,25@3,50 as in quality.

For other changes consult the annexed price list:

### Rochester Wholesale Prices.

## NEW YORK MARKET.

NEW YORK, April 5.

FLOUR.—Our market for Western and State flour is heavy and rather lower for common brands. The shipping demand is quite light, and the eastern inquiry moderate. Canadian quiet and nominal. Sales, Western Canadian, 3,500 bbls, $4 56@6S for common to good State. 46S@194 for mixed to fancy Michigan and Indiana, and common to good Ohio.

GRAIN.—Wheat market very quiet, and prices rather nominal. 1 20@1 21 for Ohio, 1 22@1 24 for Genesee. A sale of 2,400 bu. white Western reported on p. t. Rye not active and not plenty at 90. The storm checks business. Barley dull, 65@70. Oats in good demand and buoyant. 47@49½ for State and Western. Corn buoyant; yellow scarce and wanted for the east. Sales, 10,000 bu. at 62½ for New Orleans; 64 for Southern Mixed, 66@65½ for Southern White, 67 for do. yellow in lots, now held higher.

PROVISIONS.—Pork steady and inactive. $14 94@$15 for new mess. $13 75 for do. prime. $17 for clear.

LARD steady and not plenty, demand fair, 9x@9½.

BUTTER and CHEESE firm and steady.

STOCKS.—Money in good request. Sterling ex. inactive 9¼@9½.

## ALBANY MARKET.

ALBANY, April 5.—During the week Eastern vessels have been in market for cargoes of flour and wheat which gave some animation to trade. Business on the river is good.

Flour.—Demand light and inactive. The bulk of sales were for the East. Common to good State $4,44@1,62,—fancy Genesee $5@5,37; extra $5,37@5.35.

Grain.—There is a fair demand for wheat for milling and the East. Market firm. Genesee sold at $1.23. Oats 47@50c. Barley malt 90c. Bran sold at 16c. Hay 87c@$1 per 100 lbs. Hops 20@21.

No change in Beef and Pork. Shoulders 8c per lb.—Ham 11@12. Butter 10@18. Cheese 8@9.

## NEW YORK CATTLE MARKET.

NEW YORK, March 28.—At Washington Drove Yard—Offered, 1,300 Beeves, (800 Southern and Western, remainder from this State.)

Prices range at from 7 to 10c per lb., as in quality.

At Browning's—Offered 1,200 Sheep and Lambs. All sold at from $3,75 to 5@7,50.

Cows and Calves—100 offered, and all but 35 sold at from $24 to $50.

At Chamberlain's—Offered 450 Beef Cattle; all sold, at 7, 8@9½c.

Cows and Calves—75 offered, and all sold at prices ranging at from $25@50.

2,250 Sheep offered—Sales at from $3,50 to 4,75@7 as in quality.

## ALBANY CATTLE MARKET.

ALBANY, March 30.—Woolford's Bull's Head—At market, 500 Beef Cattle. Prices extra, $7,00; 1st quality $6,00@6,50; 2d do. $5,50; 3d do. $4,50@5.

Cows and Calves—48 in market. Prices, $25, 30, 40 to $55.

Sheep—800 in market—Prices at from $1,00, 6,00 to 8,00.

# Marriages.

At the first Presbyterian Church in Gates, the 31st ult., by Rev. Mr. Balentine, ASCHEL B. PRATT and CHARLOTTE BROWN.

On the evening of the 30th ult., in the Baptist Church, at Akron, Erie Co., N. Y., by Rev. Mr. Pattengill, CHAS. HEBBARD and PHEBA JANE DELANO.

Also at the same time and place, and by the same, MARVIN CUMMINS and HANNAH ELIZA DELANO.

# Deaths.

In Riga, March 25, MARY A., daughter of Alfred and Lucy C. Fitch, aged 21 years.

Of six children, this is the fifth who has died within the last fourteen years, and lonely, indeed, now seems the home once gladdened by their presence. May God console the hearts of the bereaved!

**Sweet Potato and Other Plants.**

THE Subscriber, thankful for past favors, would respectfully announce that he expects to be prepared to furnish Plants this spring, and solicits the patronage of amateurs in his line. Sweet Potato, Early York and Drumhead Cabbage, Tomato, Vegetable Egg, Tobacco, Red Pepper, Mich. Summer Squash, and some of the Valparaiso varieties of Winter Squash, assorted to order, will be carefully set in boxes of earth, and sent by Railroad or Canal, as directed. Early orders will have the benefit of Plants growing in the boxes for transporting.

Prices, $1 per hundred for 100 to 500; $8 per thousand for 500 and over.

Also Black and White Mercer Potatoes, at 75 cents per bushel, or $2 per bbl., mixed or separate.

A few sacks of the Poland Oats may be found at J. P. Fogg's and at C. F. Crosman's Seed Stores in Rochester.

I. W. BRIGGS.

West Macedon, Wayne Co., N. Y., April, 1853. 171-2t

**POLAND OATS, AGAIN.**

I HAVE a few bushels of the Poland Oats which I will sell for $2 per bushel. Address I. A. CLARK,
171-2t* Marion, Wayne Co., N. Y.

**ALFRED ACADEMY.**

MALE and Female Boarding Seminary, ten miles west of Hornellsville, on the N. Y. and Erie Railroad.

There are ten Departments of Instruction in the Seminary, with an able Instructor at the head of each Department. The public attention is particularly invited to the Department of "Chemistry applied to Agriculture," designed to show the relation between Science and Productive Farming. The course comprises Chemical Analysis, conducted in a well supplied Laboratory,—"Use of Fertilizers"—"Adaptation and Rotation of Crops," &c.

For further information address

"Alfred Academy, Alfred Centre, Allegany Co., N. Y."
171-1t* N. V. HALL, Pres. of Trustees.

**PALM LEAF MATTRASSES.**

THE undersigned is the authorized Agent of Spencer & Granger, Manufacturers of Palm Leaf Mattrasses in this city. The above firm have capital, and every facility to fill the largest orders with dispatch and ship them to any part of the United States or the Canadas. One of the firm is a practical workman, and their fabrics give the best of satisfaction as regards *price* and *excellence*. All orders should be addressed to the undersigned. [2t*]

Rochester, April 6, 1853. G. A. KNAPP, Agent.

**IRISH CUP POTATOES.**

A FEW bushels of genuine Irish Cup Potatoes, for seed. They are unequalled by any potato cultivated in Western New York. A large share of those raised under that name are not genuine, hence the reason they are in no better repute. Price $3 per barrel. $1 per bushel, shipped as desired. All orders adressed to E. D. HALLOCK, at Hallock's Ag'l Warehouse and Seed Store, 24 Exchange Street, Rochester, N. Y., will receive attention.
April 6, 1853. 171-2t

**FRUIT TREES FOR SALE.**

A GOOD assortment of the various kinds of Fruit Trees, adapted to the wants of Central New York, can be had on good terms, at the *Central Nursery*, Himmauville, Oswego Co., N. Y. [171-3t] STONE & COOK.

**GARDEN AND FIELD SEEDS**

*From the New Establishment of Van Zandt & Bowdish*
No. 114 State street, Rochester, N. Y.

CAN be purchased of the merchants generally throughout the country, in Papers or Packages, on the most reasonable terms. Also at the Agricultural Warehouse of E. D. Hallock, No. 21 Exchange street, near the Clinton Hotel, Rochester, N. Y.

The Seeds from this establishment can be relied on as being of the very best quality. They are mostly imported, or grown by the Eastern Shakers, and are warranted.—Full directions for cultivation printed on each Paper and Package. VAN ZANDT & BOWDISH.
Rochester, N. Y., 1853. 170m6.

**Unprecedented Sale.—Webster's Great Orations.**

15,000 *Already Sold.—Fourth Edition Now Ready.*

CONTAINING—Eulogy on Adams and Jefferson. First Settlement in New England, Bunker Hill Monument, Reply to Hayne.

Single copies, 37½cts.; per dozen, $3; per hundred, $20. Agents would do well in the sale of this and other works. Copies mailed to any part of the country, (postage free,) on the receipt of 37 cents. Address, post-paid,
270w2t J. McMAHON & CO.,
Publishers and cheap Booksellers, Rochester, N. Y.

**Pure Bred Male Stock at Private Sale,**
AT MOUNT FORDHAM, WESTCHESTER CO.,
Eleven Miles from City Hall, New York.

I WILL sell and let from 10 to 12 Short Horned Bulls and Bull Calves, 4 Devon Bulls and Bull Calves, and from 12 to 15 Southdown Rams. The annual sale by Auction will be omitted this year, as I wish to reserve all the Females, having recently purchased another Farm, to enable me to increase my Breeding Establishment. My Hog Stock, including all the Spring litters, are engaged.

Catalogues with full Description and Pedigrees of the above Bulls, and Southdown Rams, with the Prices attached, can be obtained by the 15th April next, from the subscriber, or at any of the principal Agricultural Stores, or from the Editors of the principal Agricultural Journals.
March 23d, 1853. 170m3 L. G. MORRIS.

**Sheppard, Cherry & Co.,**
PROPRIETORS OF THE RIVER BANK NURSERY,
Rochester, New York.

OFFER for sale the following, comprising all the principal varieties of fruits:

10,000 Apples, fine thrifty trees.
5,000 Pears, standards and dwarfs.
5,000 Cherries, do do do
3,000 Peaches, one and two years old.
1,000 Plumbs.

Also, a general assortment of small fruits—Gooseberries, Raspberries, Currants, &c.,—and a few thousand of those superior Cherry Seedlings, which can be furnished, if applied for soon.

Orders for the above respectfully solicited. 170w2t*

**Seneca Lake Highland Nurseries,**
*Catharine, near Havana Depot, Chemung Co., N. Y.*

CATALOGUE containing price and description will be furnished gratis to all mail applicants of this old and extensive establishment, which contains Standard and Dwarf Fruit Trees of all kinds, Ornamental trees and Shrubbery, Green House Plants, &c., &c.

Orders amounting to ten dollars or over, delivered free of charge at New York, Dunkirk, or any intermediate station on the N. Y. and Erie Railroad. Trees carefully packed and forwarded to any part of the United States, including California; also to the Canadas and Europe,
March, 1853. [169-3t*] E. C. FROST.

**1,000 BOOK AGENTS WANTED.**

INTELLIGENT and industrious men wanted in every part of the United States, to engage in the sale of the best assortment of Illustrated
POPULAR AND USEFUL BOOKS
published in the country.

Men of good address, having a small capital of from $25 to $100, can do well by engaging in this business, as the inducements offered are of the most favorable character.

For further particulars, address, (postage paid,)
ROBERT SEARS, Publisher,
170w4 181 William street, New York.

**REMOVAL!**

HALLOCK'S AGRICULTURAL WAREHOUSE has been removed from No. 50 State street, to

**No. 24 Exchange St., Rochester,**

in the Store formerly occupied by J. E. Chesney as a Stove Store. The new store is well supplied with Implements, Seeds, &c.—comprising a larger and more complete assortment than heretofore. Former customers and farmers generally are invited to call at the new establishment and examine for themselves. E. D. HALLOCK.
169-4t. 24 Exchange St., Rochester, N. Y.

**HALLOCK'S HAND SEED DRILL.**

THIS Drill is adapted to sowing carrot, turnip, beet, onion, and other small seeds in drills, with perfect regularity and without regard to their weight or shape.—The seeds are forced out by a circular brush, which revolves against a perforated tin plate inserted in the bottom of the hopper. A series of these plates accompany each drill, with holes of different sizes for regulating the quantity and kinds sown. It is a light, compact, and durable machine, and not liable to get out of order. They can be forwarded to any part of the country by railroad or stage. Remittances by mail at my risk. All orders (which should give full directions for forwarding,) promptly attended to. Price, $5. Address E. D. HALLOCK,
168eowtf. Rochester, N. Y.

**WHITE SHANGHAI FOWLS.**

EGGS for hatching carefully packed and forwarded by Express. Price $2 per dozen.

The fowls of the above named variety in my possession, were bred by Dr. E. Wight of Boston, and are some of the finest specimens of the breed.

Address, JOSEPH S. HILDRETH,
[169-3t*] 51 Court St. Boston.

**GREAT PRIZE MEDAL.**

THE WORLD'S FAIR AT LONDON, awarded us a Mammoth Silver Medal for the Best Hats.—Gents wishing the Spring and Summer style, will call. We are prepared to serve you with a superior article, and of the most becoming style.

CLARK & GILMAN, 23 State St.,
[169-3m.] Rochester N. Y.

I WILL sell by Auction, on Wednesday, 8th June next, at 1 o'clock, P. M., about Thirty of my improved Short Horned Cattle, mostly all the get of my imported Bull—Up set price from $150 to $300. [169-9t*]
Auburn, N. Y., March, 1853. J. M. SHERWOOD.

**CLOVER AND TIMOTHY SEED.**

200 Bush. medium Clover Seed; 100 bu. large or late Clover seed; 200 bu. Timothy seed, on hand and for sale at the lowest market price, at the Genesee Seed Store, 65 Buffalo st., Rochester, by
163-tf J. RAPALJE & CO.

MONEY TO LOAN on Bond and Mortgage, on improved farms. L. A. WARD,
[169m6.] 36 State St., Rochester, N. Y.

FOR SALE.—20,000 Seedling Apples for stocks.
170w3t S. MOULSON, Rochester.

**Ketchum's Patent Mowing Machine**
Howard & Co., Proprietors and Manufacturers,
Buffalo, N. Y.

THIS justly celebrated Machine is rapidly advancing in public favor, for its simplicity, durability, and efficiency, and it has settled the question beyond a doubt, that grass can be cut by Horse Power equally as well, and at much less expense, than with the scythe; for during the past season five hundred of these Machines were sold by us, and were universally approved of by those who used them. It leaves the grass evenly spread, and requires no turning to cure perfectly. The Report of the Committee of the State Agricultural Society, at the late trial at Geneva, shows fully and conclusively that this was the only machine in the field which worked without clogging, or any interruption, and the only Machine which successfully cut the two acres required by the Committee, cutting the same in one hour and twenty-six minutes, doing its work admirably and in a far better manner than can be done by manual labor with the scythe. They also show in that Report that there is an actual saving of $13 per day by the use of this machine over hand labor. We have only to refer those who wish a perfect mowing machine to said Report, and judge for themselves.

This Machine received last fall the First Premium at the late trial at Springfield in Ohio; the Gold medal at the American Institute in New York: also the First Premium at the great Provincial Fair at Toronto, C. W.

They are so compact that one of them can easily be carried in an ordinary one horse wagon, and so very simple that it requires no machinist to put them together, as there are but two bolts (besides the pole bolts) to be secured, to have the Machine ready for use, which does not require over ten minutes time. They weigh about 750 lbs., and can be worked by any boy who can manage a team.

The great difficulty in Mowing Machines is their liability to clog, and thereby render them inefficient. But this difficulty has been entirely overcome in this Machine by a peculiar construction of the knives, which renders them impossible to clog. Another great advantage of this Machine over all others (which we have secured by Letters Patent) is the placing the knives on a line with the shaft, or tread of the wheel, (or nearly so,) which allows the knives to follow, with the wheel, the unevenness of the ground. Also, that the vibrations of the frame on uneven ground shall not materially elevate or depress the cutters.

All the improvements suggested by experience and use necessary for strength, durability, efficiency, and ease of action, have now been made, and we offer them for sale under the following

**Warranty:** That said Machines are capable of cutting and spreading with one span of horses and driver, from ten to fifteen acres per day, of any kind of grass, heavy or light, wet or dry, and do it as well as can be done with a scythe, by the best of mowers. They are equally capable of cutting Barley, Buckwheat, Millet, &c.

It is much less trouble to keep the knives in order than a scythe, as farmers frequently cut from ten to fifteen acres without sharpening, which can be done on an ordinary grindstone in a few minutes. We can give any reference required for the full performance of our Machine as above stated.

Orders should be sent in early, as we shall manufacture but a limited number. The price of our Machine, including two sets of knives, extra knife blades and wrench, is $110 cash, in Buffalo, the Machine to be delivered on board of boat or cars free of charge. Office and shop, corner of Chicago street and Hamburgh Canal, near Eastern R. R. Depot, Buffalo, N. Y. HOWARD & Co.
[169-1t]

**LOOK AT THIS!**

*A Great Bargain! If Attended to in Time!*

THE Subscriber, by five years incessant labor and daily toil, has accomplished his design in improving and fitting up his farm to satisfy his own eye, and make it all right and productive; and now having an opportunity to purchase a long-sought for, and desirable location in Michigan, at a low rate, is induced to offer his farm for sale on the most reasonable terms. The farm is located ¾ of a mile north-east of Byron Centre, on a good road, and about the same distance from North Byron, in Genesee county; 150 rods from a good Custom and Flouring Mill, and a good Saw Mill, and Plaster Mill. Said farm contains about two hundred acres in a square body—175 acres improved, the rest wood land. The soil rich and fertile. In a natural state will produce as large crops as any farm in the county, and no one acre of it but that will produce good corn. Fifty acres of good wheat land, eighty acres of handsome meadow, that cannot be bent, all fitted for the mowing machine. The fences are all new, or newly laid over—every length staked and capped; 17 gates, hung to good oak posts. Every field is furnished with running water.

The buildings are, a large Cottage House, with wing and wood-house, and a cellar with cement bottom; an ash and smoke house; a large dairy house, with all the apparatus complete for making butter and cheese; barns sufficient to hold 150 tons of hay, and stable-room for eight horses, and fifty or sixty cows, or the same number of fatting cattle; work shop and open shed; barn-yard well paved with stone, all convenient to the house. A good horse power in the barn for cutting feed, churning, &c., and a water wheel that drives, with a force pump, a sufficient quantity into the feeding barn, and also into five yards and lots in which are large vats, where cattle, sheep and hogs can drink at leasure—likewise into the garden, so that a boy ten years old, can water the whole garden with a shower of creek water in five minutes, in the dryest time in the season. A beautiful yard in front of the house, ornamented with choice shubbery, evergreens, grapes, &c. The garden on the right, and fruit yard on the left. Two good orchards of choice cultivated fruit, a comfortable house for a tenant, or hired man, 40 rods from the dwelling.

The farm may be bought between this and the 30th of April inst., lower than any other in this county, taking all things into consideration. Terms of payment easy.—Please call and see. E. W. PENDILL.
Byron, N. Y., March 23, 1853. 170w2t*

**FARM FOR SALE.**

ONE AND A HALF MILES from Lockport, N. Y., containing 190 acres, on which is a spacious frame house, a bank barn 40 by 90 feet, two good houses for tenants, and other necessary buildings; a good orchard of grafted fruit, with Peach, Pear and Cherry trees, &c.; 20 acres timber, 10 of which is a beautiful grove of sugar maple; and a brook running through the farm. From one half to two-thirds of the purchase money may remain on bond and mortgage. The whole can be conveniently divided into two farms, to suit purchasers. Lockport has a population of 12,000, and is increasing rapidly, with good schools and an excellent market.

Inquire of JOSEPH TREVER on the premises, or J. W. REED, Lockport. 169-3t*

**CLYDE STALLION FOR SALE.**

THE Subscriber offers for sale the thorough bred horse Young Clyde. He is a beautiful dapple bay, with dark legs, black main and tail,—stands full 17 hands high, with great bone, muscle and action—and is 4 years old this spring.—Was raised in Darlington, Canada West. He was sired by the far-famed horse, Old Clyde; dam the well known bay mare Messenger.

For further particulars as to pedigree, &c., inquire of the subscriber at Hayward Place, or of S. B. GRANT, ½ mile north of the race course, in Irondequoit, near Rochester, where the horse may be seen. If not sold by the 1st of May, a trusty man is wanted to take charge of him, and travel the north part of this county.
167w6* EDWIN S. HAYWARD.
Brighton, near Rochester, N. Y, March, 1853.

**Manny's Patent Adjustable Northern Illinois**
**REAPER AND MOWER.**
First Premium Machine for 1853.

AWARDED the First Premium for Mowing and the second for Reaping, at the N. Y. State Fair, in the great trial at Geneva, N. Y., in July, in competition with eleven other machines; awarded a Silver Medal at the Ohio State Fair, for the best Reaper and Mower, and received the highest award at the Vermont and Michigan State Fairs, for the best Reaping and Mowing Machine.

The true merit of this Machine has given it a great triumph over all others, and being a perfect combination of Reaper and Mower, it comes to the farmer with double value, and it is clearly demonstrated to be the only successful combination of Reaper and Mower. As a Mower, it is as simple and perfect as though constructed expressly for mowing; and as a Reaper, it is as simple and perfect as if constructed for reaping only. All the change that is necessary from one plan to the other, is to insert or remove a loose platform.

Machines warranted to cut all kinds of grain as well as can be cut with a scythe, and to cut flax and millet, also to gather clover, timothy and flax seed, and to be well built and of good materials. This machine will cut from ten to fifteen acres per day, with two horses, and one person to tend it when mowing, and two persons when reaping. The cutting apparatus is made perfect by means of a double edged sickle, and double guards, as fully tested the last two years, and it is connected with a joint, so as to adjust itself to uneven ground, and by a level at the driver's seat, it can be raised when moving along, to cut from one inch to two feet from the ground. All side draft against the team is entirely avoided. The machine will turn square corners, and turn square about, either way. Over three hundred of these machines were in use the past season, all of which gave perfect satisfaction.

The machines are manufactured at Hoosick Falls for the State of New York, and I will have them delivered to any part of Western New York where ordered. Price of machine, where made, $125. Address Gen. R. Harmon Wheatland, Monroe Co., N. Y.
149-tf. R. HARMON, Agent.

# Poetical.

Written for the Rural New-Yorker.

## SONNET.

BY WM. EDWARD KNOWLES,

A SUN-SET glory tinged the golden west,
And fringed with gold the clouds that nestled there;
A light wind rustled in the valleys fair,
And rocked the lilies to a dreamless rest,
And all above and all below are blest,
And feel no more the weight of earthly care;
Guarded by Him who ever guardeth best,
Watching his children, as they slumber there.—
O, if His angels ever come to earth,
It must be in a holy hour like this;
And as they leave this home of higher birth,
They come to man in his unconscious bliss—
And leave, when gone, a lingering glory-light,
Glowing adown the dim stairway of the night.

# Rural Sketch Book.

[Written expressly for Moore's Rural New-Yorker.]

## THE PLEBEIAN.

BY KATE KOOLEY.

[*Continued.*]

EDWARD reached his twenty-first year, without seeing much of what is called society. Mr. Wells had lost all relish for general intercourse, and for many years had led quite a retired life. It had now become his intention, as soon as he considered the mind of his pupil sufficiently matured to form a just estimate of men and manners, to mingle again with the world.

One side of the small garden before mentioned, was partially bounded by a large house, belonging to a widow lady by the name of Baden, who resided there with her two daughters. One window in the second story of this dwelling, overlooked the garden of Mr. Wells. This window was covered with a blind, and never opened except by the servant, to cleanse it. One morning Edward had risen with the dawn, to review his studies of the previous evening, and was seated by an open window in his study, in full view of the above mentioned window; a slight noise induced him to raise his eyes, when he was surprised to see the blind slowly unclosed, and instead of the woolly head of the servant, that of a young lady with dark, shining locks, was cautiously protruded from the window. The faces of the inmates of that house were familiar to Edward, but this was a stranger. She seemed to enjoy the view of the garden.—At length her eye was apparently attracted to some rare plants which were ranged around the window where Edward sat, when she became aware that they partially concealed eyes that loved to look on beautiful objects as well as her own. The head was quickly withdrawn, and the blind closed. Often on that day Edward found his thoughts playing truant, and though his eyes rested on the page, his mind wandered to the incident of the morning.

### CHAPTER II.

Miss Julia Snowden belonged to one of the most ancient and aristocratic families in the State—ancient, if any thing in our Republic can be called so, for Mr. Snowden, the father of Julia, took great pride in the armorial bearings of his family, as they were the same that graced the escutcheon of some old English Baron.

Julia having lost her mother while yet an infant, was at an early age placed at boarding school, where she remained until she entered upon her seventeenth year. Her father, who for many years had impatiently awaited the time when his daughter should become qualified to be the mistress of his house, and a companion for himself, determined to be no longer deprived of her society. He soon found his fond anticipations were not likely to be realized,—for Julia, finding herself released from study, and entirely her own mistress, was wild with delight, and often planned schemes for amusement, and indulged in sports which her father thought quite indecorous, and even dangerous. Sometimes, when he particularly desired her presence in the library, to converse on some grave and important subject, his daughter would be very likely, if the weather was fine, to be engaged in a game of romps with Bruno, the house dog, or perhaps in her own room bending with delight

"O'er the dear pages of a new romance."

After mature deliberation, Mr. Snowden determined to send his daughter to spend a few months with his sister, whose stately bearing, and precise and formal manners, he hoped would check the wild exuberance of Julia's spirits, and teach her that dignity of manner befitting the station she must fill as mistress of "Snowdon Manor."

Mrs. Baden, sister of Mr. Snowdon, was a widow with two single daughters,—one verging on forty, the other about twenty-five years of age. Mrs. Baden's fortune, once large, now yielded a moderate income, but her pride of birth seemed to increase as her means diminished.

On the evening of Julia Snowden's arrival at her aunt's, she was lighted to her chamber by a servant, followed by the elder of the daughters, (who was always called *Miss* Baden,) to give directions about the baggage, &c., which having done in the most precise manner, she ended by saying, as the weather was warm, she might raise all the windows but one, which she told her cousin must on no account be opened, as it overlooked a gentleman's garden. As soon as the formal "good-night" was uttered, and Julia in the solitude of her own room, she opened her trunk and drew forth one of the novels with which she had supplied herself, as she knew they were forbidden luxuries in her aunt's house, and must be enjoyed in secret. She had just commenced reading the "Waverly Novels," which were at that time attracting deserved admiration, and derived too much pleasure from their pages to relinquish the perusal for what she deemed the whim of her precise aunt.

Becoming fatigued, she reluctantly closed the book and sought her pillow, just after she had finished reading the fifth extract from Julia Mannering's letter to Matilda Marchmont. She was delighted with the character of the heroine, Julia Mannering, as described by that unrivalled delineator, Sir Walter Scott, and fancied that she herself resembled her in person and character, as well as in name. She was soon lost in slumber, but her imagination still revelled in the region of romance; visions of beautiful lakes, verdant laws, tall, handsome young men, music, &c., made blissful the "dark-winged hours."

Scarcely had the morning "looked o'er the eastern hills," when she awoke. With her mind stil full of the subject of the previous night's reading, she arose and seated herself by an open window. It was a lovely summer morning; not a cloud obscured the sky, but not yet was there sufficient light to enable her to read. It so happened that the first rays of the morning fell on the interdicted window, and but for this trifling circumstance how different would have been the termination of my story,—still another proof of the accuracy of the thought that, "great events sometimes from little causes flow." Supposing that no one would be stirring at that early hour, Miss Snowden determined to avail herself of the above mentioned circumstance. Deprecating the fastidiousness of old maids, she folded back the muslin curtain, softly raised the sash, and was cautiously opening the blind, when she seemed transported to the groves of the East. As the sweet perfume exhaled from the shrubs and flowers, rose on the soft and balmy air, there was borne to her ear the sound of a human voice, singing in clear tones, these beautiful words of a well known hymn:

"Awake, my soft and tuneful lyre,
Awake, each charming string;
Before the rosy dawn of day,
To thee, my God, I'll sing.

Again the sky with golden beams
Thy skillfull hands adorn,
And paint with cheerful splendor gay,
The fair ascending morn."

For a moment surprise and curiosity overcame her sense of propriety, and peeping through the little opening in the blind, her heart throbbing with romantic interest, she beheld among the shrubbery below, leaning on a garden implement, with his eyes turned to the rising day, a young man whose form and features realized her wildest dream of manly beauty. "Flusher his cheek than blush of morning glowed," and as he stood chanting his morning song, all unconscious that mortal eyes were upon him, Miss Snowden thought, as she looked down into those eyes, that they seemed a reflection of the pure azure vault on which they rested. She withdrew from the window, and after arranging every thing about it as before, seated herself to muse on this singularly romantic incident, while her book lay unheeded by her side.

This vision of the morning soon engrossed all her secret thoughts, and filled her imagination with airy speculations. She dared not inquire who the gentleman was, nor could she expect to meet him, excepting at church, where he sat at a distance from her aunt's pew, and too much interested in the services to notice the presence of strangers. Was ever heroine in such a predicament? One morning on awaking she concluded again to indulge herself with a view of Mr. Wells' splendid collection of flowers, whose fragrance had so delighted her on the former occasion. Finding all quiet, she raised the window, and was herself seen and admired as before related.

The visit to her aunt, Miss Snowden expected, would be tedious and formal, but she found these exciting reflections a great relief to the rigid and ceremonious etiquette she was compelled to observe in the presence of her aunt and cousins, and the weeks glided almost imperceptibly away. At length Mrs. Baden received a letter from her brother, saying he felt anxious for the return of Julia, and should send for her very soon.

Mrs. Baden, after consulting her daughters, determined to give a party in compliment to her niece before that young lady should leave them. All was bustle and preparation. Miss Baden sat down to write cards of invitation. "Mr. Wells is an old and esteemed friend, and I shall send him an invitation of course," said Miss Baden, addressing her mother. "I have observed," she continued, "that Mr. Wells visits more than he has been in the habit of doing formerly, but he is always accompanied by that beggar, on whom he is spending his fortune;" as she said this a smile of contempt crossed her sharp features. If the truth must be told, Miss Baden had for some years hoped that Mr. Wells would offer her his hand and fortune, the latter being just the thing to repair the decayed condition of hers; and bitterly did she hate Edward, whom she believed had caused the disappointment of these long cherished hopes. Addressing her cousin Julia, said she—"Some eight or ten years since, Mr. Wells, a single gentleman, of good family and large fortune, (the owner of the garden under your window,) was on a journey and picked up a beggar's brat, on whom he is lavishing much fondness; he has given him an education befitting a gentleman, and now expects the base Plebeian to be received in genteel society, and I suppose we must invite him, or Mr. Wells will not come. Now, if he comes I wish you to treat him with the contempt he deserves."

"Indeed!" was Miss Snowdon's reply, and she bent her head still lower over her work, to hide her emotion.

"Now, cousin," said Mary Baden, "let *me* advise you." (at the same time casting an arch glance at her sister,) "I think you had better guard well your heart, for he is very handsome, and quite an angel."

"Why, Mary!" exclaimed her sister, raising both hands in pious horror, "how can you be so profane, as to compare a vile man to an angle?"

"I have heard you and beautiful women called angels," said Mary, "and I see no impropriety in this instance, for Mr. Wells says he is quite as good as he is handsome."

"I do believe, mother," said Miss Baden, sneeringly, "that Mary has actually fallen in love with that low-born fellow."

"Not quite as probable, as that you have fallen in love with Mr. Wells' fortune," replied Mary, a little tartly.

Miss Snowdon had too much penetration not to discover the origin of her cousin's dislike towards Edward Mullet. True, thought she, he has rather a plebeian name, but as to his being really low-born, his very looks contradict that, and if I like his conversation I shall not ask leave of my amiable cousin to listen.

As invitations were sent only to those of "honorable descent," the party was not a very large one. While Mrs. and Miss Baden were engaged with friends in another part of the room, Mr. Wells entered, followed by our hero. Mary Baden introduced her cousin to Mr. Wells and passed on to welcome other guests. Mr. Wells begged leave to introduce his adopted son, to which Miss Snowden gracefully assented, with an intelligent smile of recognition, for there had been more than one game at bo-peep at the forbidden window. After some inquiries respecting his old friend, Mr. Snowden, Mr. Wells passed on to pay his respects to Mrs. Badgen and her daughter.

Julia Snowdon was a burnette, rather below the medium height, black eyes sparkling like diamonds, features rather small and regular; in short, no one would have thought of calling her handsome, perhaps not even pretty, had she not possessed a warm vivacity and simplicity of manner, far more attractive than cold beauty merely.—On this occasion she was arrayed in a simple white dress, and wore no ornaments except a string of pearls, which confined her glossy hair of the darkest hue.

Although the youthful couple had never formally met before, they did not meet as strangers. Miss Snowden, in a voice not intended to reach the ears of her relatives, begged he would excuse the liberty she had taken to peep at his flowers. "On opening my window," said she, "they filled my chamber with such delicious perfume, I could not withstand the desire of examining their beauties, though well aware I was committing a trespass." Edward assured her he was far from viewing it in that light, and hoped she would often avail herself of the liberty, freely granted. She observed she was passionately fond of flowers, but could not appreciate the taste that confined their cultivation to Bachelor's Buttons, Heartsease, and Love-lies-bleeding,—at the same time glancing archly at her elder cousin.

Never before had such bright glances from bright eyes, and sweet smiles from beautiful lips, been received by our hero. He might have met Miss Snowden in a crowd without being particularly attracted by her appearance; but a previous interest was created—she had broken in on his solitude—the mind, perhaps wearied by pouring over the subtleties of the law, his heart was open to the bright impression, and he who acknowledged that all the workmanship of God was made to love and admire, experienced these sentiments towards "God's most beautiful creation, a lovely woman." So new and delightful were Edward's sensations that he seemed as if under the influence of a pleasant dream, and when she asked him if he did not love those beautiful lilies and roses, just opening in his window, scarcely conscious that he spoke, said he "did not know." Surprised at his manner, her eyes sought the floor, her tell-tale countenance betraying her feelings. After a moment she recovered herself, and raised her eyes to his face, which was overspread with the blush of confusion. He had seen the shade pass over her joyous countenance, and when he recalled his stupid answer, he saw the cause. He said his dear father, (as he called Mr. Wells,) was extremely fond of flowers, and had entrusted them to his care, and it always gave him so much pleasure when he could in any way contribute to the happiness of one to whom he owed so much, that he never asked himself whether he was consulting his own taste, but he was sure his flowers would now possess a double charm, since they had attracted her notice and attention.

While Miss Snowden, forgetful of all else, stood admiring the beautiful expression of his countenance, as he spoke his gratitude to his benefactor, a hand was laid on her arm, and as she turned Miss Baden said, "Come, cousin Julia, you are wanted at the piano," and casting a look of scorn and contempt on Edward, she led her cousin away to the piano, when she became so surrounded that our poor hero could not get a glimpse of her till she had ceased playing; but the music of her voice reached his ear, and its tones were well and long remembered.—Several times during the evening he attempted to address her, but she was compelled to avoid him, as Miss Baden continued to watch her steps, and

"Hung like the dragon, o'er the Hesperian fruit."

The party separated at a late hour. The next morning a servant came with Mr. Wells' compliments and a beautiful boquet for each of the ladies. As Miss Snowdon was examining the rare flowers of which her boquet was composed, she perceived a slip of paper concealed beneath the ribbon with which they were tied. She excused herself to her friends, by saying she wished to press some of those flowers while fresh, that she might show them to her father, and retired to her chamber to learn what was hidden among them. On the slip of paper were these words:—"Flowers are lovely and beautiful, and I love to look on them.—but in the presence of an object more lovely still, I forget them." The next day a servant arrived to convey her home.

From this time, Mr. Wells observed that the fits of abstraction, which were not unusual with his pupil, owing probably to his secluded and studious habits, were much more frequent than formerly. As the period was near at hand when he must pass an examination previous to his being admitted to the bar, his kind friend supposed his mind was engaged on some knotty points connected with his studies. The time at length arrived, and he passed the examination with honor to himself and to his tutor, and never did father look with more pleasure and pride on the success of a son, than did Mr. Wells on the son of his adoption.

During the session of the court, Mr. Wells had been engaged in several cases in which he felt an unusual degree of interest, which obliged him to tax his mental energies to the utmost. He was successful; and on the evening of the day which witnessed that success and the admission of his pupil, Mr. Wells was taken suddenly ill, and was carried home insensible. His physician pronounced the disease paralysis, which left but little hope of his recovery.

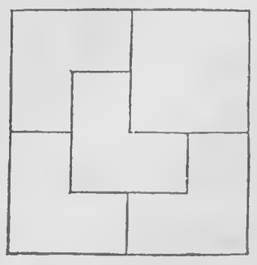
### ANSWER TO ENIGMA, &c., IN NO. 13.

Answer to Geometrical Problem:



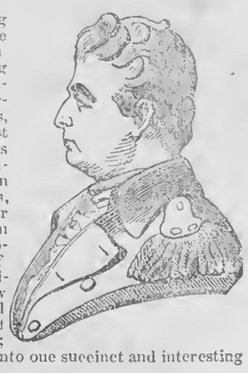
Answer to Miscellaneous Enigma — *Catalogue of the Genesee Wesleyan Seminary.*

Answer to Puzzle—99 9-9.

Answer to Charade—*Well-come.*

### ETHAN ALLEN
AND THE
### GREEN-MOUNTAIN HEROES
OF '76.

BY HENRY W. DE PUY, author of "Louis Napoleon and his Times," "Kossuth, &c."—128 pages 12mo, with a steel engraving of Kinney's Heroic Statue of Gen. Ethan Allen, a Map showing the route of Gen. Burgoyne, previous to his surrender at Saratoga, Oct. 17th, 1777, and a view of Old Ticonderoga.



This book, full of thrilling interest, should be in the hands of every American. Independent of its being historically valuable, it contains many accounts of hair-breadth escapes, hardships, and sufferings, almost past belief, and of bloody battles where the heroic Green-Mountain Boys fought in the defense of their homes, their children, and their wives. Although Ethan Allen is the principal subject of the work, brief historical and biographical reminiscences of many others, who are identified with the early history of New England, are given; thus weaving all together into one succinct and interesting historical narrative.

AGENTS WANTED.—This work affords a rare opportunity for Agents, and others, wishing to engage in a light and profitable business, as a liberal percentage will be allowed to all persons canvassing for the work.

Single copies, done up in substantial wrappers and delivered free of postage to any post-office in the United States, will be furnished for $1.25.

Address, *post-paid*, BEADLE & BROTHER,
*Buffalo, N. Y.*

### GENESEE VALLEY NURSERIES

A FROST & CO., Rochester, N. Y., offer for sale the following, at low prices, which comprises a part of their large stock, that they will forward to any section of the country. Parties can depend that no second rate articles will be sent out, and that they will prove to be true to description.

The packing is done in the most secure manner, that plants may reach their destination in perfect safety.

Standard Apple, Pear, Peach, Cherry, Apricot, Nectarine and Quince Trees.

Dwarf and Pyramidal Pear Trees, on imported Quince.

Dwarf and Pyramidal Apples; Bushes, 1 and 2 yrs. old for Gardens.

Dwarf and Pyramidal Cherry Trees, 1 and 2 years old.

Grape vines, native sorts.

Grape vines, Foreign sorts, in pots, comprising 18 best varieties.

Currants; White and Red Grape, Cherry, May's Victoria, White and Red Dutch, Black Naples and English, and 8 other sorts.

Gooseberries of 40 Prize Lancashire varieties best suited for cultivation in this climate.

Raspberries, Strawberries; Esculent Roots, such as Rhubarb of sorts, Sea Kale, Asparagus, etc.

Hedges.—Privet, 1 and 2 yrs; Buckthorn and Osage Orange, 1 year.

The *Ornamental Department* of Hardy Trees, Shrubs, choice Roses, Herbaceous Plants, etc., is very extensive.

*Bedding Plants.*—Their stock of Dahlias, Verbenas, &c., &c., of extensive and choice varieties of the respective kinds, can not be excelled, if equalled, in the U States.

100,000 Norway Spruce Firs and other hardy evergreens, 3 to 15 inches high. Price low by the quantity.

The following *Descriptive Catalogues*, lately published, and containing the prices, will be mailed free, upon application, when one cent postage stamp is enclosed for each catalogue wanted.

No. 1. A descriptive catalogue of Fruits, Ornamental Trees, &c., &c.

No. 2. A descriptive catalogue of Dahlias, Verbenas, and other bedding plants.

No. 3. A wholesale catalogue or trade list, for Nurserymen and others who wish to buy in quantities. 167w6

### POLAND OATS BY MAIL & EXPRESS.

PACKAGES of 10, 20 and 40 lbs. of these oats will be put up in strong muslin sacks, and sent by Express to any part of the country as follows:—10 lbs. for $1; 20 lbs. for $1,75; 40 lbs. for $3; all orders to be pre-paid, enclosing the cash, and directions for sending. The sacks will be delivered in Canandaigua or Rochester. I will send ½ oz by mail (as before offered,) for 9 cts., each additional ½ oz., 4 cts., pre-paying all sent at this rate. Postage stamps will be received for small amounts. All remittances will be entered on a book in the order they are received and promptly responded to, or the money returned if my stock should become exhausted.

Address J. W. BRIGGS,
March 12, 1853. West Macedon, Wayne Co., N. Y.

### Credentials of the Rural, from Reliable Sources.

IN order that those unacquainted with the RURAL NEW-YORKER may know the estimation in which it is held by the public, we annex a few voluntary notices of the Press:

For judicious selection, mechanical execution, and ability in the preparation of original articles, we do not hesitate to pronounce the Rural New-Yorker "the best Rural, Family and General Newspaper," that we have any acquaintance with; and we are glad to learn that its merits are so well appreciated by the public as to warrant further improvements, and to stimulate yet higher exertions by its publisher in the forthcoming volume.—[Ontario Repos.

MOORE'S RURAL NEW-YORKER.—The number before us closes the third volume of one of the best Agricultural and Family Newspapers in the world. It is conducted by four able editors, at the head of whom stands D. D. T. MOORE, Esq., the enterprising publisher.—[Louisville (Ky) Journal.

The Rural New-Yorker is one of the most ably edited, interesting and successful papers of its class in this country, and during a period of the three years which it has been published, has acquired a very large circulation.—[Boston (Mass.) Journal.

Its leading feature, perhaps is agricultural; but in the departments of the arts, the sciences, education, history, literature and the daily news, it is most ably and admirably sustained—is an honor to the newspaper family, as well as to its editor and proprietor.—*Mich. Chris. Herald.*

Independent of its being the very best agricultural paper that has ever come under our notice, its literary merits are unsurpassed. It is certainly the best and most useful paper of the kind we have ever seen.—*Pa Whig.*

MOORE'S RURAL NEW-YORKER is one of our exchanges, which we always open with pleasure. It is free from politics and party, and always comes to hand filled with a choice variety of well written, and well selected matter.—*New York Observer.*

THE WOOL GROWER AND STOCK REGISTER, at Rochester, is one of the neatest printed, as it is one of the most valuable, of publications. We dip into its pages with interest. The NEW-YORKER, is also one of the best Agricultural publications in the world, and deserving the wide and increasing patronage it receives.—*Cayuga Chief.*

## MOORE'S RURAL NEW-YORKER:
A WEEKLY HOME JOURNAL,
## For both Country and Town Residents.

PUBLICATION OFFICE,
BURNS' BLOCK, CORNER STATE AND BUFFALO STS.,
ROCHESTER, N. Y.

### TERMS, IN ADVANCE:

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

### Terms of Advertising:

ONE DOLLAR per square (ten lines—100 words, or less,) for each insertion,—*in advance.* ☞ The circulation of the NEW-YORKER is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on *any* terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 16. ROCHESTER, N. Y.—SATURDAY, APRIL 16, 1853. WHOLE NO. 172.

**MOORE'S RURAL NEW-YORKER:**

A QUARTO WEEKLY

**Agricultural, Literary and Family Newspaper**

CONDUCTED BY D. D. T. MOORE,

WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page.

## Progress and Improvement.

### THE MANUFACTURE OF BUTTER.

THE great importance of butter as an article of daily use and commerce, render appropriate all well considered information connected with its manufacture. It might be taken for granted that the dairymen of our country understood the making of as common an article as butter, were it not for the large amount which every year goes to market in a condition so bad as to render its sale and use next to impossible.

One of the essential requisites of a butter dairy, is the selection of cows best adapted to that business. Every farmer or dairyman well understands the wide difference between cows, not only in the amount of milk they yield, but of the richness of the same. A cow that does not yield rich milk should never be kept in a dairy; they are better adapted to the milkman. To determine the quality, the lactometer is useful, but it requires long and close observation to enable any one to determine fully, the good qualities of milch stock. A very safe method is to set and churn the milk by itself. If a cow does not yield a pound of butter a day, under good circumstances, she is adapted to some other place than a butter dairy.

Next in importance is, good pasture. It is essential that cows have enough feed, and that of a good quality. Fresh, rich, juicy feed will enhance both the quantity and quality of milk and butter. The supply should be kept up through the season, for which purpose use may be made of corn sown broad-cast; to be cut when feed is shortest, during the dry season. Another thing not to be overlooked, is a supply of water. Clear spring or brook water is best, for though muddy water will satisfy thirst, cows will not drink as much as will be necessary, neither will the milk be as pure as when pure water is drank. Cows are better, more comfortable and profitable, for having shade in hot weather, and if there are no shade trees in the pasture, the sooner they are planted the better.

Having secured good cows, and attended properly to their feeding and watering, next see that the milking is done rightly. To secure the largest amount of milk much care will be necessary in relieving them of the lacteal treasure. Milking is an art easily acquired, and should be performed with care, gentleness and fidelity. Milk as quick as practicable, and be certain you get the last drop, for these "strippings" are the richest parts of the milk. Raising the cream also, demands attention. A good practice is to strain it into shallow pans.—Some let it cool partially before straining. Milk should stand in the pans until all the cream has raised, which will require from thirty-six to forty-eight hours. In hot weather less should be put in a pan, or the milk will sour before all the cream rises.—The cellar in which it is to stand should be pure and sweet, as any impure matter, like decaying vegetables, damp or mould, will impart a bad taste to the butter. So, also, the food of the cow often imparts its flavor to the cream and butter.

Churning performs an important part of the making of good butter. To make sweet, high-flavored butter, the cream must be churned often. In large dairies this is done every day; in smaller ones it should not be allowed to sour before churning. To have butter come hard in summer, cream should be cooled before the operation is commenced. Sixty to sixty-two degrees while churning has been considered the most desirable temperature, for producing the largest amount and best quality of butter. The best authorities claim that more and better butter can be made when cream is churned from an hour to an hour and a half, and in no case would we recommend its being done in less than half an hour, unless the cream is very pure, as it is generally the first few weeks a cow is milked each season. The particles of butter in the cream adhere to each other at sixty or sixty-five degrees, and care should be exercised not to have the temperature rise above that point, as it will make the butter soft, less highly colored, and not as good flavor.—Churns have been constructed with thermometers attached, but we should prefer to put that instrument in the cream rather than outside the churn.

After churning, too much care cannot be exercised in working, salting and packing butter. Some recommend washing it in one or two waters, but this practice cannot be too strongly discountenanced. It injures the texture, color, and keeping properties. In many places the hands are used as butter workers, in preference to a ladle or other simple machine. The practice should be discontinued—the natural warmth of the hand will melt, to some extent, the butter with which it comes in contact, rendering it oily and destroying its flavor and properties for keeping. Butter should be worked enough to remove the butter-milk, and thoroughly incorporate enough salt. Some dairy maids use a large cloth to absorb the milk, that the butter will not be over-worked. About an ounce to a pound is the quantity of salt used, though if the butter is soft more will be necessary, as more will work out with the milk. New York and Boston commission houses, that keep Turks Island and Liverpool salt for sale, strongly recommend those kinds as best, or the only kinds that can safely be used to preserve butter. Close analysis has demonstrated that common Onondaga salt is more pure than Turks Island or Liverpool, and to our conviction, it can be used with quite as much safety, and an equally satisfactory result.—The great point is, to salt it enough to preserve it without any injury to its flavor. It will require more salt when designed for packing than for present use.

The packages or tubs in which butter is sent to market, have much influence in the sale, and the price obtained. A large majority of New York and western butter is sent to market in ash tubs, largest at the top, with a loose fitting covers. We have heretofore labored to convince dairymen that this kind of package, known as the "Welch tub," should not be used. Butter does not keep as well in them, and cannot be sold for as high a price as if properly put up. The best kind of butter tubs are those which have given so much character to "Orange County butter." These are made—staves and heading of well seasoned *white oak*—barrel shape, with half-round walnut hoops, with the bark on. We have been assured and reassured by dealers in New York, that butter which commands not more than *twelve or fourteen* cents, in "Welch tubs," will at once sell at twenty or twenty-two, after being repacked in good order in the Orange county oak kegs. This is well worth the attention of all dairymen and dealers. Small kegs generally sell better and for higher prices than large ones.

Kegs should be well soaked with brine, and weighed, marking the weight on the same. Salt should be sprinkled on the bottom of the keg, over which many good dairymen put a cotton cloth cut some larger than the size of the tub. Pack the butter in solid, putting no salt between layers. If the keg cannot be filled at once, put a cotton cloth over the top, on which sprinkle salt, which will all be removed when more utter is to be put in the keg. Keep the tub as tight as possible, and when full, put on a cotton cloth, tucking it in around the edges. Put over this a slight covering of salt and head up the keg, taking care to have the butter fill it as much as possible. If there is any danger of leaking, or of the kegs not being air tight, use a cement of white lead and oil, made thick, to stop up every crevice.

### TREE-PLANTING ASSOCIATIONS.

THESE Societies, in the thicker settlements, in the villages and elsewhere, may be organized with much benefit, as they can be made very easy, simple and effective, and add greatly to the personal improvement and enjoyment of the members, as well as to the beauty of the landscape.

Let any number assemble together, adopt a constitution and by-laws, which may be few and simple, for their governance. Let them have their stated meetings, and when general business is attended to, discuss some subject connected with the objects of the association, and hear essays and addresses. There are a thousand topics that might come up and be most edifyingly enlarged upon. Such a course would lead to tho't, induce investigation and research; the habits and constitutions of plants would be studied, and the laws of vegetable Physiology unfolded. This would enlarge the mind and open to it new beauties, strengthen the social principle among the members, for what is more heart-refining and thought-elevating than the sincere contemplation and study of plants,—God's beautiful messengers, speaking silently but impressively to the minds of men.

The association should have its officers and committees, and be composed of both sexes. A light membership fee might be exacted, and a weekly payment of a few pennies, which should be applied judiciously in procuring and putting out shade and ornamental trees, &c., for the public improvement. The Society might, through its appropriate committees, arrange the grouping, setting, &c., of the trees. Those who desired, should have the privilege of paying their dues, in procuring or planting trees under the direction of the appropriate committees.

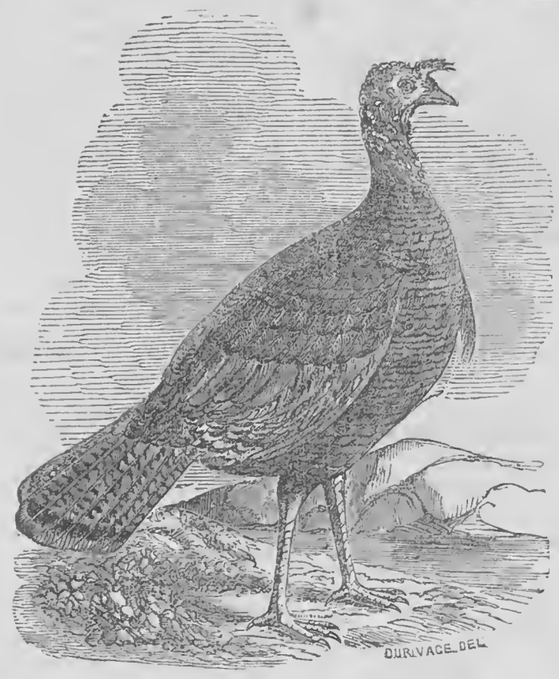
Such an association, in any village, started on right principles and well supported, would soon convert the place into a little rural paradise, making it the beauty and pride of all the country around, while it would raise the value of real estate in a manner that would astonish your mere money plodding people.

Nor is this all; it would beautify the inner man, and more truly make the inhabitants *neighbors*, in the fullest sense of the term. Yes, then, organize tree planting societies, and give them a generous support. Plant out the trees with liberal hands and give them the requisite after care; mingle your views freely on all subjects relevant to your objects, and you will surely be blessed many fold. Nor need you stop here, but, though it be in a small way, you may make of it an effective Horticultural Society that shall be of great use to all within its circle of influence.

### COWS.—CHAPPED TEATS.

WHEN cows are thus afflicted, it is not only troublesome to them, but unpleasant to the milker. If it is owing to the state of the blood, as it may at times be, it is well to cleanse the animal's system with some gentle physic. External applications will then be more effective. The bag and teats must be well cleaned with clean cold water.—Bran water is good. So is good clean lard, applied after the ablutions. A healing ointment, at all events, should be applied. A writer in the Michigan Farmer recommends the application of linseed oil, immdiately after milking. He avers it is better than cold water or lard. It is softening and healing in its effects, while it allays fever also. The same remedy, he adds, is equally good for chapped hands.

An acquaintance informs us, that a better remedy yet, is the application of the oily liquor obtained from the kitchen pot where cowslips have been boiled for greens. It is effectual, healing the sores in a very short time. But "greens" are of short duration, yet if the virture lays in the cowslip, it might be obtained, perhaps, at any time while the leaf holds green. Possibly the expressed juice would be better yet.



THE WILD TURKEY-COCK.

ABOVE we present a portrait from life, of a Wild Turkey-cock, and shall follow it next week with an engraving of the hen—the mother of the above—which was taken wild some years since, at the West. It is now ascertained, beyond a doubt, that the domestic Turkey originated in the Wild Turkey of the American forests, tho' it is quite uncertain when they were first introduced into Europe. It was taken to England, in 1530, and in 1573 it is mentioned in books of husbandry, as forming the staple of the farmer's ordinary Christmas dinner. We copy on the next page a valuable essay on "Rearing Turkeys," by A. W. DODGE, Esq., of Massachusetts.

### SEASONABLE LABOR.

WITH the farmer, each season has its appropriate, even its indispensable labors.—Those of the spring season are multifarious and of too much importance to be neglected. First in time and importance, are repairs of the fence. These should be put in good order.

The cattle will soon be turned from the yard, but not a hoof should be allowed to go upon the meadow, or wheat field. A drove of cattle going over the wet soil in early spring, leave a blight upon every spot over which they pass. Keep them in the yard as long as possible.

If not already attended to, see that all the drains and water courses are cleaned out. Standing water, at this time, will kill grass and wheat if not soon removed.

Sow clover and timothy seed. Though the price may be high, let not a crop of wheat grow, without seeding the field. The fall feed, and the turf to turn under for the next crop, will more than compensate for all the expense. Have a care that the seed is pure. It is bad policy to buy and sow noxious weeds. It is good policy to sow timothy or clover with spring grain.

This is just the season to look to the manure. If any is wanted for spring crops, select the finest and best, that from the stable, and any that was left after putting in wheat. All that is left in the yard should be put into convenient piles. It will rot faster, retain more of its good qualities, and be less liable to leach with spring rains.—The barn yard will likewise become dry and clean.

Take good care of the stock, especially that portion which is to raise the young. Grain in small quantities may be used in feeding with decided profit.

Get your tools ready. Plows, harrows, hoes, harnesses and all necessary farm implements. A day spent now, for this purpose, will accomplish as much, and not be as valuable to the farmer, as a good day for work after the summer's business has been commenced.

If you have not a good wood pile, get one at once and have the wood for summer use split fine, and placed under cover, where the women can get it without hard work.—It is poor policy for a farmer to be drawing up wood at midsummer.

Now that you are ready, plow deep, pulverize well. Sow the best seed of its kind—till every piece of ground and crop thoroughly—and watch the progress with thankful hearts, for seed time and harvest are the sure promise, especially to the diligent, systematic, and intelligent farmer.

### CULTIVATION OF CARROTS.

EDITORS RURAL:—In volume 3, number 9, I find a couple of articles, setting forth the importance of the carrot crop, as food for stock and working horses. I have cultivated the carrot, as a field crop, many years, and every year become the more convinced of their value. Last season I had half an acre,—they were not measured, but when gathered, were estimated at 400 bushels, and my crops have seldom been short of that when measured. They have been fed to six work horses, and my cows; and one thing is certain, give my work horses a feed of half carrots and half corn in the ear, and they invariably show a decided preference for the carrots. As to their value in yielding nutriment, I am not able to state. But Prof. MAPES rates them nearly equal to oats—but when fed with other food, the assistance they render in the better digestion of that food, makes the carrot much more valuable than oats.

Raising carrots comes under the term of "much labor on a little land," but I have found, by proper management, much of the labor can be saved. I will state what kind of a piece of land I would select for carrots, and how I would manage the crop. I would select a piece of land so wet that its surface had never been turned with a plow, though not so wet but that Timothy and red-top grass would flourish well. (But where those grasses are destroyed with surface water in the heat of the summer, weeds are subject to grow, which would make it expensive to weed the carrots.) The soil, a fine, deep vegetable mould, resting on a porous, sandy subsoil. As soon as the frost was out of the ground, I would thorough drain the piece, putting the drains not less than three feet deep, from 25 to 40 feet apart—the distance regulated by the light or porous nature of the subsoil.

As soon as the ground was dry enough, I would rig the big plow with one of SMITH'S "Jointers" on the beam, and team enough to turn a furrow as deep as the plow could do the work, to get a good depth of fine soil on the top of the sod; and if the subsoil plow

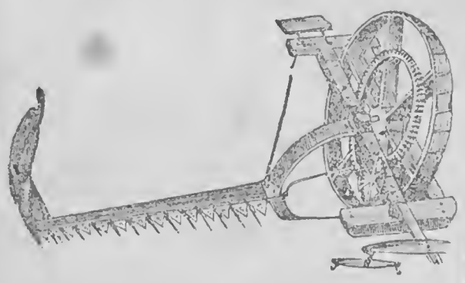
is used also, all the bottor for the crop. Use the harrow and cultivator as often as once a week, till the last week of May, to get the weeds started and destroyed, and the labor of weeding the carrots will be half done.—Not having a seed drill, I rig my corn marker to make the rows twice as thick as corn. One pound of the long orange carrot seed to half an acre, is enough, and they may require thinning; I divide my seed into several parcels, and count the rows, which enables me to get it equally distributed over the piece. It may be sown in hills, ten or twelve inches apart, or in rows. When sown, hitch the team to the harrow, and harrow the same way as the rows. It went move the seed out of the rows, only a trifle where you cross the ends.

Remember in weeding, that "a stitch in time saves nine." As soon as the carrots show the third and fourth leaves, put the hoe on the grind-stone and fetch it to an edge. Now work as close to the carrots as possible; never work over half a day without grinding the hoe, as weeds so small, with their roots cut off, are destroyed. As soon as the roots of the carrots are as large as a wheat straw, the weeds can be pulled up without lifting the carrots. When weeding, if any of the carrots have failed, it will be in season to sow the ruta baga or Swedish turnip. No spring crop is better calculated to be benefited by a stiff sod, than the carrot, as more than three-fourths of its growth is after the heat of summer, just in time to take its nutriment from the decayed sod. But don't forget that a plenty of good, long manure helps the carrot crop.

Only think, farmers, how much stock might be kept through winter, from an acre of carrots and the straw stack.

ALVIN WILCOX.

West Bloomfield, N. Y., 1853.



KETCHUM'S MOWING MACHINE.

THIS machine is entitled to rank among the most valuable agricultural inventions of the day—performing, as it does, the operation of mowing most perfectly and rapidly. It will cut from 12 to 15 acres of grass in a day, spreading it as evenly as it grows, ready for drying. The season of haying will soon arrive—at any rate, it is not too early to think about and prepare for it. The advertisement will be found in this paper. We believe Messrs. RAPALJE & Co. are the only agents for this city.

## CLASSIFICATION OF MANURES.

THE following classification is taken from STOCKHARDT'S Field Lectures. The best manures are given first.

I. MANURES RICH IN NITROGEN.

1. *Substances containing ammonia*, (very quickly forcing.) Ammonical salts of all sorts, good guano, urates, soot, putrid animal substances, such as blood, flesh, skins, &c.; poudrette, gas-water, putrid urine, draining-compost, fermented stable manure, especially of sheep and horses.

2. *Azotized substances that are easily decomposed*, (somewhat quickly forcing.)—Horn-shavings, glue, boiled-flesh, bones liquified by acid, steamed and finely pulverized, oil-cakes of all sorts, malt-grain and the refuse of beer-breweries, fresh urine, drainings, stable-manure beginning to rot.

3. *Azotized substances that are decomposed with difficulty*, (slowly forcing.) Bone-dust coarsely powdered, woollen-rags, fresh stable manure.

4. *Substances containing nitric-acid*, (quickly forcing.) Nitrate of potash, (ordinary saltpetre,) nitrate of soda or Chili saltpetre, nitrate of lime or decayed stable-walls, rubbish of old clay walls, and old compost-earth.

II. MANURES RICH IN CARBON: (forming humus.)

Stable-litter, straw, foliage, weeds, forest-leaves, saw-dust, lawn and garden trimmings, rotten mould, turf, earthy brown-coal, and vegetable substances of nearly all sorts.

III. MANURES CONTAINING POTASH: (strongly forcing.)

Potash, nitrate of potash, malt-grain from beer-breweries, urine of breeding cattle, wood ashes, foliage, stalks and leaves of all sorts, lawn and garden trimmings, building rubbish, street-sweepings, compost, burnt clay and loam, marl of many sorts.

IV. MANURES CONTAINING SODA: (less visibly operative.)

Common salt, refuse salt, Chili saltpetre, soap-boilers' lye, urine, certain sorts of manuring salts, soda felspar, and some other kinds of stone, soap-suds, and dish-water.

V. MANURES RICH IN PHOSPHORIC ACID: (seed-forming.)

Burnt bones, bone black, sugar refuse from refineries, phosphorite, and a few other kinds of stone, poor guano, raw bones, bone dust, true guano, animal substances of all kinds, oil-cake, malt-grain from breweries, solid human and animal excrements, stable-manures, urine of carniverous animals, wood ashes, straw, leaves, &c.

VI. MANURES CONTAINING SULPHURIC ACID: (partly direct manures, partly absorbents of manuring substances.)

Gypsum, sulphuric acid, green vitriol, sulphur-coal, ashes of pit-coal, turf, and brown coal.

VII. MANURES RICH IN LIME.

Burnt lime, chalk, marl, gypsum, ashes of brown-coal and turf, building-rubbish, pond mud, and soap-boilers' ashes.

VIII. MANURES RICH IN SILICA.

Pit-coal ashes, as also ashes of all sorts, sand, straw, stable-manure, &c.

IX. MANURES THAT PULVERIZE THE SOIL.

Sulphuric acid, muriatic acid, lime, marl, humus, &c.

X. MANURES THAT IMPROVE THE SOIL.

Lime, marl, loam, sand, pond-mud, vegetable mould, turf, &c.

Here is a fine classification of the chief manures that are employed as fertilizers.—They should be chosen and applied according to the nature and condition of the soil, as well as with reference to the crop, that is to be produced. Many of the manures are compounds—hence the reason why you find them repeated in the different classes. The farmer should preserve this classification and use it until he finds a better one.—W.

## CONDENSED CORRESPONDENCE.

### Artificial Incubation — Again.

EDITORS RURAL:—Allow me to say thro' the RURAL, that the process of "artificial incubation," as intimated by your correspondent Farmer D., in the RURAL of 26th of March, if tried, will certainly succeed.—A similar mode was tried by myself, ten years since, with success. Instead, however, of "removing the *top* of the heap of manure," W. L., will do better to make an opening in the *side* of the heap. This will make it more easy of access, during the process of incubation, as well as at the period of hatching. Neither will the heat be disturbed by such an opening, as it would be by removing the manure from the top down to the nest every time we wish to examine it. The mode practised by myself was this:—I dug a hole in the side of a large heap of manure, some 12 inches from the surface and some 20 in diameter. I then made an opening still further into the heap, high enough to contain the eggs after a little hay had been inserted. Here the eggs were placed, and a small board placed against the small opening, while the larger hole above mentioned, was again filled with manure. In this manner the eggs can be easily examined without much diminishing the heat, while they are perfectly safe from rains and snows, without "a coop or any other temporary roofing" over them.

Another method has been tried with success, to my knowledge, although it is not as practicable as the former. Remove the eggs from the nest of a crow and replace with hens eggs, selecting those as near the size of the crow as possible, and speting them with ink, so as to resemble those removed. This mode of hatching can be tried by the *curious*, and by those who have no better mode.—C. C. Goss, *Clifton Springs, N. Y.*, March 28, 1853.

### Hatching Eggs in a Hot-bed.

EDS. RURAL:—In a late No. of the RURAL, I saw something about hatching eggs by artificial heat, and I thought I would give you an account of the Egyptian manner of hatching in a hot-bed. In a book we have, it is given as follows:—Take an earthen vessel like a garden pot, but not quite so deep; fill it half way with wool or cotton, and lay as many eggs on a bed as will make a single layer, so as not to come within an inch of the sides of the vessel; then fill up the pot with wool, covering the eggs about four inches thick, and set it up to the rim, in such a bed as is used for cucumbers with a frame, upon which you must lay the lights as close as possible, and the eggs will be hatched in a due time. But if the weather proves very cold, the young ones must be carefully nursed by the fire; and if they are water fowls they must have pans of water agreeably warm, which they will go into of their own accord. If you can make fowls lay, you may always hatch their eggs.—W. H. PURDIE, *Columbus, N. Y.*

### Postage on Seeds, Scions, &c.

FRIEND MOORE:—The subject of Cheap Postage, applied to seeds, scions, roots, &c., has forcibly suggested itself to me within a few days, as I have paid over $10 postage, on seeds alone, within the last four weeks, and verily believe the amount would have been doubled at a rate of one, or one-half cent per once. Might not this reduction be made, with great benefit to our agricultural community, and no detriment to the Postal revenue? It may be objected that written communications might be enclosed, but this might be objected by keeping the rate unchanged for the first ounce, and rating all after that up to sixteen ounces, at one cent each. I have often thought of this subject, as a matter of great public interest, and have wondered why men who are devoting their time and talents for the advancement of Agriculture, should overlook it. I hope more able pens will thoroughly discuss the question.—I. W. BRIGGS, *West Macedon, N. Y.*, April, 1853.

## AGRICULTURAL ADDRESSES.

### Common Sense in Farming.

THE following forcible and sensibly expressed paragraphs are from an address by Col. S. D. HARRIS, of the *Ohio Cultivator*, delivered last Autumn before the Medina Co. Agricultural Society:

We have come together to strengthen the ties of peace and good will, and amid all the chicanery and time-serving around us, there is much of genuine truth and improvement. Theories after theories have been invented, expanded, and finally exploded, with all their wealth of promise clustering around them. Patent guano, and its kindred inventions, will do well enough to amuse *fancy* farmers with, but after all, we are coming back to the belief, which we have never departed from, that Nature is not so fastidious in these latter days, but that a generous application of organic manure, such as every farmer can command, joined to a thorough tillage, under direction of good common sense, is the best preparation for a crop.—Particular soils may be originally destitute of some mineral element, essential to the production of particular crops, or some soils by mismanagement may be made thus destitute; but the results of the best chemical analyses for the last few years, are fast tending the opinion intelligent men to the conclusion, that much less is to be gained by this process than has been generally supposed; and especially in our rich virgin soils. The result of Prof. Wells' analyses of the soils of the Scioto, which you will find in the last Annual Report of the Ohio State Board of Agriculture, are in support of this assertion. The best kind of scientific farming that I know of, is good, common sense, systematic farming—a judicious system of cropping, and a just return to the soil, for the elements of fertility, which you have taken from it. Thus a new farm will not be worn down to a wreck of skin and bone, but like a sensible and well fed workman will grow up to a vigorous manhood, which may be protracted as long as a reasonable tillage is kept up.

I care not how much of science is applied to agriculture, so long as it is kept under the dominion of common sense. We don't want to raise up a race of automaton farmers, even to carry out the speculations of the wisest men, but do want a race of intelligent farmers—intelligent not only in the science of Agriculture, but in the science of Life, for after all, Labor and all its appurtenances are subservient to the full development and enfranchisement of the soul; and that life is perverted and lost which fails to accomplish this great work. Our material bodies are the ministers of the soul, and upon their full and harmonious development depends much of our happiness in this life. Whatever we have gained in mental cultivation, over the ancients, we are far behind them in physical development. The plainest laws of life are little understood or wickedly violated. It has often been said that the body, by its frailty and sensuality, tempts the soul to sin, but we deny the truth of such a charge; if the soul is noble, the body will be noble too, inasmuch as the soul can control its volitions. A body pampered by indulgence and sloth, has been degraded by a groveling soul. If we would not exhibit to the world, the grossness of a sensual soul, let not that soul write out that evidence of its deformity, upon its outer temple to be known and read of all men. The body does not need indulgence—a strict discipline best promotes its happiness and fits it for ministering to those lofty aspirations of the soul which so distinctly mark the supremacy of man, as the noblest among the works of God.

There are some callings in life which seem unsuited to a healthful development of the body, and in the hands of ignorant and hoodless operatives, do their work of distortion without hindrance, but most labors can be performed with such alterations of position and appliance, that symmetry of body can be maintained and its healthful functions remain unimpaired. I can have no patience with those men and women, who are so intent upon working only, that they come to think that work is the chief end of life, and for its own sake so much a religious duty, that they must adapt themselves to its formula, as though hay making or cheese making would be their department when they come to a sort of paradise which they have figured to themselves in some dim mysterious future life. Equally absurd is the notion of another class of self made earth-worms, who during their weary life give themselves no holiday, but push on with a vague hope of an elysium somewhere, in which they can lounge out their hereafter in shirt and trousers, just as now they lounge away a Sunday in harvest time.

## THE AGRICULTURAL PRESS.

### Breeds of Swine.

WE copy below Mr. HOWARD'S concluding article on the "Breeds of Swine," originally published in the *Boston Cultivator*, of which Mr. H. is the principal Agricultural editor:

THE IMPROVED ESSEX BREED.—This is one of the most valuable breeds now known. The establishment of the breed is generally credited to the late Lord Western. It has in latter years been extensively known in the hands of the noted breeder, W. Fisher Hobbs, of Marks-Hall, Essex. It has perhaps carried more prizes at Smithfield within the last ten years, than any other breed. As before mentioned, it was derived from a cross with the Neapolitan, and inherits the color of that race, with more size, finer symmetry, and much better constitution. Stephens, author of the Book of the Farm and the Farmer's Guide, says:—"As to the breed which shows the greatest disposition to fatten, together with a due proportion of lean, I never saw one equal to that which was originated by Lord Western, in Essex..... They were exceedingly gentle, indisposed to travel far, not very prolific, however, but could attain if kept on to a great weight, and so compact in form, and small of bone and offal, that they invariably yielded a greater weight of pork than was judged of before being slaughtered. The offal was small, and more delicious ham was never cured than they afforded." Martin says—"These animals fatten quickly, grow rapidly, and yield very superior meat. The hogs, when fattened, will sometimes weigh 26 or 28 stones (14 lbs.,) often 18 or 20"—equal to 252 to 392 lbs.

The only animals of this breed in this country, within our knowledge, are in the possession of L. G. Morris, Esq., of Fordham, Westchester county, N. Y., or of persons who have obtained the stock of him. His first importation was made about a year since, and his last the past autumn. Some of these animals were procured directly from W. Fisher Hobbs, and were of that gentleman's best stock.

A variety of the Sussex breed is closely allied to, and may be identical with the Essex. Some of this variety were introduced into this country several years since by Mr. Henry Parsons, now of Guelph, Canada West. The writer of this article obtained the stock of Mr. Parsons, and from the experience of several years can say he never had any swine that gave more weight of carcass in proportion to the food consumed, and never any which equalled them in quality of meat.

There is a white, or nearly white variety of Essex. Specimens were imported by the late Mr. Stickney, a part of which are now in the possession of Mr. H. H. Williams, of Roxbury.

THE BERKSHIRE BREED.—The old Berkshire was a hog of nearly the largest class. He is described as having been mostly black, with a large frame, and a large pendant ear. Martin says "they were often found to weigh from 100 to 110 or 120 stones of 8 lbs to the stone. Culley mentions one which in 1774, "weighed alive 12 cwt. 2 qrs. 10 lbs., and when killed and dressed weighed 10 cwt. 3 qrs. and 14 lbs. avoirdupois."

The modern breed is the result of various mixtures of the old with smaller breeds. Youatt says the old Berkshire has been crossed with the Siamese, Chinese, and Neapolitan—a statement which is corroborated by others. It was for a while a very popular breed in this country. Many of our people have reason to remember the "Berkshire fever"—some from the money they gained, others from the money they lost by it. During the excitement in regard to the breed, it was represented by speculators as far more valuable than any other, and specimens were sometimes sold as high as $200 to $300 a head. But their popularity soon declined, and from the height to which they had been raised, they quickly went down to the opposite extreme, in general estimation. The causes of this reversion of public opinion were various. One, and not the least important, was the exaggerated representations which their advocates made of their merits. This produced a reaction. People did not find them to come up to the false standard which enthusiasts or sharpers had made, and being disappointed in this, refused to see or acknowledge the true value which actually belonged to the breed. Another cause of their decline was the character of their meat. The Berkshire is, in all its phases, a *lean*-meated hog. Hence the pork was not adapted to barreling—the carcass lacked the clear, unmixed fat, which the packers wanted.

But it may be supposed the pork was well adapted to the fresh-meat market, and to the mode of curing practised at the south, before spoken of. This was the case, to a certain extent. Some of the Berkshires were well suited to these purposes. The breed, however, varied greatly in character. They were large or small, according as the old Berkshire, or the breeds with which they have been mixed, predominated. The large, lop-eared ones, which sometimes weighed 600 or 700 lbs., dressed, were often coarse fleshed, and not liked on that account. The very smallest, partaking most of the Siamese characters, had a lack of constitution, and were not prolific, but their flesh was fine and good; and the medium sized ones, weighing about 300 lbs., dressed, at sixteen to eighteen months old, were in every respect useful animals for these purposes. We may add further, in explanation of the Berkshires not having succeeded at the south, that they appeared not adapted to the climate, and in many instances became unhealthy there.

Judging the Berkshires as they have appeared in this country they are less uniform in their characters than many other breeds. Persons who are inclined to adhere to them will however, have the opportunity of obtaining the stock from Mr. Morris, Fordham, N. Y., who has lately imported some.

There is an offset of the Berkshire called the "Tamworth pig," which is held in considerable estimation in England. The color is reddish brown with darker spots. A pair, lately imported, are in the possession of Col. Jaques.

THE HAMPSHIRE BREED.—Hampshire bacon has long been regarded in England as of superior quality, and this is thought to be due in a great degree to the breed of the animals from which it is produced. Richardson says "this breed is not unfrequently confounded with the Berkshire, but its body is longer and its sides flatter; the head is long, and the snout sharp. The color of this breed is usually dark spotted, but is sometimes black altogether, and sometimes white." Martin says "he who travels through Hampshire, and looks into the farm-yards, will see some excellent hogs, generally black, and middle sized, with rather a long snout, but compactly made; they are a modification of the old large-sized Hampshire stock, individuals of which in former days were of huge magnitude—and some carried about for show. This colossal breed is now seldom to be seen, but it had its good points; when fattened (and time and much food were required to effect this,) it returned by way of repayment, a weighty carcass. As in all cases, however, the question comes in, was it profitable—was the repayment for food and time in a just ratio? The answer must be, quick fattening, even with a smaller carcass, a gain of time and of provision being included, is one of the points in which the farmer finds himself best remunerated. Slow feeders, however weighty their carcass at least, will not be found profitable when all expenses are calculated. The present Hampshire hog is compounded of the old race, and the Essex, the Chinese, and the Neapolitan, with an admixture also of the improved Berkshire."

Some of this breed were kept in Canada several years since, but we know of none in America at the present time.

We have been somewhat particular in the history and description of breeds, as much misapprehension prevails on that subject. Many persons appear not to know that several of those noticed are extinct, and have therefore ordered, and may have received, animals under names of breeds which are not in existence. It is proper they should be disabused of this error.

## REARING TURKEYS.

IT is my object to offer some hints, derived principally from experience, on the rearing of Turkeys. The first great requisite is, to have good stock to raise from, both male and female. The cock turkey should be of a large size, and as he does not attain to his full growth till he is two or three years old, one of this age is to be preferred, though yearlings are generally made to answer. The color I should choose, would be jet black or bronze, with legs to match. The books give directions as to the gait and mien deemed essential to his perfection; but there is very little difficulty in finding a gobbler whose strut is sufficiently martial to satisfy the most precise stickler for a military carriage. With tail erect, breast inflated, and head and throat inflamed, he marches a perfect Haynau of the poultry-yard. The question is discussed too, in the books, as to the number of females that should constitute his harem. But it is for us more of a theoretical than practical one, as there are here hardly ever more hens allowed to this feathered sultan, than can be suitably provided for by him. A greater point is to prevent a deterioration of stock by breeding in and in. The excellent rule given by Mrs. Sarah Dakin, of Duchess County, New York, in a statement on the management of Poultry, "be sure and change the tom turkey every year," is confirmed by the practice of the successful turkey rearers. A strong and healthy brood of chicks is thus secured.

With the same view, the largest hen turkeys, and if more than a year old the better, should be reserved for mothers. Those that are small in size will lay only small eggs, from which the chicks hatched will be of corresponding proportions. If you expect a large litter of eggs, the hens must be well kept through the winter, but not so as to become very fat, otherwise they will not lay so early as is desirable. If they do not begin to lay till May, they will not complete their litter and be ready to sit till June, which will bring the hatch into July: and thus will be allowed for the growth of the young breed only five months to the last of November, at which period the annual turkey killing comes round in New England as regularly as Thansgiving. It is considered, therefore, by all experienced persons, of great moment to have an early litter of eggs, the first turkey's egg being often a matter of as much congratulation in the family, as the first baby's tooth.

The turkey is an out-of-door bird. In this respect he retains even in his domesticated state, that love of freedom which characterizes the aborigines of our country. Turkeys have no fondness for a shed or barn as a roosting place, but in the coldest weather in winter, in the severest storms of snow, sleet or rain, they prefer the open air and a lofty tree on which to take up lodgings for the night. Here, perched head to the wind, they ride out the hardest gales in safety with apparent pleasure. The instances are rare in which they are known to perish, either from cold or storm. Dickson, an English writer, says that "it is important, during winter, that their perch should not be exposed to the sweep of frosty winds, which are apt to cause the feet of turkeys to freeze," and the same caution is given by Dr. Bennett, in his work on poultry. But such a misfortune I have never known to befall turkeys, that all winter have risked themselves out on trees over night. When the old hens shed their feathers late in the fall, as will be the cause when they have continued to lay a number of litters, it is well to house them in cold nights till they renew their coat, and it may be prudent to do so in extremely severe weather in winter.

We will suppose now that winter is gone, and spring is beginning to open. The notes of the robin are heard welcoming the advent of warmer skies. As the snow melts away, patches of green earth are here and there disclosed to view. Your turkeys no longer hang about the barn, like so many loafers, but spend most of their time in the orchard, and on the sunny side of walls and buildings. The gentleman of the party is as full of airs as any city exquisite, perambulating hither and thither, in front and at the sides of his companions, more intent on exciting admiration of his own person, than bestowing it upon theirs. This species of courtship continues throughout the spring, even after the hens have laid out their litters and

have begun to sit. His attentions to them during this latter period often become so officious and annoying that it is best to separate him entirely from them.

A hen turkey is very shy in selecting her nest, and is sometimes so particular as to be a number of days in securing a place to her fancy. In this she is probably governed by an instinct, to provide a safe place for her eggs and her young. The first intimation, after mating, of her disposition to lay, is by her stealing away from her companions, going here and there with head down, as if meditating upon the task before her. If closely watched, she will be most likely to give up her project for the present. Even after she has begun to lay, she must be followed only at a distance. A better way to find the nest, if out of doors, is to observe the direction in which she returns from it. This very season one of my turkeys that was laying a second litter in a neighboring thicket, was watched a number of hours on two successive mornings, and yet she gained her nest the first morning in secrecy; and on the second, as if fully apprehending the system of espionage established over her motions, she wandered around and through the thicket, and at length returned home and dropped her egg on the open grass plat in front of the house.

If left to her own choice, the turkey will usually make her nest out of doors, at the side of walls, under a bush, in long grass, or in a thicket. Although so fastidious in the site of her nest, she is not at all particular as to the materials of which it is composed, and is as well contented with the bare ground as with a bed of leaves. After a place is selected it is not always the first day or the second that it is made the depository for the first egg. She seems intent rather on adapting herself to it and endeavoring, like the boy in the new school house, "to get the hang of it." The number of eggs which a turkey will lay in the spring, varies from fifteen to twenty-five. They should be gathered daily, (no nest egg is necessary,) or as often as they are laid, and carefully kept in a cool place. If left out over night they may be chilled or stolen. But to guard against such accidents, nature teaches the turkey, silly bird as we sometimes call her, just what to do, by covering them carefully with a few leaves or spears of dead grass. To be sure she does this in warm weather as well as cold, but the covering serves equally in both to screen them from observation.

When she has laid her litter, the turkey manifests her desire to sit, by remaining on her nest, even if no nest egg be under her. She should be permitted to do this for some days before the eggs are placed under her, observing however to drive her off at night if the nest be out of doors. When this is the cause, it will not be safe to let her sit there, as the eggs and herself will be exposed to rats, weasels, skunks and other midnight marauders. A nest should therefore be prepared for her under cover. The barn is a good place for this purpose, and the ground floor. Better still is a shed or an out-house, which can be kept fastened, as the liability to accidents is thus diminished to almost none at all. For a series of years I have kept my hen turkeys in a workshop, during the process of incubation. On one side of this is a carpenter's bench, the space under which is parted off with boards, making a number of apartments about three feet square for the nests, the hay of which they are composed being kept in its place by a narrow strip of board laid on the floor in front. The nests should be rather shallow, and spread out over sufficient space for all the eggs to rest on the surface.

The number of eggs that can be covered to advantage by a turkey, depends upon her size; twenty is a large number, and better success may be expected with fifteen or seventeen. Having placed them in the nests, allow the hen turkey to remain on her original nest, if out of doors, till dusk, and then carefully take her in your arms and remove her to her new abode. Sometimes she will be frightened and disposed to escape. To prevent her leaving, I secure a piece of lattice, made of laths, in front of the nest under the bench, immediately on placing her there. Similar screens I have attached to all the nests, thus keeping the inmates as securely shut up, as if they were in so many cages. This arrangement demands more care of the turkeys than when they have their liberty, as they must be let off every day or two to eat and drink, and health and cleanliness. The way once learned into the building, there is no trouble in their returning to it afterwards. The turkey is a close sitter, so close that I have almost uniformly been obliged, on removing the lattice, to use some efforts to drive her off. She quits reluctantly; when off, she feeds and drinks eagerly; she runs about quickly, pecking the green grass, and if she can find any loose dry dirt, she settles herself in it, flopping the dirt rapidly with her wings over her body, and then hastens back to her nest. This adhesiveness to her eggs grows stronger as the time of hatching approaches. She should then be disturbed but seldom. Four weeks is the usual term of her incubation, but it is sometimes protracted a day or two longer. It happens not unfrequently that turkeys, like some hens of the common fowls, do not incline to sit. When this is the case, they continue to lay litter after litter, during the season, as do often the turkeys that have hatched, after their broods have attained to some size. The eggs may be used in the family. It is not advisable to have a hatch from a late litter of eggs; the chicks will not repay the cost and trouble of attempting to rear them. Turkeys' eggs may be placed under common hens, and hatched with success, if no more are used for this purpose than can be fully covered. This is a convenient arrangement in the spring, in order to enlarge other broods.—*Jour. of Ag.*

*Concluded next week.*

# Orchard and Garden.

## PEARS ON QUINCE STOCKS,—AGAIN.

To be satisfactory and equal to the expectations of those who plant them, these trees must receive proper treatment and training. They are, in some respects, artificial and require artistic skill to bring them to perfection. No person who is unwilling to give them the requisite attention, ought to expend his money in their purchase, or cumber the ground with these trees. To render them profitable, due regard should be had not only to a proper selection of varieties, but suitable and uniform attention must be given to the right mode of planting and manuring the trees, and the proper time of gathering, and method of keeping the fruit.

It is best to procure trees only one year from the bud. Such are easily managed and pursuaded or forced into a fine form. In our judgment, the better way in this snowy region, is to allow at least a foot and a half of trunk below the first branches.—In those parts of the country where but little snow falls, permit the trees to branch as low down as they will, and cut close to effect that result.

Upon planting the maiden tree, cut it back to within from six inches to a foot and a half of the ground. Where the limbs are not likely to be broken down by a heavy body of snow, settling and carrying them down with it, of course one should cut closer than in those localities where such a result is likely to occur. Again, some varieties are naturally inclined to throw out side shoots, while others run up almost perpendicularly, and therefore require to be shortened in a greater degree. Madelaine, Osband's Summer, and Pratt, are examples of the latter class.

Set the stock entirely under ground, placing the point of union of the bud with the stock about an inch beneath the surface.

If the whole plot has been deeply trenched and properly manured, of course only so much earth need be thrown out as will furnish the requisite depth and allow the roots to be fully and evenly extended and spread. If the root, or rather that portion of the stock which was below the surface in the nursery, is too long, say over eight inches, it will be better to cut it off. Although deep planting is not so great an evil in reference to the quince stock, which sends out roots up to the very top of the ground, as to other kind of trees, yet in the cases of these long rooted stocks, the bottom part soon decays and so may as well, and better, be taken away before hand. All roots injured in taking up must be smoothly cut off above the injury, before setting the tree.

And now, having got our tree fairly in the earth, we will let it stand quietly till the next week.

## GRAFTING OLD APPLE TREES.

Thousands of individuals in this State sink large sums of money every year, by neglecting to graft their old apple trees.—This should not be so. The trees look 200 per cent. better grafted, than with their natural burden of limbs on. Apple trees capable of producing fifty bushels of good apples annually, are often seen without even a graft upon them. In Virginia, there are a good many such, it is said, two feet in diameter. Recently, however, grafting companies have gone out from Ohio into many parts of the Southern States, and many thousands of grafts have been set in old trees.

I think we ought to adopt the plan more universally in this State. We have done a great deal in the line of grafting old trees, however, in the Central and Western parts. If the old trees are thrifty, and have not been maimed too badly by having the large lateral branches cut off, in two or three years after the scions are set, they will bring forth choice fruit. I have grafted some old trees, and have failed in making the grafts grow well. In such instances I have noticed that the trunks and limbs of the trees did not look healthy and vigorous; therefore, the failure may be reasonably attributed to the decayed and unhealthy state of the trees, and not to the manner in which the scions were set. Frequently I have grafted trees—old ones, I mean—in the most careless manner, cutting off the limbs with a coarse saw, and putting the grafts in with scarce no care at all, and yet they did well with just such treatment as this. Again, I have been unable to restore them, by any amount of nursing. It is a fact, nevertheless, worthy of mention, that most all old trees can be grafted so that they will bear fine fruit within the space of three or four years. It is cheaper, then, to raise fruit in this way than to set out young trees, which do not generally produce much fruit in five years after they are transplanted; though farmers can both graft their old trees and set out young ones. Old apple trees should be grafted early in the spring; the scions should be cut large; the wax should be of the best kind, and of course should be put on with care.

Now, farmers, and you that have old apple trees, do not fail to apply the saw to your trees, and after removing the limbs about to your liking, don't fail to put in the right number of scions, that they may grow and do well, and thus pay you four-fold for your labor in setting them.

## CLOTH COVERING FOR HOT-BEDS.

Eds. Rural:—In answer to your correspondent, "T., Palmyra, N. Y.," in whom I recognise an old neighbor, permit me to say I have used for several years past, the cloth covering spoken of, and have found it to answer well the purpose I used it for, viz., to start early vegetables, melons, flower seeds, dahlias, &c. I do not think it has as great power, or will hasten plants along quite as fast as glass, but for an amateur, or ordinary family purposes, I think it has the following advantages over glass:

1st. It does not burn up the tender plants like glass, if left exposed by neglect or forgetfulness to a hot summer's sun for a day or so.

2d. It preserves the atmosphere and soil in a comparatively moist condition.

3. The plants if they do not grow quite so fast, are stronger and healthier, and grow when transplanted with scarcely a sensible check by the change, and become as strong and productive plants, or at least as nearly so as if sprouted in the open air.

On the whole, they have been entirely satisfactory to me, although one of my frames was so small as 10 inches by 2 feet to cover a small box, which answers a good purpose.

The following is the preparation I have used, as I find it in my memorandum book, and for which I am indebted to some of our excellent agricultural journals, some two or three years ago. I have not even experimented towards an improvement, if it is capable of it, for I find it just the thing for me, with the little attention I can give a hot-bed.

Take white cotton cloth of a close texture, stretch and nail it on frames of any size you wish; take 2 oz. of lime water, 4 oz. of linseed oil, 1 oz. white of eggs, 2 oz. yolk of eggs. Mix the oil and lime water with a very gentle fire heat; beat the eggs well separately, and mix well with the former. Spread this mixture with a paint brush on the cotton cloth, allowing each coat to dry before applying another, until they become water-proof.

Geneva, N. Y., April 2, 1853.

## LADIES FLOWER BORDERS.

In almost every nice yard, we now see the flower borders well covered with manure—an excellent thing to protect them in winter. In reply to the question, what shall be done with the manure, the general answer is, "why dig it into the borders of course?" Now, ladies, I wish for your sakes, most respectfully, to remonstrate against this, for several reasons.

1st. All the valuable qualities of that manure, that can be made immediately available, have long ago been washed into the border.

2d. Your small flower seeds and fine fibres of your delicate plants, can only flourish well in the finest and most completely pulverized soil, and all manures should be thoroughly decomposed before they are allowed to enter your flower borders. Even well rotted manure should be composted before used among these fine plants, for no manure is of use to small or large plants until it is soluble. The coarse fibres of corn and potatoes can overcome the obstacles of short bits of manure and refuse straw, but not so with small plants.

The loose covering of the borders should be carefully taken off, laid in a heap, mixed with lime and salt, and very soon it will be finely composted.

Many persons lose all their labor on their borders, mainly on account of the error above referred to.

Geneva, N. Y., April, 1853.

Memphis-Grown Oranges and Lemons.—The Memphis Eagle of the 12th ultimo has the following:

"We have just received a basket of oranges and lemons grown here in the city of Memphis, and they are as fine as any we ever saw on the Gulf, or in the far-famed orange groves of Louisiana. The oranges are of a deep vermilion color, large, luscious, and glorious to look upon, and no mistake—the largest we have ever any where seen. They were sent to us by our kind friend, Dr. S. M. Wheaton, and are the product of his beautiful and extensive garden near the railroad depot, about three quarters of a mile east of the Mississippi river, and on or near the 35th parallel of north latitude.

# Mechanic Arts, &c.

## LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending April 5, 1853.

John H. Bloodgood, of Rahway, N. Y., for improvements in process for forming yarn by felting.

Thos. D. Burrall, of Geneva, N. Y., for improvement in grain harvestess.

Solomon Henry, Jr., of Richmond, Ind., for improvement in plows.

Wm. H. Lindsay, of New York, N. Y., for improvement in water meters.

Thompson Newbury, of Taunton, Mass., for improved apparatus for feeding blanks to screw machines.

Henry R. Noll, of Lewisburg, Pa., for improved arrangement of sash fasteners.

Charles J. Pownall, of Addison Road, England., for improvement in process for preparing vegetable fibre. Patented in England for Ireland, Aug. 11, 1852.

Samuel Rust, of New York, N. Y., improvement in sector presses.

Elliott Savage, of Berlin, Ct., for improved machine for cutting the threads of wood screws.

Wm. Smith, of New York, N. Y., for improvement in weaving corded fabrics.

Wm. Mt. Storm, of New York, N. Y., for improved process for mixing air and steam for actuating engines.

Gregor Frinks, of Jersey City, N. J., for improvement in brakes for railroad cars.

John J. Updegraff, of Selin's Grove, Pa., for improvement in stoves.

## THE CRYSTAL PALACE.

It is not improbable that, after all, this great undertaking will prove a stupendous failure. Certainly, unless some new leaf is turned over in the association's books of management, the main objects for which it was projected will be defeated. Quite an attempt was made, not long since, to create an impression that applications for space in the building exceeded the limits of supply. So far is this from the truth that those to whom space has already been assigned have sent in notices of withdrawal of their applications. This is due to the insane policy of the managers determining to charge an entrance fee to exhibitors. Exhibitors when they know and understand this, very naturally protest against being so fleeced.

The completion of the building before the first of May is an impossibility (as things now go,) and whether it will be done before the Fourth of July is a matter of serious doubt. The engineers and architects are at loggerheads; much of the material has to be fitted after it reaches the ground, beams being found too long, and girders too short; and, to use a homely expression, "the very old Harry is to pay all round." Theodore Sedgwick, Esq., the President of the Association, is a most excellent man, and does the best he possibly can, but he does not possess the tact and management indispensable for carrying out the erection of a building like this.

What the Association most need, is a thoroughly practical and experienced managing head—such a man as Barnum, for instance—who can pull, push, coax, or drive, as occasion requires; and who is accustomed to the control and direction of numbers of workmen. Such a man of leisure would not be caught with his work half done at the time when, as he had told all the world, it should be finished; and least of all, would he allow the saving or expenditure of $20,000 or $30,000 to drive the opening of an exhibition into mid-summer, which might reasonably be expected to yield an extra $100,000 if opened on the day and hour it had promised.—*New York Sun*, April 2nd.

## WHITE SHEEP SKINS FOR DOOR MATS.

Take two long-wooled sheep skins, and make up a strong lather of soap; the sign of proper strength is when the lather feels slippery between the fingers. When the lather is cold wash the skins carefully in it, squeezing them between the hands so as to take all the dirt out of the wool. When this is accomplished lift out the skins and wash them well in cold water until all the soap is extracted. Have a vessel of clean cold water ready, to which some alum and salt (about half a pound) which have been dissolved in a small quantity of hot water, are added, and the skins left to steep all night. They are taken out in the morning and hung over a pole to drip. When all the alum water has dripped off they are spread out on a board to dry, and carefully stretched with the hand from time to time. Before they are thoroughly dry a composition of two table spoonsful of alum, and the same of saltpetre are ground to powder in a mortar or otherwise, and sprinkled carefully on the fleshy side of each skin. They are then placed the one on the top of the other, leaving the wool outside, and hung upon a rack of slats, in a barn, shed, or dry, airy place, for about three days, or until they are dry—they should be turned every day. After this they are taken down and the flesh side is scraped with a blunt knife, and each skin trimmed for a mat. The flesh side may then be rubbed over with pipe clay, beat with switch, and will then be found supple, of a beautiful white color, and fit for a door mat for a mechanic or a prince. —*Scientific American.*

Terra Cotta ornaments for the exterior of buildings have been introduced in Boston. Window caps, brackets, &c., are made of this article, and are much admired. As they are much cheaper than ornaments made of sand-stone, it is thought they will come into general use.

## FRENCH PATENTS.

A law somewhat similar to that about to be introduced into England, substituting stamps for the present system of patent right, has been passed in France. The French system does not, however, do away with the existing laws or patents, but leaves it at the option of the patentee to follow either method of protection as he likes, and to be subject to the fees of that alone. A law introducing stamps has, accordingly, been promulgated in France, which are divided into two classes, the one called "timbre marque," to protect the name or mark of the manufacturer, the other "timbre garantie," to protect his ownership of an invention.—These stamps are to be made of various sizes, on paper and metal, of a circular form, with an empty space in the centre for the manufacturer's legal mark or signature; the former are to be sold to patentees at one per cent. on the price of the articles for which they are intended, and the latter ("timbre garantie") at two per cent., and the counterfeiting of them will be punishable by law. The "Genie Industrial" calculates that this system, if generally adopted, would produce a revenue sufficient to pay more than half the annual budget of the country.—*Scientific American.*

# Domestic Economy.

## HOW TO MAKE GOOD BREAD.

The "Mother's Magazine" has the following sensible article on Bread-making; a subject of much importance to all sorts of people:

To make good bread requires two things—first, good materials; then judgment in putting them together. We have seen very fine flour come out of the oven in the form of very poor bread. It will not do to act on the principle, that because bread is made out of a few simple materials, there is no care necessary to insure success in its composition. Bread making is a chemical process, and its laws may be known as well as any other chemical operations. Fermentation will not go on actively without warmth, and yeast will not be active that is not itself well fermented, or that has passed into the last stage of fermentation (the acetuous). And it can be seen easily, that every little particle of flour must come in contact with the yeast principle, or one particle will rise, while its neighbor will lie dormant or dead; in other words, bread must be well kneaded, that all the particles may share alike in the raising power.

And now we will give our own method of compounding flour milk and yeast into the form of sweet, tender, white, wholesome bread; and we can assure every young house-keeper that if she will follow it closely at first, she may improve upon it, perhaps, and she may bring smiles upon the face of her husband, three times a day, at least, and her children will like it so well that they will be satisfied to do without pies and cake, and thus will not be systematically trained to be dyspeptics.

Four quarts of flour, three pints of milk, a small table spoonful of salt, half a pint of potato yeast, will make four good sized loaves of bread.

In cold weather (eight months of the year,) we knead it at night, that it may have ample time to rise, and there is little danger of its becoming sour unless the fire is kept through the night. In warm weather it should be kneaded in the morning, and the first process may be begun at night.

In the afternoon take a quart bowl, fill it half full of flour (which is additional to the four quarts above,) mix with it the half pint of yeast, and water to make a thick batter, cover it, and set it in a warm place to rise.

When fully light, which will be in a little while if the yeast be good, put in a cold place until you are ready to use it. In the evening sift the flour into a large bowl, add the salt, make a hole in the middle of the flour, put into it the mixture from the bowl (which is really fresh made yeast,) let the milk be a little warm, and gradually mix it in, keeping in mind that the flour, the yeast and the milk must come in contact as much as possible. Knead it well, cover it with a thick flannel cloth, and put it in a room a little warm. It should be cracked on the top and quite porous in the morning.—When quite light, mould the dough into four loaves of equal size, and put into the pans for baking. Let it stand in a warm place, at least fifteen minutes. Let the stove or range oven be well heated, but not very hot; bake the loaves an hour. They should rise up quite high in the oven before becoming brown on the top. When well baked, turn them out, leaning them upon the side, and covering with a thick cloth.

Potato Yeast.—Pare and boil six large potatoes, sift them, and add six tablespoonsful of flour. Pour upon them one quart of boiling water, (the water in which they were boiled is the best,) add half a teacup of sugar, and one tablespoonful of salt. When cool, put in a teacup of home-made yeast, or half as much brewers' yeast. When well fermented, cork it, and keep it in a cool place.

Hop Yeast.—Boil a handful of hops in two quarts of water, till their strength is obtained, or half an hour. Pour half of it through a sieve on to two handsful of flour, boiling hot, that the flour may be thoroughly scalded; add the rest of the hop-water, a spoonful of salt, half a cup of molasses, when cool—raise it with a cup of yeast. It must be corked tight, when the fermentation has ceased, and kept in a cool place.

Do what ought to be done to-day, for to-morrow it may rain.

# Educational.

## THE SCHOOL-MISTRESS.

"THE school ma'm's coming—the school ma'm's coming!" shouted a dozen voices at the close of half an hour's faithful watch to catch a glimpse of our teacher. Every eye was turned towards her with the most scrutinizing glance—for children as well as others always form an opinion of a person, particularly of their teacher, at first sight.

"How tall she is!" exclaimed one.

"No, I aint afraid of her, nor a dozen like her," exclaimed the "big boy" of the school.

"Nor I, either," cried the big boy's little ally; I could lick her easy enough, could'nt you Tom?

"Yes; and I will, too, if she goes to touch me."

"Hush!" cried one of the girls, "she will hear you."

By this time she had nearly reached the door around which they clustered, and every eye was fixed upon her face with an eager yet bashful gaze, uncertain as yet what verdict to pass on her.

"Good morning, children," she said in the kindest voice in the world, while her face was lighted with the sweetest smile imaginable. "This is a beautiful morning to commence school, is it not?"

"I know I shall love her," whispered a little pet in my ear.

We all followed her into the school room except Tom Jones and his ally, who watched until the rest were seated and then came in with a swaggering, noisy gait, and a sort of dare devil, saucy look, as much as to say, "who cares for you!"

Miss Wescott looked at them kindly, but appeared not to notice them farther. After a short prayer, and reading a chapter in the Bible, she passed around the room and made some remarks in regard to themselves and their studies.

"And what is your name?" she asked, laying her hand on Tom's head, while he sat with both hands in his pockets swinging his body backwards and forwards.

"Tom Jones," shouted he at the top of his voice.

"How old are you, Thomas?" she asked.

"Just as old again as half," answered Tom with a saucy laugh.

"What do you study, Thomas?"

"Nothing."

"What books have you?"

"None."

Without appearing to be at all disturbed at his replies, Miss Wescott said, "I am glad I am to have one or two large boys in my school; you can be of great assistance to me. Thomas if you will stop a few moments after school this afternoon we will talk over a plan I have formed."

This was a mystery to all, and particularly to Tom, who could not comprehend how he could be made useful to anybody, for the first time in his life he felt as if he was of some importance in the world. He had always been called the "bad boy" at school, and he took a sort of pride in being feared by the children and dreaded by the teacher.

Miss Wescott comprehended his whole character and began to shape her plans accordingly. She maintained that a boy who at twelve years of age made himself feared among his schoolmates, was capable of being made something of. Heretofore all influences had conspired to make him bad, and perhaps a desperate character; she was determined to transform his character, by bringing opposite influences to work upon him; and to effect this she must first win his confidence, which could not be done in a better way than letting him fool that she placed confidence in him.

When school was out, more than half of the scholars lingered about the door wondering what Miss Wescott had to say to Tom J. He had often been bid to remain till after school, but it was to receive punishment or a lecture, and nine times out of ten he would jump out of the room, but it was evidently for a different purpose that he was to remain now, and no one wondered what it could be more than Tom Jones.

"Don't you think Thomas that our school room would be far more pleasant if we had some evergreens to hang about it; something to make it more cheerful?" inquired Miss Wescott.

"Yes'm, and I know where I can get plenty of them."

"Well, Thomas, if you will have some here by eight o'clock to-morrow morning. I will be here to help you put them up, and we will give the children a pleasant surprise. Here are some books I will give you Thomas; you may put them in your drawer, as they are what I want you to study."

"But I can't study geography and history," exclaimed Tom confused, "I never did."

"That is the reason why you think you cannot," replied Miss Wescott; "I am quite sure you can, and will love them too."

"Nobody ever cared whether I learned or not before," said Thomas, with some emotion.

"Well, I care," said Miss Wescott with earnestness; you are capable of becoming a great and good man; you are forming a character for life, and it depends upon yourself what you become. The poorest boy in the country has an equal chance with the wealthiest, and his circumstances are favorable for becoming eminent, for he learns to depend upon himself. I will assist you all I can in your studies, Thomas, and I know you will succeed. Remember that I am your friend, and come to me in every difficulty."

Tom Jones had not been brought up; he had come up, because he had been born into the world and couldn't help it; but as for any mental or moral training, he was guiltless of it as a wild bramble or a pruning knife. His father was a bad man, and his mother a totaly inefficient woman. At home he received nothing but blows, and abroad nothing but abuse. Bad passions were therefore all excited and fostered, and his good ones never called out. He always expected his teachers would hate him, so he whetted anew his combative powers to oppose them, and he had made up his mind to turn the new school ma'm out of doors.

When therefore Miss Wescott declared that she was glad he was in her school, he was amazed, and could not understand why she should manifest such an interest for him, and to give a set of books was perfectly incomprehensible to him. Miss Wescott understood his position and character, and determined to modify them. She felt that he was equally capable of good and bad actions, though the bad now predominated.—She know that his mind must be busy; one might as well think of chaining the lightning, as bending down that wild spirit to his books. She would give him employment, but such as would call out a train of ideas and thoughts. He must feel that he was doing good for others' sake, and that he was not guided alone by his own wayward will, yet there must be no appearance of restraint upon him; he must choose to do good.

Tom Jones went home that night with a new spirit in his breast; for the first time in his life he felt that he was capable of rising above his present condition, and becoming somewhat greater and better than he was. His mind became inundated with new and strange emotions, and like a mighty river turned from its course, his thoughts and energies from that hour sought a new direction.

The next morning he was up with the dawn, and when Miss Wescott arrived at the school house she found Tom Jones there with his evergreens.

"Good morning, Thomas," she said kindly, "so you are here before me; you must have risen early and I see you have found some beautiful evergreens. Now, if you will help me hang them, we will have the room arranged before 9 o'clock."

"I have brought a hammer and some nails," said Tom; "I thought we should need them."

"Yes, so we shall; I am glad you thought of it," replied Miss Wescott.

That day every scholar looked amazed to see Tom Jones actually studying his book, and hear him answer several questions correctly, and they were still more confounded when, at recess, Miss Wescott said:

"Thomas you will take care of those little children, will you not, and see that they don't get hurt; you must be their protector."

One would as soon have thought of setting a wolf to guard a flock of lambs, as Tom Jones to take charge of the smaller children.

"Well," exclaimed Sam Evans, "I never saw such a school ma'm in all the days of my life, did you Tom?"

"No," replied Tom, "but I wish I had; I would have been a different boy from what I am now; but I am going to study and learn something; Miss Wescott says I can, and I am now determined to try."

I was astonished to see the effect that Miss Wescott's treatment of Tom had upon the scholars; they began to consider him of some importance, and to feel a sort of respect for him which they at first manifested by dropping the nick-name Tom, and substituting Tommy, which revealed, certainly, a more kindly feeling towards him.

In less than a week Miss Wescott had the school completely under her control, yet it was by love and respect she governed, and not by an iron rule; she moved among her scholars a very queen, and yet so gained their confidence and esteem, that it did not seem to them submission to another's will, but the promptings of their own desire to please. One glance of her dark eye would have quelled an insurrection, and made them happy for a day.

Julia Wescott always taught school with a realization of the responsibilities resting upon her, and she bent her energies to fulfil them. Carefully and skillfuly she unlocked the soul's door and gave a searching within, in order to understand the capabilities, and she shaped its course accordingly. The desponding and inactive she encourged; the obstinate she subdued; to the yielding and fickle she taught a strong self-reliance. She encouraged the single rain drop to do all the good it could, and the rushing torrent she turned where it would fertilize rather than devastate.

There are in every school some dormant energies, which if aroused might shake the world; which if let loose will like the lightning of the heavens scatter ruin and blight, but if controlled, may like that element, become the messenger of thought to the world. In that head you call dull may be slumbering passions like some pent up volcano; open that closed crater and see if there don't belch forth flames which your hand cannot stop.

* * * * * * *

The sower in the parable sowed good seed, but that only which reached good ground bore good fruit; had the thorns been rooted out and the soil enriched, would not the other fields have yielded a harvest also? I have seen a teacher make his entrance into a school by reading a list of rules two or three feet in length—you must do this, you must not do that—without a single remark upon the propriety, the why and the wherefore, of the thing, but only, you must not do so.

You might as well attempt to cure a man of stealing by pelting him with pebbles.—The truth certainly hits hard enough—and so would stones; let a man feel the beauty and virtue of the law, and he will be quite as apt to profit by it.

Julia Wescott understood nature; she made it a study, as every teacher ought to do. She rooted out error and prejudice from the midst of her pupils, showed them the evil of sin and the beauty of virtue, the advantage of education, and the consequence of ignorance; taught them their own capabilities and responsibilities, and adapted her instructions to capacities and necessities.—And thus she went on from year to year—scattering good seed on good ground—and she reaped an abundant harvest. From many a happy home and high place came a blessing upon her; and there is no one who breathes her name with more grateful affection than Tom Jones, who has filled with ability one of the highest judicial offices in the Union, and freely acknowledges that he owes his present character and position, under God's providence, to her treatment and instructions.

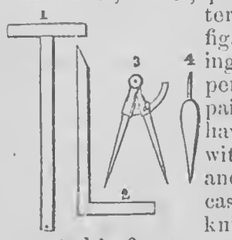
Truly, he that goeth forth weeping, bearing, precious seed, shall come again rejoicing bringing his sheaves with him.

# For the Young.

## MODELING IN CARD-BOARD.

AMONG the many in-door pursuits in which boys or girls indulge, there is none more interesting and instructive than that of MODELING IN CARD-BOARD, and we flatter ourselves that the following little treatise will afford much gratification to such of our readers as may happen to have their organs of constructiveness strongly developed.

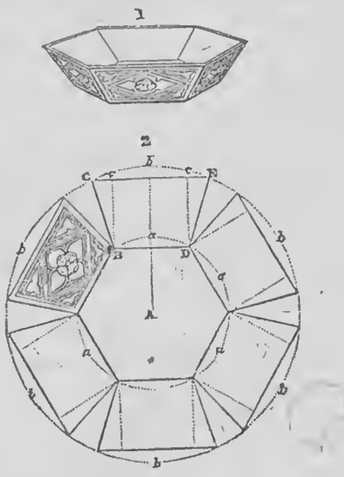
The implements requisite are not very numerous or expensive; they consist of a parallel rule; a flat rule or scale, divided into inches, halves, quarters, and half-quarter inches; a T square, fig. 1, in the accompanying illustration; a carpenter's square, fig. 2; a pair of compasses, fig. 3; having a movable leg, with pencil, steel-pen, and knife to fit in, as occasion may require; a knife of the shape represented in fig. 4; punches of various sizes; a pair of scissors; one or two chisels; and a drawing-board of well-seasoned wood.



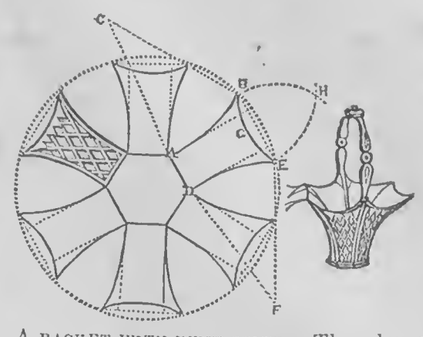
The card-board should be secured to the drawing-board, either by pasting it down round the edges, or by fixing it down by a pin in each corner. After the design is carefully made out, the rule or square must be pressed very firmly and evenly upon it, and the knife carried steadily close to the rule. In cutting circles, it is better not to cut quite through the card-board, with the point of the knife, but to finish with the edge of the blade, or the scissors.

Common glue is frequently employed for fastening the edges of card-board together, but it requires to be used very carefully, otherwise the yellow tint of the glue looks very disagreeable and unworkmanlike.—Mouth glue is also sometimes used: it is no more than common glue with a little scent in it, to take away its disagreeable odor.

We shall commence our instructions with some directions respecting the manufacture of baskets in card-board as they are easy of execution, and form a good prelude to the more difficult subjects. In the annexed illustration, fig. 1 is a representation of regu-



lar hexagonal, or six-sided, basket; and in fig. 2, the plan of it is shown. Draw a circle of the dimensions you wish the bottom of your basket to be, as at *a*, *a*, *a*, *a*, *a*, fig. 2, and divide it off into six parts; next make another circle at the intended height of the sides, as *b*, *b*, *b*, *b*, *b*, *b*, and draw lines thro' the corners of the opposite sides of the hexagon, as shown by the dotted lines, and the perpendicular form of the sides will be then obtained. To give the necessary slant to the sides, a certain measurement must be taken, as C, *c*, *c*, E, on each side of the dotted line; and the same measurement must be observed with all the sides, otherwise, when put together, the inclination of the sides, as at B, C, D, E, will not correspond as truly as they should do; these lines being adjusted, straight lines must be made on the outer circle, as C, E, to mark the straight tops of the sides of the baskets exactly parallel with the inner hexagon. If the young artist wishes to make any ornaments upon the sides, they must be drawn and cut out carefully ere the sides are separated from the surrounding board. The ornament shown in our figure is well adapted for this shaped basket, and has a pretty effect when cut through, and delicately tinted paper put behind it. When detaching the side pieces from the sheet of card-board, and inner hexagon, the operator must be cautious to cut with great steadiness and accuracy; and when joining the sides together, care should be taken to keep them in their proper places, till the cement is quite dry.



A BASKET WITH BENT SIDES.—The plan of this basket is similar to that of the former, but, as its sides are curved inward, a different method of shaping them is necessary.—After the inner and outer hexagons have been drawn, and the squares of the sides adjusted, to give them the proper degree of curve, put the point of the compass in A, afterwards in B, draw with the pencil-point of the compasses two arcs which intersect each other in C; this done, place the compass-point at C, then describe the arc A, B, which will give the necessary curve to one side, and then from the points D, and E, draw two arcs crossing each other at F.—From this last point, the arc D, E, may be described; and care must be taken that F is precisely the same distance from D, and E, that C, is from A, and B, otherwise the curve of the sides will not be true. To produce the curved line G, for the top of the side, the compass-point should be put in B, and the arc E, H, described; and afterwards from E, the arc E, H; from this intersecting point the curve G, may then readily be drawn. When one side is cut out, it may be used as a pattern for the remainder.—The decorations on the sides we leave to the contrivers, as our illustration shows but a very plain species of ornament. For the handle, an embossed pattern may be used; or if a fantastic shape be preferred, the designer must exert his taste; the handle should be lined with a flattened wire, to give it greater strength; and the same paper as the interior of the basket is papered with pasted over its under part, to hide the wire.

## KINDNESS.

"KINDNESS has resistless charms,
All things else but weakly move;
Fiercest anger it disarms,
And clips the wings of flying love."

"Will you please to open this gate?" asked a flaxen haired little boy, who was vainly attempting to force open a frozen gate, to a gentleman who was passing, without noticing his puny efforts, one cold frosty morning last week; "I have been long trying, but can't" and the little fellow stopped to warm by his breath, his cold, blue fingers.

But the passer by, warmly muffled in cloak and mittens, did not heed him, but giving a hasty glance passed rapidly on. The little fellow again attempted to open the frozen passage, when another gentleman passing, and noticing his vain efforts, unasked pushed open the gate, and with a sweet "Thank you, sir," that would have rewarded hours of effort, the little fellow sped up the broad avenue leading to the house and disappeared around a corner of the building.

Oh, what a power there is in kindness!—Whoever understands his own interests, and is pleased with the beautiful rather than the deformed, with the sunshine rather than the storm, will be sure to cherish the virtue of kindness. Kindness costs nothing. It is a flower blooming spontaneous within the human heart. It requires but a slight knowledge of human nature to convince us that much of our happiness in life consists in cherishing and cultivating this virtue.—Kindness is exceedingly lovely and attractive in its appearance, winning the hearts of all, and rendering the missiles of envy and malice powerless and ineffectual. Kindness always proves to us and our fellow men, that we can command our passions, and soar away in the bright atmosphere of good feeling, wishing well to all men, and live in continual sunshine. The amount of happiness we can produce is incalculable,—unknown—if we have kindness and sympathy in our hearts, a smiling face, and benevolent actions. There is no pleasure like that which springs from a kind act; no matter how trifling that act, and then, with the poet we feel, that

"Like warp and woof all destinies
Are woven fast;
Linked in sympathy like the keys
Of an organ vast;
Pluck one thread and the wed ye mar;
Break but one
Of a thousand keys, and the paining jar
Through all will run." L. M. S.

—*N. Y. Reformer.*

THE WHALE.—The whale, having no air bladder, can sink to the lowest depths of the ocean, and, mistaking the harpoon for the teeth of a sword fish or shark, he instantly descends, this being the manner of freeing himself from these enemies, who cannot bear the pressure of a deep ocean: and from ascending and descending in small space, he puts himself in the power of the whaler; whereas, if he knew his force, and were to swim on the surface in a straight line, he would break or destroy the machinery by which he is arrested, as easily as the salmon breaks the single line of a fisher, when his reel is entangled.

NATURE teaches us that we are all dependant,—that we are like cog-wheels pushing each other along by filling up mutual voids.

IN whatever shape evil comes, we are apt to exclaim with Hamlet, "Take any shape but that!"

THE present is the mould of the future.

## POWER OF CONVERSATIONAL KINDNESS.

How often do we hear from those around us, "O! that I had the gift of oratory, to stand in the presence of assembled multitudes, and rouse them to noble deeds with words of resistless eloquence." Truly, it is a laudable desire. What can be more worthy of our aspirations, than to face the world in defence of right; or melt the hearts of listening hundreds with sympathy for a suffering brother? He is worthy of high respect who seeks to develop in himself, and use aright, such a powerful means of benefiting his fellow men. Yet one can pass but a small portion of his time in addressing a crowd, however eagerly it may hang upon his words; and how little the gift of eloquence in the forum fits one for gladdening the long hours at home, where only one heart is to be cheered, or left more lonely than when in solitude. Many a man, able, when aroused, to lead whither he will the mind of every listener, is shunned as the dullest of companions.

Another would be able to wield the pen, and through that instrumentality bear to the burthened spirits of every land, words of good cheer and trust in God. This, too, is one of the noblest gifts. Endowed with this, the farthest spot of inhabitable earth alone shall say, "Here is the limit of your influence?" But does the possession of this power give one the same attractiveness in his own home circle; or is it like the telegraph, which bears our words as far as the wire can reach, but is worse than useless when friends meet face to face?

These are noble gifts, but allow me to choose in preference to both, another which is less calculated to win the admiration of the world,—is capable of opening for its possessor a way to every heart.

It is delightful to listen to words coming from a heart warm as our own. How often have you, in turning page after page of some truthful book, forgotten the lapse of hours which had otherwise wearied you with their slow succession? But when long days of illness have confined you to your room and bed—and the trembling hand lacks strength to hold the book, of which your aching head forbids the perusal—then how your pain is forgotten, while some friendly hand is placed lightly on the aching brow, and a sweet voice breathes in your ear words of holy comfort, or a face whose every look is peace, bends in humble prayer upon your pillow. Let months and years confine you to the little world bounded by the walls of your sick room, and will you think it strange when I say, "give me conversational powers?"

Far the greater part of life is passed at home, and in its society. Give me the power to make home musical with words of holy love, a bright spot, where, though sorrow enter, it may not stay, and will it be hard to bear the storms of life, or the rude conflict with the outer world? To which would the heart grieving in loneliness at the death of the one most loved of earth, go with its load of sadness; to him who could only speak words of consolation as applicable to a hundred others; to him who would bid the mourner read what he had written to comfort the sorrowing; or to him who would go and kneel with the stricken one beside the grave of the departed, and there direct the tearful eye to a bright heaven above, with words of peace? "Fear not, for I have redeemed thee; I have called thee by thy name; thou art mine. When thou passest through the waters, I will be with thee; and through the rivers, they shall not overflow thee. When thou walkest through the fire thou shalt not be burned; neither shall the flames kindle upon thee." "In the world ye shall have tribulation; but be of good cheer; I have overcome the world." "I will never leave thee, nor forsake thee."

Who has not seen a child turn from the embodiment of all that could please the eye, to sit, a charmed listener, on the lap of one whose only attraction was a gentle voice speaking words warm with the love of a pure heart?

Oratory is a noble gift, by which one leads thousands away willing captives. The eloquence of the pen reaches to the most distant habitation of man, and lasts till civilization itself goes down in the darkness of barbarism. But what other gift can lend a charm to make home bright and happy, and mark one's presence as with the sunlight of heaven, like that of good conversational powers?

A warm heart ever going forth in gentle deeds and words of love to all around, is irresistible. SUISSAC.

IF life improves the character, death will improve the condition.

## THE SPRING BIRD'S RETURN.

Weary of other climes, sweet bird,
Did the fresh spring breezes come,
And, beneath the glow of summer skies,
Tempt thy swift pinions home?

Could'st thou not breathe thy joyousness
Away o'er land and sea?
Were not thy notes as gay and glad,
Thy songs as wild and free?

Did'st find, in all the stranger homes,
No music-loving ear,—
No bird-appreciating hearts
To welcome thee, as here?

Or memories of cooling shades
In summer's richest prime,
And wealth of leaves and flowers, came they
O'er spirit such as thine?

Sweet bird, when our spirits take their flight
To the brighter clime above,—
When they bask in the light of the heavenly home,
The Father's smile of love:

No wandering fragrance of the flowers,
No breath of the balmy spring,
Nor even music of thy notes,
May win us here again.

In those bright bowers of Paradise,
No tempting power may come,
To lure us, from the peacefulness,
The beauty of our home.

Victor, N. Y., 1853. E. C. W.

Written for Moore's Rural New-Yorker.

## A PLEA FOR THE BIRDS.

Incredible, is it not, that they should need an advocate,—that these bright and beautiful denizens of our gardens and groves should fear harm at the hand of man—that his eye and ear should be so dull as to find no charm in their untaught melodies, in their forms of perfect grace? Yet not more strange than sadly true is it, that boys, and "children of a larger growth," can find delight, in the destruction of these harmless creatures. One could not believe it, did not every day witness, these *noble* bipeds sallying forth, armed with deadly weapons, and on murderous thoughts intent. And at night returning with—a dozen robins, sparrows and bluejays! proud trophies of a well spent day!

Well, and why not? *it is such sport*, I think I hear him say. I will tell you, my boy—(there is not much use in talking to a *man* who would shoot a little bird—but when you become a man, remember what I tell you now,)—these little birds were not made in vain, nor merely to furnish "sport" for the idle. Their wise Creator formed them for an important use; if you destroy them, you frustrate this plan—and nature always suffers, when the laws and plans of God are disregarded. You have probably heard your elders speak of the great increase of the various tribes of veracious insects, and that the fruits are not so fine and fair as of old; but knotty and worm-eaten. Yet I suppose that you (nor perhaps they either,) never dreamed that the destruction of the birds had anything to do with the case.—You would realize it, could I tell you how many bugs and worms and flies, were frequently found in the crop of a single bird. I cannot recall the numbers—but have been astonished at the amount, as certified by creditable witnesses. Farmers and gardeners are *beginning* to find out the birds to be their most useful allies. Nothing in the insect line comes amiss to their dainty looking bills, from the Aphides upon the rose-bush, to the hideous caterpillar. And if they sometimes treat themselves to a ripe cherry, or tempting raspberry, who can blame them if, after such a dinner, they fancy a little fruit for dessert—and how do you know, but their quick eye perceived a worm in the very cherry you grudge them? The laborer is worthy of his hire—and man can well afford this compensation for their tireless industry.

I well remember having seen in Southern Pennsylvania (where boys and guns abound,) a strip of young woodland, at midsummer, entirely denuded of leaves. "The work of the caterpillars," was replied, to my wondering inquiries. True, but not less the effect of the ravages of the aforesaid boys and guns. It did not occur to me then. I had not thought much on the subject, nor added the observations of others to my own. Gov. Ramsay, of South Carolina, has declared it impossible to cultivate *rice*, without the aid of the *Rice-bird*. Yet so destructive were they at one time considered, that a crusade was decreed, for their extermination. The following years their crops were rendered nearly worthless by *the worm*. So they were very glad to invite their misused allies, back again to the rescue—and to accord them freely, a fair share of the crop, for their invaluable aid in its cultivation.

Swallows live wholly upon flies which, in their larvæ, or grub state, are the pests of the garden. Yet what fair game are their ingenious nests considered by the destructive school boy. Night-birds eat the May-bug or pincher, that children are so afraid of—and from the eggs of which are hatched the odious grub or cut-worm. Moths and millers are the common prey of all: even the poor bat, is a destroyer of the common enemies of vegetation. And the much abused crow and blackbird are not near so black as they are painted—as may be proved by an examination of the crop of one of your victims; fifty bugs, worms and flies, to every single grain of corn, I'll engage.—Why they appear to like the fresh-plowed ground, quite as well *before* the corn is planted. Don't suppose they are looking for *grain*. No, no. Bugs and worms, and eggs of worms, are the delicate tit-bits for which they follow the plow.

Thus wisely has the great Creator of all disposed the checks and balances throughout his stupendous works. Let us beware how, even in what we call *trifles*, we interfere with his designs, or conclude that anything is made in vain. The insect tribes are wonderful in their endless variety and complicated organism. Yet permitted to increase inordinately, by the destruction of other animals that feed upon them, they destroy the fair fruits of the earth, and become an intolerable scourge. Therefore, dear boys, let me once more beg of you, to *spare the birds!* Spare them particularly now, when, just returning from the far off climes, they begin to build their inimitable nests—

"Behold a birds-nest! mark within, without;
No tool had he who wrought—no knife to cut,
No bodkin to insert.
His little beak was all! Yet what nice hand,
With every implement of curious art,
And twenty years' apprenticeship to boot,
Could make me such another!"

Spare them later, too, when their nestlings cry for food. Ye would destroy their tender lives, too! Look on their bright and graceful forms; listen to their gushing melodies. You cannot kill them, if you will but pause, and thus look and listen—nay, surely you *will spare the birds!* S. *. *.

Wellsboro, Pa., 1853.

## "PRIVILEGE OF COUNSEL."

By the "privilege of counsel" we believe is understood the right of a lawyer to use as much Billingsgate and slang as he sees fit or has breath to utter. A lawyer *outside* the bar may be a very contemptible kind of creature, and looked upon with a degree of indifference anything but flattering to the individual's vanity. Should he take it into his head to slander his neighbor or lay unlawful hands upon his property, or in short commit one single offence against the peace and safety of society, he would soon find the hand of the law laid upon him with an iron gripe. Out of the court room, a lawyer is a mere human being, possessing like other human beings vulgar flesh and blood.

But only observe the transfiguration.—The moment he has placed his feet *within* the magic ring, where legal gladiators are permitted to display and dispert themselves, he becomes another and superior being.—*Here* he is safe alike from legal and personal vengeance. Himself the embodiment and minister of law, laughs at and rises above all law. He is restrained by no fetters, he is awed by no terror. The champion of his client he may for the time being become the foe and scourge of society itself. In order to gain his case he may brow-beat and frighten the timid, tempt the swerving and give the lie to virtue herself.

Many of the privileges accorded to counsel are proper and necessary of course.—But there are limits—though courts and seem often to think otherwise—to the license of the advocate. He has no right to utter deliberate and notorious libels in any case or under any provocation. He has no right in order to bolster up a *bad* to assail a fair reputation. A good name should be sacred everywhere. Estimable private life should be exempt alike from the intrusion and the coarseness of legal inquisition.—The witness who testified on the stand, as well as the party which seeks redress for wrong at the tribunal of justice, has a right to *demand* that their private reputations should be screened from the profanity even of "legal privilege."

"But the lawyer is bound to make the most of his case." No such thing. In the first place, he has no moral right to become the advocate of a cause which he *knows* to be bad. He has no right furthermore to use *means* which he knows are corrupt in behalf of the cause he has espoused. Least of all has he a moral—or a right founded in equity—to attempt to "break down" either a character which he knows to be estimable, or testimony which he knows to be reliable.

It not unfrequently happens that lawyers *use* the "privileges of the law" to gratify private piques and indulge in personal animosities. Under the shield of "privilege" they not unfrequently utter libels and make assaults which would otherwise consign them to infamy. We can recall more than one instance in which a counsel went deliberately out of his way to make a coarse and ruffianly attack upon the private character of a witness against whom he was to known cherish personal animosity. We well remember an instance in which an eminent member of the bar devoted at least half an hour to a coarse and infamous attack upon an important witness—with the double intent to impair the force of his testimony, and to gratify personal malevolence. And he was permitted thus to wander from the line of his argument by the Court until he was admonished to desist by an overwhelming expression of disapprobation from the audience.—*Oneida Herald.*

## CLAIMANTS TO THE FRENCH THRONE.

There are two claimants to the throne. The one of these represents the Bourbon dynasty. Charles X. had a son, the heir of his rights. Many years ago this young man was assassinated. He left a little boy a few years old. This little boy has now become a man, thirty-seven years of age. He bears the title of the Count of Chamberd. According to the doctrine of legitimacy, he, the lineal descendant of the Bourbons, is the legitimate King of France. He has been married ten years, and has no child. It is not probable that he will ever have an heir.

But there is another party, who repudiate the claims of the Bourbons, and espouse the cause of the Orleans branch of that family. The Duke of Orleans, the eldest son of Kink Louis Phillippe, was the inheriter of whatever rights his royal father could transmit. He was a noble young man—physically and intellectually noble. His generour qualities had rendered him universally popular. One morning he invited a few companions to breakfast with him, as he was about to take his departure from Paris, to join his regiment. In the conviviality of the hour, he drank a little too much wine. He did not become intoxicated. He was not in any respect a dissipated man. His character was lofty and noble. But in that joyous hour he drank a glass too much.—He slightly lost the balance of his body and of his mind. Bidding adieu to his companions he entered his carriage. His horses took fright and ran. But for that extra glass of wine he would have kept his seat. He leaped from the carriage. But for that extra glass of wine, he would have alighted upon his feet. His head first struck the pavement. Senseless and bleeding he was taken into a beer-shop, and died. That extra glass of wine overthrew the Orleans dynasty; confiscated their property of one hundred millions of dollars; sent the whole family into exile.

The Duke of Orleans left a son, the Count of Paris, now thirteen years of age. This lad is the heir of whatever political rights the Orleans family can transmit. Should the Count of Chambord die childless, the young Count of Paris becomes the heir both of the Bourbon and of the Orleans family. Many attempts have been made to unite the friends of these two claimants in their combined strength against Louis Napoleon.

The secret of Louis Napoleon's power with the masses is this: the Count of Chambord is the candidate of the old feudal nobility. He is the representative of their exclusive privilages, and will sustain them.—The sympathies of the surrounding thrones are entirely with him.

The Count of Paris is the representative of the more modern nobility, and the higher aristocracy of the nation. He stands between the modern democracy and the old feudal despotisms.

Louis Napoleon is the democratic candidate. The people believe him to be their friend, the representative of the rights of the masses. Hence they rally around him, not from any enthusiastic attachment to his person, but because they believe his very name pledges him to defend their cause.

The more intelligent of the people say: "Louis Napoleon is a despot—an utter despot. We admit it. But divided as France is, we must have a man at the head of the government who is not afraid to enact the despot. *He* will tyranize to protect us.—The *Bourbon* and the *Orleanist* will tyranize to crush us, and to uphold the exclusive privileges of the nobles."—*Harper's Mag.*

## ON SMOKING.

Of the three modes of using tobacco, smoking is that which seems to have insinuated itself most extensively among the youth of our community. Tobacco, employed in this way, being drawn in with the vital breath, conveys its poisonous influence in every part of the lungs. There the noxious fluid is entangled in the minute spongy air-cells, and has time to exert its pernicious influence on the blood, not in vivifying it, but in vitiating it. The blood imbibes the stimulant narcotic principle, and circulates it through the whole system. It produces, in consequence, a febrile action in those of delicate habits. Where there is any tendency to phthisic and the tubercular deposit in the lungs, debility of these organs, consequent on the use of tobacco in this way, must favor the deposit of tuberculous matter, and thus sow the seeds of consumption. This practice impairs the natural taste and relish for food, lessens the appetite, and weakens the powers of the stomach. As to pleasure produced by it, it is, I believe, a well-known fact, that a person smoking in the dark is very often unable to determine whether his segar is lighted or not.—*Dr. J. C. Warren.*

## COUNTRY PAPERS.

If country papers would devote at least a column a week to local news of interest, they would never have reason to complain of the inroads of eastern mammoth weeklies, filled with love stories and trash.—When we open a county paper and find it filled with long extracts from the city papers, to the exclusion of original articles and items of interest to its readers—edited, in fact by a pair of shears—we do not wonder that its readers sometimes conclude to go to head-quarters for their news. In the local news of its own country no city paper can compete with a well conducted country sheet, and it is only by making exertion to procure and publish it, that the country press can deserve and insure a liberal support.

Most people complain bitterly of the troubles of life, yet often greatly increase life's real troubles by the anticipations of imaginary ones.

# For the Ladies.

## THE NIGHT BEFORE THE BRIDAL.

How beautiful to-night
The stars that I have loved from childhood's years,
How gleamingly they gaze on me, through tears,
That almost blind my sight;
They speak to me! in their familiar eyes,
The shadowy vistas of my child-life rise!

My childhood—Oh no more!
To-night the very memory is pain,
I leave it here—though I return again,
Yet never as of yore;
To the old Homestead's altar will I come,
Or hearthstone, for I may not call it home!

To-morrow I depart;
Will it be lonely, mother, when I am gone?
Oh! well I know I do not watch alone,
Tears are upon thy heart;
Thy pillow is all wet with tears for me—
Oh! mother! can I leave my home and thee!

Would thou wert here, mine own!
To soothe me, with thy voice, whose tender spell
Seems now upon my soul,—Oh loved too well,
That low deep music tone;
Whose passionate eloquence so oft has stirred
My heart's still fountains, with each burning word.

I leave them all for thee!
Thy God shall be my God—thy people mine,
Nay, Love, I will not murmur or repine,
I have no world but thee!
Am I not thine? thy very own—thy bride!
Through life or death my place is by thy side!

[*Methodist Protestant.*

For the Rural New-Yorker.

## NATIONAL CHARACTERISTICS OF WOMEN.

The English woman is respectful and proud; the French woman is gay and agreeable; the Italian is ardent and passionate; the American is sincere and affectionate. With an English woman love is a principle; with a French woman it is a caprice; with an Italian it is a passion; with an American it is a sentiment. A man is married to an English lady; united to a French woman; cohabits with an Italian; and is wedded to an American. An English woman is anxious to secure a lord; a French woman, a companion; an Italian, a lover; an American, a husband. The Englishman respects his lady; the Frenchman esteems his companion; the Italian adores his mistress; the American loves his wife. At night the Englishman returns to his house; the Frenchman to his establishment; the Italian to his retreat; the American to his home. When an Englishman is sick, his lady visits him; when a Frenchman is sick, his companion pities him; when an Italian is sick, his mistress sighs over him; when an American is sick, his wife nurses him. When an Englishman dies, his lady is bereaved; when a Frenchman dies, his companion grieves; when an Italian dies, his mistress laments; when an American dies, his wife mourns. An English woman instructs her offspring; a French woman teaches her progeny; an Italian rears her young; an American educates her child.

Edward.

## BETTER THAN DIAMONDS.

I was standing in the broad, crowded street of a large city. It was a cold winter's day. There had been rain; and although the sun was then shining brightly, yet the long icicles hung from the eaves of the houses, and the wheels rumbled loudly as they passed over the frozen ground. There was a clear bright look, and a cold bracing feeling in the air, and a keen north-west wind, which quickened every step.

Just then a little child came running along—a poor, ill-clad child; her clothes were scant and threadbare; she had no cloak, and no shawl; and her little bare feet looked red and suffering. She could not have been more than eight years old. She carried a bundle in her hand. Poor little shivering child! I, even I, who could do nothing else pitied her. As she passed me her foot slipped upon the ice, and she fell, with a cry of pain; but she held the bundle tightly in her hand, and jumping up, although she limped sadly, endeavored to run on as before.

"Stop, little girl, stop," said a soft, sweet voice; and a beautiful woman, wrapped in a large shawl, and with furs all around her, came out of a jeweller's store close by.—"Poor little child," she said, "are you hurt? Sit down on this step and tell me." How I loved her, and how beautiful she looked!—"Oh, I cannot," said the child; "I cannot wait—I am in such a hurry. I have been to the shoemaker's, and mother must finish this work to-night, or she will never get any more shoes to bind." "To-night," said the beautiful woman—"to-night?" "Yes," said the child, for the stranger's kind manner had made her bold—"yes; for the great ball to-night; and these slippers must be spangled, and—" The beautiful woman took the bundle from the child's hand, and unrolled it. You do not know why her face flushed, and then turned pale; but I, yes I, looked into the bundle, and on the inside of the slippers I saw a name, a lady's name, written; but—I shall not tell it. "And where does your mother live, little girl?" So the child told her where, and then she told her that her father was dead, and that her little baby brother was sick, and that her mother bound shoes, that they might have bread; but that sometimes they were very hungry, and her mother sometimes cried, because she had no money to buy milk for her little sick brother. And then I saw that the lady's eyes were full of tears; and she rolled up the bundle quickly, and gave it back to the little girl—but she gave her nothing else; no, not even one sixpence; and turning away, went back into the store from which she had just come out. As she went away, I saw the glitter of a diamond pin. Presently she came back, and stepping into a handsome carriage, rolled off.

The little girl looked after her for a moment, and then, with her little bare feet colder than they were before, ran quickly away. I went with the little girl, and I saw her go to a narrow, damp street, and into a small, dark room; and I saw her mother—her sad, faded mother; but with a face so sweet, so patient, hushing and soothing a sick baby. And the babe slept; and the mother laid it on her lap.—the bundle was unrolled; and a dim candle helped her with her work, for though it was not night, yet her room was very dark. Then, after a while she kissed her little girl, and bade her warm her poor little frozen feet over the scanty fire in the grate, and gave her a *little* piece of bread, for she had no more; and then she heard her evening prayer, and folding her tenderly to her bosom, blessed her, and told her that the angels would take care of her. And the little child slept, and dreamed—oh, such pleasant dreams!—of warm stockings, and new shoes; but the mother sewed on, alone. And as the bright spangles glittered on the satin slipper, came there no repining into her heart? When she thought of her child's bare, cold feet, and of the scant morsel of dry bread which had not satisfied her hunger, came there no vision of a bright room, and gorgeous clothing, and a table loaded with all that was good and nice, one little portion of which spared to her, would send warmth and comfort to her humble dwelling? If such thoughts came, and others, of a pleasant cottage, and of one who had dearly loved her, and whose strong arm had kept want and trouble from her and her babes, but who could never come back—if these thoughts did come repiningly, there came also another; and the widow's hands were clasped, and her head bowed low in deep contrition, as I heard her say, "Father, forgive me; for thou dost all things well; and I will trust in thee."

Just then the door opened softly, and some one entered. Was it an angel? Her dress was of spotless white, and she moved with a noiseless step. She went to the bed where the sleeping child lay, and covered it with soft, warm blankets. Then presently, a fire sparkled and blazed there, such as the little old grate had never known before.—Then a huge loaf was upon the table, and fresh milk for the sick babe. Then she passed gently before the mother, and drawing the unfinished slipper from her hand, placed there a purse of gold, and said in a voice like music, "Bless thy God, who is the God of the fatherless and the widow"—and she was gone; only as she went out, I heard her say—"*Better than diamonds! better than diamonds!*" What could she mean? I looked at the mother. With clasped hands and streaming eyes, she blessed her God, who had sent an angel to comfort her. So I went away, too, and I went to a bright room, where there was music, and dancing, and lights, and sweet flowers; and I saw young, happy faces, and beautiful women, richly dressed, and sparkling with jewels; but none that I knew, until one passed me whose dress was of simple white, with only a rose-bud on her bosom, and whose voice was like the sweet sound of a silver lute.—No spangled slipper glittered upon her feet; but she moved as one that treadeth upon the air, and the divine beauty of holiness had so glorified her face, that I felt as I gazed upon her, that she was indeed as angel of God.—*Harper's Magazine.*

## ECONOMY IN A FAMILY.

There is nothing, says a good writer, which goes so far towards placing young people beyond the reach of poverty, as economy in the management of their domestic affairs. It matters not whether a man furnishes little or much for his family, if there is a continual leakage in his kitchen or in the parlor; it runs away he knows not how, and that demon Waste cries "More!" like the horse-leech's daughter, until he that provided has no more to give. It is the husband's duty to bring into the house, and it is the duty of the wife to see that none goes wrongfully out of it. A man gets a wife to look after his affairs, and to assist him in his journey through life; to educate and prepare his children for a proper station in life, and not to dissipate his property. The husband's interest should be the wife's care, and her greatest ambition carry her no further than his welfare or happiness, together with that of her children.—This should be her sole aim, and the theatre of her exploits in the bosom of her family, where she may do as much towards making a fortune, as he can in the counting-room or the work-shop. It is not the money earned that makes a man wealthy—it is what he saves from his earnings. Self-gratification in dress, or indulgence in appetite, or more company than his purse can well entertain, are equally pernicious. The first adds vanity to extravagance, the second fastens a doctor's bill to a long butcher's account, and the latter brings intemperance, the worst of all evils, in its train.—*N. Y. Organ.*

If you cannot be happy in one way, be happy in another; and this facility of disposition wants but little aid from philosophy, for health and good humor are almost the whole affair. Many run about after felicity, like an absent-minded man looking for his hat while it is on his head or in his hand.

It is a sure method of obliging in conversation to show a pleasure in giving attention.

Some showy quality often screens a number of unsightly ones.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, APRIL 16, 1853.

*SPECIAL NOTICE—NEW QUARTER.*

THE SPRING SERIES OF THE RURAL, *commencing April 2d, will be opened with vigor, and a determination to improve as we advance. Without making any pledges, we can safely say that the immediate future of the paper will indicate no deterioration. Those who wish to subscribe, or renew their subscriptions, will bear in mind that* NOW IS THE TIME. *We shall add largely to present edition, in order to supply orders from the beginning of the new quarter. See Publisher's Notices, Premiums, &c., on next page.* March 26.

## Our May Premiums, Etc.

AFTER looking over the books somewhat hastily, our clerks report that there are but few competitors for the handsome Premiums offered for subscribers obtained on or before the 1st day of May. This is owing to the fact that a great majority of agents and other friends, who have formed clubs of from 20 to 100 subscribers each, have selected (and in most cases already been paid,) *Specific* Premiums. This, of course, is very favorable for those who aim for the large prizes, as it leaves but few competitors. The following are the names of the most prominent in the order they now (April 12) stand on our books — commencing with the person who has obtained the greatest number of subscribers :

L. D. Branch, E. R. Hughes, J. H. Stanley, S. E. Norton, E. W. Fairchild, G. N. Sherwood, J. L. Yeckley, I. W. Briggs, M. Harris, J. C. Montgomery, S. P. Chapman, (Robert Fulton, Jas. Cameron, tie.)

This is as complete a list as we can give this week ; think it is correct, and shall endeavor to add more names in our next number. The first three competitors are not far asunder,—and the next three are also in close company.

KEEPING IT UP.— Many friends of the RURAL are continuing their exertions in its support — keeping up their remittances bravely. We are daily receiving orders for new clubs, and numerous additions to former ones. We can still furnish back numbers from 1st March or April, and hope agents and others will continue their favors — remembering that our premium offers extend thro' the present month.

☞ To any person who remits us $2, previous to the 1st of May, we will (as before offered) send the RURAL one year, and also either volume (past, present or future,) of our monthly — the Wool Grower and Stock Register.

## "Deceptive Advertising"— Again.

THREE weeks ago we opened this subject in the RURAL, alluding to it as practiced in our goodly city of Rochester. Since then we have obtained, from various sources, additional information, which we propose to impart in this and future articles, for the public benefit.

The Daily *Democrat* quoted a portion of our former article, before the RURAL was generally circulated. Seeing the extract, a gentleman (?) of this city called upon us, stating, in a most bland and respectful manner, that *he* advertised *something* which *might* come under the category of "deceptive advertising"— and that he wished to convince us that what he offered was really valuable. From his admissions we soon ascertained that he advertised over an *alias*, and that the article furnished was not named in his advertisement, which reads as follows :

A CHANCE TO MAKE MONEY.— FROM $5 to $10 a day may be made by any individual, in city or country, with the knowledge of a highly useful discovery, in universal demand, which I will send by return mail, on inclosing to me $1, postage paid, directed to H. S. HOLT, Postoffice box No. 350, Rochester, N. Y. This is a *first rate* opportunity for students, clerks, invalids, or any young man or young lady out of business, as it is *immediately* lucrative in any part of the United States.

This advertisement is copied from the New York Evangelist. It has also been published for some time (perhaps months) in the Weekly Tribune, Saturday Courier, National Era, and other largely circulated papers — and has, undoubtedly, brought hundreds of letters (and dollars) to the advertiser. Let the reader carefully note this fact, and the large latitude of the advertisement (not omitting the clause for the benefit of any "*young lady* out of business !") while we proceed.

After attempting to show us some value in an article from which (according to his card) *every one who pays him one dollar* for a recipe to make the same, is to realize from $5 to $10 a day, our would-be innocent and extremely modest visitor requested us to authorize the publication, in the Democrat, of a certain document, penned by himself, which readeth thus:

"The ed. of the Rural N. Yorker authorizes us to say that in his strictures upon those who sent him advertisements stating that they would impart valuable information on receiving $1, he did not allude to the one published over the signature of H. S. Holt. The information Holt advertises he has reason to believe is of intrinsic value and worth the dollar to most any one not acquainted with it."

[We comply with the request, fully authorizing the Democrat to publish the above, provided our entire article is given !]

During the interesting interview, our amiable friend intimated that he would pay a large amount of money (to wit, a million of dollars, *if he had it,*) rather than have *his name* placed in the category of deceptive advertisers. As levying black-mail is no part of our business, we did not *take*, but quietly replied that we could easily conceive that his position was no enviable one — such as no honorable man would be likely to occupy. "On this hint, he spake"—relating, not unlike Othello, the reverses and sufferings he had passed ; and how he had only adopted this course "to get another start in the world," and so forth and so on. But the fact that he lives high, or *fast*, and apparently has plenty of money, (not to specify certain facts, since learned, relative to his obtuseness concerning sundry honest I-O-U's of his contracting,) caused and still causes our sympathy to evaporate in a different channel from the one desired. And we now state, distinctly, that unless *Holt's* advertisement in the papers above mentioned, and others, is discontinued within three weeks, we shall feel constrained to give the *real name* of the originator of this far-spreading and most reprehensible swindle.

—But what is this "highly useful discovery?"— for we do not condemn on hearsay or at random. Read the following letter and recipe from one who has been *elected* to "make $5 to $10 a day," through the extreme generosity of our esteemed friend *Holt!* (We trust and expect he will soon change the cognomen to *Halt!*) Listen to our correspondent's *musical*, and then to his benefactor's "highly useful" notes, in this wise :

MR. MOORE —*Dear Sir:* I see by an article in your last truly valuable paper, that those ingenious rascals in your city, are about to be exposed in their deceptive advertising — that of "A chance to make money, from five to ten dollars a day"— "Most valuable information for either sex," and the like, which are published in some of our first papers in New York and Philadelphia. For the benefit of those who have not sent in their dollar to the accomplished *rascal*, H. S. Holt, and other similar humbugs. I enclose for your inspection the *wonderful* discovery for which a dollar was pulled out of my trowsers pocket,— on the principle of "nothing risked, nothing gained." But I must say that it was tempting. Only look at it; a chance to make $5 and $10 a day out of a straight one dollar investment! But I would gladly give another dollar to have him shown up in proper shape, before he dupes any more fortune-seekers like your humble servant.

Yours, most respectfully, TRUMANSBURG.

Trumansburg, N. Y., March 28, 1853.

P. S. Perhaps this recipe better be published for the benefit of those who can't raise the dollar. Here it is : T.

**TO MAKE INK,**

*COSTING BUT FIVE CENTS A GALLON!*

1 pound Log Wood,
1 gallon soft water—boil one hour, then add
24 grains Bychromate of Potash,
12 grains Prusiate of Potash,

Stir a few minutes while over the fire—take off—and when settled, strain it.

This Ink is a bright jet black at first, flows beautifully from the pen, and so indellible, that *even oxalic acid will not remove it from paper.* No other Ink will stand the *test* of oxalic acid. Write a word with this Ink, and the same word with any other Ink contignous to each other—apply oxalic acid to both, and *instantly* the word written with the other Ink will disappear, while mine will remain. It is *equally* indellible on cloth.

☞ Buy your ingredients by the moderate quantity, and it will cost but about 5 cents a gallon.

In regard to this recipe, we may state that it is no recent discovery. On the contrary, it has heretofore been published extensively ; indeed we believe we had the honor of giving it publicity some ten years ago. It may be worth a dollar to some,—but not one in a thousand of such persons as would be likely to respond to *Holt's* advertisement, can make the money named, per day, from the investment. But the swindle is the more heartless and reprehensible, from the fact that it appeals to and robs *invalids*, and *poor young men and women* who are out of employment.

—In conclusion, (for this week at least,) a word in regard to our own position. Some may think we discuss matters beneath the notice or dignity of this journal. To such, if any there are, we reply that our primary object is to warn and protect the thousands of our readers throughout the country, from Maine to California, against the stupendous fraud which is being practiced by a regular system of advertising in all the largely circulated journals to which access can be gained. We wish to guard the honest and unsuspecting against expending their dollars (and, in the aggregate, thousands of dollars,) for that which is naught. And we here caution all to beware of such advertisements as the above —which, we regret to notice, are rapidly increasing,— for all like announcements are more or less deceptive. We consider the subject worthy the attention of every independent journalist in the land, and are surprised that such papers as those named, should, for mere dollars and cents, lend their columns to such deceptive, (not to say base and fraudulent,) worshippers of Mammon. Editors and publishers are morally bound to regard the interests of the *public* as well as their own ; and we hold that, instead of aiding and abetting, they should condemn and expose every artifice whereby the community may be defrauded.

## Book-Making in Western New York.

THE cities of Western New York are becoming known, if not celebrated, for the production of books and periodicals. The book-making business, especially, is rapidly increasing in Auburn, Rochester, and Buffalo—constituting an item of considerable importance. Among others, DERBY & MILLER, of Auburn, (in connection with DERBY, ORTON & MULLIGAN, Buffalo,) are extensively engaged in book publishing. They have issued some of the most valuable and popular works of the day, and deserve credit and support for their enterprise. We wish them, as well as other publishers in the cities and villages of Western and Central New York, abundant success in their efforts to demonstrate (as they have already, to a great extent,) the fact that books can be made as well and cheaply here as in the Atlantic cities.

While at Auburn, some days ago, we spent a few minutes in examining the publishing and binding rooms of Messrs. D. & M., and were much pleased with what we observed—and somewhat surprised at the extent and completeness of their establishment. Their facilities for printing, binding, &c., are superior—deserving of more than this brief and altogether unsolicited mention.

THE FARMS offered for sale by Mr. BRINCKERHOFF, of Batavia, is among the most desirable, for both soil and location, in Genesee county.

# Literary Notices.

RURAL CHEMISTRY : an Elementary Introduction to the Study of the Science in its relation to Agriculture and the Arts of life. By EDWARD SOLLY, F. R. S., etc., etc., First American, from the third English Edition. Philadelphia : Henry Carey Baird, 1853.

WE have seen no elementary work on this subject more valuable and practical than this. The substance of it was originally contributed by the author to the London Gardener's Chronicle, and excited much interest at the time, which led to its revision and publication in its present acceptable form. It treats among other things, of the gases, metals, earths, organic matter, vegetable principles, the food of plants, causes of the deterioration of soils, the composition of different crops, &c., &c. Price $1. It may be found at HOYT'S Bookstore, State St.

MEMOIR OF MARY L. WARE, Wife of Henry Ware Jr. By EDWARD B. HALL, Boston : Crosby, Nichols & Co. 1853.

VERY little of notoriety attended the life of the subject of this memoir, yet few women ever lived more worthy of the pen of the biographer. The author has wisely permitted her letters, written to personal and intimate friends, to furnish the greater part of the volume before us. No one can read it without acquiring a greater respect for the domestic virtues, those sterling qualities of heart and soul which fit woman to shine in her noblest and highest sphere—that of Home. We are glad to hear that this book is having an extensive sale. DARROW has it.

BLEAK HOUSE, part XIII, has been received by SAGE & BRO. from the Harpers.

## Binghamton, and Southern New York.

BINGHAMTON, April 7, 1853.

FRIEND MOORE :—You have often asked me to "use the quill," and I make the attempt. For a day or two I have been tarrying in the beautiful village of Binghamton. Nearly all the villages throughout the "Southern tier" are located in valleys, and almost completely walled in by "high, huge hills," so that expansion seems next to impossible. Not so with Binghamton : it is situated at the junction of the Chenango and Susquehannah Rivers, on a plain sufficiently high to admit of perfect drainage, and large enough upon which to build a city that may vie with your own beautiful Rochester.

It is a decided "smart village," with a population of eight or ten thousand, possessing much wealth, and more energy and enterprise, which will some day make at this point an extensive inland town, second to none in all the "region round about." On the north we have the rich valley of the Chenango,— which river, uniting its waters with those of the Susquehannah, form a broad and beautiful stream, on whose bosom annually floats to market thousands of dollars worth of lumber, and the products of the rich valley. The New York and Erie Railroad, too, affords daily communication with New York, the great west, and the rest of the world — facilities which are seldom equalled, and no-where surpassed.

By means of the Chenango Canal we have direct communication with the "Great Erie," at Utica, and thence with the rich fields of old Genessee itself. This is not all ; a Railroad is under contract, to be finished next fall, from this point to Syracuse ; the stock is subscribed, and work ready for letting from here to Albany,— making Binghamton a centre point for a large section of country, hard to be surpassed in agricultural or mineral resources.

The whole southern portion of New York has been but little known, except to those who have chosen its great valleys and rich, rolling hills as their home,— but it is safe to predict that causes now in operation will so far develop its resources and value, that it will not suffer in a comparison with the older and more favored portions of the Empire State.

I called to-day upon one of your brethern of the quill, viz., JOHN R. DICKINSON, editor of the Democrat in this place. He is one of your mild, quiet, determined men, who does not say much, but thinks and does a good deal. He is now acting Judge and Surrogate of Broome county. At this place also resides his brother, D. S. DICKINSON, who is now, at least, receiving as much attention as he desires.

I commenced this with the intention of writing an agricultural letter, but I have gossipped with you until my sheet is nearly full.

Yours, KNICKERBOCKER.

ROCHESTER, LOCKPORT AND BUFFALO R. R.—It may not be known to a large share of our readers that the Rochester and Niagara Falls R. R. have constructed a branch from their road at Lockport to intersect the Buffalo and Niagara Road at Tonawanda, enabling them to transport passengers from Rochester to Buffato, as cheaply and in about the same time it is done by the old route through Batavia. The whole road passes through a beautiful farming country, and is studded by some of the finest villages in the western part of the State. The road, engines, and cars, are superior to those of any other road running out of this city, and being attended by gentlemanly conductors, will command a full share of the travel between the two cities. This road will ever be a favorite one, as thousands will desire to behold the scenery and public works at Lockport, and view the matchless majesty and sublimity of old Niagara, and they can now do so with but slightly increased delay and expense

☞ The person who, about three weeks ago, sent us a certain deceptive advertisement, (headed "Most Valuable Information,") can have his money on personal application at this office,— or by sending us his real name and address.

# Legislature of New York.

### Synopsis of Proceedings.

MONDAY, April 4.—*Senate.*—A number of bills, mostly private, were passed ; and in Committee of the Whole the bill for the relief of Prison Inspectors was considered, upon which the Committee reported progress.

*Assembly.*—The Assembly refused to reconsider the resolution of imprisonment of Mr. Tarbox.— The bill making an appropriation of $5,000 to erect a monument to Gen. Worth, was ordered to a third reading. The bill providing for the incorporation of Life Insurance Companies, and in relation to Agencies of such Companies, was read a third time and passed. The Railroad Consolidation bill has been signed by the Governor.

TUESDAY, April 5.—*Senate.*—A short Executive Session was held, after which a message from the Governor was received, and reported to the Select Canal Committee.

*Assembly.*—Sundry bills were passed, and the Canal question further discussed. Also the Temperance bill.

WEDNESDAY, April 6.—*Senate.*— Mr. Vanderbilt's resolutions were further debated, mainly by Messrs. Cornell, Jones and Cooley. Several local bills were acted upon.

*Assembly.*—Mr. Loomis tried to get an act to preserve the purity of Legislation before a Committee, but unsuccessfully. A proposition to amend the Constitution in favor of the Canals was made by Mr. West, from the minority of the Canal Committee, which lies over under the rule. Among the bills passed was one appropriating $10,000 to extend the Idiot Asylum buildings.

THURSDAY, April 7.—*Senate.*—The Senate passed the Emigration bill, with the clause restoring the Health Physician to the Marine Hospital in it.— The Mock Auction bill, and the bill appropriating a portion of convict's wages to the support of their families, was also passed.

*Assembly.*—The main topic was Mr. Vanderbilt's resolutions. An unsuccessful attempt was made to refer them to a Select Committee, and they passed into the hands of the Committee on Canals.

FRIDAY, April 8.—*Senate*—Among the bills passed, was one consolidating the Oswego and Syracuse and Binghamton Railway, and another authorizing the formation of teachers' associations.

*Assembly.*—Various bills passed the House, and a discussion occurred on the report of the Branch Committee.

SATURDAY, April 9.—*Senate*—A resolution was passed fixing the day of ajournment on Wednesday next. A large number of bills were voted upon

*Assembly.*—The concurrent resolution of adjournment passed the House. We shall give a new list of the most important acts at the close of the Session.

# Congressional.

### Synopsis of Proceedings.

MONDAY, April 3.—*Senate--Extra Session.*—Mr. Brodhead called up his resolution requesting information as to the amount of the United States and State stock and bonds, of all kinds, held abroad. He made a few remarks upon the subject, and estimated that at present the balance against us was $64,000,000, to be met by exporting $37,000,000 of gold and silver, and by Federal, State and other stocks.

TUESDAY, April 5.—The Senate, in open session, debated and laid on the table a resolution of Mr. Houston, authorizing the publication of the report of Bartlett and Gray's Exploring Tour. It came out, however, that the work had yet to be written, and the majority seemed anxious to know something of the character and merits of it before ordering its publication in an expensive form. Little progress made in the Gardiner case.

WEDNESDAY, April 5.—Mr. Seward offered a resolution calling upon the President for information in relation to the recent acts of Commander Hollins, of the sloop of war Cyane, at San Juan. A debate arose on a resolution offered by Mr. Chase, to abolish the Secret or Executive Sessions of the Senate, except on very special cases, in which Messrs. Chase, Hunter, Phelps, Borland, Butler, and Sumner participated.

THURSDAY, April 7.—Several resolutions were offered. No Executive Session was held to-day.

FRIDAY, April 8.—Nothing worthy of note occurred.

SATURDAY, April 9.—The Senate appointed a Committee to inform the President of their proposed adjournment on Monday. A resolution to adjourn then, failed to pass for want of a quorum.

GARDEN AND FIELD SEEDS.— Inasmuch as we cannot give it as many insertions as is desired, we invite particular attention to the advertisement of Mr. JAS. P. FOGG, Proprietor of the Rochester Seed Store. Those of our readers wishing to purchase Seeds, will find by reference to the list of Agents, who can furnish them in their respective localities—or ascertain the name of the nearest agent. We dislike to publish so long an advertisement, but as the RURAL circulates more or less in most of the places named, have concluded to give it one or two insertions for the benefit of all parties. Mr. F.'s establishment is one of the most extensive in the country, and enjoys an enviable reputation.

PROSPECTS OF THE WHEAT CROP.—If we may judge from what we saw in a recent trip through portions of Niagara, Genesee, and Orleans counties, the wheat crop of Western New York never promised better at this season of the year. In but few wheat-fields were bare spots observed ;— these, we learned, were in some cases caused by the wire-worm ; in others (on low or very exposed situations) by winter killing. If no untoward event occurs the crop of 1853 will be a good one.

FERN LEAVS.—Fanny Fern's new book will be published by Derby & Miller, of this city, early in May. It will be a handsome 12mo. volume of 400 pages, with eight beautiful illustrations, designed by Fred. W. Coffin, of Auburn. The first edition of the work, numbering 5,000 copies, is nearly all engaged. It is confidently expected that the work will meet with an immense sale.— We have been favored with a perusal of a hundred or so pages of the advance proof sheet, and can assure the reading public that the volume will be one of great interest.—*Auburn Daily Adv.*

# News Brebities.

—— Gen. Lane, accompanied by his family, has left Oregon for the States.

—— It is stated that there are 2,000 Cuban youth in the schools of the United States.

—— A statute of Dewitt Clinton, is talked of, to be erected in the Capitol Park at Albany, at a cost of $20,000.

—— Boston has now in its environs four cemeteries, embracing in all upwards of three hundred and fifty acres.

—— The receipts of the American Board of Missions, from August 1st to the 1st of March, were $160,232 72.

—— Grace Greenwood says that she never witnessed such extreme and universal cruelty to animals as in Rome.

—— Shad are selling in Alexandria at from $9 to $9, 50 a hundred, and herring from $7 to $7,25 a thousand.

—— The losses by fire in Boston during the three months ending April 1, were $79,464 ; insurances, $73,914.

—— A great many of the English nobility have gone, or are going to Paris. The gaieties there are amazingly attractive.

—— The 37th anniversary of the American Bible Society will be held in the Metropolitan Hall, Thursday, 12th of May.

—— Ninety-five thousand feet of lumber for the Illinois Central Railroad, arrived at Chicago from Kalamazoo in one day.

—— Proposals are called for by the Engineer of the Valley Railroad, for graveling the same from Rochester to Mt. Morris.

—— The route of the Utica and Black river Railroad, is nearly surveyed, and measures will soon be taken for its construction.

—— Good farms in the towns of Wheatland and Caledonia, with ordinary buildings, are selling at rates of $75 to $110 per acre.

—— The receipts of the American Baptist Missionary Union, from the 1st April, 1852, to the 1st March, 1853, were $61,924 66.

—— A "Shade-Tree Society" has been organized in South Boston. Each member must annually plant trees or pay a fine of $2.

—— The number of casualties on the Railroads in Massachusetts, during the year, was 87, of which 63 were fatal, and 24 not fatal.

—— Mrs. Stowe has sued a publisher in Cincinnati, named Thomas, for issuing a German edition of Uncle Tom, in violation of her copy-right.

—— According to the reports from the Lunatic Asylums, 573 persons have became insane thro' the "rappings," and 17 committed suicide.

—— Barrow, the Chinese traveler, computes that there is more material in the great wall of China than in all the houses of England and Scotland.

—— The aggregate cost of the New York & Erie Railroad including property of every description has been $30,277,542, or about $65,000 per mile.

—— The population of Savannah is 23,508.— Of this number 7,276 are white males, 6,488 white females, 4,173 colored males, and 4,571 colored females.

—— The debt of Great Britain is said to be $126 per head ; of France $33 per head ; of Germany $26 per head ; of the United State $2,60 per head.

—— It is announced in the New York papers that the Crystal Palace, on Reservoir Square, will not be ready for the reception of articles before the first of June.

—— In the neighborhood of Port Sarnia, a leaden bullet was recently found embedded in the heart or an oak tree. It was supposed to have been there 120 years.

—— The Legislature of New Jersey have amended the General Banking Law of that State, so as to render City Bonds available as security for circulating notes.

—— The Chicago Tribune says that some of the railroad companies in Illinois are importing men direct from Ireland, to supply the present scarcity of laborers.

—— It is said that Boston speculators in old butter have $10,000 worth. Good. We wish there had been ten times as much, that the lesson might be everlasting.

—— In the search for Sir John Franklin fifteen expeditions have been engaged, at a cost of four millions of dollars. Sir John has now been absent nearly eight years.

—— No less than one hundred and seventy-five vessels, manned by crews numbering seven thousand men, have recently sailed from Newfoundland, for the seal fishing grounds.

—— The Wheeling Gazette says that a refreshment car will be put on the Baltimore and Ohio Railway, and will run with every passenger train. This is a new feature in railroading.

—— The annual amount of Lead produced from the Wisconsin Lead mines, is about 40,000,000 pounds, which amounts to two million dollars, when sold at five cents a pound.

—— The Washington Monument is to be upon so large a scale, that Bunker Hill Monument could be placed inside the column, and room for all practical purposes would still be left open.

—— The rates of fare from San Francisco to New York, by the steamers of the Pacific Mail Steamship Company, have been reduced to $100 in the cabin, and $50 in the steerage.

—— Some more fossil remains of an antediluvian animal have been discovered on the Burlington Hights, near Hamilton, supposed to have belonged to the animal known as the mastadon.

—— There are two Emperors of Japan : the temporal Emperor has the seat of his authority at Jeddo ; the ecclesiastical Emperor reigns at Meaco, a descendant of the Sun Goddess, the tutelar deity of Japan.

—— Eminent European writers on Finance are agreed, according to the Bankers' Circular, that the supplies of gold now pouring into Europe, must at an early period occasion an immense rise in the price of all commodities.

—— A specimen of the new silver coinage has been exhibited on change, in the form of a twenty-five cent piece. It is very neatly executed, but in figure and design does not appear to differ from new twenty-five cent pieces of the old standard.

—— A course of Agricultural lectures is to be given in the University of Michigan (Ann Arbor,) commencing April 27 and closing June 28. The Chemistry of soils and plants, Geology, Mineralogy, Botany, &c., will be thoroughly elucidated.

—— One house in Boston buys very largely of the agricultural produce of St. Lawrence county, in this State. Last fall they purchased and shipped 6,283 packages of butter, weighing 475,550 lbs.; 582 packages and 5,272 boxes of cheese, weighing 434,371 lbs., and 79,750 lbs. pork.

# California News,

### Arrival of the Daniel Webster.

By this arrival at New Orleans, April 6th, we are possessed of fifteen days' later intelligence from California. The great feature of the news is the total loss of the Pacific Mail Steamship Company's Steamer Tennessee, on the 12th ult. She ran ashore in a fog, near San Francisco; but her 600 passengers and mails were saved.

The Vanderbilt Steamer Independence was thirty days beyond her time, and had not been seen since the 15th of February, at which time she was off Cape St. Lucas. She had a large number of passengers on board, and her long delay had created a great deal of anxiety.

The mining news is favorable. Weaversville, a town in Trinity county, had been destroyed by fire at an estimated loss of $100,000.

Gold mines of great value have been discovered in Oregon.

The Prometheus put into Charleston on the 6th, short of coal, with 221 passengers and the Pacific's specie. She reports that the San Juan difficulty is settled.

# News Paragraphs.

☞ The stone contributed by Switzerland, inscribed "The Free Swiss Confederation to the Memory of Washington," was presented on the 5th inst., at the City Hall, in Washington city, with appropriate ceremonies. It was thence drawn by six horses, and escorted by the Germon Yagers, the Marine Band and citizens, to Monument Place. On passing the executive mansion, Gen. Henderson notified the President, who repaired to the window to view it. On its pausing for a moment, he simply remarked, "The Washington Monument would not be complete without a stone from Switzerland."

☞ The rumor at Washington that the administration was about to recall the Japan Expedition, is without foundation. The latest accounts are that it is to be reduced from 236 guns to less than 130, and to about 2,100 men instead of 3,123. The Vermont, ship of the line, now in Boston, will form no part of the squadron, as was originally intended, only because seamen cannot be got at the present rate of wages paid by Uncle Sam.

☞ The Executive Committee of the Ohio State Agricultural Society, have given notice that there will be an exhibition and trial of Reaping and Mowing Machines at Wooster, on or about the first week of July next. No premiums will be awarded except on Mowers and Reapers. The rules and premiums will be published on the 20th of April, in pamphlet form, and copies can be obtained by addressing W. W. Mather, Columbus.

☞ It is stated, but it is not generally known, that General Washington was made Marshal of France by Louis XVI, to enable him to command Rochambeau, who, in rank, was a very old General, and could only be commanded by a Marshal of France. On a picture presented by the Earl of Buchan to General Washington, it is written—"To Marshal General Washington.

☞ The Superintendent of the Banking Department, has given notice that the bonds and mortgages deposited by the Farmers' Bank of Onondaga County, as security for its circulating notes, will be offered at public sale at the Capitol in Albany, at noon on the 20th inst. The mortgages are thirteen in number, all on lands in the town of Holland, Erie county.

☞ The Egyptain Railway is progressing. In a few months it will be completed from Alexandria to the Nile, when the passage to Cairo will be effected in nine or ten hours, instead of twenty-four as now required, and the passengers to and from India will no longer have to pass a night on the canal or Nile.

☞ The Evening Journal corrects a misapprehension in reference to the bill providing for further consolidation of Railroads in this State. The bill, as we now understand it, allows the consolidation of any and all the companies, except that the New York and Erie and the Central Line cannot be united.

☞ The Havana correspondent of the New York Journal of Commerce says that 3,000 negroes have been landed on the north side of Cuba, since the 12th of February last, notwithstanding the quickened vigilance of the authorities, and the constant observation of the British cruisers. The facts of all the arrivals are notorious at Havana.

☞ The oldest son of Queen Victoria begins to exhibit military talent, and has received an appointment as General or Major General, with an addition of some half a million of dollars attached to his salaries. He has already stormed one tea-pot and two coffeepots.

☞ The Boston Post states that Gov. Stevens, the newly appointed Governor of Washington Territory, is to be put in charge of one of the three surveying parties which will be sent out to explore the several routes of the Pacific railroad.

FOREIGN IMPORTS.—It is estimated that our foreign imports for the year ending the 30th of June next, will be equal to the sum of $272,000,000.—Our imports last year are supposed to have exceeded our exports by the sum of nearly $70,000,000. Nearly half of this was paid in gold, and the rest in Railroad and other bonds. We shall see the end of this rope some disagreeable time, by and by.—*Albany Journal.*

NEW COUNTIES IN MINNESOTA.—At the session of the Minnesota Legislature, just closed, eleven new Counties were organized in that Territory, west of the Mississippi River. In a few years, those Counties will be filled with an industrious, rich and intelligent population. Cities yet unknown in dreams will be built, and cultivated farms will cover one of the most enchanting countries ever shone upon by the sun.

THE WEATHER AND THE SEASON.—The weather during the past week, has been coolish — some snowy and some rainy. On Friday evening about 7 o'clock, the city was visited by a severe gale of wind from the west, north west. It lasted but a short time.

Crocuses have been in flower for about two weeks. The elm is about ready to blossom.—Gardeners are beginning to work a little. Peeping frogs heard about two weeks since. Swallows —the white breasted—were seen on Saturday.—Grass begins to put on a verdant hue; and soon will all nature be dressed in her loveliest adornings, and be no less beautiful than vocal—for the forests and orchards will soon resound with the notes of the wood-land songsters. Rainy this (Tuesday,) morning. Wind, S W.—w.

# Market Intelligence.

RURAL NEW-YORKER OFFICE,
Rochester, April 13, 1853.

THE market for the week just closed has not been very brisk. Farmers are occupied with spring work, and bring very little produce to market. In most branches of trade operations have been healthy and reliable, and on a scale that promises well for the season. Canal interests are well cared for, the various transportation companies having made liberal arrangements for the season. Boat building has been carried on to an unusual extent, and at no former period, to our knowledge, have so many new, first class boats been ready for the water, as at this time. Money is readily obtained on first class paper, and the season commences with every reasonable prospect of being a successful one in all legitimate business operations.

GRAIN.—The feeling for wheat has been more favorable, and for some choice lots $1,08 has been paid. Corn is inactive, very little offering, and prices unchanged. No sales of Barley. Oats are in demand at 38@12c., as in quality.

SEEDS.—The demand for choice Clover has exceeded the supply, and those who are fortunate holders have advanced the price temporarily, from $6,50 to $7,50, and in some instances $8, prices which cannot long be maintained. Timothy seed is abundant, and retails at $2,50@3,50, as per quality. Garden seeds are in some request, and our seedsmen are sending out unusually large quantities.

FARM PRODUCTS.—Potatoes are abundant at 25@37½c.—Apples scarce, selling at 44@75c. Eggs, 10@11c. Butter, 12@15c. The supply is sufficient for present wants. Little change in other marketable commodities.

## NEW YORK MARKET.

NEW YORK, April 12.

FLOUR—There is a light demand for Western and State Flour for the home trade and the east. Sales Western Canal 2,400 bbls. at $4,56¼@4,62 for common to straight State; $4,68@4,94 for common Ohio and mixed to fancy Michigan and Indiana.

GRAIN—Demand for wheat very limited. Holders are firm at $1,24@1,25 for Genesee; $1,23@1,24 for Ohio and Michigan. Rye quiet at 90c. Barley heavy. Corn more plenty. Sales 15,500 bu at 60@61 for unsound; 62@63 for mixed and Southern yellow; 64 for white mixed; 62½@64 for white Southern; 65@65½ for Southern.

PROVISIONS.—Pork firm. Sales at $15 for mess; $13,-12@13,25 for prime. Beef $8,25@10,25 for mess; $14,50@13 for repacked Chicago; extra do., $14; prime $4,50@6,50. Lard, 9¼@9½. Butter, 10@16 for Ohio; State, 14@23.—Cheese, 8¼@9¾.

## ALBANY MARKET.

ALBANY, April 11.—Nothing of moment has transpired in the Flour and Grain trade. Some few hundred barrels of the former have changed hands at the closing rates of Saturday. In Provisions, there is a moderate demand for Pork and Beef at former prices. Cut meats sell slowly. Strictly prime Butter is rather scarce at 16@18. Timothy seed is selling at from $2,50 to 3,50. Clover is scarce at 12½@13 for medium, and 14 for large.

## NEW YORK CATTLE MARKET.

NEW YORK, April 4.—At Washington Drove Yard—Offered, 1,200 Beeves, (1,700 Southern and Western, remainder from this State.)

Swine—6¾@7¾; best quality, 7@8c; retail 7½@10c; fat hogs, 6¼c.

# Marriages.

AT St. Lukes Church, in this city, on the 7th inst., by Rev. Dr. Lee, THEO. E. SCRANTOM and Miss MATILDA J. KENNEDY.

BIG TREE.—We see in an exchange, an account of a tree that throws the "Big Walnut," somewhat famous in this region, entirely into the shade. The Jackson County (Ind.) Democrat, says there is now standing on the land of Stephen Crabb, near that place, a sycamore tree that measures 89 feet in circumference, and contains a cavity 23 ft. in diameter. This tree will be hard to beat this side of Oregon, or the story either.

TROUBLED WITH RATS.—Accounts from British Guiana state that than extraordinary plague had appeared on the plantations, in the shape of rats, which were doing an enormous amount of injury to the crops. The animal takes one bite from each cane, which soon withers and dies. Thus far dogs and head money have done little to stop their progress.

RELEASE OF THE MADIAIS.—Decidedly the most interesting item in the foreign news by the Niagara is the release of the Madiais by the Grand Duke of Tuscany. Public sentiment in England and the United States, we must conclude, has not been entirely without influence in facilitating this happy issue.

## PUBLISHER'S NOTICES.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is ordered.

☞ ADVERTISEMENTS must be brief, appropriate to the objects of the paper, and accompanied with the cash.

ADDITIONS TO CLUBS—Are still in order. Having but few back numbers, agents and others can order additions to Clubs at $1 per copy from 1st of March or April to end of the year and volume Now Clubs, or single subscribers, can begin 1st Febrnary, March, or at date of subscribing.

### SPECIFIC PREMIUMS!

In order to reach and reward *every one* who may lend a portion of influence in support of the RURAL NEW-YORKER, we offer the following Premiums for subscribers obtained previous to the 1st of May next:

1st. FIVE DOLLARS, in CASH, or a copy of WEBSTER'S UNABRIDGED DICTIONARY, (or $6 in Ag'l. Books,) to *every person* sending payment for FIFTY or more yearly copies (six month subscriptions proportionably,) according to our terms, previous to the 1st of May next.

2d. FIVE DOLLARS, in Books, or four extra copies of the RURAL, to every person remitting payment for FORTY or more subscribers as above.

3d. THREE DOLLARS in Books, or a handsomely bound volume of the RURAL for 1852, to every person remitting payment for THIRTY subscribers.

4th. To every one remitting payment for TWENTY copies, we will give an extra copy of the RURAL, and four (the present and three past) volumes of THE WOOL GROWER AND STOCK REGISTER—or, if preferred, an extra copy of the RURAL and $1,50 in books.

5th. To every one remitting for TEN copies, an extra copy of the RURAL and three volumes (past or present) of the WOOL GROWER—or, instead of vols. W. G., $1 in books.

6th. To every one remitting for SIX copies, an extra copy of the RURAL and either volume of Wool Grower.

7th. To every one remitting for THREE copies ($5,) either volume of the Wool Grower, *and* a bound volume of Gen. Farmer for 1848 *or* '49.

8th. To every person remitting for ONE copy, ($2,) we will give a copy of either vol. Wool Grower, *or* the Farmer for '48 or '9, as preferred.

All competitors for Premiums are expected to adhere strictly to the following

### TERMS,—IN ADVANCE:

TWO DOLLARS A YEAR. Three Copies, one year, for $5—Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Six month subscriptions in proportion. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different post offices if desired.

☞ Specimen numbers, &c., furnished free to all disposed to compete for the Premiums, or who desire to extend the circulation of the NEW-YORKER. Subscription money properly enclosed, may be mailed at our risk.

Address D. D. T. MOORE,
Rochester, N. Y.

### FOR SALE,

**A first rate Wheat Farm, in Genesee County.**

THE Subscriber offers his farm for sale, as he intends, on account of his health, to change his business.

It is located two miles North of the Village of Batavia, on Bank Street Road, and contains about 220 acres of first quality wheat land—about 185 acres under good improvement, all well fenced with stakes and caps, and about 63 acres of wheat on the ground. It is well watered by springs, on both sides of the road; and has a good frame house, with a small frame house for a hired man—two wheat barns, with sheds—a corn barn, two granaries, and a smoke house. There is a choice selection of fruit trees, embracing Apple, Cherry, Peach, Plum and Pear trees; also Nectarines and Apricots, of the best kinds. The farm might be divided so as to accommodate two families.

I intend to sell, and whoever buys, will get one of the best farms in Genesee county, under a high state of cultivation, and clear from foul stuff. Any person wishing to purchase a large farm or a part of this farm, is requested to call and examine. C. R. BRINCKERHOFF.

Batavia, Genesee Co., April 6, 1853. 172-3t*

### SPRING GRAIN AND SEEDS.

WE have now on hand and for sale at the Genesee Seed Store, the following Field Grains:

100 bushels Pure Fife Spring Wheat.
100 do. Barley, 4 or 6 round.
25 do. Do. superior new variety, 2 round.
100 do. Buckwheat.
100 do. Racine or Cat-tail Oats.
200 do. Reapt Timothy seed.
400 do. Common do.
25 do. Large Clover.
25 do. Red Top.
20 do. Orchard Grass.
50 do. Millet.

172-tf. J. RAPALJE & CO.

FOR SALE.—20,000 Seedling Apples for stocks.
170w3t S. MOULSON, Rochester.

### PEAS! PEAS! PEAS!

WE most respectfully call the attention of Farmers and others to our extensive assortment of Field and Garden Peas; among the former are

200 bushels Common Marrowfats.
400 do. Junes.
200 do. Golden Vine.
200 do. Creepers.
100 do. Common Canada.

And among the latter are

25 bushels Superior Early Kents, earliest grown.
5 do. Prince Albert.
100 do. Early Warwick—superior.
200 do. do. Washington.
100 do. Marrowfats, superior article.
50 do. Black Eye Marrowfats.
25 do. Dwarf Blue Imperial.
10 do. Monastery Marrow.
25 do. Blue Marrowfats.

Also, various other choice kinds.—all of which will be sold at small profits for cash, at the Genesee Seed Store 63 & 65 Buffalo st., Rochester.

172-tf J. RAPALJE & CO.

### SEED POTATOES.

WE have on hand 200 bushels of the celebrated White Mercer Potatoes, at $2 per barrel, delivered at the Railroad or Canal, in this city.

100 bushels Early Junes.
50 do Mountain Junes.
25 do Wild Mexicans.
25 do Carters.
50 do Irish Cups.

J. RAPALJE & CO.
172-tf. 63 & 65 Buffalo st., Rochester.

### VALUABLE FARM FOR SALE.

ONE MILE South east of the Village of Hudson, on the Michigan Southern Railroad. The farm contains 160 acres, of which 100 are improved, and suitable for all kinds of grain and grass: with a two story frame house, 22 by 32—kitchen and wood-house—2 good barns, one 20 by 28, the other 40 by 45—shed 20 by 30—and other out buildings. There is a good well, an orchard of 170 trees, with Peach and Plum, &c.

Terms, $25 per acre. I will sell horses, cattle and sheep with the farm, if desired. H. M. FISH,

172-1t* Hudson, Lenawee Co., Michigan.

### THE CELEBRATED MALTESE JACK

WILL stand the coming season at the stable of the subscriber in Perinton, one and a half miles east and south of Egypt—at the Red Barn, four miles north of Victor.

Terms, $10 to insure a foal, payable on the first of March, 1854.

Jack is coming five, and stands fourteen hands high without shoes. Accidents at the risk of owners of mares.

H. & D. SHEARS.

Perinton, N Y., April 9, 1853. 172-1t*

### Sweet Potato and Other Plants.

THE Subscriber, thankful for past favors, would respectfully announce that he expects to

# Poetical.

## THE VOICE OF SPRING.

BY ELLEN ELIZABETH MACK.

"Go forth, gentle maid, 'tis for thee I bring
My sweetest treasures—the flowers of spring!
My balmy breath, the wakening breeze,
As it fans the hills and waves the trees,
Shall give to thy cheek, the tint of the rose,
Where the god of health shall in beauty repose.

"Go forth, young man, in thy beauty and pride,
And breathe the free air of the rough mountain side;
List to my music and join in the song,
Zephyrs and streamlets will bear it along—
Thy step is elastic, thy spirit is free,
And thy *heart* shall be light, if thou wander with me.

"Go forth, old man, with the footstep weak,
With the eye-sight dim, and the wrinkled cheek;
Go forth! for again to the gladdened earth
Has the *Spring* returned, with its joy and mirth,
And say not, 'I never shall greet thee again,
For in Heaven, thy home, I eternally reign!'"

Barre, N. Y., 1853.

## THE PLEBEIAN.

BY KATE KOOLEY.

[*Continued from last number.*]

CHAPTER THIRD.

MANY friends gathered around the couch of Mr. Wells, but there was *one* who never left his side. Many weary days and nights did Edward watch over the unconscious object of his solicitude, and most fervently did he pray Heaven in mercy to spare his only earthly friend. At length perception and consciousness returned, and the first object that blest the sight of the invalid, was his adopted son sitting by the bed-side, with his eyes closed, but tears were stealing from underneath the pendant lashes—tears more precious to the dying man than the brightest jewel that glitters in the crown or casket of any European monarch. He endeavored to speak, but no sound issued from his lips; he would have pressed the hand that held his, but the nerveless fingers obeyed not the impulse; the affecting conviction burst upon him that he was never more to feel the warm grasp of a friend, and with a convulsive effort he raised the other hand. Edward saw the movement and caught the hand to his lips, while tears of joy and gratitude fell upon it.

In a few days Mr. Wells was able to converse, and welcome to Edward's ear was the sound of that voice, which had so long been silent.

Months passed, and still he lingered.—Spring's earliest flowers again put forth, and as Edward placed some beautiful ones in the hand of the invalid, he expressed a hope that when his favorite rose-tree should again blossom, his friend might be able to be carried into the garden.

"My dear son," said Mr. Wells, "do not deceive yourself; it cannot be. For your sake, I could wish to linger a little longer; for myself, I long to flee away and be at rest. Could I but I know that your manhood would fulfil the promise of your youth, I should leave this world without regret."

"Tell me, my father," said Edward, "have you seen aught in my character or conduct that should make you distrust me?"

"No, my son; on the contrary, your conduct has ever merited my commendation, and I am convinced that if the mental and moral training of all children could be what yours has been, vice would, after a while, nearly cease to deform this fair world of ours. The innate purity of man's mind, if cherished and encouraged, would lead him to look upon crime with abhorrence, and choose the path of virtue as the only one that could lead to rational happiness. In fact, my son, you have established in my mind a favorite theory. The observations of many years have convinced me, that if every child were educated according to its capacities, its sweet and confiding affections cherished, and shielded from the baneful effects of vicious examples, man at no very distant period, would reach that exalted station which the development of every succeeding generation gives us reason to believe he was destined to fill. In unfolding my plan to my friends, and urging them to test its practicability, I was constantly met with the common argument of the 'natural depravity of the human heart.' I longed to apply my theory; I have tried it, and I thank Heaven I have lived to see so rich a promise of its success. Yes—men have called me a visionary, or enthusiast, because I would not believe their base slanders on our natures as they came from the plastic hand of Omnipotence, who moulded us according to His own will. I am constrained to acknowledge that man has perverted the rich gifts bestowed upon him by a beneficent Creator—that he has become degenerate through ignorance of that nature, not, as some honestly believe, through natural depravity—and when man shall better understand his own being, and the philosophy of his own mind, then will he learn the best means of accomplishing its true end and aim. For ages has Heaven been wearied with prayers that the time might be hastened that all shall know the Lord, and knowledge extend over the whole earth. That the period will arrive, when universal knowledge, and consequently universal peace and happiness will prevail, good men in all ages have believed—and the interest that pervades the public mind in regard to universal education is the surest evidence that the time may indeed come.

"In the world with which you will soon mingle, I foresee from your inexperience, that you will be liable to meet with many disappointments—you will look upon the world rather as it should be, than as it is.—Youth is unsuspecting and confiding, and that precious confidence we might always retain, were it not too often repaid by treachery. But, my son, I am aware that there are disappointments in life that may for a time palsy our energies, and render life itself an undesired boon. You know my history, and should it ever be your unhappy fate to be the victim of a similar disappointment, I warn you not to yield to its paralyzing influence. Keep your mind usefully and actively employed, and endeavor to submit with fortitude to the great Disposer of events. You are gifted with superior intellectual capacities, which happily you have had the opportunity to cultivate. To improve time and talents is the duty of all; where much is given much is required. I do not leave you wealth; it will therefore be necessary for you to employ your talents for your support—and, what is equally necessary to those who possess a benevolent mind, to acquire the means of relieving those less favored than ourselves. In the exercise of benevolence, you will lay up to yourself a treasure of which no event can deprive you. Had the 'wise man' employed his talents and the boundless wealth which he possessed, in relieving distress and doing good alone, instead of indulging in sensual excess, he never would have pronounced all the unparallelled blessings which Heaven had heaped upon him, 'Vanity of vanities'—nor would the clouds of voluptousness and idolatry have darkened the sunset of his existence. How long have the precepts of wisdom which he left on record, outlived the proud temple that he reared! Human experience proves that the happiness of individuals, and the prosperity and perpetuity of nations, depend not on luxury and splendor, but on virtue and intelligence.

"My strength is failing, but I would fain say a few words more. Continue, my dear son, to cherish that purity of heart that 'leaves the mind open to angels' visits, and repels the ministry of ill.' If you are careful to observe the precepts of Him whose mission was to save his people from their sins, you can scarcely err. May Heaven reward you, and accept my most fervent thanks that it has given me a son to watch over me in my helplessness, and to close these eyes from which this world is fast receding. Bury me by the side of Mary.—Farewell."

Such was the close of this good man's life. In a few days the remains of Mr. Wells were borne to their last resting place. A long train of mourners followed; some lamented the companion of earlier days; many mourned with no common sorrow for one who had saved them from poverty and ruin. Widows and orphans were there, whose hearthstones, but for him, would have been cold and cheerless.

There was *one* who stood *alone*—no language can describe the desolation of his heart, as he looked on those loved and venerated features for the last time, and saw the grave close over his only friend. He returned alone to his solitary home, where every object reminded him of the happy past, and his irreparable loss. After a sleepless night, he sought in the cool and invigorating morning air, a relief to his burning temples. Involuntarily he sought the garden, where every flower seemed to remind him of the magnitude of his loss. But in contemplating the character of his deceased friend he found consolation. If, thought he, in recognizing the image of God in all his intelligent creatures,—if to receive all mankind as his neighbors, to pour the oil of consolation on the wounded spirit, and relieve the destitute, are deeds acceptable to God, then will the crown laid up for him vie with the stars in brightness. By such reflections the intensity of his grief became subdued.

Entering his study, he endeavored to form some plan relative to his future course of life. While revolving this subject in his mind his eye fell on Mrs. Badon's window, which was associated in his mind with bright visions of hope and pleasure, which his recent affliction had banished. Perhaps *she* may love me, thought he, after recalling her every word and look, and to know that one being could love and sympathize with me in this hour of desolation, would relieve my heart of half its load of sorrow. He instantly determined, as soon as circumstances would permit, that he would visit his native place, which was in the neighborhood of Snowden Manor.

The persons whom Mr. Wells had selected as his executors were summoned, and the will duly opened; when it was found that of the ample fortune of which Mr. Wells was once possessed, a bare competence remained, which was to be equally divided between Edward and a distant relative. Memoranda of numerous donations to charitable institutions, and large sums of money lent, were found among his papers; therefore no surprise was created at the diminution of his fortune.

Spring was yet in its early beauty, when Edward mounted a beautiful bay pony, the gift of his kind patron, and set out on his intended journey. Arrived at his birth-place, his first visit was to the grave of his mother—and though no stone marked the spot, the evergreens which his little hands had planted, flourished in wild luxuriance. His father and old teacher had long been dead. Without seeing any of his childish associates, he bent his steps towards Snowden Manor.

Snowden Manor once boasted many broad and luxuriant acres, and some of its former proprietors had lived in almost princely splendor. At this time the estate was diminished in extent, the stately mansion was fast falling to decay, and the whole place presented an air of dilapidation that painfully indicated the waning fortunes of the family. It so happened that a relative of Edward's was overseer of Mr. Snowden's estate. By his invitation Edward concluded to make his house a temporary resting place. This cousin, a little man of forty, had recently married a young and ignorant girl. She received our hero with a vulgar stare, but seemed disposed to make his visit agreeable. Having dispatched a servant with a note to Miss Snowden, informing her of the death of Mr. Wells, and begging permission to wait upon her, he seated himself in the little parlor allotted to his use, and awaited in trembling impatience the answer to his missive.

Since Miss Snowden's visit to her aunt's she seemed much changed; her former amusements, with the exception of novel-reading, were abandoned. She was often melancholy and abstracted, and preferred a solatary walk to gay company. Her father sometimes marvelled at this, but as she seemed more solicitous than ever for his happiness, it passed without further notice. When her brother's noisy companions indulged in their revels, she could not help contrasting their lives with the guileless one of him whose name had never passed her lips, but who was seldom absent from her thoughts. Her joy was unbounded when she learned that he was in the vicinity, tho' well aware that his request to call upon her could not be complied with. She at once formed a plan to procure an interview with her lover, quite in accordance with her romantic character. She answered his note by saying she was at present engaged, but would meet him at evening in the Elm grove that skirted the estate. Thither she repaired at the appointed time, accompanied by an old female slave who had lived in the capacity of nurse in the family.

On her way there Julia thought she would inform him of the opposition he must expect to meet with, open a secret correspondence, and bid him trust to time and circumstances for a favorable issue. When she arrived at the grove, she found Edward already awaiting her. After the first emotions of joy had subsided, Edward spoke of the recent affliction that had deprived him of his only friend. "When in the desolation of my heart," said he, "the future seemed shrouded in gloom, then did your bright image beam upon my heart, like a ray of celestial light on the benighted traveler, dispersing the clouds of sorrow, and gilding the future with hope. Tell me, Miss Snowden, may I still hope that there is one who, though she may not love me, is not indifferent to the fate of a friendless orphan?"

Miss Snowden was unable to reply, but a slight pressure from the hand Edward still held, was understood. Ah, thought she, how can I tell him we must part, perhaps forever. She burst into tears.

"My dear Miss Snowden, if in relieving my own heart, I have inflicted pain on yours, I cannot forgive myself for distressing you."

Yielding to her ardent temperament she exclaimed—"No, you have not distressed me; to share the griefs of such a heart as yours may be deemed a pleasure."

"Thank you for this kind assurance," he replied, still at a loss to understand her emotion.

Miss Snowden resolved to defer the unpleasant communication she was compelled to make, till they should meet again; he shall be happy at least one evening, thought she. Drying her tears, she took his arm and strolled through the grove—followed at a respectful distance by the old servant.

Edward for a time forgot his bereavement in the certainty of being loved. Miss Snowden too forgot the insurmountable obstacles which would prevent their union, when she felt his eyes resting on her in perfect confidence and love.

There are some brief moments in our existence when this world seems an Eden with all its pristine beauty and purity—the path before us strewed with roses—moments in which we forget that "roses have thorns," or that even a poisonous reptile may lie concealed beneath the violet leaves.

The servant advanced and reminded her mistress that it was time to return, and the lovers bent their steps homeward.

Concealed behind a clump of the white blossomed haw, was the wife of Edward's relative. She had seen him put a note into the hand of the servant, and heard the request to deliver it to Miss Snowden. Her curiosity was aroused; she watched his steps and followed him to the grove, where she witnessed the interview between Edward and Miss Snowden, whom she regarded with such feelings as little minds are apt to indulge towards their superiors. Full of malice, she left the grove, sought the quarters of a slave, and bade him go directly and tell his master where he could find his daughter, and *who* was her companion,—well knowing where that master was most vulnerable.

[*Continued next week.*]

AN agricultural author, talking of hen culture says—"Fowls that are penned up should have some kind of amusement—it is essential to their health. The kind of amusement is shelling their own corn, &c." Upon which the Boston Post remarks that it is the same with the *fair* as with the fowl. Women who are penned up should have some kind of amusement, such as making their own bread, &c.

ANGER is the most impotent passion that influences the mind of man—it effects nothing it undertakes, and hurts the man who is possessed by it more than the object against whom it is directed.

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

For the Rural New-Yorker.

## MISCELLANEOUS ENIGMA.

I am composed of 31 letters.
My 19, 30 4, 27, 31, 25 is the godess of fruit.
My 23, 3, 28, 9, 10, 9, 22, 31 is what many lack.
My 24, 9, 5, 10, 25, 21, 8 is where the sublime and beautiful are combined.
My 26, 9, 1, 14 is the name of an English statesman.
My 31, 16, 6, 12 was a cruel Empress of Rome.
My 7, 5, 19, 15, 27, 20, 28 was a distinguished modern painter.
My 19, 28, 8, 1, 30 was a noted Athenian philosopher.
My 2, 12, 18, 11, 23 was a celebrated Grecian poet.
My 13, 25, 31 is sometimes very useful.
My 17, 21, 23 all are liable to do.
My 28, 3, 24, 14 is a time for fasting.

My whole is an event lately transpired, that has excited the admiration of some, and the condemnation of others. E. D. T.

## POETIC QUESTION.

"Oh! dear, 'twill never do, you're too old I declare,
For when I'm blooming in life, you'll be faded by care."

If from my age there taken be
A certain number, less by three;
And from this square the same number cleave,
A goodly number it still will leave,—
Nine bold tens, meek units four,—
The hundreds are, eight from a score.
Then these units, tens, and hundreds take
From the square of my *age*, and it yet will make
Thirty times the number from which I took three,
As every *grey* maiden or bachelor 'll see.
So for all these great numbers, fair maid, don't despair,—
I am yet less than *fifty*, and without a grey hair.

East Bergen, N. Y. SEBASTIAN.

## A PUZZLE.

WHAT word is that of one syllable consisting of two vowels and five consonants, out of which one hundred different words may be formed, and many of those of two syllables? J. S. G.

Media, Pa., April, 1853.

☞ Answer next week.

A QUESTION.—Suppose you start from a given point on a given day, say from Rochester, Monday noon, April 18th, and travel west, keeping all the time directly on the meridian, or noon line; where will the inhabitants of the earth first tell you it is Tuesday noon? AMICUS.

## Ketchum's Patent Mowing Machine

Howard & Co., Proprietors and Manufacturers, Buffalo, N. Y.

THIS justly celebrated Machine is rapidly advancing in public favor, for its simplicity, durability, and efficiency, and it has settled the question beyond a doubt, that grass can be cut by Horse Power equally as well, and at much less expense, than with the scythe: for during the past season five hundred of these Machines were sold by us, and were universally approved of by those who used them. It leaves the grass evenly spread, and requires no turning to cure perfectly. The Report of the Committee of the State Agricultural Society, at the late trial at Geneva, shows fully and conclusively that this was the only machine in the field which worked without clogging, or any interruption, and the only Machine which successfully cut the two acres required by the Committee, cutting the same in one hour and twenty-six minutes, doing its work admirably and in a far better manner than can be done by manual labor with the scythe. They also show in that Report that there is an actual saving of $13 per day by the use of this machine over hand labor. We have only to refer those who wish a perfect mowing machine to said Report, and judge for themselves.

This Machine received last fall the First Premium at the late trial at Springfield in Ohio; the Gold medal at the American Institute in New York; also the First Premium at the great Provincial Fair at Toronto, C. W.

They are so compact that one of them can easily be carried in an ordinary one horse wagon, and so very simple that it requires no machinist to put them together, as there are but two bolts (besides the pole bolts) to be secured, to have the Machine ready for use, which does not require over ten minutes time. They weigh about 750 lbs., and can be worked by any boy who can manage a team.

The great difficulty in Mowing Machines is their liability to clog, and thereby render them inefficient. But this difficulty has been entirely overcome in this Machine by a peculiar construction of the knives, which renders them impossible to clog. Another great advantage of this Machine over all others (which we have secured by Letters Patent) is the placing the knives on a line with the shaft, or tread of the wheel, (or nearly so,) which allows the knives to follow, with the wheel, the unevenness of the ground. Also, that the vibrations of the frame on uneven ground shall not materially elevate or depress the cutters.

All the improvements suggested by experience and use necessary for strength, durability, efficiency, and ease of action, have now been made, and we offer them for sale under the following

**Warranty:** That said Machines are capable of cutting and spreading with one span of horses and driver, from ten to fifteen acres per day, of an ykind of grass, heavy or light, wet or dry, and do it as well as can be done with a scythe, by the best of mowers. They are equally capable of cutting Barley, Buckwheat, Millet, &c.

It is much less trouble to keep the knives in order than a scythe, as farmers frequently cut from ten to fifteen acres without sharpening, which can be done on an ordinary grindstone in a few minutes. We can give any reference required for the full performance of our Machine as above stated.

Orders should be sent in early, as we shall manufacture but a limited number. The price of our Machine, including two sets of knives, extra knife blades and wrench, is $110 cash, in Buffalo, the Machine to be delivered on board of boat or cars free of charge. Office and shop, corner of Chicago street and Hamburgh Canal, near Eastern R. R. Depot, Buffalo, N. Y. HOWARD & Co.

[169-4t]

## GARDEN AND FIELD SEEDS

*From the New Establishment of Van Zandt & Bowdish*

No. 114 State street, Rochester, N. Y.

CAN be purchased of the merchants generally throughout the country, in Papers or Packages, on the most reasonable terms. Also at the Agricultural Warehouse of E. D. HALLOCK, No. 24 Exchange street, near the Clinton Hotel, Rochester, N. Y.

The Seeds from this establishment can be relied on as being of the very best quality. They are mostly imported, or grown by the EASTERN SHAKERS, and are warranted.—Full directions for cultivation printed on each Paper and Package. VAN ZANDT & BOWDISH.

Rochester, N. Y., 1853. 170m6.

## 1,000 BOOK AGENTS WANTED.

INTELLIGENT and industrious men wanted in every part of the United States, to engage in the sale of the best assortment of ILLUSTRATED POPULAR AND USEFUL BOOKS published in the country.

Men of good address, having a small capital of from $25 to $100, can do well by engaging in this business, as the inducements offered are of the most favorable character.

For further particulars, address, (postage paid,)
ROBERT SEARS, Publisher,
170w4 181 William street, New York.

## CLYDE STALLION FOR SALE.

THE Subscriber offers for sale the thorough bred horse Young Clyde. He is a beautiful dapple bay, with dark legs, black main and tail,—stands full 17 hands high, with great bone, muscle and action—and is 4 years old this spring.—Was raised in Darlington, Canada West. He was sired by the far-famed horse, Old Clyde; dam the well known bay mare Messenger.

For further particulars as to pedigree, &c., inquire of the subscriber at Hayward Place, or of S. B. GRANT, ½ mile north of the race course, in Irondequoit, near Rochester, where the horse may be seen. If not sold by the 1st of May, a trusty man is wanted to take charge of him, and travel the north part of this county.

167w6* EDWIN S. HAYWARD.

Brighton, near Rochester, N. Y, March, 1853.

## REMOVAL!

HALLOCK'S AGRICULTURAL WAREHOUSE has been removed from No. 50 State street, to

**No. 24 Exchange St., Rochester,**

in the Store formerly occupied by J. E. CHENEY as a Stove Store. The new store is well supplied with Implements, Seeds, &c.—comprising a larger and more complete assortment than heretofore. Former customers and farmers generally are invited to call at the new establishment and examine for themselves. E. D. HALLOCK.

169-4t. 24 Exchange St., Rochester, N. Y.

## MOORE'S RURAL NEW-YORKER:

A WEEKLY HOME JOURNAL,

For both Country and Town Residents.

PUBLICATION OFFICE,

BURNS' BLOCK, CORNER STATE AND BUFFALO STS., ROCHESTER, N. Y.

TERMS, IN ADVANCE:

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

Terms of Advertising:

ONE DOLLAR per square (ten lines—100 words, or less,) for each insertion,—*in advance*. ☞ The circulation of the NEW-YORKER is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

## THE WOOL GROWER AND STOCK REGISTER.

THIS is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals*. It is ably conducted, published in the best style, and finely illustrated. ### Progress and Improvement.

### A HOLE IN THE POCKET.

AH, READER, a hole in the pocket! Are you sure that yours has no rent in it,—no fissure through which creeps many a hard-earned gain? Let us look at the matter.

How is it with the cattle poaching the meadow this soft weather? You think there is something gained by letting them roam at their pleasure! There is not, but a bad hole in the pocket is this, letting out many a penny. Better keep the cattle out the fields till the ground is settled and the feed has a good start; and above all, be sure the meadow is secure from their intrusion. What is cropt now will be twice lost from the swath. Yes, stop this hole in the pocket.

Ah, your year's supply of wood is yet uncut in the tree. Well, you must submit to this leakage, and no small hole will you find it, if you take the trouble to note the hours that will slip through. Make the best of it now, and profit in action hereafter.

Look sharp at the fences; see that they are strong and that they will effectually serve the purpose for which they were intended. If you find a weak place—a rail broken, a board off, a picket loose, or a stone down—don't rest till the repairs are thoroughly made. Stake and cap as much of your rail fence as practicable, for that will save time, and keep it up against winds and vicious animals. These things all well looked to, will save you much in time and yield a good profit. It is one effectual mode of "repairing the breeches."

Don't neglect the garden, or you will find a hole there too. Have a care for the vegetables. They will yield you a rich return, giving you an agreeable and healthy variety of food, which will save you much in health, enjoyment and the purse.

Wage a vigorous war upon the weeds, briers and bushes, that love to steal on your crops and fill up the corners of your fences and the waste places. It is bad policy to permit them to get the upper hand, for thieves are they, that open wide the pocket to the escape of many a dollar. By all means exterminate them, and then see what a real pleasure it is to till the land. But if you let them suck out the fertility of the soil, don't grumble at short gains, or no gains at all.

There are many things about the farm that may wear holes in the pocket and eat up the profits of its products, and which may need more than the watchful care of a prudent housewife to look after and head them off in time. But we have not time now to hint at all of them. It is quite as much of a virtue to save as it is to earn, and it requires quite as much capacity.—Have a watchful care, therefore, that there be no outgoes but such as are for legitimate and worthy purposes. So should we earn and be careful of our earnings, that we be not a burthen to others, and that we may also act as good members of the brotherhood of man.

But there are other leaks of which we might speak, that are not only holes in the pocket but in the character also. One of these is an itching for political honors. The farmer, above all classes, should avoid too great anxiety to serve the "dear people," or to "save the Union." One can look after his farm and the interests of his party at the same time, no easier than he can "serve two masters." Besides, the fruit which is so tempting proves too often like the apples of Sodom. Let alone politics, farther than to keep yourself informed of the political condition of the country, and of the doings of "the rest of mankind." Look well, however, that you give your suffrages to good men and true. Scan the character of those who solicit your vote. Be a patriot, but not a politician. If honor smile upon you, why, greet her with a becoming cordiality, but be chary of first advances.

Remember to keep the eye well guarded against all holes in the pocket. So shall you have a plenty, in the right enjoyment thereof, to bless yourselves and to make glad the hearts of others.

### GROWTH OF PLANTS—ASSIMILATION OF CARBON.

THE organic matter of plants is composed chiefly of these four elements, to wit,—Carbon, Hydrogen, Oxygen, and Nitrogen. The plant drains these from both earth and air. It was formerly believed that *humus* yielded the principal aliment for the nutrition and growth of plants; now it is looked upon as secondary, as a source of supply,—the atmosphere being now regarded as the great reservoir of plant-food.

Humus or vegetable mould is soluble in water, and thus is formed humic acid. It is found by experimenting, that but a small part of the carbon contained in the plant is thus furnished. If humic acid does not thus feed the plant, whence then hath it carbon?

It is said by writers on this subject, that the quantitiy of carbonic acid in the atmosphere, averages 4 vols. in 10,000 vols., so that every acre of land sustains a pressure of seven tons of carbon. It is estimated, that the quantity of oxygen consumed annually by the breathing of 1,000,000,000 of persons is less than a cubic mile, being about four fifths. A town of 7,000 inhabitants it is estimated consumes, yearly, 551,000,000 cubic feet of oxygen in the wood burned.

Thus any person will readily see one fruitful source of carbonic acid. Add to this the respiration of all animals, and the decay of both animal and vegetable matter. By analysis it is proved that the quantity of oxygen in the air is not less now, than it was 800, 2,000, or 4,000 years ago. In view of the fact that such vast quantities of it are used as stated, there must be some mode of supplying or replacing what has been consumed by combustion and respiration; so also of removing the carbonic acid, the accumulation of which is fatal to animal life.

The plant effects this change and supply. It absorbs carbonic acid, and evolves and gives off oxygen. The quantity of carbon in the atmosphere is estimated at 3,300,000,000,000 of pounds, more than equal to all the plants and coal on the earth.

Both the roots and leaves of plants absorb carbonic acid. When exposed to the light of the sun, it is decomposed and oxygen is evolved. In the absence of the sun's light, the reverse takes place. Some plants absorb more oxygen than others. The oak is remarkable for the quantity which it absorbs.

The amount of oxygen supplied to the air is much greater than that which is absorbed. The quantity of carbon which the plant receives from the air is very much greater than that furnished by the soil.

It is an interesting fact that the amount of oxygen in the atmosphere does not increase, neither does carbonic acid increase. The vegetable which contains animal nutrition, discharges the double function, so to speak, of both protecting and supporting animal life. It takes up carbonic acid which, were it permitted to accumulate, would destroy animal life—and furnishes oxygen the supporter of animal life.

It is no more essential that the animal should be supplied with oxygen, than it is that the plant should be well furnished with carbon. Oxygen is expired by the plant and inspired by the animal, while carbonic acid is expired by the animal and inspired by the plant. This is no less true in fact, than beautiful in theory.—What a laboratory has Nature—and how little does man yet know of what there is to be known of her doings therein.—W.

### WHY DO PLANTS CHANGE FROM ONE VARIETY TO ANOTHER?

FRIEND MOORE:—Your correspondent "HIEL," in the 168th No. of the RURAL, asks a *correct* solution of the above question.

I am happy to discover a *growing* spirit of inquiry among the farming community, upon various subjects which have heretofore been considered as beyond their comprehension—as involving inexplicable mysteries. Yet there are hundreds of practical farmers who do not even suspect that all these "freaks of nature," as they are pleased to term them, are the results of nature's laws—laws which are established beyond all conjecture, and which are as invariable in their operations as is the earth in its course around the sun,—as sure in their results as are the seasons in their return.

To present a full elucidation of the subject would require more time than I can spare at present, and more space than you would care to occupy. But I will give your readers a few hints, which may possibly assist them in coming at a true knowledge of the facts in the case.

Plants are divided by Botanists into genera and species, and again sub-divided into varieties. All plants which bear a general resemblance in all their parts, as for instance the Pear, Apple and Crab Apple, are placed in the same genus; the Pear is one species of that genus, the Apple another, and the different kinds of apples and pears constitute the varieties. Winter and Spring Wheat are species of the same genus, and the different kinds of winter and spring wheat are the varieties.

It is a general law of nature that different genera of plants never intermix with each other, and that different species rarely do so; these changes are mostly confined to the varieties of the same species. For instance, we do not look for an intermixture of pears and apples—if we plant a pear seed we expect it will produce a pear tree, and *vice versa;* but we do not expect the seeds of either to produce the same kind of apples or pears as those from which they were taken, if there are other apples or pear trees in the vicinity of those on which they are grown.

Now for the secret agent which produces the change. All plants when in flower emit a fine, mealy dust, termed pollen. This is very apparent on the tassels of Indian Corn. A particle of this dust must reach the germ of every seed, else it will remain a mere germ, and produce no seed, or grain. In corn the silk is the medium of transmission to the germ—we all know if the silk be destroyed as soon as it makes its appearance, there will be no corn on the ear. A stalk of corn which stands alone rarely produces more than a few kernels, because the pollen does not fall upon the silk, but is blown away. Yet who has not seen an intermixture where two kinds of corn have been planted even several rods apart?

In many kinds of plants the pollen produces its own kind, either in the first or second generation—in corn in the first, and in wheat in the second generation. In most kinds of fruits the product is a combination of the qualities of the two varieties intermixed.

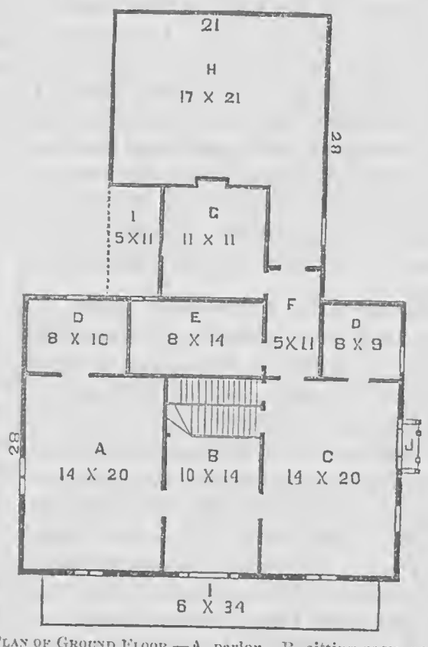
The pollen of plants is so minute that in many cases it is wafted by the wind even for miles; (some authors say there are well authenticated instances where it has been so carried more than 40 miles:) and here we shall probably find an explanation for the apparent change of your correspondent's *pure Hutchinson Wheat.* Undoubtedly there was a field of the kind or kinds of wheat which *that* produced, not far off, and his pure Hutchinson had been impregnated by the pollen of the other kinds.

If farmers wish to raise *pure* seed of any kind they must be careful to plant varieties at a considerable distance from each other.

Alabama, March 21, 1853. R. B. W.

### PLAN OF A FARM HOUSE.

MR. EDITOR:—Notwithstanding much has been published within the last ten years on the subject of Rural Architecture, it is believed there is still some room for improvement—especially in that size and style of houses needed by the great mass of our farmers and mechanics. Perhaps three-fourths of the modern built farm houses cost from eight to fifteen hundred dollars, yet the plans of Downing and others, are mainly for other buildings—the peasant's cottage, or the rich man's castle—buildings better adapted to the state of society in other countries than our own.



PLAN OF GROUND FLOOR.—A, parlor. B, sitting-room and vestibule. C, living and dining-room. D, D, bed-rooms. E, pantry and store-rooms. F, passage. G, wash-room. H, wood-house. I, I, verandas. J, portico. K, principal stairway. L, back stairs.

The accompanying plan consists of a front two stories high, 38 feet long by 28 wide, with a wing in the rear 28 feet long by 21 wide, including a wood-house. It is intended for families in which the women do their own housework, or if help is needed, the help for the time being are members of the family. In noticing the conveniences of the above, over many others, we see:

1st. The living-room is in the front and more pleasant part of the house. This is as it should be. Public opinion in many instances has advanced one step; it has brought the family out of the back wing, and placed them in the rear of the main building. Now when it advances one step farther, and places them in the most delightful part of the building, it will have arrived at something like consistency. How unreasonable that a man should toil and labor, perhaps for years, to collect means to build him a house, and then doom himself and family exiles for life to some dark corner thereof.

2d. The neat little sitting-room—large enough for all purposes for which it is designed, viz., to retire with two or three friends for business or conversation, as the case may be—this, too, is pleasantly situated, being lighted sufficiently from the front, and it is making the most of the room, instead of having a vestibule nearly as large, and used merely as a *highway.*

3d. The parlor, as well as living-room, is large, and the principal rooms being of an oblong shape, give more accommodations for tables, stoves, &c., than if the same number of feet were contained in a square form, besides one does not feel so much like being shut up in a box or pen.

4th. There are two bed-rooms on the lower floor; and this is important. In many of the plans of houses there are none. There can be no excuse for this, except where land is extravagantly high. The comfort and convenience of such rooms, especially for old people, are apparent.

There is no plan given of the second floor, as that is less important, and can be arranged by the builder or owner, according to taste. The cost of the above in this place, where hemlock lumber is $5 per 1000 and pine $20, is about $1,200. B.

Hollow-Hill Farm, April 6, 1853.

PLOW deep if you would prevent injury from drouth.

### BRAHMA POOTRAS.

THE public excitement in regard to this breed of Oriental fowls, has become more intense, and if possible, more extensive than in regard to any other of the foreign varieties. Brahma fowls have recently been actually sold in this city, at $20 and $30 the pair. Now, unless men are affected with monomania in regard to this subject, there must be some extraordinary, intrinsic value in this breed, to justify such prices. They far exceed the current prices paid for the best specimens of the Royal Cochin Chinas and Shanghais. It is worth the inquiry therefore, wherein consists this extraordinary value? Does it consist in their extra size? As to size, they are generally somewhat larger than the Royal Cochins. The finest, select samples, are decidedly larger. But are they not coarser also? We have seen specimens that were evidently of this cast. And are they not also as much more expensive to sustain, as they are larger?—Purchasers will, by and by, be able to give the answer. Are they more productive in eggs than the Chinese? Certainly not; they cannot be. The Cochins and Shanghais have laid all the winter, and the Brahmas can do no more. Are they more beautiful in form? No judge will say so. Some of them, at least, do not even look as round, solid and plump, as the Chinas. Do they carry a more uniform and beautiful plumage? Not at all; unless an array of the various blendings of black and white, frequent among the common fowls of the country, can be considered more beautiful than the pure white, the glossy black, and the rich fawn of the Chinese varieties. It results, therefore, that they are decidedly inferior to the Chinese in beauty of plumage; only equal to them in the production of eggs,—but generally, though not always, superior in size. Does there aught appear in all this, to establish the value claimed for them? Is there any thing here, to justify paying for them, three to six times the market price of fine Royal Cochins or Shanghais? Let the man of candor, the man of sense and reflection, give the answer.

But what is the history, and what are the true distinctive marks of the genuine Brahmas,—the real "Simon pures,"—for we do not question that there may be a few such? Dr. BENNET, who gives them their name, describes them as an India fowl, imported from the valley of the Brahma Pootra river; a section of country bordering on the north-eastern portion of the Bay of Bengal. They are a large bird, and their true color is white, with black tails, and a slight shading of black in the neck feathers. But Mr. BURNHAM, of Boston, considers them nothing else than grey Shanghais; a variety that may have been bought for years past, at $3 the pair in any market. In most places where they have been reared, the white India fowls, with black tails, have borne the name of Chittagongs for four or five years, and have been worth $3 to $5 the pair. Now the Brahma, unless recently imported by Dr. BENNET himself, is embraced in this list. If he is the grey Shanghai, he has been worth $3 the pair for years, and should be worth that still. If the grey or white Chittagong, he has been worth $3 to $5 the pair for years, and why should he be worth more now? But whether the Brahma is, in fact, the grey Shanghai and the grey Chittagong, let Mr. CORNISH, of Connecticut, a gentleman occupying the first rank among the breeders of fine poultry, testify. He advertises his entire flock of 400 fowls for sale; and describes the Brahmas as Chittagongs or grey Shanghais.—Mr. MINER, of the new Poultry Book, however, demurs to this idea, altogether, and pronounces the Chittagong a large, coarse bird, of little value except on account of size.

What claim then, have the Brahma Pootras, to the high prices asked and obtained for them? What, but the Alchemy *of a new name,* has transmuted the familiar Shanghai and Chittagong, worth $3 the pair, into the rare and costly Brahma, worth $20 to $30 the pair? We show, that

they are no better than the Chinese varieties, as layers,—that they are inferior to them, in uniformity and beauty of plumage,—not superior to them in fineness of form,—but concede that they are, as a breed, decidedly larger in size. In the judgment of common sense then, is there any thing in all this, to justify the enormous prices paid for them? And in the judgment of common sense, will not the persons who have paid such large prices, when a year comes round, feel "rather thin," and pronounce the present excitement, in its true character, "A SUPERLATIVE HUMBUG?"

SHANGHAI.

## DIPLOMACY.

WHAT has a farmer to do with *diplomacy?* Why intrude such a subject upon an agricultural journal? It is true when diplomatic agents want money, the farmer must pay it; when economy becomes vulgar, and nine thousand dollars a year, and nine thousand dollars for outfit would wont do, the farmer must cultivate the graces of charity and liberality. Ambassadors rely, it would seem, in these progressive times, upon tinsel ornament and well-cooked dinners, for that "high and distinguished consideration," which once depended upon talent and public service. Having furnished the *funds*, what more has the farmer to do with diplomacy? I will tell you what he has to do with it. Whatever concerns his property, his kindred and his kind, concerns him.—Agriculture, in as great a degree as commerce and manufactures, should shape the foreign and domestic policy of the Government. *Foreign ministers should be appointed mainly in reference to their fitness to serve the cause of Agriculture.* With a liberal commercial system, and with peace principles, national differences and the knotty subjects of diplomacy, are pretty much solved and settled. There remains then a friendly intercourse to be kept up between nations, interchange of scientific and practical knowledge, emulation and mutual encouragement in well doing.

Leave your LAWRENCES, RIVES, and INGERSOLLS, at home,—your literary dreamers in dream-land; give us men of science, working men, efficient, practical men, mechanics and farmers—having sent them out, give them a "programme of the performance." They shall explore the country to which they are commissioned, and make an "*annual Report*" *to Congress*, containing reliable facts touching improved modes of cultivation adopted abroad, the arts and sciences, improved implements and machinery, domestic animals, grains, vegetables, farm buildings and general management, with the results. Thus we may be saved from adopting exploded theories, and wasting long years in fertile experiments, when we might be introduced at once to the information and experience which older nations have acquired.

I take it upon myself to say, from my knowledge as a farmer, that very few questions touching our whole business, are satisfactorily settled by experience and experiment. One farmer guesses that it is best to fatten spring pigs. Another guesses the Devons will make more beef on the same feed than Durhams. Another guesses that it is profitable to feed grain in the winter to stock; others guess exactly the reverse—the combined knowledge and effort of the whole world is required to settle these "vexed questions" and unfold the hidden good which is in store for man.

We should have an exchange of agricultural reports with other nations, and whenever we have an improvement not adopted abroad, send it out at once—a plow to Portugal, an improved threshing machine to Spain, and a wheel-barrow to Central Africa. The good we should do would come back again. Set our foreign ministers to work in this way and they would be turned to some account,—whereas, of late years, they have made it their principal business to spend money, and get up a fuss.

The *first* condition of success in this reform, is the reduction of salaries. Pay one of these functionaries twenty thousand dollars a year, and he can do nothing of course but support his dignity, and the place would be filled by favoritism and fraud. On six thousand dollars a year, a man might, perhaps, afford to work, and he could emply good assistants at two thousand dollars per annum. "Europe would laugh." Let those laugh who win. It is time we illustrated our republican maxims, and set good examples to oppressed and misgoverned nations. In case of serious difficulty with any nation, special missions may be sent out, composed of adroit and able statesmen; but the regular "residents at foreign *courts*" should reside in the *country*, and should be men of sound sense, practical and scientific knowledge, and laborious habits, *and should be required to work.* Death to all sinecures.—Let us have diplomatic reform! Gentlemen farmers, let us have it. Please send a copy of this, Mr. Editor, to President PIERCE,—with the best Respects of

HUGH T. BROOKS.

Maple Grove, Wyoming Co., N. Y., 1853.

## CONDENSED CORRESPONDENCE.

### Spring Wheat.—The "Fife" variety.

FRIEND MOORE:—Having almost lost my crop of winter wheat, for two years past, by the weevil, or wheat midge, I began to look around to find what could be done to remedy the difficulty. The best thing I could find was some Fife wheat from Canada, which I was assured by a gentleman from there, would not rust if sown as late as the first of June. This was just the thing I wanted; I procured the seed and sowed 40 acres; the first 10 acres was in corn the year before. I sowed on this, 1½ bushels per acre, on the 15th day of May. The crop ripened the last days of August, and did not rust, although on Genesee river flatts, but was a very little pinched on account of the extreme drouth at that time. The produce must have been 30 bushels or over, per acre; I being sick at the time of hauling and thrashing, it was not kept separate.

I think it should be sown about 2 bushels per acre, and if it is possible to cover all the seed, to do so, as it ripens just in proportion to the time it commences to grow, consequently if a portion of the seed lies on the surface for several days before it grows, it will be too green when the most of the crop is fit to harvest. The quality of the grain is the nearest to our best Genesee wheat of any spring wheat I ever saw. I have ground some of it in my mill, and it makes bread almost equal to our best Genesee wheat. I would add here, that by sowing so late the weevils are gone before this wheat heads.—I would not recommend sowing sooner than the 15th of May, where there are weevils, as they were here till about the first of July last year.—GEO. SHAFFER, *Scottsville, N. Y.*

### Evergreens.—Ornamental Trees.

FRIEND MOORE:—I have just perused Mr. SANFIELD'S article on evergreens, &c., and think few can read it and not feel that they have lost much pleasure that might have been enjoyed. It is true, as he says, that setting out trees is the work of a few hours, which, perhaps, would otherwise be unemployed. I shall have lived twenty years next June, in my present place of residence—it is a humble, but comfortable dwelling, and lacks many things, but one thing is attached to it, of which I am justly proud,—I have thirty-eight pine trees, thirteen cedars, a row of hemlocks, and a variety of fruit and other trees, amounting to over one hundred, averaging from two to eighteen inches in diameter. They are all standing within six rods of my house, forming a splendid thicket, which forms an ornament unequalled by art—breaks off the bleak winds of winter—and furnishes a resort for the little songsters that return each genial spring to cheer us in the last part of the "three score years and ten." They cost me, perhaps, $10, and they now, in the estimation of a person of taste, enhance the value of my farm $100 or more. When I look at them and think of the multiplicity of changes that are taking place—of those that come for a time and are gone again—of the loss of those that are near and dear to us—the reflection is sweet and consoling that these evergreens will stand to remind those that will follow me of the one that set them there, long after he is laid away. Those thoughts are calculated to soften the rigid feelings we are too apt to indulge in, and as the trials and anxieties of business press upon us from day to day, it "soothes the heart and lulls the cares to rest."—JOEL HOUGHTON, *Adams Basin, Monroe Co., N. Y.*

### Wool Growing.

"IN 1840, Vermont, with nearly a million less sheep than Ohio, produced more wool." Two inquiries are suggested by this remark:—1st. "What is the reason of this difference?" and 2d. "Is it probable that Ohio can be made to produce wool in the same proportion as Vermont?"

In answer to the first question, two reasons may be given: the kind of sheep; and the character of the country. If the sheep are of the same kind, or quality, and yet the difference in the amount of wool is so great, unless a difference in the management will explain the difference in the product, it must be referred to the second cause: a difference in the character of the country.

In looking at the map of the country, the first thing observable is, the situation of the two States. Vermont lies wholly north of the parallel of 42¾° of north latitude, having long and cold winters, and Ohio wholly south of 42°. Further, Vermont is a mountainous region, Ohio is more level. The climate of Vermont is colder and more variable than that of Ohio; and the soil of the two States, and to some extent, their productions, are also different.

The law of adaptation prevails among animals as well as among vegetables.—Hence, we find, that animals are not only affected by the kind, or quality of their food, but are also more warmly clad in cold countries, than in warm. May not this law affect the growth of wool in the two States. If so, this fact may answer the second inquiry.

But it may be said, that Ohio is in the same latitude with the central part of Spain, extending neither so far north, nor so far south as the extremes of that country.—True, but Ohio is a low, level country, while Spain is almost wholly mountainous; and the sheep are chiefly fed in the mountainous districts. The climate and soil of Spain differ also from those of Ohio. Hence, if any difference in wool growing, exists between the two countries, it is also explained by the law of adaptation.—H., *Down East*, February, 1853.

### Cost of Pork.—An Experiment.

DEAR RURAL:—Few farmers have been particular enough to ascertain the expense of making pork, myself among the rest, so I concluded I would experiment thereon.

On the 18th of Dec. last, I put into the pen three pigs; their united weight was 240 lbs. They were fed three and one-half months, and then weighed 507½ lbs.

| | | | | | | |
|---|---|---|---|---|---|---|
| No. 1 when bought, | 140 | lbs. | Dead weight | 247 | lbs. |
| 2 | " | " | 51 | " | " | 130½ |
| 2 | " | " | 49 | " | " | 130 |
| | | | 240 | | | 507½ |

I paid 5c. per lb, or $12 for the three, and sold them at 7c. per lb, receiving $37,19 for the pork and lard; (of the latter 16¾ lbs. sold at 10cts.) They were fed with corn meal—26½ bus.—for which I paid $16,56. Counting first cost and feed, and allowing manure to pay expenses of taking care of them, I made $8,63 on the lot.—SAMUEL T. VARY, *Lima, N. Y.*, April 1853.

## AGRICULTURAL INTELLIGENCE.

### Mowing and Reaping Machines.

No implements in which the farmer is interested are deserving of more attention than mowing and reaping machines. The trial of these machines at Geneva under the direction of the State Agricultural Society, brought together some thousands of interested observers. At a recent meeting of the *Rensselear County* Agricultural Society, we observe they proposed to have a similar trial at or near Troy, probably in July next. At their February meeting, after considering the subject, it was

*Resolved*, That a premium of $20 be offered for the best Reaping Machine, and a premium of $20 for the best Mowing Machine, to be exhibited and worked under the inspection of a committee of this Society, at such time and place as the committee shall fix upon. The machines to be afterwards exhibited at our next county Fair to entitle them to draw the premiums awarded.—Competition open to the world.

The following rules were adopted to govern the actions of the committee in judging of the merits of different machines, exhibited, and in determining the awards:

MOWING.—1st. Cost of Machine. 2d.—Simplicity of Construction. 3d. Durability. 4th. Power required for a given amount of work including manuel labor. 5th. Quality of work, both as compared with the scythe and the manner of leaving the grass. 6th. Facility of managing, comprising time and room in turning. 8th. Adaptation to uneven surface.

REAPING MACHINES.—1st. Cost of Machine. 2d. Simplicity of Construction. 3d. Durability. 4th. Power required in proportion to work done. 5th. Quality of work as compared with the cradle. 6th. Facility of managing, &c. 7th. Adaptation on uneven surface and to cutting different heights. 8th. Space occupied and portability.

All those wishing to compete, must become members of the society, and enter the machines for competition by the 15th June next, they can do so by addressing the Chairman of the Committee, B. B. Kirtland, Esq., Greenbush Rens. Co., who will give all necessary information.

Rensselear County boasts one of the best Agricultural Societies in the State, and we have no doubt they will take the necessary steps to make the proposed trial, of implements of the very best character, creditable to themselves, just and satisfactory to all competitors. It is to be hoped every machine of the kind will be represented at the trial.

SALE OF THE LATE MR. WEBSTER'S LIVE STOCK.—The live stock of the late Hon. Daniel Webster, consisting of cattle of the Alderney, Devonshire, Hereford and Ayrshire breeds, sheep, horses &c., was sold at auction by order of the executors, yesterday, at Marshfield, by Col. Thompson of this city. Many of the the best specimens were bought in for the use of the farm by James W. Paige, Esq., but yet the number sold for removal from the premises was large. The buyers were mainly rich experimental farmers, and they paid high prices. The horses which were given to Mr. Webster by his New York admirers, in 1850, were sold for about $400, and were purchased by Col. Thompson. The number of persons present at the sale was quite large.—*Boston Courier.*

WILD TURKEY-HEN.

ABOVE we give the portrait of a Wild Turkey-hen, caught in the woods of the West and domesticated. We also conclude Mr. DODGE'S essay on "Rearing Turkeys," commenced in our last.

## REARING TURKEYS.

As soon as the chicks break the shell, it may be known by a peculiarly soft and tremulous sound uttered by the mother, as if recognizing the new-born brood, and expressing the anxious sensations that now throb in her bosom. I know of no sound more touching and plaintive; a sound which she never makes till this epoch in her existence. As they are hatched, it is well to remove the young chicks to the house, and to clear the nest of shells. But the young chicks should be returned to the mother at night, or before, the natural warmth of her body being of more help to them than any artificial substitute. Sometimes a chick, in consequence of the pellicle which lines the interior of the shell adhering to it, is unable to free itself. Gentle means may be used to separate them, but care is necessary in the operation, or it may prove disastrous. A turkey will almost always hatch out the larger proportion of the eggs on which she has sat, and not unfrequently the whole of them. I have known instances, when, on removing the old one for the first time after hatching, the entire brood presented themselves, as lively as the four and twenty blackbirds in the nursery song, when the crust of that famous pie in which they were baked is opened to the wonder and admiration of all juvenile naturalists.

Now that the chicks have fairly entered on life, what is to be done with them? Leave them to the care of the mother? Nature, you say, is the best guardian and provider. True, were the mother in the woods, wild and undomesticated. But she is under your protection, and in your hands is the destiny of her offspring. You must do something for them, at least after they are a day or two old, or they will perish from starvation. In doing this, however, avoid the too frequent and mischievous practice of stuffing them and overloading them with food.—They are but tiny birds, with constitutions as delicate as can well be imagined. Shun, too, the absurd treatment of thrusting a pepper corn down their throats, to invigorate them. But begin betimes to supply them with crumbs, not soaked in wine, as the English writers recommend, but softened in water. The same food of which the parent turkey eats, except grain in an unbroken state, the chicks will eat. The article most in use for this purpose, is Indian meal made into a paste, and this, given to them in small allowances, will be sufficient for their present wants. They should, for a week or more, be kept under cover, and then they may be placed out of doors, in some enclosure, to prevent the old one from rambling. A frequent practice is to tie her to a stake, by a string attached to her leg But with such a confinement she is not well pleased; and in one instance I have known a sad fate befall a turkey thus tied, being torn in pieces by a strange dog that attacked her. If it be desirable to confine the mother, it may be done by placing a crockery crate over her, at the sides of which the little ones could have easy passage in and out.

At night, and in wet weather, turkey chicks must be safely housed, and the house must be large enough to be well ventilated, and high enough at the door to drive in the old one without trouble. I should recommend invariably a floor of boards, with the edges and those of the side closely united, so as to keep out all intruders. For want of such a precaution, I lost in one night last spring, the entire brood of a common hen, consisting of fourteen very early chickens; a rat or a weasel, well skilled in the art of mining, had burrowed under the sides of their house and made a clean sweep of them.—The floor of the turkey house may be covered with fine hay, which should be frequently removed for purposes of cleanliness.—The cleaner the chicks are kept, the less liable are they to be infested with lice. I know of no remedy for this evil. Fat or oil rubbed on the chicks, is said to be effectual, considering, in this, as in most of the disorders to which poultry are subject, an ounce of prevention is worth a pound of cure.

As the chicks grow, they will need large supplies of food. Curd and thick skim milk are good articles of diet. But here let me caution against giving any salt with the food of young turkeys. A farmer in my neighborhood lost his whole flock, of forty or more, merely by feeding them once on skim milk, which had been salted. So far as I have observed, salt may be safely left before turkeys and other fowls, when they have attained to some size, as it is to be found on barn floors all winter, where hay has been salted. But it would seem, from the above fact, that the crops of young turkeys are not adapted to its use. The books mention certain other articles as injurious to them, marrowfat peas in particular, but I have never known any ill effects to turkeys from this description of pea, nor can I see why it should be poisonous to them more than the other varieties. For drink, let them be supplied with water, placed in shallow vessels.

After a few weeks the young brood may be allowed to accompany the mother in her rambles, with full liberty to go where she pleases, giving her the range of a pasture if practicable. They will soon learn to forage for insects, which promote their health and thriftiness. Dry summers make large turkeys; the weather is almost uniformly favorable to their rambling, and grasshoppers are plenty. But in wet seasons they thrive less rapidly; they find fewer insects, and lose many days in remaining idle. A flock of turkeys, in foraging for food, spread themselves at some distance apart, and thus advance, devouring in their course every insect on which they can fasten their bills. As accidents of various kinds may befall the young chicks, it is well, when two broods are hatched at about the same time, to join them together, and to house them with their mothers in the same coop at night. The old ones will shortly associate together, taking equal care of the members of the families thus united, and forming a double protection in times of danger. And if it be necessary to hunt them up at evening, you will thus save many steps by making but one journey for both flocks. If, however, they be fed regularly at night, they will soon learn to come home of themselves.

At six weeks or two months old, the young turkeys begin to "shoot the red" as it is called, by which is simply meant that the red granular excrescence on the head and neck begins to develop itself. This is a critical period in their existence. If there be much wet weather, they will drop off in considerable numbers. It may safely be asserted, that from loss at this time, and before, not more than two thirds of the chicks that are hatched, survive. But when they have shot the red, turkeys are thenceforward the hardiest of all poultry. They have literally passed their climacteric, and food, and a plenty of it, is now nearly all that they require. This they will obtain, till it is time to fatten them, principally in the fields; and of course, unless there is a sufficient range for them, they cannot be raised to advantage. They may soon be made to roost on a tree, provided with boards for them to make their first efforts at roosting in a shed or barn, as they sometimes lose their hold of the roost, before they have become accustomed to it, and if out of doors, may be picked up by some of those midnight prowlers that infest farm premises.—After they have become accustomed to the tree on which they roost, they will generally repair to it every evening, seldom manifesting any desire for a change.

They now range farther, sometimes so as to be mischievous to the grain fields and orchards of neighbors. To check this rambling propensity, the old one may be fettered by fastening her legs together with a piece of list a few inches in length, so as to allow her just to hobble. The fetter can be removed in a few days, when the habit of strolling in the wrong direction is cured.—But ramble they must, if they are to get their living by foraging in the pastures. If you have a bed of cabbages, be sure to protect them from your turkeys, or you will have only the stumps left for yourself. Early in the fall they should be fed night and morning with dry corn. When the weather becomes colder, they may be supplied at frequent intervals with a mash of boiled potatoes, Indian meal and skim milk, given to them warm. Of this they will eat most voraciously. They now ramble but little, preferring rather to hang about the sunny side of the buildings and walls, from which they will hasten when called to their food, and having devoured it, repair thither again. Thus plentifully fed, they thrive most rapidly, increasing in size, in the short space of six months, from the wee chick that was hatched in the spring, to the plump and tempting roaster, if a male, of twelve and fifteen pounds weight, and if a female, eight and ten pounds, at Thanksgiving.

Now, it may be fairly asked, will the price at which turkeys usually sell in the market at that time, pay a profit for the rearing of them? It is difficult to tell the precise quantity of food consumed by a turkey from first to last, so as to estimate the cost of it. But when they bring fifteen cents a pound, I believe those that raise them are generally satisfied with the profits, taking corn at an average price. At any rate, I have been, from an experience of the past ten years'; having during that time reared about fifty turkeys a year, and in one year eighty-six young turkeys from six old ones. In the rearing of turkeys care and attention are all important. Ill luck will sometimes happen, but here, as in most other pursuits, ill luck is often only another name for a want of attention. It is a pleasant work to have the care of turkeys. They are company for you at all times; first to salute you with their jovial gabbling in the morning, and ready at any moment to run to you at your call.—And the interest we take in them is all the greater, from the care and solicitude with which we have watched over them.—*Jour. of Agriculture.*

To feed an ox to one thousand two hundred pounds weight, usually takes five years; while the same amount of poultry can be made ready for the table in about three months, and at less than half the cost in food. So says an English poulterer.

# Orchard and Garden.

## PLANT TREES.

Certainly, plant trees. They are a blessing money cannot measure—an investment sure to return its profits four-fold.—Plant trees and shrubs for fruit, for ornament, for shade, for timber;—in the yard, in the field, in the garden, in the nooks and corners, in the waste places, in the highways and the by-ways. Give them care and attention, and they will grow to increase your store and bless your life, when you are weary and care-worn, sick or asleep.

By all means, plant out trees as you have means and opportunities. If it be but one, plant and nurse it with care. By and by your opportunity may enlarge and you may plant a dozen, a score, or a hundred. Be sure to seek the best. It may be a trifle more trouble, or it may cost a few pennies more, but the produce, when you come to that, or the elegance, if it be for ornament, will be far superior. Mark what a difference. Single pears of superior quality have of late readily commanded six and eight shillings in the markets of our large cities, whilst others have been raised that were unmarketable at any price. Is it not then, an object to select the very best varieties for cultivation? So of apples or any other fruit for market or for any purpose,—one had better pay any price for a tree whose produce may warrant a dollar a bushel, than to take as a gift, one that cannot yield anything worth a sixpence.

In these days, however, if one who has a native stock, or a poor bearer, or one of worthless fruit, he can readily improve it, by a little pains in grafting or budding select varieties. In the way of fruit, where the climate will permit, and where one has the land, don't be afraid of planting too much, provided you give your plantation the after culture it requires. The market cannot very easily be overstocked with choice fruit. It will always command remunerating prices, for if a surplus accumulate at any point, the increased and rapid means of transit will soon transport it to less favored regions.

It is a better policy for the farmer, where he may, to combine several branches of his business together, as fruit culture, wool growing, wheat raising, stock breeding, &c., for one serves to check losses from the other, and at the same time, more effectually to keep up and advance the fertility of the soil, and beside time the little wastings into profitable channels. Where one's attention is wholly absorbed in one branch of industry, any revulsion in the market, untowardness of the season or accident, is much more sure to paralize his efforts and swallow up his profits.

Besides its direct profit to the purse, fruit adds greatly to the personal enjoyment, and by its use induces a healthy condition of the physical functions, which indirectly swells the gains very materially. By all means, we repeat, remember the orchard and garden fruits with a generous hand.—If you have been putting off the good time, delay no longer, but go immediately about the matter, thoughtfully yet earnestly.

If you are a new beginner, in a new region, don't despair. Get a few trees at first, just as soon as you make your "opening." Then obtain seeds and plant them in their proper time, look to the tender shoots, and when it is proper, secure your scions of the choicest varieties and bud or graft your seedlings. Thus, in a very few years, almost before you know it—time flies so swifty from the truly occupied—you are plucking and feasting on the delicious fruits, the products of your judicious exertions.—Is not this something worth more than the little effort required and which may be made a delightsome pastime even?

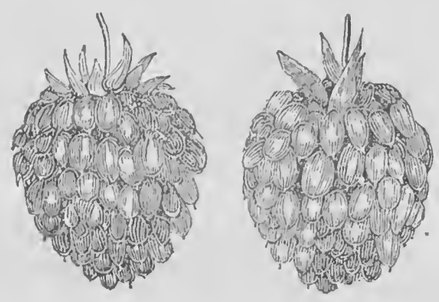
If you are old, don't forget to plant trees. You may live many years yet to enjoy the blessings they certainly will give. If not, take consolation that, though small the act, great may be the benefit to others. If you are middle-aged or young, by all means plant trees, and plant all that your opportunities may allow. Set the children at it; it will have a charm for them. Give them the instructions, and see in how few years the bleak landscapes will be adorned with the highest beauty. The Agricultural publications of the country give instruction to those who lack experience, and there are those who, devoting their lives to this business, and becoming well qualified to teach, have given the public their rich experience in books. Consult their pages, and follow their hints, as your good judgment shall decide them suited to your circumstances, and you can hardly fail of success.

In the matter of shade trees, much of the useful may be combined with the ornamental, without detracting at all from the latter. Many of our nut-bearing trees are very beautiful and easy of cultivation. In the selection of them, or others from the forest, much judgment must be used. Those taken from the depth of the wood, or from a dense thicket, are sure to fare poorly when changed to the open field, and subjected, without protection, to the hot sun and chilling winds. Select from the skirts of the wood, or from open situations, where young trees have sprung up under the genial warmth of a full sun.

In many parts of the west, the beginners on new locations, can make their premises just as beautiful as they please, simply by selecting the best trees and leaving them just as they grow. This is particularly the case on all "opening lands." Where heavy timbered woods abound, it is much more difficult—owing to the great and sudden change from the shade of the wood, to the full sun. If indeed, such live, they too often make a sickly appearance, while the larger trees, unable to resist the greater force of the wind in their changed situations, soon bow before it. Hence, those who live on such lands must resort to transplanting and raising from the seed to supply the proper shade trees.

The practice adopted in some of the old countries, of planting choice fruit along the road side, for the especial enjoyment of the traveller, is one worthy of imitation by our own people. What a change it would work in the fruit-stealing propensity of our population, whilst it would not otherwise take anything from the pocket of the planter.—Let us urge then, with all our influence, that fruit trees be liberally mingled with those that shall adorn the public highways of our land.

## CULTIVATION OF RASPBERRIES.



RED ANNTWERP. FASTOLFF.

Very few of our readers are aware how easily raspberries may be raised. They are a healthy, delicious fruit, ripening little later than the strawberry, and thus furnishing an excellent succession of a valuable dessert dish, which may be continued some time, by means of different varieties, and when few other good fruits are in eating.—The market demand for them, will increase in proportion as they become known. The common red and black raspberries are much improved by cultivation, and are great bearers. It requires but a few bushes, in the odd corners of the garden, to supply the wants of a family. For this purpose we should prefer the black.

Within a few years other varieties have been introduced, which have been cultivated with success, and promise to be a great auxiliary to dessert fruits. These are the Red and Yellow Antwerp, which prove quite hardy, enduring the cold of our winters, and unless in very unfavorable localities may be relied upon for fruit. They are now supplied to a considerable extent in our market—meeting with a ready sale, and held in high estimation. In New England and more northern latitudes than New York, the Franconia does better. A variety known as the Victoria, is said to be a prolific bearer, but in northern latitudes it does not stand the winter well. This variety holds its fruit late in the fall, furnishing a succession of raspberries when grown with the other varieties. Another kind, the Ohio Everbearing, prolongs the season, being a very late variety, and is worthy of attention.

This fruit can be cultivated with as much ease as any other garden fruit. For warmth, the ground should have a gentle southern and eastern slope. Trenching would be preferable, but in place thereof, subsoil or plow very deep and thoroughly pulverize the soil, using strong fertilizors, as guano, mixed with plaster, as a top-dressing. The top soil and leaves, where the red and black raspberries flourish, will be found serviceable. Good strong roots of one year's growth, set in large deep holes, well manured with fine stable manure, or compost, will be sure to grow with no more care than should be bestowed upon all new set plants and shrubs. They should be placed in rows, some three or four feet apart, each way, and carefully hoed, keeping the earth loose. Planting to beans, will be a good crop and ensure cultivation. The plants may be set either in spring or fall, though we prefer early spring. The second year they will require staking and pruning. After bearing, the pruning each year should consist of cutting away all the old wood that bore the fruit, and all the sprouts except three or four. The pruning should be done early in spring as soon as the frost is out of the ground.

Farmers and gardeners can raise raspberries with little labor or expense, and we hope to see them come into general cultivation.

## GIRDLED TREES AND THE REMEDY.

Messrs. Editors:—I saw in your paper, No. 164, that Mr. Wright, of Brighton, had a number of apple trees girdled, and wished to know how to save them. I also saw in No. 166, Mr. R. N. Y.'s a plan for saving them; I will tell you of a more simple one. My father had a row of apple trees by the fence, where a large drift formed round them. In the spring he saw his trees were all girdled by the mice. On a few of them he tried the following experiment:—He took manure from the cow stable and bound it to the tree, two or more inches thick, where the bark was off, and then banked about the tree with coarse straw manure, to prevent the sun from striking the tree. Those treated in this way, leaved out in the spring, and are now bearing apples.—C. A. W., *Fort Covington, N. Y.*

## GARDEN VISITORS.

It was only last summer that a friend from the city, affecting for the moment a taste for horticulture, sought admission to our little garden. We took him thither, and he rushed through it as if a railway whistle had pierced the tympanum of his ear, or if he had been bent on "proving by his heels the prowess of his head." We waited at the door until his return, and had not long to wait, when taking the adjoining border as our text, we proceeded to descant upon its inhabitants. The first was a Peruvian novelty, which had never flowered beneath the Tay, and for whose inflorescence we were waiting in high expectancy. The second was a hybrid Veronica, the gift of an early cherished friend, and most accomplished floriculturist—a child from a marriage of his own making; for our friend's is highly potential in commanding parties to join hands—in manipulating those quaint clandestine marriages, for which nature does not provide—in tying those mystic hymenial knots among Flora's children, the progeny whereof does oftentimes give a pleasant surprise at once to the parent and priest. The third was a rose—the Geant de Battailles—a gift from another friend, who varies his exercitation in the gloomy province of criminal law by frequent recreations among the innocent and lovely denizens of his exquisite Resarium. We were making slow progress in our descriptive narrative—for, indeed to us a flower border is not a mere border of flowers, but an unrolled volume of many-colored history. Each plant has its pedigree and its parentage—its peculiarities of habit and education, and its biography. One brings to our recollection dear friends in a distant land; another transports us to its native home among the snowy Himalayas. Every plant form a nucleus of kindly associations, and "on every bough we have learned to hang gentle thoughts and pleasant memories." To number three in the border we had only reached, when, accidentally looking into the face of our friend from the city, we saw depicted there blank ignorance, and a cold negation of all sympathy with our floricultural enthusiasm.—It was enough; we were throwing words away. We conducted Mr. Urban out of the garden; but not before he had cropped, with most rash and profane fingers, the flowers of an antir-rhinum of such clean and brilliant stripes, that we had severed it from its compeers for the purpose of seeding! Smothering our indignation we led the gentleman back to our parlor, and put into his hands an Edinburgh newspapor!—We have made up our mind on the subject. A man that can walk rapidly through a garden is an undoubted barbarian. He ought to keep to the highway—or the boards of the Parliament House; or if he must enter a garden, let it be a large one, where he may take an airing, and pedestrianize at his pleasure.—*Blackwood's Magazine.*

## GRAFTING GRAPE VINES.

"W. H." can turn his thrifty wild grape vine to good account by grafting. Saw off the vine an inch or so below the surface of the ground. Then with a gimlet or small auger, just the size of the graft, bore one or more holes perpendicularly, or parallel with the grain, about two inches deep, in the top of the root where sawn off, and into these insert the scions, the full depth of the holes. Let the scions be of the last year's growth, well ripened, and about six inches in length, with a bud or eye at the top; they should be cut from the vine during winter or early in the spring, before the sap gets in motion, and the operation should be performed before it is expected the sap will start—although it will usually succeed afterwards if the top of the stock is well waxed. After inserting the scions, cover the wound firmly with moist clay, up to the eye of the scions, and place a board so as to protect from washing by rain, till the leaves appear. This method is surer than cleft grafting.—*Ohio Cultivator.*

Sage Roots.—*How to preserve them.*—Cut off the tops close to the ground in April. Treated in this manner annually, the plants are continually renewed, and become perennial. Seeding is prevented, and an abundant supply of leaves is produced. So says one who has pursued the practice successfully for fifteen years.—*Wayne Sent.*

Crush the caterpillars in the egg and you will save much time and injury.

# Mechanic Arts, &c.

## LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending April 12, 1853.

Wm. Berlin, of Berryville, Va., for Improvement in Harrows.

Edwin L. Bushnell, of Poughkeepsie, N. Y., for Improvement in Spring Mattresses.

H. L. Fulton, of Chicago, Ill., for Improvement in Smut Machines.

Jacob J. Hatcher, of the District of Spring Garden, Pa., for Improved Coin Safe and Detector.

Samuel W. Hawes, of Boston, Mass., for Improvement in Manufacturing Rosin Oil.

Simeon Ingersoll, of New York, N. Y., for Improvement in Shingle Machines.

Edward A. Tuttle, of Williamsburgh, Pa., for Improvement in Hot Air Registers.

Wm. H. Johnson, of Granville, Mass., for Improvement in Feeding Clamps for Sewing Machines.

Benj. F. Upton, of Bath, Me., for Improvement in Mercury Baths for Daguerrotyping.

Chas. F. Wilgus, of West Troy, N. Y., for Improvement in Washing Machines.

Chas. Goodyear and Robert Hearing, of New Haven, Conn., assignors to Chas. Goodyear, of the same place, for Improvement in manufacturing Gutta Percha and India Rubber. Patented in England, March 4, 1851.

Cullen Whipple, of Providence, R. I., assignor to the New England Screw Company, of the same place, for Improvement in Machinery for Shaving the Heads of Screw Blanks. Patented in England, Nov. 30, 1852.

## THE "GREAT BORE" AT THE HOOSAC MOUNTAIN.

The Committee of the Massachusetts Legislature, to whom was referred the petition of the Troy and Greenfield railroad company, asking for a loan of $2,000,000 to aid them in tunneling the Hoosac Mountain, arrived here this morning from Troy, where they tarried over last night. The Committee, consisting of seventeen members of the Senate and House, left Boston on Tuesday morning last, and arrived at the mountain in the town of Floriday, on Wednesday, where they had an opportunity of witnessing the great boring machine operate upon the solid rock. The weather was cold, and the machinery was quite frosty, but notwithstanding, the mammoth instrument was put in motion, and in the space of fifteen minutes bored four and one eighth inches. The circle is twenty-four feet in diameter, and will admit a double track. The machine was several times tested and with like success. It has bored at the rate of twenty-four inches per hour.

There is said to be room for great improvement in the knives. The machine is also very unsteady at present, and will continue to be so until it enters far enough into the tunnel to be better secured. The Committee were accompanied on their visit by several distinguished scientific gentlemen, citizens of Massachusetts, and members of the press, the whole party numbering about sixty. After witnessing the experiment, they crossed the mountain in sleighs, over the proposed line of the tunnel, which is four and a half miles in length. The West—highest—summit is 1,700 feet. Cold river—a small stream—flows down the center of mountain, running South to within 800 feet of the grade level.

We learn from a gentleman who was present when the machine worked that it gave the greatest satisfaction in its operations.—Every person seemed to be agreeably surprised. Scientific gentlemen who were present consider it clearly demonstrated that the mountain can be easily tunneled. The only question remaining is a matter of dollars and cents.—*Tribune.*

Note.—The Legislature of Mass. have passed a bill for loaning the credit of the State for $2,000,000, for the purpose of completing this tunnel.—Ed. Rural.

## CHEAP MODE OF FILTERING WATER.

As efficient a filter as can possibly be constructed may be made in a few minutes by any person, and at the cost of a very few pence. Procure a clean flower-pot of the common kind, close the opening in the bottom by a piece of sponge; then place in the inside a layer of small stones, previously well cleansed by washing: this layer may be about two inches deep, the upper stones be very small. Next procure some freshly burnt charcoal, which has not been kept in a damp or foul place, as it rapidly absorbs any strong smells, and so becomes tainted and unfit for such purpose; reduce this to powder, and with it twice its bulk of clear, well-washed, sharp sand; with this mixture fill the pot to within a short distance of the top, covering it with a layer of small stones, or what is perhaps better, place a piece of thick flannel over it, large enough to tie round the rim of the pot outside, and to form a hollow inside, into which the water to be filtered is to be poured, and which will be found to flow out rapidly through the sponge in an excellent pure state. The flannel removes the grosser impurities floating in the water, but the latter absorbs much of the decaying animal and vegetable bodies actually dissolved in it; when it becomes charged with them it loses this power, hence the necessity for a supply of fresh charcoal at intervals.—*Monthly Observer.*

Modeller's Clay.—Sculptors and modellers are frequently exposed to inconvenience if obliged to leave their work for a time, by the rapid dessication of the clay which they employ. This evil may be obviated by moistening the clay with the concentrated solution of glycerine.

## CLOTH DRYING APPARATUS.

At different stages in the manufacture of woolen cloth, the piece requires to be dried, and this is commonly done by stretching it on tenter frames, which are placed in the open air. An improvement on the above, by which the process of drying can be carried on much more rapidly, as well as inside the factory, has been invented by Robert Preston, of North Pownal, Vt., who has taken measures to secure a patent. The apparatus consists of a large iron box supported by standards having furnaces underneath, the heat from which before its escape, is conducted about by means of flues extending along the back and sides of the chamber or box. Inside this are arranged series of rollers which carry the cloth back and forth until it is sufficiently dried, but previous to this operation, the fabric is submitted to the action of a nap-laying card, and after having made the circuit of the whole series of rollers, it is carried over a cylinder brush for the purpose of smoothing it. The rollers are worked by a shaft and pulleys, which are properly arranged to transmit the required motion by means of belts, and the whole is operated by any suitable power.

## IMPROVED LARD LAMP.

The great objection to the employment of the above-named lamps is the difficulty that is experienced in lighting the wick from the cooling of the lard, and consequently hardening around the wick. To remedy this inconvenience, an improvement has been invented by Isaac H. Bartholomew, of Northford, Ct., who has taken measures to secure a patent. The inventor uses an additional oil lamp, and a copper or other metallic tube, which is suspended over this last named lamp, and furnished with reflectors, by which the lard round the wick of the other lamp is melted and also the lard in the body of the lamp. Both apparatus being only used until the purpose is effected, when the oil lamp is extinguished and the heat conducter removed.—*Sci. Am.*

Paper.—About 1822 an ingenious English manufacturer of this material, in experimenting for the purpose of producing a superior bank-bill paper, eventually succeeded in forming from the stalks of the nettle a paper fabric nearly as tough as parchment and difficult to tear. The piece shown to the writer of this, though too thick for bank-note purposes, evidently proved that a valuable paper might be produced from this abundant source; and successive operations would doubtless eventuate in affording to the manufacturer almost any degree of fineness he might require. This hint may be of service to our manufacturers, and is, at least, worth a trial.—*Tribune.*

# Domestic Economy.

## COLD FEET.

Many people complain of cold feet, especially in winter, who seem not to understand either the cause or the remedy.—The cause is, the moisture of the feet. As soon as the shoes and stockings are removed, this moisture begins to evaporate. To effect evaporation, heat is taken from the feet, which immediately become cold. This coldness retards evaporation, which will not go on without heat, and as the heat of the feet is constantly diminished by the process, the evaporation (or the drying of the feet,) is retarded, and the coldness protracted.—*Remedy*—Dry the feet thoroughly by the fire, before retiring to rest. H.

## TO MAKE BLACKING.

Take 1 1-2 oz. gum arabic, half an oz. copperas, 2 oz. muriatic acid (spirits of salt), and 4 oz. ivory black moistened with half oz. oil of vitriol diluted with three or four times its weight of water. Mix them well together, and then add 4 oz. of sugar candy, 1 1-2 of sweet oil, and three pints of vinegar, which being shaken, then spread lightly over the boots, and rub with a stiff brush until dry, when it will give a brilliant jet black.

The following is another method for rendering leather impervious to water;

Dissolve 1 oz. of ivory black in 2 pints of water, and add 4 oz. of ivory black and 2 or 3 oz. of sugar; mix this with a solution of gum elastic (India rubber,) and rosin, prepared with spirits of turpentine and linseed oil. Having first moistened the leather with a decoction of oak bark, apply this composition, which, when dry, will render the leather water proof. In the above preparations, lamp-black will answer when ivory black cannot be obtained.

To Make Coffee.—The best way of making coffee is to put the ground coffee into a wide-mouthed bottle over night and pour rather more than a half pint of water upon each ounce and a half, to cork the bottle, in the morning to loosen the cork, put the bottle into a pan of water, and bring the water to a boiling heat; the coffee is then to be poured off clear, and the latter portion strained; that which is not drunk immediately is kept closely stoppered, and heated as it is wanted.—*Scientific American.*

Sore Toes.—A correspondent who has tried it informs the public that a simple remedy for the difficulty occasioned by the toe nail growing into the flesh, may be had by the pressing with the point of a knife a piece of soft rag under the corner of the nail. By persisting in the practice a radical cure may be had.

# Educational.

## DECISION OF CHARACTER.

BY J. CLEMENT.

Messrs. Ticknor & Co., of Boston, have recently published the tenth volume of the writings of Thomas de Quincey, the title being "Essays on the Poets, and other Writers." All the articles on the poets are good; and the three on "other writers."—Godwin, Hazlitt and Foster—are the same, with the exception of some sentiments with reference to the author of "Decision of Character." De Quincey objects to that essay on the ground that it "places a very exaggerated valuation upon our quality of human temperament." He adds that "obstinacy in a gift more extensively sown than Foster was willing to admit." The critic here seems to make obstinacy a synonym of decision, a license hardly justifiable on the part of "Mr. Quincey, Senior," as he styles himself. I have not read or even glanced at "Decision of Character" in ten years, but am certain it contains no panegyric or obstinacy; nor can I think the great essayist over-estimates the value of decision. In his "Suspiria de Profundis," the English Opium-Eater thanks God that he is a dutiful child of a "pure, holy, and magnificent church," [meaning the Establishment;] and Foster, it is well known, was a dissenter, and a mighty one at that. Possibly the opium-scented admirer of Church and State, felt a little prejudicial nervousness when he sat down to dissect the essays of a non-conformist, remembering, no doubt, Foster's declaration that he had acquired an "intensity of detestation of hierarchies and *secular* establishments of religion."

Mr. De Quincey affirms that the four original essays, by which Foster was first and best known—including "Decision of Character"—have no "*practical* character, calculated to serve the uses of life." This assertion must be incorrect. Whatever teaches us how to conduct ourselves in order to perform the business of the world successfully and honorably, "serves the uses of life." I read the essay on "Decision of Character" many years ago—I read it with more than ordinary interest and care, and received more than ordinary benefit. As much is often acknowledged by others. If, as Gilfillan affirms, decision is an intellectual quality rather than a moral power, it is, nevertheless, a quality worth improving, and the reading of Foster's essay stimulates the ambition in that direction.

I did not take my pen to dispute with De Quincey, whom I regard as, on the whole, one of the most orthodox critics and splendid essayists of the age:—I wish merely to express my convictions of the importance of early cultivating mental firmness. The results of an opposite state of mind are frequently disastrous, sometimes ruinous. A young man of flexible purposes, likely to veer with any and every wind that blows, will not be apt to preserve erectness of position through life; an "*ill* wind" will be almost certain to prostrate him.

Some people like to please everybody for the sake of popularity; hence without extraordinary decision, they will resort to culpable deeds to avoid giving offence.—What is lacking in such people, and some others, is the ability to say *no*, when improper requests are made. This little monosyllable, Timothy Flint calls "a kind of Rubicon, or rather the bow of Achilles," and he adds that "whoever knows how to utter it with mingled gentleness and firmness, cannot be said to want the rudiments of a strong mind."

The ruinous effects of indecision are illustrated in a thousand ways; but a single example may suffice. We will consider the temperance pledge. Many sign it feeling the importance of total abstinence, and break it, in numerous instances, merely to please some kind friend who urges them to drink! Simpletons!—they violate their word, and take poison into their system, knowing that it *is* poison, because they have not firmness enough to say *no*. It is the same with most of the vices. Young men, in particular, are led into them because their convictions of duty are not backed up by inflexibility of purpose. The way to prosper, is to have no dalliance with sin. Knowing a practice wrong, we should none of it. To drinking, gambling and licentiousness, as well as to falsehood, theft and the still higher crimes, we should say,—"Ye are of your father the Devil, and we will not shake hands with you."

The ancients had an adage that "the middle course is safest" [*media tutissimus ibis*]—an adage which merits the contempt of the moderns, and of us republicans in especial. A neutral citizen of a free country is, at best, a milk-and-water man. To vacillate, in indifference, between all parties, says an American writer previously mentioned, "is to incur the distrust and contempt of all, and, moreover, strongly to manifest the want of principle; as a well principled man can hardly fail to have opinions and principles in regard to questions of agitating concernment. Wholly to suppress the expression of them, is to want the frank and manly independence of freedom, or to act under the restraint of servile and mercenary calculations. To choose the medium between proposed alternatives, is generally to incur the difficulties and disadvantages of both, and secure the advantages of neither,"

Buffalo, March 15, 1853.

## JUDICIOUS TRAINING OF YOUTH.

During last summer a select committee was appointed by the British House of Commons to investigate the causes and remedies of juvenile delinquencies. A vast amount of testimony was taken, which is now in course of publication. Among the persons examined was a Mr. John Ellis, a shoemaker, who has been a Ragged-School teacher for eight years. A gentleman furnished him with means to take in charge fifteen boys between the ages of twelve and nineteen, of whom some had committed criminal offences and all were extremely vicious. The character of these boys was very unpromising; the course pursued and the result obtained may be gathered from the following questions and answers.—*Episcopal Recorder.*

"Will you proceed to state the way in which these boys were treated? I thought that one cause of their crime was want of employment; they had never been used to work, and no one had ever taken them by the hand to train them in the way of work. I made the employment of shoemaking as amusing to them as I possibly could, and I found that the boys were very fond of making things themselves, such as shoes.—I used to go and sit with them for two or three hours a day, and I used to tell them that they might, by governing their tongues, their tempers, and their appetites, and governing themselves generally, be much more happy if they would put themselves in harmony with the laws of their own physical nature; and I showed them how wrong it was to break the social laws of God, and so forth. And I considered that my conversation with them for two or three hours had had a great effect; and I provided them with wholesome food, and I gave them clothes to wear, and I surrounded them with as many comforts as I possibly could.

"Will you explain to the committee what was the effect which you gradually saw attained upon the mind of these three boys, in consequence of the attention which you paid them? I at once recognized them as my children; they looked upon me as their father; and the latent power of their souls being brought into existence, there was every feeling that I could exact from a child towards me.

"Had they at first any moral sense?—No; when I first took them, they did not know right from wrong.

"Will you explain to the committee up to what point of training you have carried these boys in the school, and how gradually introduced them into your house?" My principal object always was with these lads to put in their power the means of getting a living, by teaching them a bussiness; with regard to their morals, I thought I could not do better than set before them a good example: I ate with them, and drank with them, and slept with them, and I associated myself with them in every way; and as far as religion goes (I don't profess to be a religious teacher,) I showed them the law of the Gospel as well as I could. I am not much of a scholar myself, and therefore I could not cultivate their intellects much.

"You consider that some person should, like yourself, be placed in a position of a parent, to give them good moral principle?" That is what we want. I contend that the great cause of juvenile crime is the effect of a bad mother's training.

"Have you had any boys that you have been obliged to give up, whom you positively could not reclaim?" I have never seen such a case, and I have confidence that if I had any boy who had his right senses about him, I could reform him.

"How long have these boys been under you superintendence?" I have known them these seven years, but it is four years since we formed the class. They have been in my house above two years and a half; the committee gave them up. I got places for them, and some of the more expert ones in the business are now paying me back what they have cost me, and they have all solemnly pledged themselves to pay me back by their labor every farthing which they have cost me.

When moral dignity and Scriptural charity is manifested by human beings a child will see it and adore it. Though I never use the rod or anything of that sort, there is a feeling in those lads that brings them to perfect submission; they dread my looks, or frown, or a word from me, more than they would dread the lash.

Finally, says Mr. Ellis "*these lads who were once a disgrace, and a curse to society, are now as decent and fine young men as ever you saw.*" No experiment could have been more completely successful.

---

The habitual and spontaneous recognition of a principle in our actions, is the mark of a healthy conscience—but all palterings with our likings, or compromising principle with the expediency, marks an unhealthy state of the conscience.

---

The false appearance of a proud man makes his ill-wishers envious: but could his friend behold his heart, he would have cause to weep.

# For the Young.

## BEING SOMEBODY.

BY ELIZA A. CHASE.

"Come, William, you will go with us this afternoon," said James Grey to his cousin.

"No, James; and I have already given you my reasons for refusing," was the reply.

"A fig for such reasons! You can't afford the time! Why, man—or boy, rather, for you will never be a man—what is one afternoon, that you are so afraid of spending it?"

"Much, very much, James. I have a difficult plan almost completed, and wish to finish it while the idea is fresh in my mind."

"That everlasting plea again. Some old machinery, enough to puzzle the brain of Archimedes himself. Are you going to invent perpetual motion? I do declare, William Grey, you are enough to provoke the patience of a saint. Forever moping over plans, diagrams, and models, and heathonish machinery, that would make one think your room a pagan temple. I expect you will apply for a patent for an improvement in the ear of Juggernaut. But it is of no use to talk to you, for you are 'joined to your idols.'

"I would try to be somebody," he petishly continued, as he turned toward the door.

"Would you, James?" was the quiet reply of William, "Well, I *am trying* to be somebody."

"You take a strange way for it, though. Here you are shut up in this dismal room, night after night, never enjoying a harmless trick with the rest of us, or giving yourself any of the indulgences that make life pleasant. Even a holiday makes no difference with you. One would think you loved the very sight of the tools and workshop, for you have them forever with you."

"Don't get excited, James," said William, smiling. "Come, be serious now. Do I neglect any of my duties? Do I not perform as much labor and succeed as well in my trade as any of you? And as for enjoyment, no one loves pleasure better than I do. I should enjoy a sail with you this afternoon very much, but I cannot indulge myself, for my means of improvement are limited, and but little of my time can I call my own.

"James, we are machinists, causing gross, material substances to assume shapes of beauty and fitness, under the mysterious supremacy of our wills. Some call this a low, a common business, a mechanical operation; but it is not so. There is a mental power to which matter must bow, and there is nothing higher than to elevate and ennoble our conceptions, so as to make this plastic matter subservient to the best interests of man. It is thus improvements are made. First, the ideal, then the corresponding outward form. Now, in my mind there is shadowed forth, though but dimly——"

"Save me from such learned inflictions," exclaimed James. "I have no taste for what I cannot understand. Well, William, be a dreamer if you please, I am for active life and its pleasures. Hurrah for our sail, and good-by to the second Fulton!"

"Poor James! A mere hewer of wood and drawer of water," said William, as he closed the door and resumed his employment.

"Where's Will?" cried several voices, as James joined his comrades in the street.

"Oh, in his room, of course, calculating how much beetle power it will take to draw an acorn up an ant-hill."

"Couldn't you prevail on him to come? He is one of the best rowers we have."

"Prevail on him? No, you might as well try to prevail on an oyster to leave his shell! I was really vexed with him, and gave a short piece of my mind. I told him, at length, I would try to be somebody," said James, lighting his cigar and twirling his cane after the most approved fashion.

"Good!" said Harry Gilbert, "I am glad you showed your spirit. William is a good-hearted fellow, if he is so full of oddities, and it may perhaps start him from his burrow. But what did he say?"

"Oh, after arguing the matter awhile he went off into a learned dissertation, in the midst of which I made my escape. His 'conceptions' and 'ideals' were too much for me. He will never be anybody in the world, that's the long and short of it."

James and William Grey were cousins, and were both apprentices in a machine shop, where various kinds of machinery were made. James, as may be inferred by the foregoing conversation, looked upon his employment as a necessary evil. To him it was mere manual labor, a given number of blows, a requisite degree of heat, a certain expenditure of strength—in a word, it was *toil* in its most literal sense.

William, on the contrary, viewed it with the eye of an artist. There was not merely the rough iron to be moulded into some uncared-for machine, but, as he had told James, a plastic material, assuming beauty by the will of man. He studied, therefore, not only the mechanical part of his trade, but his inventive genius was excited.—Curiosity led him to examine the uses and peculiar adaptation of the machinery he made, till at length his active mind suggested various improvements.

All his leisure time was employed in the construction of models, and his room might have been taken for a miniature patent-office. The last year of his apprenticeship was nearly at its close, and William had not only improved, but had invented several really useful designs.

Looking over a paper one day, he read an offer of a prize of a thousand dollars for the best model for a peculiar kind of machinery to be used in a cotton factory.

"Why should I not try?" said William.

He understood what was wanted, and day after day did he study intensely on the subject. At length he grasped the idea, and it was the model of this upon which he was at work when James urged him to join the sailing party.

Late at night his cousin returned, weary with pleasure, and found him sitting at the table, a sealed package before him, his cheeks flushed, an unusual brightness in his eye, and a peculiar expression on his countenance.

About a week after this a gentleman knocked at the door. It was opened by James, who was then alone.

"I wish to see Mr. Grey," said the stranger, glancing with a smile at the peculiar decoration of the room.

"My name is Grey," returned James, placing a chair for the guest.

"Allow me to congratulate you on your success, Mr. Grey," said the gentleman pointing to a counterpart of the model which stood upon the table.

"My success! I do not understand you sir," said James.

"Are you not Mr. Grey, the inventor of this delicate and important machinery?

"I am Mr. Grey, but I am not an inventor of any thing," returned James somewhat bitterly. "Here is the fortunate person, my cousin, William Grey," he continued, as William entered.

"I rejoice in your success, young man," said the stranger to William. "Your plan has met the entire approbation of the committee, of which I am one. My name is Wilson, and I am authorized to pay you the thousand dollars, and also to advance you another thousand on condition that you superintend the erection of the works to be established."

William was astonished, overwhelmed, and after expressing his thanks, added, "I am yet an apprentice, and my time will not expire within some three months. After that I will accept your offer, if you will wait till then."

"An apprentice!" said Mr. Wilson.—"How then, let me ask you, have you obtained such a knowledge of mechanics?"

"By saving my leisure moments, joined to a love of my business as involving some of the best interests of man."

Six months from that time saw William in a responsible office, with a high salary, and the patentee of several useful inventions while James was a journeyman laborer with twenty-five dollars a month.

"Well, James," said Harry Gilbert, a short time after, "William *is somebody* after all."

"Yes," returned James, "I think we judged him wrongly once. I would give all I have in the world to live over my apprentice life. These leisure moments are what make the man after all, Harry!"

## "CUBIC MEASURE."

An article under the above heading, published originally, I believe, in the Worcester Spy, has been going the rounds of the public press, and has at length found a place in the columns of the Rural. (Vol. 4, No. 8, page 63.) The article, notwithstanding its popularity, contains an important error: viz., the "small bureau" was claimed to be *one-half* as large as the large one, but was "explained and exemplified" by rule to be only *one-eighth* as large. The truth is, it was neither; but, *one-fourth* as large. The large one was thirty-six inches square in front and nine inches deep, and the small one eighteen inches square and nine inches deep. It was then just one-fourth of the size of the large one. Proof: 36×36×=11664, the solid contents of the large one, and 18×18×9=2916, the solid contents of the small one. The latter number is just one-fourth of the former. It may also be demonstrated in several other ways. If a square box be divided into four parts, each part will be a quarter, not an eighth.

J. L. H.

## INSTINCT OF THE HONEY-BIRD.

This extraordinary little bird, which is about the size of a Chaffinch, and of a light gray color, will invariably lead a person following it to a wild bees' nest. Chattering and twittering in a state of great excitement, it perches on a branch beside the traveler, endeavoring by various wiles to attract his attention; and, having succeeded in doing so, it flies lightly forward in a wavy course in the direction of the bees' nest, alighting every now and then and looking back to ascertain if the traveler is following it, all the time keeping up an incessant twitter.—When at length it arrives at the hollow tree, or deserted white ants' hill, which contains the honey, it for a moment hovers over the nest, pointing to it with its bill, and then takes up its position on a neighboring branch, anxiously awaiting its share of the spoil. When the honey is taken, which is accomplished by first stupifying the bees by burning grass at the entrance of their domestic domicil, the honey-bird will often lead to a second and even to a third nest.—The person thus following it ought to whistle. The savages in the interior, whilst in pursuit, have several charmed sentences which they use on the occasion. The wild bee of Southern Africa exactly corresponds with the domestic garden bee of England. They are very generally diffused throughout every part of Africa, beeswax forming a considerable part of the cargoes of ships trading to the gold and ivory coasts, and the deadly districts of Sierra Leone, on the western shores of Africa.

## BE YE READY.

Be ye ready, for who knoweth
When the Son of God shall come,
And with wise, all-seeing purpose,
Take thee from thy sorrows home:
He hath known how much of anguish
Is the lot of all below,
And has promised that the steadfast,
All the joys of heaven shall know.

Earth has many sore afflictions
Which doth rend the heart with pain,—
Friends in whom with faith we've trusted,
Have deceived us o'er again;
We have tasted Love and Friendship,
Both have left an aching heart,—
Trust not earth, but "be ye ready,"
For the summons to depart.

Place not all thy hopes and wishes
On this life, which soon must end;
But let all thy thoughts and actions,
To a heaven-ward journey tend.
Then, when earthly objects vanish
From thy dim uncertain view,
Thou'lt be ready to inherit
Heaven, when earth is bade adieu.

Avon, N. Y., 1853. E. N.

Translated from the German for the Rural New-Yorker.

## THREE SENTIMENTS.

Three words of great import I mention to you, and though they pass from mouth to mouth, they do not spring from without, but the heart alone makes them known. And the man who refuses to believe in these three sentiments, is deprived of all worth.

Man is *free-born*, though he were born in fetters; let not the cry of the populace cause you to err, nor the abuse of raging fools; you may well tremble before the slave when he breaks his fetters, but not before the freeman.

And *virtue* is no empty sound, and man may practice it during his life; and even if he should totter in every cause, he can nevertheless strive after divine virtue, for what the understanding of the intelligent does perceive, a filial mind practices in simplicity.

And, *there is a* God, and, however the human will may waver, a Holy Will exists; for above time and space the greatest thought moves alive, and though every thing circulates in a perpetual change, a quiet mind remains unchanged.

Remember these three sentiments; they are of great import:—spread them from mouth to mouth, and though they do not spring from without, the heart gives information of them. As long as a man believes in those three sentiments, he will not be deprived of his worth.

S. T.

## THEIR DEPARTURE.

The death of the pure is almost always free from suffering. A writer, commenting on this fact, gives an instance in which the dying one said, "Do not be troubled about me. I know not how it is, but there is an inward power that takes upon itself my sufferings; and these spasms are only an appearance."

The explanation given is alike simple and true. When the mind is exalted, the infirmities of the body fail to control it.—It knows then no pain, nor hunger, nor cold. It rises above the fury of the flame, and forgets the agony of the rack. Says the good man,—"Even our natural affections and passions have power, though in a limited degree, of suspending our bodily sensations. A mother who, a little while ago, was pale and drooping under the smallest burdens, is by and by seen hanging over the bed of her striken child; and how changed from what she was! Her countenance that was so pale now beams with life, and the arm that hung down is nerved with energy.—The astronomer in his starry contemplations becomes free of the body, and cold, hunger, and fatigue, are alike forgotten.—But religious faith, when warm and clear, and its eye open on immortality, elevates and changes all our affections, and then it re-acts upon the whole frame, and sends its tranquilizing influence along all its nerves. It was this that made the martyrs almost insensible to suffering, and they rose to God out of the fires, while singing triumphant hymns." The poet saw this—felt it. Not as an accident, but as a law beneficent as wise. He described it too, and so sweetly, as

——that blessed mood
In which the heavy and the weary weight
Of this unintelligible world
Is lightened; that serene and blessed mood
In which the affections gently lead us on,
Until the breath of this corporeal frame,
And even the motions of our human blood
Almost suspended, we are laid asleep
In body, and become a living soul.

---

He that loves may be sure that he was loved first; and he that chooses God for his delight and portion, may conclude confidently, that God hath chosen him to be one of those that shall enjoy him, and be happy with him for ever; for that our love and electing him, is but the return and repercussion of the beams of his love shining among us.—*Leighton.*

---

Charity.—It is an old saying, says Cumberland, that *charity begins at home*; but this is no reason it should not go abroad. A man should live with the world as a citizen of the world; he may have a preference for the particular quarter or square, or even alley, in which he lives, but he should have a generous feeling for the welfare of the whole.

---

Since we were born for mutual help, we should know the world.

# Miscellaneous.

## GRASS.

BY NINA ZANINA.

I seek for blossom far and wide,
Is there not then one early comer?
Through all the wood, one single bud
To tell my yearning heart of summer?
By streams that seemed to sing of flowers,
They were so musically flowing;
I sought in vain, alas! not yet—
Not yet—but lo! the grass is growing.

Exquisite grass, each fairy blade,
Made glorious by the dews adorning,
With starry splendor flashing back
The cloudless brilliancy of morning.
Fair grass, o'er all the barren earth
A robe of velvet verdure throwing;
No more in vain I wander forth—
The beautiful green grass is growing.

Where on the azure April skies
The "Iron Horse" his breath is flinging—
And in the stead of woodland birds
The busy steamboat bells are ringing—
Where up and down the noisy marts,
The restless human tide is flowing—
E'vn there, a joy to yearning hearts,
The delicate young grass is growing.

Its fresh luxuriance bears me back
To the first memories of life's morning,
When Winter seemed, "how leaden winged,"
And, Oh, how slow, the sun's returning:
Then watching through the ceaseless rain,
Life had no bliss like that of knowing
That Spring had surely come again,
The beautiful green grass was growing.

Sweet voucher of the coming spring,
I bless thy gentle ministration,
With the glad morn, I too would sing
A hymn of thanks and adoration.
Year after year wilt thou be hailed
By hearts like mine with gladness glowing,
When eyes that watch thee now have failed,
And o'er my grave the grass is growing.

## DOG-KEEPING NEWSPAPER-BORROWERS.

"The man that is too poor to take a paper, has bought a long, slab-sided dog, and bargained for two hound pups."—*A Newspaper.*

Yes, here it goes!—pen in hand! What a text! I've long been "*aching*" to give these "newspaper borrowers," *my* mind, but could'nt find a text until now.

Now, my friend, two questions—Do *you* borrow your neighbor's paper?—do *you keep a dog?* If you answer both affirmatively, then let me say, you should be ashamed to do the *first*,—and *why* do you keep a dog? You perhaps answer, "to protect myself and property." Better invoke, and rely on Heaven to protect *yourself*, than on the sagacity of a dog, liable at any moment to become "*mad*," thereby *endangering your life* and the *lives of your family*. Were you to expend the amount expended for the sustenance of your dog, in providing fastenings and locks for your buildings, your property would be much more effectually secured, and the lives of those seeking your property would not be periled. But should you wish to "put the rascals out of the way," would it not be much more humane to shoot them down, than to torture them to death with hydrophobia?

Look here, friend: have you a son or daughter old enough to play with your favorite dog?—a golden rivulet from own life tide—one on whom your brightest hopes are centered—do you *love* that boy—that girl? Yes, as your own soul. Your faithful, and, as you think, gentle dog enters the room—your child joyfully runs to caress him—plays with him, and as he plays, playfully pulls his ear—the dog growls—a little harder—still he pulls—the dog shows his teeth—snaps at him! * * * Heavens! he has bitten the child! see that spot on its arm!—you apply remedy after remedy—all the preventives of hydrophobia you can hear of—you await the result with heart-bursting anxiety. * * A few days have passed and no sign betokening *madness* has appeared. You *hope* it was nothing. But at last!—at *last*, those symptoms which predict the fate of *your own loved child*, appear. It dies! *you know how.* Now sir, will you *keep that dog?* Of what value is your property, compared with the life of your child, of your neighbors children, or your fellow man?

I have neighbors whom I esteem as friends, and would *willingly* lend a paper, were they too poor to take one. Yet these neighbors *keep dogs*—I call on an errand, or an evening visit. The moment I step in the yard, out bounds a howling, growling bull dog, to meet me! Is this neighborly, or a neighborly greeting?

*You* keep a dog, and too poor to take a paper!—"can't afford to take one till your farm is paid for!" Yet how much *solid cash* could you have taken last fall for *that calf* you traded for that ugly-looking cur of yours? Three dollars! That would have secured you the "Rural" and "Wool Grower," and left a balance of *one dollar* for charitable purposes! "*Too poor* to take a paper," eh? *Can't afford* it, can you? If there *is* a class in the wide world, I would like to see BANISHED, it is these DOG-KEEPING NEWSPAPER-BORROWERS.

CHARLIE CHESTNUT.

## MR. PRESCOTT'S MODE OF WRITING.

It may not be generally known to our readers that Prescott, the historian, is deprived of the use of his eyes; and that in his extensive researches into the sources of history, as well as in the preparation of his manuscript, he is obliged to resort to an artificial process, which he thus describes in a letter to Mr. Putnam:

"As you desire, I send you a specimen of my autograph. It is the concluding page of one of the chapters of the 'Conquests of Peru'—Book III., Chap. 3. The writing is not as you imagine, made by a pencil, but is indelible, being made with an apparatus used by the blind. This is a very simple affair, consisting of a frame, of the size of a common sheet of letter paper, with brass wires inserted in it to correspond with the number of lines wanted. On one side of this frame is pasted a leaf of thin carbonated paper, such as is used to obtain duplicates. Instead of a pen, the writer makes use of a stylus, of ivory or agate, the last better or harder. The greater difficulties in the way of a blind man's writing in the usual manner, arise from not knowing when the ink is exhausted in his pen, and when the lines run into one another. Both difficulties are obviated by this simple writing case, which enables one to do his work as well in the dark as in the light. Though my trouble is not blindness, but a disorder of the eye, the effect, as far as this is concerned, is the same, and I am wholly incapaciated for writing in the ordinary way.—In this manner I have written every word of my historicals. This *modus operandi* exposes one to some embarrassments; for, as one cannot see what he is doing on the other side of the paper, any more than the performer in a tread-mill can see what he is grinding on the other side of the wall, it becomes very dificult to make corrections. This requires the subject to be pretty thoroughly canvassed in the mind, and all the blots and erasures to be made before taking up the pen, or rather the stylus. This compels me to go over my composition to the extent of a whole chapter however long it may be, several times in my mind before sitting down to my desk. When there, the work becomes one of memory rather than of creation, and the writing is apt to run off glibly enough.

"A letter which I received some years since from the French historian, Thierry who is totally blind, urged me by all means to cultivate the habit of dictation, to which he has resorted; and James, the eminent novelist, who has adopted this habit, finds it favorable to facility of composition. But I have been too long accustomed to my own way to change. And, to say the truth, I never dictated a sentence in my life for publication, without its falling so flat on my ear that I felt almost ashamed to send it to the press. I suppose it is a habit.

"One thing I may add. My manuscript is usualy too illegible (I have sent you a favorable specimen) for the press, and it is always fairly copied by an amanuensis before it is consigned to the printer. I have accompanied the autograph with these explanations, which are at your service, if you think they will have an interest for your readers. My *modus operandi* has the merit of novelty; at least I have never heard of any history-monger who has adopted it besides myself."

## OFFICE BEGGARS.—CORWIN'S ADVICE.

The Capital has been besieged since the 4th of March, and bids fair to be for months longer. Hungry swarm succeeds hungry swarm; it is humiliating to witness the eagerness with which young men, whose true field is the world of industry and enterprise, strive for a miserable dependance and scanty pittance, to be paid out of the public treasury.

About three years ago, a young man presented himself to Mr. Corwin for a clerkship. Thrice was he refused; and still he made a fourth effort. His perseverance and spirit of determination awakened a friendly interest in his welfare, and the Secretary advised him, in the strongest possible terms, to abandon his purpose, and go to the West, if he could do no better outside the Departments.

"My young friend," said he, "go to the Northwest; buy 160 acres of government land—or, if you have not the money to purchase, squat on it; get you an axe and mattock; put up a log cabin for your habitation and raise a little corn and potatoes; keep your conscience clear, and live like a free man; your own master with no one to give you orders, and without dependence upon any body. Do that and you will become honored, respected, influential and rich.—But accept a clerkship here, and you sink at once all independence; your energies become relaxed, and you are unfitted in a few years for any other and more independent position. I may give you a place to-day, and I can kick you out again to-morrow; and there is another man over there at the White House, who can kick *me* out, and the people by-and-by can kick *him* out; and so we go. But if you own an acre of land, it is your kingdom; your cabin is your castle—*you* are a sovreign, and you will feel it in every throbbing of your pulse, and every day of your life will assure me of your thanks for having thus advised you."

If the thousands who so ardently strive for places under Government would ponder well these words, and exercise a sound discretion in their application, thus many a young and gallant spirit would be saved from inanition, to be useful to the world, and a joy rather than grief to its possesser.

As a fool, while the images tremble on the bosom of the water, thinks that the trees, towns, and the wide horizon, are dancing to do him pleasure; so man, while nature performs her destined course, believes that all her motions are but to entertain his eyes.

## THE PLEBEIAN.

(*Continued from page 140, this number.*)

Supper was announced, and the conversation became general. After the supper the company separated into groups. Edward paused near one of them, composed of girls from twelve to fifteen years of age, clustered round a table examining some engravings. While he stood contemplating their happy faces, a gentleman, struck with the expression of his fine countenance, approached him and remarked, "An interesting sight, sir."

"Ah yes, theirs is the golden age," replied Edward.

The usually grave face of the gentleman became animated as he viewed the group. "If the minds of our youth," said he, "were properly trained, and taught that useful industry was more honorable than genteel idleness, we could assign no limit to the greatness to which our Republic might aspire."

At this moment Mr. and Mrs. Rose approached Dr. Wilmer, the gentleman with whom Edward was conversing.

"Pray, Dr. Wilmer," said Mrs. Rose, "what grave subject are you discussing to-night."

"We were speaking of the 'golden age,' madam," and a smile of peculiar meaning lit up his grave face.

"Something we are not likely to see at present in this western country, I fancy. I don't believe there is real gold enough in the country to buy a fashionable dress in an eastern city." This was said by Mrs. Rose with a complacent glance at her own expensive dress, which she was wearing for the first time. As they passed on Dr. Wilmor resumed the conversation.

"In conversation with an intelligent lady, Napoleon once asked, 'What is wanting that the youth of France be *well educated?*' '*Mothers,*' was the brief reply. But alas!" continued the Dr., "for our golden dreams of greatness, while *fashion* reigns supreme, and we bow to her sceptre,—while she exalts to the most conspicuous place in society mothers, who have no higher aim than to be considered the most brilliant of the gems with which they surround themselves."

Music, wine, a display of rich confectionaries, and all the et ceteras of a fashionable party, concluded the evening.

A Broadway belle may perhaps smile at the idea of a fashionable party in the wild west—but soon as the woodman's axe lays low the giant tree, ere vitality has left the roots, busy crowds of human beings throng the streets, spacious and handsome buildings rise on every hand, where not many moons before, the red man roamed in the solatary grandeur of his native forests; distinctions in society are created, and the influence of fashion is felt and seen, from the dross of the votary recently from New York, to the peculiar cut of the hunter's tunic, and his jaunty coon-skin cap—from the church decked in humble imitation of the gorgeous city edifice, to the rudest log cabin.

Weeks and months passed away, during which Edward wrote many times to Julia Snowden, but he received no answer, nor could he obtain any information respecting her, or the cause of her silence. But time sped on, as he always will, whether we hang a leaden weight to his wings, or chide his lingering footsteps; and we will not stop to tell how despair sometimes spread his dark wings over Edward, or how he applied all the energies of his powerful mind to business, till his health began to fail—a sacrifice to mental exertions.

The period prescribed by Miss Snowden as the limit of his absence had nearly expired, and Edward, sad and weary, set out on the journey that was to decide his fate.

[*Continued next week.*]

## STUDYING AND SOCIAL VISITING.

There are some who would rather have a social visit from their paster than a good serman; and there are some, too, so unreasonable as to expect both; but I cannot consider them wise or just. There may be others who think that it costs nothing to preach well, but they know nothing. There are ministers who shake sermons out of their sleeves; but are they worth 'the shaking' after they are out? The flock soon shows the kind of pasture upon which it has been subsisted. For myself, I do not know a more heartless thing, or one more wicked, than for a minister to ascend on the Sabbath, and, when souls are hungry for the bread of life, talk nonsense in the name of the Lord. It is much *easier*, and much more *agreeable*, likewise, to spend an afternoon in a social circle than in close and laborious thinking in a silent chamber. It has not been for want of inclination that I have never been a greater visitor, but because my conception of what a faithful pastor ought to be embraced higher traits of character than those which are gratified with admiration in a lady's parlor; and if you are wise, and seek the good of the church, you will allow me, unmolested, to pursue this course. So far it has been well.—*Pastor's Memorial.*

# For the Ladies.

## TO A GIRL IN HER THIRTEENTH YEAR.

BY WM. SIDNEY WALKER.

Thy steps are dancing toward the bound
Between the child and woman,
And thoughts and feelings more profound,
And other years are coming;
And thou shalt be more deeply fair,
More precious to the heart,
But never canst thou be again
That lovely thing thou art.

And youth shall pass, with all the brood
Of fancy-fed affection;
And grief shall come with womanhood,
To waken cold reflection.
Thou'lt learn to toil, and watch, and weep
O'er pleasures unreturning,
Like one who wakes from pleasant sleep
Unto the cares of morning.

* * * * * * *

Nay, say not so! nor cloud the sun
Of joyous expectation,
Ordained to bless the little one,
The freshling of creation!
Nor doubt that He who thus doth feed
Her early lamp with gladness,
Will be her present help in need,
Her comforter in sadness!

Smile on, then, little winsome thing!
All rich in nature's treasure;
Thou hast within thy heart a spring
Of self-renewing pleasure.
Smile on, fair child, and take thy fill
Of mirth, till time shall end it;
'Tis nature's wise and gentle will,
And who shall reprehend it?

Written for the Rural New-Yorker.

## A CHAPTER ON GOOD NURSING.

BY A FARMER'S WIFE.

The "Rural New-Yorker," at a very moderate calculation, is read every week by one hundred thousand individuals, who are or may be, *feelingly* interested in the subject of *good nursing*. Granting that one-fourth of that number will allow their attention to rest on this article, and are thereby prompted to acquire some of the little arts that involve the comparative comfort of every family, the writer will feel conscious of having the thanks of many a suffering invalid.

When I consider the amount of human life, especially in its early stages, that is every day sacrificed by no nursing at all, or what is still worse, *bad* nursing, I do not fear attaching too much importance to the subject of *good* nursing. Unhappily this is not one of the accomplishments that can be acquired by set lessons, or a course of instruction—it must be learned by experience and tact, in the use of such faculties and knowledge, as always ought to be brought into action by the side of a sick bed.

The acquirement of a perfect command of the nerves, and a mind so fortified as to meet all emergencies, are among the imperative requisites of a really good nurse. Who that has ever suffered a single week's illness, especially if obliged to employ watchers, has not been painfully conscious of defects in this department of duty?

It is a well known fact, that if persons are neat in their habits when in health, they become nervously sensitive on this subject when sick. Not being able to employ the hands, the mind wanders from one subject to another, till it commences a scrutiny of every portion of the room that is accessible to prying eyes—hence, the importance of having it in such order as will bear the closest inspection. Cleanliness of the bed and of all things about a sick person, is not only conducive to the quiet of the mind, but in reality contributes essentially to the recovery.

At all times when the weather is suitable a free current of air should be admitted, once or twice a day; especially in the morning. This can generally be done safely, by covering the patient entirely in the bed for a few moments. The frequent changing of the air and clothes, is of the utmost importance in that dreadful scourge of children, *scarlet fever*. That is a disease, too, in which there is as much responsibility resting on the nurse as on the physician, whatever may be the Doctor's "pathic."

Any one who for a moment recalls the indescribable nausea that has been felt when some ill-prepared food has been offered to her, will be particularly careful not to offer any thing disgusting to a sensitive stomach. There are so many rules and recipes for preparing nourishment for the sick, that I scarcely need mention any. There are a few things, however, that are very generally required, very simple, yet all will allow are seldom made palatable,—one of which, is a cup of tea.

I was in the sick room of a lady not long since, when her dinner, which consisted of tea and toast, was brought to her. "O dear," said she, "I cannot drink this tea; it makes me sick." It was luke-warm and had stood till it was insipid. I requested the liberty of invading Bridget's dominions and preparing tea for her in (as I think,) the only proper way for a sick person.

Have the water *boiling*, and if there is a China bowl or mug in the house, use it—if not take the next best bowl or coffee cup, scald it till it is heated through, then put enough tea to give the required strength into the hot dish, pour boiling water on it, cover tight, and in three or four minutes add the cream and sugar. You will then have a cup of tea, the fragrance of which will revive the invalid. Let it be drank from the dish in which it is made.

When the lady received her tea, so different from the former cup, she remarked that she hoped Bridget saw how it was made—but alas! for the *memory* of Bridget. I will mention another thing that is very useful in almost all diseases, yet few know how it should be prepared, to make it acceptable to a weak stomach. I mean the bark of slippery elm. Not more than a pint should be prepared at a time,—it should be done by cutting the bark into fine strips, about a teacupful to a pint of cold water, to which the bark readily yields its mucilage, which is all that is wanted, without imparting any of the woody taste that is given by using hot water. In many cases, lemon juice and a little ice, added to the water, are not objectionable. No kind of food or drink for the sick, should be made in such quantities as to grow stale before using.

Equal in importance to the preparation of nourishment and medicine, is a faculty of waiting upon the sick in a kind and proper manner, suppressing any desire to hurry the trembling patient. Having every thing done promptly and cheerfully, is a very important matter to the invalid. It is extremely trying to the weak and debilitated patient, to be obliged to wait long for one to put a cup of drink to the parched lips, or have the cup placed in the trembling hand, and no clean napkin spread to catch a chance drop that might fall.

How irksome to the convalescent, when the appetite is keen, to be obliged to wait till the family has dined before receiving his or her portion. The invalid's wants should be first supplied.

When the patient lies burning with fever, no one in health can realize how refreshing it is to have the parched skin bathed in the cool and limpid element, by a light and delicate hand. There is such a difference in the manner of performing all these little offices, that it is in vain to prescribe *rules*. Some persons seem to have a natural talent for nursing the sick acceptably. It is a gift that is sometimes granted to *men*, as well as women. I have an individual in my mind's eye, at this moment, who is a resident of a city in California, whose faculties in that line are so highly estimated, that he is frequently engaged to watch the sick, at ten dollars a night—such nursing cannot often be bo't even with gold. He is one of the rare individuals who can act the barber, the clerk, or the valet, while his pleasant conversation inspires cheerfulness, and his gentle and firm manner assures hope.

The business and pursuits of men in general, are adverse to a cultivation of this desirable accomplishment,—but I do think it is a pity that mothers do not oftener initiate their boys into the little arts that would at times contribute much to the comfort of a family. If men would acquaint themselves a little more with the requirements of a sick-room, how often would it enable them to relieve the tired and anxious mother at the bed-side of the sick and dying child. Such knowledge could do a man no harm; if never called for, so much the better—yet the want of it might cost the life of some individual, dear to him as his own.

Willow-dell Farm, April, 1853.

EXCELLENT WOMEN.—Much of the gold-dust of humanity lies beneath our feet, unseen by the multitude, in unwritten biography. Particularly is this true of the female sex. Besides the mother of Washington, there have been Marys, whose characters have been equally as beautiful as hers; and yet they are wholly unknown to fame. They had neither son nor husband possessed of a sufficiency of the elements of greatness to make themselves famous; consequently these good mothers lived, wrought, died, and were unheard of. Yet they lived not in vain; if meriting the title of "excellent," in the scriptual sense, their work was approved by their Divine Master; their influence was felt powerfully in a limited circle; and while they have gone to their reward, the impress of their character is left behind, to be felt by generations to come.—*J. Clement.*

THE TRUE TEACHER.—For my own part, I shall think well before I trust any teacher with the training of my George or Caroline Amelia. The teacher I select shall be at least one who is worthy to be called my friend. He shall be one who is, in worth of character, if not in cash, at least my equal. To such a teacher I will give my confidence and my respect. This I will do so frankly, that if everybody did the same, the schoolmaster would never again seek to entice ladies and gentlemen to walk up, by sounding a trumpet for himself, and playing Merry Andrew during the vacation at his school-room door.—*Charles Dickens.*

MOORE'S RURAL NEW-YORKER.

ROCHESTER, APRIL 23, 1853.

### PUBLISHER'S NOTICES.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is ordered.

☞ ADVERTISEMENTS must be brief, appropriate to the objects of the paper, and accompanied with the cash.

ADDITIONS TO CLUBS—Are still in order. Having but few back numbers, agents and others can order additions to Clubs at $1 per copy from 1st of March or April to end of the year and volume. New Clubs, or single subscribers, can begin 1st February, March, or with the quarter—April 2d.

## The Press vs. Terra-Culture.

WHO "OPENED THE BALL?"

THE papers are now "coming down" on Terra-Culture in all quarters. We believe *Moore's Rural New-Yorker*, "opened the ball," since which time there has been plenty to join. The Wayne *Sentinel*, in an article on humbugs generally, pronounces Terra-Culture "a genuine Barnum humbug."—*Rochester Union*.

We have some knowledge of one paper which has never had any sympathy with the Terra-Culture humbug—The New York Farmer, has all along regarded the matter as unworthy of attention, and the Professor as a man possessing a liberal share of self esteem to say the least. Others can take out a patent for "opening the ball" if they please. We have never been humbugged enough to attend one of the lectures, having in private conversation, become satisfied of the utter fallacy of the claims put forth.—*N. Y. Farmer*.

THE minds of our Rome, Albany, and one or two other contemporaries, seem of late to have been not a little exercised on the subject of Terra-Cultural disclosures. The above, and other *pointed* paragraphs, indicate that some people cannot endure the reverberation of any thunder not of their exclusive manufacture. It is proper that our esteemed friend COMSTOCK, at the "Romish See," should be conservative—and it is hardly expected that our venerable contemporary of Rip Van Winkledom, (whose city, history gravely informs us, contained, at no ancient period, "two thousand houses and eight thousand inhabitants, all standing with their gable ends to the street!") should be *very* decided or progressive on any subject. And yet, notwithstanding the fact that some editors between Schenectady and sun-rise, studiously avoid a *public* expression of well-formed opinions, the people of the West naturally look to the East for knowledge. This probably arises more from habit, and early education, than any real expectation of obtaiuing beneficial light. It may, indeed, be a sort of superstition—not unlike viewing the new moon over the opposite of the dexter shoulder, and so forth. But, like the moon, certain earthly luminaries not unfrequently neglect or refuse to display their inherent effulgence; leaving the people of the "rural districts" to grope on in darkness, or constraining us to illuminate, however feebly and imperfectly, on our own responsibility—even at the risk of obtaining the severe displeasure of the "Wise men of the East."

As our friends seem anxious to call the RURAL out, we, with becoming diffidence and proper deference to superior age and experience, enter the arena—prepared to defend ourselves against any charges, whether direct or implied. In the above extract we are, by implication at least, arraigned for endeavoring to "take out a patent" for first "disclosing the disclosures" of a certain self-styled *Professor*. Now, in regard to the item credited to the Union, we may state that, (though a constant reader of that excellent daily,) we have no recollection of seeing it until accompanied with the remarks of friend COMSTOCK, as above—and certainly never authorized its publication. Still we think the Union is correct in the main, and if not, the contrary can easily be established. It is *true* that the RURAL embraced the *first* opportunity of condemning the humbug, after hearing it from the lips of its sage expounder—and had we, from private conversation, "become *satisfied* of its utter fallacy," our duty would probably have been discharged with equal promptitude. We did not stop to ask whether it had been exposed before: considering the thing calculated to mislead the public, and believing the lectures *expensive* and *useless*, we did not hesitate to warn or readers against the deception. For this we claim no credit, nor assume more virtue than our contemporaries ought to possess. No doubt our own interest, temporarily at least, would have been better subserved by remaining silent, or endorsing the pretended "discovery;"—and perchance the publication of such a quasi-endorsement as the following (from a leading article in an Albany agricultaral journal of comparatively recent date,) would have "saved us from our friends:"

"Those of our readers, whose recollections extend back far enough, may remember to have heard of a great discovery that was once made in the cultivation of the earth, and for the public announcement of which, a few hundred thousands were asked from one of our State governments. The State government declined paying the price, but *the people individually paid subsequently large sums in the aggregate*, to obtain separately the secret. Many of them have thought that the dollar thus paid by each was well expended. *Without giving any opinion as to the merits of this discovery*;" &c.

But we preferred a different course. We were early taught that it was difficult to serve two masters—and moreover that such service indicated neither honesty nor good policy. Hence we are generally on one side of the fence or the other—we always endeavor to be on the *right* side—and when our readers find us astride, they may reasonably conclude that self-interest (an unusual proclivity to dollars and cents,) hath obtained the ascendancy—which heaven forfend!

No, gentlemen, we claim no "patent right" in this matter, and you are at perfect liberty to quote (as we believe you have recently, to some extent,) any thing which we have said or may say on this subject. Our object, from the beginning, has been to caution the community against what we conceived (and you *now* admit.) to be a silly and egregious humbug. But we *are* greatly surprised that you of Albany, possessing superior facilities for ascertainiug the facts, ("Prof." Comstock residing comparatively near you, and lecturing, years ago, in your city and vicinity,) should not have expressed your honest convictions in regard to this matter. Your *silence* gave consent and credence to the deception—and many of your readers have consequently expended their money for stone instead of bread. We hesitate not to affirm that, had the Albany Cultivator taken a bold and independent stand against Terra-Culture when or soon after the lectures were delivered in Albany, the agricultural community of this State alone would have been the gainer by hundreds and thousands of dollars. The lamented DOWNING discharged his duty in the premises, so far as he could consistently, and had others performed theirs, the thing would have been exploded long since,—and hence there would have been no occasion for our humble, but sincere and effectual, services in behalf of a community not unfrequently deceived by the passiveness or studied silence of its professed advocates and protectors.

—Such, readers and contemporaries, is our defence—for this article is simply in response to a not fancied aggressive movement. Though somewhat impulsive—for we have not time to study policy, and should not if we had abundant leisure—we trust the courtesy due our contemporaries has not been forgotten.

## The New York Crystal Palace.

WE have from the commencement, abstained from any extended remarks upon the Crystal Palace, now in course of construction in New York. To our apprehension it was and is now, nothing more than a project on the part of a small Company to construct a building something in the style of the celebrated palace in London in 1851, not so much for the purpose of having an exhibition of the industry of the Empire State, the U. S., or of all Nations, as to have a means of inducing the people to visit the palace for the pecuniary benefit of the projectors and stockholders,—to make of it a show more of various celebrities, simply to poeket the profits of the fee for admission.

The public here or elsewhere, have been furnished with little or no guarantee that measures have been taken to secure awards, in which any confidence can be placed, or which shall be of any practical value to those who may be so fortunate as to obtain them. There seems to be a want of definite action on the part of the managers, which must be far from satisfactory to those who feel any interest in the enterprise. It has been very generally understood that the demand for space has been greater than it was in the power of the managers to supply, but if we are to credit the New York Sun, many to whom space had been allotted, have sent in notices that they should not use it, since the managers have announced their intention of charging an admission fee to exhibitors. We are surprised any such course should be pursued, and can only account for it by supposing the managers design to make the most money possible, and have added the fee named to other means of swelling the amount.

It is now conceded that the Palace will not be ready for opening on the first of May, and the precise time when it will be thus prepared, seems involved in much uncertainty. The New York Evening Post says, the enterprise is steadily advancing to its consummation; the difficulties in the way of such a building have been great, but are now for the most part surmounted, the whole of the first, second and third stories are erected, and all the material for the structure coming on to the ground, and that the dome is the only considerable part of the structure to be completed. The Post asserts the delay will be but a short one, and will be really for the benefit of foreign contributors, and enable President PIERCE to be present at the opening. We look upon it as an ill-advised private speculation, hastily got up, from which the industrial pursuits, and the people of the United States, are to reap no great benefit. †

## Plank Roads—Increase of Toll.

VERY many of the plank roads in this state have not proved as profitable as has been expected.—The rates of toll heretofore charged have not been sufficiently productive to pay fair dividends. This has induced many of them to petition the Legislature for authority to give up and abandon their roads. To meet this want the Legislature have passed a law authorizing the charging of the following rates of toll. For every vehicle drawn by one animal one cent per mile, and one cent per mile for each additional animal; for every vehicle used chiefly for carrying passengers, drawn by two animals, three cents per mile, and one cent per mile for each additional animal; for every horse rode, led or driven, three quarters of a cent per mile: for every score of sheep or swine, one and a half cents per mile; and for every score of neat cattle, two cents per mile.

The increased rate, though not large, will, we think, operate to the prejudice of those roads which run in the vicinity of railroads, as the toll allowed to be charged a farmer's team in drawing his produce to market is the same as the lawful fare upon the central line of railroads through our state, and will have the effect, as has too much of the legislation, to benefit those companies, more than any other interests. Plank roads are a great public convenience, and the people may be willing to be thus taxed to maintain them on some important thoroughfares, but all other routes will be shunned, by all travel not absolutely crowded upon them. †

## Notes from New York Oity.

NEW YORK, April, 1853.

FRIEND MOORE:—As the "RURAL" is devoted not only to the illumination of the Agricultural world, but also to the spread of news and general intelligence, I send you accordingly the result of some observations in this commercial and political Metroplis of America. The "signs of the times" portend a financial and political crisis. All classes of laborers have demanded an increase of wages. Rents have advanced beyond all precedent. The money market is extremely tight, and unless California and Australia continue and increase their tributes to American industry and enterprise, we soon expect to see the *"hard times"* of 1837 renewed once more. New York is growing beyond all calculation. Block after block, street after street, spring up as if by the magic of a wand.—When the end will be none can tell. We may rest assured in the confident belief that within twenty years "Gotham" will contain as large a population as London now boasts of.

In the line of public amusements, New York presents an attractive bill. No one should fail to hear HENRY WARD BEECHER preach on Sabbath night. His Church (the Plymouth, Brooklyn,) will hold four thousand or more, and is always filled to overflowing. He ranks as the greatest piece of ministerial ordnance in America. His motto is, "I would rather be right than orthodox." This accounts, in some degree, for his great popularity and public influence. EDWIN FORREST is now acting at the Broadway Theatre. I had the pleasure of seeing him in the great character of WILLIAM TELL. It is needless to say that FORREST entered fully into the spirit and feeling of the Swiss Patriot. As a tragedian FORREST is not excelled in America, perhaps not in the world.—Would to heaven, that looseness of moral principle was not too often the concomitant of exalted intellect. While all can worship at the shrine of genius, we must also *lament* that private virtue and public morality are shrouded in gloom, or forgotten amidst the glare and pomp of extraordinary endowments.

No saying has experience proven more true, than *"Satan is always near* WHEN YOU *are thinking about him."* Yesterday morning, as I was strolling leisurely down Broadway, meditating on the changes in fortune, political aspect of the times, Salt River, and who last sailed up that delightful stream, who should turn up but Gen. WINFIELD SCOTT, looking as hale and hearty as ever. It evidently agrees with him to sojourn for a time on this side of the political Jordan. His eye seemed as bright, as when gallantly leading the American arms on to glory and the Montezumas.

Nothing of great interest is transpiring in the book world. Mr. SAMUEL HUESTON, the enterprising publisher of the "Knickerbocker Magazine," is next week to publish a most interesting work called the "Attorney," which appeared in chapters in the old "Knick." many years ago. It is written by IRVING, and will have a good sale.

All who have laughed or wept over the Editor's table in old "Knick." have experienced a desire to visit the "Sanctum," whence so many good things emanate. By a special invitation of LOUIS GAYLORD CLARK, I called at his mansion on 22d street, and was introduced to his Sanctum—the Mecca of wit and humor. He has adorned it with many fine paintings, and other works of art. He showed me a large collection of letters which he had received from Webster, Clay, Everett, Longfellow, Cooper, Bryant, and Dickens. The most of these, with many others, forever to be remembered in the annals of literature, have been contributors to old "Knick."—may its days be long in the land. Mr. CLARK speaks in terms of unqualified commendation of the RURAL NEW-YORKER. W. M. H.

## Asylum for Idiots.

ONE of the most creditable and useful institutions under the fostering care of the State, is the Asylum for Idiots, located on the Troy road about a mile from Albany. It is but a few years since it was deemed possible to do any thing to ameliorate the condition of that unfortunate class of humanity. The Asylum was instituted, we understand, mainly through the efficient exertions of Hon. F. F. BACHUS, of this city, at the time a State Senator. The State purchased what had long been known as the "Bull's Head Hotel," near the trotting course, and placed the whole institution under the care of Dr. WILBUR.

The number of pupils has been limited, but embraced those for whom not a hope had been entertained of any thing better than spending a useless, indeed a burdensome life in a state of hopeless idiocy. The result thus far has exceeded the most sanguine anticipation. The worst cases have been found capable, not only of improvement, but of learning a trade that would enable them to obtain a respectable livelihood, and an education which promises to open to their understanding the lore of science and the beauties of literature. At an exhibition recently held in Albany, the pupils of the Asylum gave a very gratifying and creditable rehearsal of the different branches in which they have been instructed.—The present Asylum is not large enough to meet the wants of the public. Feelings of humanity prompt to noble deeds in behalf of the unfortunate, and we are glad to know the Legislature has provided the means for extending the usefulness of an Asylum for Idiots.

A GALAXY OF STARS.—Rochester is highly favored this week. On Monday evening, Rev. Miss ANTOINETTE L. BROWN, lectured on Temperance. On Tuesday evening, (we write Tuesday P. M.,) Rev. H. WARD BEECHER lectures; Wednesday evening OSSIAN E. DODGE and his Bards give a musical entertainment; Thursday evening DEMPSTER, the celebrated vocalist, gives a concert; and on Friday evening, the Rev. J. PIERPONT is to deliver his Poem, "The Scholar's Hope."

## The Winter, &c., in Kent Co., Mich.

OUR winter has been one of more than usual mildness, with few storms, and consequently been very favorable for the prosecution of all kinds of business. The snow has been at no time above ten inches in depth, except it was in the timbered woods, and for a good share of the time, just enough to make it passable sledding. The lumbermen especially have profited by it and got out more than their usual quantity of logs.

December gave us an average temperature of 31.21 degrees, which was a trifle more than six degrees above the December of the preceding year. The range of the thermometer was from 8° to 57°. There were 6 fair days, 11 cloudy, 6 rainy, and 8 snowy. Amount of rain and snow, 5 inches.

January averaged 29.68 degrees, against 23.96 of the preceding year, and ranged from 4° below zero to 49° above. There were 16 fair days, 12 cloudy, and 3 stormy, with less than an inch of rain.

February has averaged 26.83° against 27.52° of 1852. The range was from 3° below to 50° above zero. There were 11 fair days, 13 cloudy and 4 stormy, with a fall of 1.76 inches of water. This month was of very steady winter weather, comfortable for all kinds of out door-work.

March has averaged 34.05 degrees, which is one higher than the preceding March. Thermometer ranging from 2° below, to 60° above zero. There were 13 fair days, 15 cloudy, and 3 stormy, with some rain between days. Fall of water 1.88 inches.

Robins and blue birds came the 17th March; other of the earlier spring birds are caroling their vernal songs. Our lighter soils are ready for the plow, and I have seen it in motion under the guidance of one or two farmers during the past week The indications of a favorable and early spring are really encouraging. The wheat looks quite favorable for the season, though the leaves seem to be deadened more than usual. The season for sugar making is below an average one.

The prospects of the Grand River Valley are more encouraging, as we are now quite sure of the completion of the Oakland and Ottawa Railroad within two years, which will put us in direct communication at all seasons of the year, with the east and west, and all the rest of the world. This region will be then seen, and its unrivaled advantages more duly appreciated by those seeking new homes in the west.

Laphamville Mich, April, 1 1853. T. E. W.

The above has been deferred some two weeks.

## Letter from Illinois.

ST. CHARLES, Ill., April 8, 1853.

EDS. RURAL:—Thinking you might like to hear how the world moves with us at the west, allow me to say, we have had a good winter for business. During January the weather was changeable; through February steady, cold and dry: good wheeling most of the time. March was rather mild; some cold days, but very few sudden changes. April thus far has been dry, so that most of the spring grain has been sown in good order, and every thing promises well. The dry weather has retarded the grass so much that there is a lack of spring feed, and good warm showers are just now very much needed. We have always the sure promise of sunshine and showers, of seed time and harvest, and the blessing of heaven is sure to follow the labors of the diligent husbandman.

In common with many other sections, we are much engaged and interested in this part of Illinois, in Railroad operations and projects. The Air-line road from Chicago to Savannah, on the Mississippi, is located through this place; also the Galena and Chicago Company think of straightening their road from the Aurora and St. Charles junction to Cherry Valley or Rockford. The books for the Air-line road were not opened until the 5th of March, and closed the 14th same month, having in that short time $2.3000 more than was necessary subscribed. They are locating the road, and will be ready to let the contracts by first of June. The road will pass through a large amount of unsettled priarie land, embracing some of the best in Northern Illinois. The demand for laborers will be very great, and farmers may expect, for the present, a good home demand for their surplus productions. J. HELS.

"TERRA-CULTURE."—The getter up of this affair has left Western New York—probably in disgust at the lack of "appreciation of merit" on the part of our people. Before departing, he violated his engagements relative to returning money to dissatisfied auditors—which course soon finished his lecturing career hereabouts. We have some ammunition, including several rich anecdotes in reserve against another demonstration in this section. The last we heard of the "Professor" he was lecturing at *Wolf Creek*, in one of the Western States; an appropriate resort for a "wolf in sheeps' clothing." He is perfectly safe about creeks and rivers, for we are satisfied he is not destined to be drowned! As the western papers are *after* the "Prof." he may be considered effectually "headed."

READ—the advertisements in this paper. We make this special request, because we do not wish to publish as many times, or often, as advertisers desire. The announcement of EMERY & Co. should receive the attention of all interested—while the card of our friend WHITE is worthy the special notice of merchants and others.

OVID ACADEMY.—The next term of this finely located, excellent and prosperous institution is to commence on the 10th proximo. For particulars, see advertisement in this paper.

☞ The *Special Session* of the Senate adjourned on Monday, the 11th inst., without farther action of special interest.

## Literary Notices.

ELLEN LINN, a Franconia Story. By the author of the Rollo Books. New York: Harper & Bro. 1853.

THIS is the Eighth in the series of Franconia Stories, by JACOB ABBOTT,—a series presenting quiet and peaceful pictures of happy domestic life, and seeking to exert a moral influence over the young by the portrayal and expression of such conduct and feelings as it is desirable to exhibit before them for their copying. The author is very successful in the execution of his design, and the interest and naturalness of the scenes depicted, make them most pleasant reading for children. Sold by SAGE & BRO.

YUSEF; or the Journey of the Frangi. A Crusade in the East. By J. ROSS BROWNE. With Illustrations. New York: Harper & Brother, 1853.

THIS is an interesting and well got up volume of some 400 pages, detailing visits and adventures in the most noted Oriental cities. It has numerous and spirited illustrations—some of them bordering on the grotesque—but all adding to the attractiveness of the volume for the majority of readers. The letters composing it appeared originally, we believe in the National Intelligencer.—SAGE & BRO. have it.

NEW MUSIC.—"The Ideal Waltz," composed by MRS. WM. WEBSTER, of this city, and dedicated to the Misses DE LANCEY, Geneva, has recently been published by Firth, Pond & Co., New York. Mrs. W.'s previous compositions have been well received, and the present will probably increase her reputation.

## News Brevities.

—— There are fifty banks in the city of New York.

—— Three dollar gold pieces will be in circulation after June 1st.

—— The receipts of the Rochester and Syracuse Railroad for March, were $84,500.

—— There are 11,000 husbands in Australia whose wives have been left behind.

—— Miss Caroline E. Putnam advertises herself as a barber in the Salem Register.

—— Mrs Meagher is on her way from Australia to New York in the ship Wellington.

—— Messrs. Page & Bacon, of St. Louis, have been fined $1,000 each, for illegal banking.

—— The New York Tribune is enlarged, and printed in close imitation of the London Times.

—— The $800 necessary for the redemption of "Daphne," has been raised, and the woman is now free.

—— The Albany Register says there are upward of thirty millions of bricks made in that city annually.

—— A letter from Havana states that during a recent week, upwards of 1200 slaves were landed on the coast.

—— The coronation of Napoleon III has been postponed until August, on account of the Pope's inability to be present at an earlier period.

—— The London papers state that difficulties have arisen in the English Cabinet which may lead to its dissolution.

—— The Union says that ninety-four canal boats have been built in this city since the close of navigation.

—— Steamers are plying daily between Rochester and the Canadian ports, and doing a prosperous business.

—— Judge Hancock, a son of John Hancock, of Revolutionary memory, is living at Boston. He is over 80 years of age.

—— The salary of the Mayor of Sacramento is $4,000; Recorder, $4,000; Marshal, $3,000; all the other officers, $2,000.

—— Mr. Choate's Eulogy on Daniel Webster, at Dartmouth College, will be delivered July 27th, the day before Commencement.

—— The Cleveland Herald learns that within sixty days, the gauge between Buffalo and Cleveland will be made a uniform one.

——The Allegany Valley Railroad, from Pittsburg to the New York State Line, is to be pushed ahead with all possible dispatch.

—— According to the New York Journal of Commerce no ship made of iron or propelled by steam, was ever struck by lightning.

—— The office of American Consul at Panama is estimated, by the Courier, to be worth from $35,000 to $100,000 a year. Who pays it?

—— The Nail manufacturers of New York held a meeting last week, and resolved to reduce the price of nails from six cents to five cents per lb.

—— The Court of Appeals has decided the question between Messrs. Welch and Cook, as to which was elected State Treasurer, in favor of Mr. Welch.

—— Mackenzie has moved in the Canadian Parliament for an address to Her Majesty praying for the liberation of O'Brien and the Irish exiles.

—— Rev. John Pierpont, of Massachusetts, will read his Poem, entitled "The Scholar's Hope," in Corinthian Hall, Friday evening, April 22. Admission one shilling.

—— The anti-tipling bill has been dodged by the New York Assembly. Two attempts have been made to bring the House to a vote upon the bill, but without success.

—— The citizens of Cleveland, Ohio, have, by a majority of more than six hundred, authorized the construction of water works, at a cost of four millions of dollars or over.

—— Saxon cattle are being imported into the west of Ireland from England and Scotland, which is called by the Galway Packet a strange revolution in the affairs of Ireland.

—— The annual amount of lead procured from the Wisconsin lead mines, is about 40,000,000 pounds, which at five cents a pound (a low estimate now,) amounts to $200,000.

—— Green peas and tomatoes are for sale in the New York markets. They are brought from Georgia, and the former sell at 62½ cents a half peck, and the latter at 37½ cents a quart.

—— The Northern Railroad is now in operation between Albany and Cohoes. Eight trains pass over the road each day. Cohoes is one of the most important manufacturing places in the state.

——Between seven hundred and eight hundred Spanish troops have recently arrived in Cuba from Spain. It is stated that about 25 per cent. usually die during the first year of their residence on the island.

# Legislature of New York.

## Synopsis of Proceedings.

### Extra Session.

THE regular session of the Legislature closed on the 12th inst., but both Houses were convened next morning by authority of the Governor.—Thursday was spent in arranging the preliminaries of an Extra Session, and deciding what should be done, or more properly what should be left undone.

In the House a difficulty occurred between Mr. HOLLEY, of Niagara, and the Speaker. The House ordered the arrest of Mr. HOLLEY. He was subsequently released, stating the whole affair arose from a misunderstanding. Both Houses concurred in a motion to have a recess until the 24th of May. During this extraordinary Extra Session the following bills were passed:

To incorporate the Agricultural College; requiring banks in N. Y. city to furnish weekly statements of their specie, circulation, deposites, and discount items for publication; and the Banking Basis bill, allowing city stocks to the extent of ten per cent. of the recent State valuation, to be received as banking basis. The bills making appropriations to pay the interest on the canal certificates, was passed. A temporary supply bill was introduced and passed.

*Assembly.*—The amendments of the Senate to the Banking Basis bill were agreed to. A resolution of inquiry into the affairs of the New York Art Union was adopted. The motion to reconsider the vote rejecting the militia bill failed. A motion to extend the session to the 6th was adopted, but the Senate did not act upon it, and at 5 o'clock the House adjourned.

In the list of acts passed at the recent session, we note the following as the most important:

To extend the time for the collection of taxes of 1852.

To authorize the addition of another reigment of the militia in the fifth brigade district.

To amend an act entitled "An act to amend and consolidate the several acts relating to the city of Rochester," passed April 10, 1850.

To amend an act entitled "An act to incorporate the Association for the Exhibition of Industry of all Nations," passed, 11th March, 1852.

In relation to the payment of certain annuities due the Cayuga Nation of Indians west of the Mississippi river.

To provide for certain expenses chargeable to the Canal Fund.

Requiring canal superintendents to publish monthly abstracts of their official disbursements.

To regulate the construction of roads and streets across railroad tracks.

Extending the time for the collection of taxes, when stayed by injuncton or otherwise.

To amend title one of chapter twenty of the first part of the Revised Statutes, entitled "Of the relief and support of indigent persons."

To amend an act entitled "an act providing for the registry of births, marriages and deaths."

To authorize the consolidation of certain railroad companies.

To amend an act to incorporate the New York State and National Law School.

To amend an act entitled "An act to incorporate the New York and Virginia Steamship Company, passed April 10, 1850.

Relating to the Deaf and Dumb.

To authorize the formation of corporations for the erection of buildings.

To amend an act entitled "An act authorizing the incorporation of Rural Cemetery Associations," passed April 27, 1847.

To amend an act entitled "An act for the incorporation of companies formed to navigate the ocean by steam ships."

Making appropriations for the payment of certain State bonds and interest on certain State stocks.

To authorize the formation of corporations for ferry purposes.

To punish gross fraud and to suppress mock auctions.

Making an appropriation for the continuance and enlargement of the State Asylum for Idiots.

In relation to laying out private roads and discontinuing public highways.

To provide for the effectual draining of the Cavuga marshes and swamp lands.

Requiring the police justices in the city of New York to file records of all convictions of vagrancy.

Relative to the incorporation of colleges and academies.

To provide for the care and instruction of idle and truant children.

For the re-imbursement to counties of the expenses of criminal proceedings in certain cases.

For the relief of assessors for enrolling the militia in the year eighteen hundred and fifty-two.

To authorize the consolidation of the Syracuse and Binghamton and the Oswego and Syracuse Railroad Companies.

## Currency Items.

THE amount of counterfeit paper money is constantly increasing, and we again urge upon all our readers the *absolute necessity* of the closest scrutiny, and of so marking every bill not well known, that you can readily return it to the one from whom it was taken. The practice of the Suffolk Bank, Boston, of putting the name of the person presenting a bad bill upon the face of the same, and thereafter holding him responsible therefor, cannot be too strongly recommended. We have clipped the following items as being of general interest:

Counterfeilt notes of $5 on Winsted Bank, are now in circulation. The closest scrutiny is necessary to detect them.

Three Banks in Rhode Island have issued fractional bills in large quantities. About four weeks since one issued $30,000 in these bills, and not a dollar has been returned to the counter.

The Supreme Court of Litchfield County have limited six months from the 21st of March, for the presentation of claims against the Woodbury Bank, which recently failed. The claims must be furnished to Edward A. Phelps, of Colebrook; Thos. Bull, of Woodbury, or Geo. C. Woodruff, of Litchfield.

☞ A casting took place March 19th, at the foundry at Woolwich dockyard, of a brass screw propeller for the Agamemnon, 91, screw steamship, at Portsmouth. The quantity of metal required for the casting was about 11 tons, and the time occupied in running it, first into an iron pot made for the purpose, and subsequently into the screw propeller mould, was abont twenty minutes.

## Death of Vice President King.

By a telegraphic despatch (received on the eve of going to press,) we learn that the long expected demise of the venerable Vice President occurred on Monday evening 18th inst. He reached home in Alabama, on Sunday morning, and expired in the midst of those with whom he had been so long associated. The deceased, says the Rochester Advertiser, was not an old man, in the usual acceptation of that term, but his public life has been a protracted one, and of varied character; and it is pleasing to know, now that he has gone from among us, that no spot rests upon the character which has now become the common legacy of his countrymen. They but recently gave him an added proof of their confidence and regard; but it was not his fortune to avail himself of the responsibility which that mark of esteem brought with it. He has fallen upon the threshold of his new dignity, leaving a position vacant which he was so well qualified to occupy and adorn.

THE NEW YORK HORSE MARKET.—The weekly transactions at the New York horse market are estimated by the Agricultor to amount to $60,000; or to upwards of $3,000,000 for the year. In this calculation the sales are put at 300 horses per week, of the average value of $200. The stables last week contained 950 horses, which is about the usual number. It is said that horses are generally about ten per cent. higher than they were last Spring, and thirty per cent. higher than three years ago. Very few, compared with the whole number, are sold for less than a hundred dollars.

CANADIAN COUNTERFEIT NOTES.—The Sherbrook Gazette says:—"We would caution the public against taking bank notes of the 'Agricultural Bank of Montreal,' which is a fraud, no such bank being in existence in Canada. Several notes of the above spurious bank, of the denominations of 2's and 1's are in circulation in Sherbrook."

TOBACCO IN ALGERIA.—The culture of tobacco has been successfully introduced into Algeria, and two crops are raised in a year. The quantity, raised in 1852 was 1,500,000 kilograms, of which 700,000 will be taken by the French government in lieu of an equal quantity annually taken of American and Hungarian tobacco.

SILVER AT THE PHILADELPHIA MINT.—There is now nearly $2,000,000 in silver at the Mint, and large acquisitions are being daily received. The Mint is busily engaged at the present time in coining quarter dollars, dimes and half-dimes, a large number of which will be shipped to California.

PAPERS BY THE ACRE.—It is stated, on the authority of a well known statistican, that the N. Y. daily papers consume twenty-eight acres of paper every day. In other words, if one day's papers were laid out to dry on the grass of Washington quare, they would cover it more than twice over.

RED GOLD.—A new kind of coinage is proposed, consisting of one part of gold to six of copper.—This would be about an equal weight of each. It would have about the value of silver, and would be easily distinguished, by its color, from either the gold or copper coins.

COUNTY CLERKS.—The Senate have passed a bill making the office of County Clerk a salaried office. The salary of the County Clerk is to be determined by the Board of Supervisors in each county, but in no case is it to be less than $1200 a year.

☞ R. H. Walworth, of New York, and Neal Dow, of Maine, have issued a call for a meeting of delegates from each State in the Union to be held in New York on the 12th of May next, for the purpose of making arrangements for a World's Temperance Convention, to be held in New York during the World's Fair.

☞ The construction of the Nashville and New Orleans Railroad seems to be no longer a matter of doubt. It will be 600 miles in length, and will cost from $10,000,000 to $15,000,000. About 4,500,000 of the amount has been raised, and a portion of the route is already under contract.

☞ The New York Commercial Advertiser says that the fees paid by the Common Council to Henry E. Davis, Esq., as Counsel to the Board, during his term of office, amounted to $109,722.42

# Market Intelligence.

RURAL NEW-YORKER OFFICE,
Rochester, April 20, 1853.

THE near approach to the "opening of navigation" has imparted an increased activity to the business of the present week. The weather has been delightful for a few days, and more than the usual amount of produce has been offered. Money has been abundant for all business wants, and trade has exhibited a healthy activity.

GRAIN.—Wheat has been in more demand, selling in the streets at $1,10; it is doubtful if any except the best quality would command over $1,08. Corn is dull at 56¼c.—Oats 38@40c.

SEEDS.—Clover seed has been scarce, and retailed at $7,-50@8,00, though not as firm at the close. The stock is light. Timothy is abundant at $2,50 to 2,75@3. Peas are more abundant, and may be purchased at less prices than they could have been a few weeks since.

VEGETABLES.—Apples are scarce and command 50@63c. Potatoes abundant at 25@37½c. White Mercer, Irish Cup and White Mexicans are sought for seed at higher rates.

PROVISIONS.—The supply is good, without material change in quotations. Butter is selling at 13@15c. Eggs 10@11c. and in good supply.

WOOL.—We hear of no transactions of any moment in this market. The feeling is not quite as buoyant as it was a few weeks since; the speculative feeling has been somewhat checked. The real demand is not lessened, and our confidence in good prices has suffered no abatement.

In other departments we observe no changes worthy of menticuing.

### Rochester Wholesale Prices.

### NEW YORK MARKET.

NEW YORK, April 19.

FLOUR.—Market for Western and State opened on the Pacific's unfavorable advices, but there were few sellers at our inside figures for State. In fair request for the east and home trade. Demand fair for export, mainly to complete cargoes. Better grades heavy and lower. Canadian quiet at $4,81@4,87; sales of Western canal 6,800 bbls. at $4,63@4,62½ for ordinary to strait State, $4,62½@4,87½ for mixed to fancy Michigan and common to good Ohio. Southern flour fair. Low grades not plenty but quiet.—Better grades improved and in fair request Sales 800 bls. at $5@5,12½ for common to straight brands, Baltimore, &c., and $5 50@6,50 for fair brands.

GRAIN—Wheat more freely offered and market heavy and inactive. No sales transpired. Quotations would be nominal. Corn more plenty and demand not so active for the east Sales 26,600 bu at 61@62½c. for N. O.; 62@63c. for mixed Southern; 66c. for Southern yellow; 65½@66c. for Jersey yellow.

PROVISIONS—Less doing in pork and market hardly so buoyant but firm; sales 250 bbls. at $15,87@16 for mess; $13,50@75 for prime; lard in better demand; supply light: sales 500 bbls. at 9¾@10c. in part to arrive and 400 kegs at 11½c. Butter firm; supply moderate: sales 10@15c for Ohio, 12@22c for old and new State. Cheese quiet and not plenty at 8¼@9¼c.

### ALBANY MARKET.

ALBANY, April 18.

FLOUR—Throughout the week there has been a steady but rather moderate demand for flour for the east, and for the supply of the river and local trade. Prices have undergone but little if any change. The transactions this morning aggregate about 500 bbls. at $4,50@4,62 for common to good State; $4,62@4,87 for common to fancy Mich. and Ohio; $4,87@5.87 for extra Ohio; $5@5,87 for fancy State, and $5,37@5,75 for extra Genesee.

GRAIN—In wheat but little has been done. Genesee in store is held at $1,25@1,30, which is far above the views of buyers. A small sale of good white Michigan was made at $1,20. Rye is quiet but firm at 87½c. A sale of 3,300 bu. heavy Oats was made withiu a few days at 50c.

HAY—The market is firmer, owing to the smallness of the stock here; sales, pressed at $7@1,12 per 100 lbs.

ALBANY, April 19.—No change in prices since the 16th.

### NEW YORK CATTLE MARKET.

NEW YORK, April 11.—At Washington Drove Yard—Offered, 1,900 Beeves, (1,500 Southern and Western, remainder from this State.)

The market is quite active, and prices very firm. Sales from 8to 10c per lb., as in quality. About 100 head left over unsold.

At Browning's—Sheep were more freely offered this week, but prices were rather lower. The offerings amounted to 1,000, and were all sold at from $3.50 to 5,50@8.

Cows and Calves—50 offered, and all but 10 sold at from $25 to $43.

At Chamberlain's—Offered, 250 Cattle; all sold at prices ranging from 8, 9@10c. per lb.

Cows and Calves—75 offered, and all sold at prices ranging at from $25, 35@49.

1,050 Sheep offered, and sales at from $3,50@4.75 to $6 @7.50. Market for all descriptions firm and sales brisk.

In the stalls at the stables of Messrs. Chamberlain, we notice three superb cattle called the Stoddard Calves.—They were raised and fed by Moses Stoddard, of Erie Co., some 10 miles from Buffalo. They weigh about 4,000 lbs. each, and are owned now by Mr. A. B. Gilbert. Their ages respectively 6, 7, and 8 years, and are all from one cow. We are told they are going to be exhibited at the World's Fair, but will remain at Chamberlain's stables for a week or so, when they will be taken up to the Crystal Palace. They came to Albany by the cars, and were bro't from thence by steamboat. These cattle are the same that obtained the premium at the State Fair at Utica. They are noble animals, all, and a credit to old Erie, as they are to the State at large.

### ALBANY CATTLE MARKET.

ALBANY, April 11.—Woolford's Bull's Head—At market, 380 Beef Cattle. Prices extra, $8,25; 1st quality $7,50; 2d do. $7; 3d do. $6@6,50.

Cows and Calves—35 in market. Prices, $25, 30@45.

Sheep—520 in market— Prices, $3 50, 6@8.

Swine—1,000 in market. Prices $6@6,50.

Remarks.—But few cattle and sheep in market this week not enough to supply our market. Prices firm as quoted, not any left over; mostly all sold for New York market.—Albany Journal.

### BRIGHTON CATTLE MARKET.

BRIGHTON, April 14.—At market 840 Beef Cattle, 10 pairs Working Oxen, 40 Cows and Calves, 900 Sheep, and 1,500 Swine.

Prices—Beef Cattle—Sales quick at an advance:—Extra, $8@8,50; 1st quality $7,25@7,75; 2d do, $6.75@7; 3d do. $5,50@6,75.

Working Oxen—Sales at $68, 82, 90 and 145.

Cows and Calves—Sales at $25, 27, 31, 35, 40, 42 and 45.

Sheep and Lambs—Sales $6 50, 7, 8,25 and 11.

Swine—York hogs 7½ for sows, 8½ for barrows. Ohio 6¾, 6⅞ and 7 for sows, and 7¾, 7⅞ and 8c for barrows.—At retail from 6½ to 9c. Large hogs to slaughter 6¾@6 ¾c.—Mass Ploughman.

### CAMBRIDGE CATTLE MARKET.

CAMBRIDGE, April 13.—At market, 755 Cattle, about 655 Beeves, and 100 Stores, consisting of Working Oxen, Cows and Calves, yearlings, 2 and 3 years old.

Prices — Market Beef—Extra, per cwt. $8@8 25; 1st quality, $7,50@7,75; 2d do, $7@7,25; 3d do, $6,50@6,75; ordinary, $5,75@6,25.

Hides—$4,75@5 per cwt.

Tallow—$7@7.50 per cwt.

Pelts—$1@1.62.

Calf Skins 10c per lb.

Veal Calves—$4, 5 to 9; 361 at market.

Barreling Cattle—$5,75@6.25.

Stores—Working Oxen—$89, 92, 100, 125@170.

Cows and Calves—$25, 31, 36, 44@52.

Yearlings—None.

Two years old—$30, 31, 37, 44, 51@52.

Three years old—$38, 39, 44, 51@68.

Sheep and Lambs—558 at

Extra, $7, 8, 9@12.50.

By lot—$1, 5, 5 50@6,75.

Swine—558 at shoats; wholesale 6¾@7c.

Remarks.—The first time for three weeks the market is well supplied Many beeves, and also many flocks of sheep were worthy particular notice, on account quality.—Boston Cour.

# Marriages.

In Alabama, on Monday, the 18th inst., by Rev. A. Hopkins, of Caryville, JASPER H. BIXBY, associate editor of Moore's Rural New-Yorker, and Miss SARAH E., daughter of Dea. Jos. HOLMES, of the former place.

On the evening of the 7th inst., by the Rev. A. G. Hall, D. D., EDWIN S. HAYWARD, of Brighton, and LUCY E. SMITH, of Rochester.

On the 6th inst., at Darien, Genesee Co., by the Rev. Mr. Pattengill, Mr. JAMES J. ANDERSON, of Newstead, and Mrs. FILUREA BARTHOLF, of the former place.

In Union Springs, on the 5th inst., by Rev. A. S. Dean, Mr. BENJ. F. JENNEY, of New Bedford, Mass., and Miss C. STRALEY, of the former place

# Deaths.

At Parma, Monroe Co., N. Y., Jan. 22, 1853, Mr. PETER ROSECRANTS, in the 54th year of his age. Mr. R. was one of the earliest settlers of the town. He leaves a widow and four children to mourn his loss.

On the 16th inst., in New York, while on the way from Florida to Rochester, Mrs. LUCY C., wife of Mr. Francis T. Adams, and daughter of the late Charles Church, Esq., in the 39th year of her age.

On the 18th inst., ELIZABETH M. GRANGER, aged 18 years, only surviving daughter of Lyman Granger, Esq., of this city.

50 do. Brand's Manure Forks.
75 do. Do. Straw Forks.
100 do. Do. Hay Forks.

A good supply of Reynolds' Hay and Straw Forks.
100 doz. Whitlock's Solid Cast steel Hoes.
200 " Stillman's Cast steel Hoes.

Scythe Stones, Rifles, and other tools in the same line, all of which will be sold on the lowest terms. Sale rooms at the Agricultural Warehouse of E. D. HALLOCK, 24 Exchange street, Rochester, N. Y. ☞ All orders by mail promptly attended to. HIRAM C. WHITE.

FOR SALE.—20,000 Seedling Apples for stocks.
170w3t S. MOULSON, Rochester.

**Albany Agricultural Works, Warehouse and Seed Store.**

*EMERY & COMPANY, Proprietors.*

SOLE manufacturers of the celebrated, Premium "Emery's Patent Changeable Railroad Horse Power," Threshing Machines and Separators, &c., &c., for one and two horses—designed for Farm, Plantation or Shop use. Its construction is such, that it can be applied to the driving of all kinds of machinery, without additional expense for gearing, &c., &c. It will be recollected this Power took the first prize at the great trial of implements, by the New York State Agricultural Society, at Geneva, in July last.

Owing to the great advance in the prices of Iron, we have found it necessary to advance the prices, to enable us to manufacture a power equally good with past seasons, rather than to use a cheaper material in their construction.

*Our prices will be for the season 1853:*

"Emery's Patent Changeable Horse Power," Thresher, Separator, Bands, &c., for two horses, ..... $158 00
Emery's Patent Changeable Horse Power, Thresher, Separator, Bands, &c., for one horse, ..... 125 00
Common Rack and Pinion Power Thresher, Separator, &c., 2 horses, ..... 140 00

Thanking the public for their past liberal patronage, we pledge ourselves anew to them, to give them a good article at a fair price.

*Terms*—Cash or approved notes or acceptances, with interest, payable within four months, in Albany, New York, Boston, Philadelphia or Baltimore, as may best suit the purchaser.

All articles warranted made of good material, and to operate as represented, or may be returned within three months, at the expense of the manufacturer for home transportation, and purchase money refunded. The purchaser being his own judge in each case. For further particulars, address the subscribers. Liberal deduction to dealers. Local agents wanted, to sell and put the above in operation, &c. Catalogues, giving full descriptions, furnished on application EMERY & CO.,
173eow3t 369, 371 & 373 Broadway, Albany, N. Y.

**THE ACADEMY AT OVID.**

THE Summer Term of this Institution, will commence on WEDNESDAY, MAY 10th. This School is open to Youth of both sexes.

Instruction is given in both the Ancient and Modern Languages, in General and Agricultural Chemistry, in Civil Engineering, in Music, and in all branches of study pursued in the most approved Schools in the country.

Lectures are given in Chemistry, Physiology, Natural Philosophy, the Science and Art of Teaching, and on morals.

The Board of Instruction consist of Rev. AMOS BROWN, Messrs. EDWIN PIERCE, W. H. BREWER and G. B. VOSE; Miss ISABELLA MEAD and Miss ANGELINA JAMESON.

*The Gentlemen are all of them graduates of some of the best New England Colleges, and the Ladies have proved themselves to be entirely competent to their stations.*

Charges to Pupils from abroad, for *Board, Tuition, room rent, Wood and Lights*, are $2,50 per week. The charge for instruction on the Piano Forte is $10 per quarter, and $4 for French, Painting, Drawing, &c. Pupils boarding themselves, or boarding with their particular friends, are charged for tuition, $1, $6, and $7 per term, of 14 weeks, according to studies. A commodious boarding house has been provided exclusively for young ladies, where the young ladies and their lady teachers constitute one family.

Application for admission to the school and for board, should be made to Rev. AMOS BROWN, the Principal.

WILSON GRAY, *Sec'y.*
Ovid, April 9, 1853. 173w3.

**Woodward's Premium Corn Planter and Manure Depositor**

THIS machine, after a thorough investigation at the Trial of Implements, near Geneva, in July last, received at the State Fair, the first premium. After several years use at the east, where it has given the most complete satisfaction, it has been introduced into this State and is in all respects a perfect machine.

For sale in Rochester by BRIGGS & BRO.; in Canandaigua by J. S. COOLEY; and in Geneva by J. S. & H. C. PROUTY, PROUTY & CHEW, and by the subscribers.

173w2* BRONSON & SIMPSON,
April 23, 1853. Geneva, N. Y.

**DRAIN TILE MACHINE.**

THE Subscribers are manufacturing at their machine shop, at North Bloomfield, Ontario Co., N. Y. Machines of an improved pattern, and most durable construction, for the use of moulding drain tile, bats for crocks, &c.

Orders by mail or otherwise, punctually attended to.

FAIRCHILD & WOOD.
North Bloomfield, N. Y., April, 1853. 173-5toam

**FOR SALE,**

**A first rate Wheat Farm, in Genesee County.**

THE Subscriber offers his farm for sale, as he intends, on account of his health, to change his business.

It is located two miles North of the Village of Batavia, on Bank Street Road, and contains about 220 acres of first quality wheat land—about 185 acres under good improvement, all well fenced with stakes and caps, and about 63 acres of wheat on the ground. It is well watered by springs, on both sides of the road; and has a good frame house, with a small frame house for a hired man—two wheat barns, with sheds—a corn barn, two granaries, and a smoke house. There is a choice selection of fruit trees, embracing Apple, Cherry, Peach, Plum and Pear trees; also Nectarines and Apricots, of the best kinds. The farm might be divided so as to accommodate two families.

I intend to sell, and whoever buys, will get one of the best farms in Genesee county, under a high state of cultivation, and clear from foul stuff. Any person wishing to purchase a large farm or a part of this farm, is requested to call and examine. C. R. BRINCKERHOFF.
Batavia, Genesee Co., April 6, 1853. 172-3t*

**HALLOCK'S HAND SEED DRILL.**

THIS Drill is adapted to sowing carrot, turnip, beet, onion, and other small seeds in drills, with perfect regularity and without regard to their weight or shape.—The seeds are forced out by a circular brush, which revolves against a perforated tin plate inserted in the bottom of the hopper. A series of these plates accompany each drill, with holes of different sizes for regulating the quantity and kinds sown. It is a light, compact, and durable machine, and not liable to get out of order. They can be forwarded to any part of the country by railroad or stage. Remittances by mail at my risk. All orders (which should give full directions for forwarding,) promptly attended to.

Price, $5. Address E. D. HALLOCK,
168eowtf. Rochester, N. Y.

**1,000 BOOK AGENTS WANTED.**

INTELLIGENT and industrious men wanted in every part of the United States, to engage in the sale of the best assortment of ILLUSTRATED

POPULAR AND USEFUL BOOKS

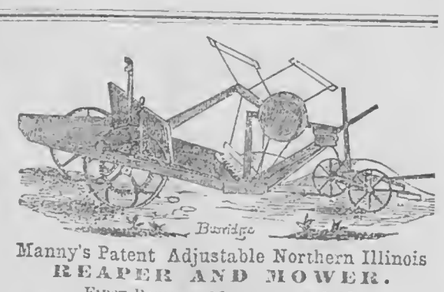
published in the country.

Men of good address, having a small capital of from $25 to $100, can do well by engaging in this business, as the inducements offered are of the most favorable character.

For further particulars, address, (postage paid,)
ROBERT SEARS, Publisher,
170w4 181 William street, New York.

**SALE OF SHORT-HORNS.**

I WILL sell by Auction, on Wednesday, 8th June next, at 1 o'clock, P. M., about Thirty of my improved Short Horned Cattle, mostly all the get of my imported Bull.—Up set price from $150 to $300. [169-9t*]
Auburn, N. Y., March, 1853. J. M. SHERWOOD.



Burridge

**Manny's Patent Adjustable Northern Illinois REAPER AND MOWER.**

FIRST PREMIUM MACHINE FOR 1853.

AWARDED the First Premium for Mowing and the second for Reaping, at the N. Y. State Fair, in the great trial at Geneva, N. Y., in July, in competition with eleven other machines; awarded a Silver Medal at the Ohio State Fair, for the best Reaper and Mower, and received the highest award at the Vermont and Michigan State Fairs, for the best Reaping and Mowing Machine.

The true merit of this Machine has given it a great triumph over all others, and being a perfect combination of Reaper and Mower, it comes to the farmer with double value, and it is clearly demonstrated to be the only successful combination of Reaper and Mower. As a Mower, it is as simple and perfect as though constructed expressly for mowing; and as a Reaper, it is as simple and perfect as if constructed for reaping only. All the change that is necessary from one plan to the other, is to insert or remove a loose platform.

Machines warranted to cut all kinds of grain as well as can be cut with a scythe, and to cut flax and millet, also to 'gather clover, timothy and flax seed, and to be well built and of good materials. This machine will cut from ten to fifteen acres per day, with two horses, and one person to tend it when mowing, and two persons when reaping. The cutting apparatus is made perfect by means of a double edged sickle, and double guards, as fully tested the last two years, and it is connected with a joint, so as to adjust itself to uneven ground, and by a level at the driver's seat, it can be raised when moving along, to cut from one inch to two feet from the ground. All side draft against the team is entirely avoided. The machine will turn square corners, and turn square about, either way. Over three hundred of these machines were in use the past season, all of which gave perfect satisfaction.

The machines are manufactured at Hoosick Falls for the State of New York, and I will have them delivered to any part of Western New York where ordered. Price of machine, where made, $125. Address Gen. R. HARMON Wheatland, Monroe Co., N. Y.

The machine is for sale by D. R. BARTON, Rochester.
173-tf. R. HARMON, Agent.

**PEAS! PEAS! PEAS!**

WE most respectfully call the attention of Farmers and others to our extensive assortment of Field and Garden Peas; among the former are

200 bushels Common Marrowfats.
400 do. Junes.
200 do. Golden Vine.
200 do. Creepers.
400 do. Common Canada.

And among the latter are

25 bushels Superior Early Kents, earliest grown.
5 do. Prince Albert.
100 do. Early Warwick—superior.
200 do. do. Washington.
100 do. Marrowfats, superior article.
50 do. Black Eye Marrowfats.
25 do. Dwarf Blue Imperial.
10 do. Monastery Marrow.
25 do. Blue Marrowfats.

Also, various other choice kinds.—all of which will be sold at small profits for cash, at the Genesee Seed Store 63 & 65 Buffalo st., Rochester.

172-tf J. RAPALJE & CO.

**SPRING GRAIN AND SEEDS.**

WE have now on hand and for sale at the Genesee Seed Store, the following Field Grains:

100 bushels Pure Fife Spring Wheat.
100 do. Barley, 4 or 6 round.
25 do. Do. superior new variety, 2 round.
100 do. Buckwheat.
100 do. Racine or Cat-tail Oats.
200 do. Reapt Timothy seed.
400 do. Common do.
25 do. Large Clover.
25 do. Red Top.
20 do. Orchard Grass.
50 do. Millet.

172-tf. J. RAPALJE & CO.

**SEED POTATOES.**

WE have on hand 200 bushels of the celebrated White Mercer Potatoes, at $2 per barrel, delivered at the Railroad or Canal, in this city.

100 bushels Early Junes.
50 do Mountain Junes.
25 do Wild Mexicans.
25 do Carters.
50 do Irish Cups. J. RAPALJE & CO.

172-tf. 63 & 65 Buffalo st., Rochester.

**Pure Bred Male Stock at Private Sale,**

AT MOUNT FORDHAM, WESTCHESTER CO.,
Eleven Miles from City Hall, New York.

I WILL sell and let from 10 to 12 Short Horned Bulls and Bull Calves, 4 Devon Bulls and Bull Calves, and from 12 to 15 Southdown Rams. The annual sale by Auction will be omitted this year, as I wish to reserve all the Females, having recently purchased another Farm, to enable me to increase my Breeding Establishment. My Hog Stock, including all the Spring litters, are engaged.

Catalogues with full Description and Pedigrees of the above Bulls, and Southdown Rams, with the Prices attached, can be obtained by the 15th April next, from the subscriber, or at any of the principal Agricultural Stores, or from the Editors of the principal Agricultural Journals.

March 23d, 1853. 170m3 L. G. MORRIS.

**GARDEN AND FIELD SEEDS**

*From the New Establishment of Van Zandt & Bowdish*

No. 114 State street, Rochester, N. Y.

CAN be purchased of the merchants generally throughout the country, in Papers or Packages, on the most reasonable terms. Also at the Agricultural Warehouse of E. D. HALLOCK, No. 24 Exchange street, near the Clinton Hotel, Rochester, N. Y.

The Seeds from this establishment can be relied on as being of the very best quality. They are mostly imported, or grown by the EASTERN SHAKERS, and are warranted.—Full directions for cultivation printed on each Paper and Package. VAN ZANDT & BOWDISH.
Rochester, N. Y., 1853. 170m6.

**REMOVAL!**

HALLOCK'S AGRICULTURAL WAREHOUSE has been removed from No. 50 State street, to

**No. 24 Exchange St., Rochester,**

in the Store formerly occuiped by J. E. CHENEY as a Stove Store. The new store is well supplied with Implements, Seeds, &c.—comprising a larger and more complete assortment than heretofore. Former customers and farmers generally are invited to call at the new establishment and examine for themselves. E. D. HALLOCK.
169-4t. 24 Exchange St., Rochester, N. Y.

**GREAT PRIZE MEDAL.**

THE WORLD'S FAIR AT LONDON, awarded us a MAMMOTH SILVER MEDAL for the BEST HATS.—Gents wishing the Spring and Summer style, will call. We are prepared to serve you with a superior article, and of the most becoming style.

CLARK & GILMAN, 20 State St.,
[169-3m.] Rochester N. Y.

**FRUIT TREES FOR SALE.**

A GOOD assortment of the various kinds of Fruit Trees, adapted to the wants of Central New York, can be had on good terms, at the *Central Nursery*, Binmanville, Oswego Co., N. Y. [171-3t] STONE & COOK.

**FARMERS, LOOK HERE!**

**The Great Difficulty Surmounted.**

T. S. STEADMAN'S CLOVER AND GRASS-SEED REAPER.

IT has long been a question among Farmers why there could not be a machine constructed for the purpose of gathering Clover seed, that should gather the heads only, and leave the stalks upon the ground where they should be, thereby saving a vast amount of labor and time in transporting the stalks to the barn and out again to the field for manuring purposes.

The subscriber would respectfully announce to the farming community that *he has* removed all the obstacles which have hitherto prevented a machine of this kind from doing the work satisfactorily, and now offers his Reaper to the public, in the firm belief that it will give entire satisfaction. The machine will gather from eight to ten acres daily, gathering only the heads, and doing it in the finest order. Only one horse is used—moving it with perfect ease through the stoutest clover.

For farther testimonials in regard to my Machine, I would respectfully refer you to the following gentlemen: Hiram Frisbie, Holley; L. J. Waters, Buffalo; Wm. Hatch, Holley; Sylvester King, do.; Martin G. King, do. John Berry, do.; Nelson Hatch, do.

T. S. STEADMAN,
Holley, Orleans Co., N. Y. 153—tf—1am*

**CLOVER AND TIMOTHY SEED.**

200 Bush. medium Clover Seed; 100 bu. large or late Clover seed; 200 bu. Timothy seed, on hand and for sale at the lowest market price, at the Genesee Seed Store, 65 Buffalo st., Rochester, by

163-tf J. RAPALJE & CO.

# Poetical.

Written for Moore's Rural New-Yorker.

## THE WINDS.

BY MRS. A. C. JUDSON.

I LOVE the gentle zephyr's breath
That comes at evening hour,
When Summer's leaves have dropped beneath
The sultry day-king's power.

It cools the fever'd brow, and brings
Joy to the weary breast,
Bearing upon its silent wings
An antidote most blest.

I love the autumnal gale—its sighs
Are music to my ear,
For in its mournful melodies
A voice I seem to hear:

A heavenly voice that warns of death,
And bids us seek a home
Where will be felt no withering breath,
In the bright world to come.

The winds of winter too I love,
That come as if with ire,
To solemn reveries they move,
And holy thoughts inspire.

Surrounded then by friends we prize,
And fireside comforts blest;
Pure songs ascending to the skies
Proclaim the grateful breast.

The winds—the unseen winds of heaven,
Yea, all of them I prize,
As messages of mercy given
By Him who rules the skies.

And as we know not whence they come,
Or whither from us go,
So doth the eternal spirit move
On human hearts below.

# Rural Sketch Book.

[Written expressly for Moore's Rural New-Yorker.]

## THE PLEBEIAN.

BY KATE KOOLEY.

[*Continued from last number.*]

CHAPTER FOURTH.

MR. SNOWDEN had just returned from a convivial party, and when excited by the wine-cup he revelled in all the pride and pomp of ancestral importance. The fading honors of his house were unthought of; he snatched his hat and cane, and sallied forth in quest of the offenders, by whom he was met near the door. Sternly bidding his daughter to retire, he poured forth a torrent of abuse on the young man before him.

"Do *you*," said he, "*you*, the son of Joe Mullett, a base-born plebeian, seek to mingle your blood with my patrician house?—*you* to marry Julia Snowden, in whose veins flow the blood of European nobles, prouder blood than all others in the State can boast? Away with you, and let not to-morrow's sun find you on my plantation, or by the"——

At that moment a light from the window gleamed full on the form of our hero, and he stood revealed in his fair proportions to the eyes of the enraged father. Mr. Snowden cut short the threat in surprise, for he thought there must be some mistake, and that he had insulted a *gentleman*. The person before him was as dignified as himself, with a brow as lofty as his own. He had before but indistinctly seen the form of Edward, and imagined that the *creature* before him was cowering with fear, or swelling with vulgar rage. It is true our hero was agitated with emotion, his bosom swelled, but it was with that true nobility which is founded not in ancestry, but on consciousness of integrity and virtue, which not all the pomp and opinions of the world can abase. He begged pardon of Mr. Snowden for his intrusion, bowed haughtily, and walked rapidly away. When Edward entered the little parlor of his cousin's house, he paced the floor in no enviable state of mind. At length he became sufficiently calm to write a few lines to Miss Snowden. A part of the letter was as follows:

"I scarcely know that I write. I cannot command language adequate to describe the conflict in my mind. At one moment I tho't myself the most favored of mortals; the next—but I forbear to pain your mind with details. An opposing barrier is raised between me and my fondest hopes, which no effort of mine can overcome, nor time diminish.—My first impulse was to give myself up to despair, but the voice of my revered friend still sounds in my ear,—'Let no disappointment, however severe, induce you to swerve from the path of duty, which is to improve your time and talents to the best advantage.' To me his wish was law, so shall it ever be. Nor will I suffer the talents which he cultivated, to remain unemployed. I cannot return where every thing will remind me of what I have lost. Even the flowers, as they unfold their delicate petals, would but remind me that there was none to say, 'how beautiful!' Do not imagine I can remain here. I have heard that in the West there is a wide field open to men of talents and enterprise. Thither I will go; and could the bright star of hope illume the path of my exile, and point to some day when I might return and lay fame and honor at the feet of her whom I feel will ever possess my heart, I would fear no obstacle, or deem any honorable enterprise too arduous to accomplish."

The next moment Edward heard a light tap at his window; stepping forward, he was presented by the old servant with a letter from her mistress. Bidding her wait, he hastily perused it. Miss Snowden advised him to leave the Manor immediately, and return home, when she would find means to confer with him in regard to the future.—She closed by assuring him that there was *one heart* on which he might rely for sympathy. Folding his own letter, he gave it to the servant, who carried it immediately to her mistress, whom she found just as she had left her,—with her head resting on her hand, the bonnet, which was not yet laid aside, thrown back, her hair escaped from its confinement, was falling over her hands. She snatched the letter from the hand of the attendant, and as soon as she became acquainted with its contents, bowed her head, and indulged in an uncontrollable burst of grief.

At length she raised her head—sternness and deep resolve had settled on that fair young brow. "If he must go," said she, "he shall not go alone." She drew her shawl around her, and moved toward the door. She paused and asked herself, "Will he who always obeyed the slightest wish of one to whom he was bound by no natural ties, approve the step I would take in defiance of my father's will? O no, I know he would not." She sank again into her seat. After some time spent in thought, she exclaimed, "*He shall hope!*"—and taking her pen, she again addressed him. She approved his resolution, and with his talents and energy she felt sure he would succeed. She wrote a few words to this effect:

"I shall limit the term of your absence to two years. It is impossible to predict what may transpire in that time, but we will at least hope the future may be propitious. Yes, *we will* hope—Julia bids *you* hope."

After arranging that a correspondence should be carried on through the agency of his cousin, Edward mounted his steed, and when the bright beams of the morning sun "tipped, like burnished gold," the lofty branches of the ancient elms on Snowden Manor, he was miles on his journey towards the "Far West."

When arrived at C., it was Edward's first business to procure a room suitable for an office. This he found no easy matter, as new settlers arrived faster than buildings could be erected for their accommodation. After a few days of unsuccessful search, a Mr. Darling, a noble hearted fellow, who had made our hero's acquaintance, offered to share with him the office he occupied.—This young gentleman was a native of Ohio, and felt proud of her rapidly increasing prosperity and influence. He was gratified to see men of talents and enterprise seeking a home among them. Possessing that native independence and contempt for social distinctions, that still characterizes the *natives* of that section, it mattered little to him whether his friend was the son of a king or a cobbler.

Edward had not long been a resident of C. when a messenger entered the office and handed invitation cards to the young gentlemen.

"A party at Menderhall's!" exclaimed Mr. Darling, in great glee; "you will go, of course."

"I think not," replied Edward.

"Not go! Mrs. Mendenhall gives splendid parties; besides all the beauty and *ton* of our 'out west' city will be there," said Mr. Darling, with a slightly sarcastic emphasis on the word *ton*. Edward still looked dubious, when his friend put a final point to his argument by saying;—"Do you not see it is for your interest to become acquainted with the people where you intend to exercise your profession?"

"Then I must go," said Edward, "for I shall do all I can, that is honorable, to promote my interest, however unpleasant it may be."

"Unpleasant!" echoed his friend, looking keenly in his face as if to satisfy himself of our hero's sanity,—"don't you know that the best remedy in the world for low spirits, is a large party, where you can see so many pretty girls as we have in C.?"

The truth was, that Mr. Darling had been assailed on all sides, by questions respecting the "handsome lawyer," and had promised a dozen young ladies an early introduction.

To enable the reader to compare the customs of the *fashionable* portion of a western "town," with eastern cities, I will invite them to a seat where they can learn all that transpired in Mrs. Mendenhall's parlor on the night of the party.

Arm in arm the two friends entered the well-lighted parlor, paid their respects to the hostess, and passed to join a bevy of young ladies who were engaged in an animated chit-chat. As they moved on, the lively scene, the beauty and gaiety of the company, seemed perfectly enchanting to Mr. Darling; and turning to his friend, expected to read in his expressive eyes a participation of his delight—but to his surprise a deeper shade of sadness than usual sat on his features, for he was in the predicament of the hero of an old ballad—all that was beautiful "but gave him thoughts of his own heart's delight."

"Ah, my dear fellow," said Mr. Darling, "I see how it is with you—Cupid has made you as blind as himself. But come, I must introduce you to Miss Vinton—in her society even a Werter might forget his sorrows."

Our hero became interested in the sensible and animated conversation of Miss V., and beginning to think that even a party might afford some pleasure, when the following dialogue reached his ear:

"Do look, Mary, there are the Bridges girls; who expected to see them here, this evening?—why their father is a blacksmith! They are our near neighbors, and do their own work; I never should think of speaking to them. Mrs. Mendenhall told mama that her company would be very select."

"You know they were at Mrs. Douglas' party," returned Mary, "or Mrs. Mendenhall would not have ventured to invite them, though they are said to be very intelligent girls."

"Well I am sure I did not expect to meet *mechanics' daughters* in society," rejoined Miss Charlotte Twiggs, whose father had just left Baltimore to mend his broken fortune in the west. "Mrs. Eaton told mama that she would find the people half-civilized plebeians, and that we should be obliged to mingle with them if we went into society; but mama thought there were so many genteel people who had become embarrassed at the east, and moved here, that there might be some genteel society; and so there is—but they should be more exclusive."*

As the word *plebeian*, which was spoken with a scornful emphasis, reached Edward's ear, all the events of that evening when he was taunted as being a "base-born plebeian," and banished, all most hopeless, from her who was the sunshine of his soul when all was dark, rose so vividly to his mind, that he could not control his emotion—and abruptly turning, he sought a place near an open window, to recover his almost suspended respiration. Mr. Darling soon missed his friend from Miss Vinton's side, and anxiously glanced through the crowded room in search of him. He found him standing with his arms folded, his countenance indicating painful thought.

"Good evening, Mr. Darling," said Miss Charlotte Twiggs; "why did you not introduce your friend? You promised I should be one of the first to enjoy the honor of an introduction."

"Perhaps," said Mr. Darling, "he would prefer the society of 'mechanics' daughters'"—alluding to Edward's proximity to the Misses Bridges, for Mr. Darling had overheard the remarks of Miss Twiggs.

"Then I presume he is some low fellow himself," she replied, with an angry toss of the head, for she could not fail to perceive her remarks had made an unfavorable impression on his mind.

"If by *low*, you mean that his parents were poor, you are probably correct, for he told me," said Mr. Darling, "that he was indebted to a benevolent friend for his education."

"I suppose," replied Miss Twigas, "that his handsome face, and fine figure, will make his fortune here in the west."

"You should have said, Miss Twiggs, his fine talents, and amiable and gentlemanly deportment;—but if he cannot boast of *patrician blood*, as you call it, posterity will be prouder of his name and fame, or Tom Darling is no prophet," remarked that gentleman with some warmth.

This foolish sensitiveness shall be conquered, thought Edward, as he mentally resolved to become a participator in the scenes around him.

"I am really afraid Mrs. Ben Rose will not be here to-night," said a shrill voice; "I have waited supper half an hour now.—She told Mrs. Twiggs she would come." This was said by the hostess, who was what may be termed one of the vulgar would-be aristocratic women, who value themselves by the amount of dollars and cents their husbands have accumulated in business—who would faint if she should be reminded of their humble beginning. In virtue of her husband's possessions Mrs. Mendenhall sought to be one of the leaders of fashion in C.

"If Mrs. Rose does not come," said the lady addressed, "your parlors are filled with good company."

"But she was at Mrs. Douglas' party," said Mrs. Mandenhall—who had neither tact nor delicacy to conceal from her guests the cause of her anxiety—"yet I have got a good many genteel folks here, that didn't go to Mrs. Douglas' party," casting her eyes around the room with an air of pride. Her eyes turned alternately from the door to a lady to whom Edward had been introduced as Mrs. Douglas. That lady, all unconscious of the envy with which she was regarded by some little minds, was a woman somewhat past the meridian of life, plainly dressed, and at that moment engaged in conversation with one of the Miss Bridges. It was evident from Mrs. Douglas' unaffected simplicity and sweetness of manner, that she was accustomed to those elegant refinements that belong rather to the intellectual, than to the outward surroundings of life. In virtue of that lady's real superiority and her husband's wealth, precedence was usually accorded to her on all occasions, and those who were rather uncertain of their own social position, with commendable tact took her for their model.

Still Mrs. Rose came not. As Edward noticed the elongated visage of his hostess, and was falling into a fit of moralizing on disappointed ambition, Mrs. Rose was announced, and Mrs. Mandenhall, in her haste to welcome her guest, jeopardized the safety of the satin slippers and muslin dresses that happened to be in her vicinity.

Mrs. Rose entered. She was rather a fine looking woman, very gaily dressed; she advanced, leaning on the arm of her husband, who was so plainly apparalled that one might have fancied they had studied contrast at the toilet. Mrs. Mendenhall seated her by the side of a very fashionably dressed lady, and left the room to order supper.

"Good evening, Mrs. Rose," said the lady, in an affected tone, drawing up her capacious mouth to the smallest possible dimensions; "we had almost despaired of seeing you this evening, it is getting so late."

"Late!" echoed the gay lady, in a very loud tone, "I thought it was very early; you know, Mrs. Bell, that in Baltimore we would not be seen at a party till at least three hours later."

The two ladies for some time sustained an animated conversation on the delights of city life, the latest summer fashions, the cost and splendor of the jewels of a certain wealthy lady who was recently married, &c., &c.

"My dear Mrs. Goodwin," said a lady near our here, to one just arrived, "I did not expect you here, as I knew it was the evening of your regular church meeting, and *you* are always so punctual in your attendance."

"I was at church, Mrs. Curry, you may be sure; but as the meeting was dismissed early, and I have been very low spirited of late, I thought I would attend the party.—Company always does me good, but I am never guilty of passing the church door to attend a party, as our good rector says some of his people are in the habit of doing." Mrs. Goodwin then remarked at some length on the proneness of the world to prefer *pleasure* to *piety*. Mrs. Curry was too polite not to *seem* to listen, though in fact her attention was chiefly bestowed on two young Misses near her, who were engaged in a spirited debate about the material of Mrs. Rose's dress, which was composed of an entirely new article for ladies' dresses—so that Edward enjoyed the sole benefit of Mrs. Goodwin's sermon.

## CHARADE.

To find out the city that gave birth to me,
Take the first thing you look at when nothing you see.
And the name of a female whom music's soft strains
Released from the region where Belzebub reigns.
And a chief of Columbia whose deeds shall be blown
By fame's loudest trumpet to worlds yet unknown.
The may-spring of life when love rules o'er the mind,
And rivets those in chains which but death can unbind.
A bird of the forest who shuns the bright day,
And at night, like a thief, skulks abroad for its prey.
A symbol of mercy by Heaven displayed;
And the sign by which Judas his master betrayed.
The initials of these joined in order, will tell
The place of my birth, if I rightly can spell,—
Where commerce unrivalled extends its broad hands,
And liberty's temple exultingly stands.

Seneca Falls, N. Y. J. E. CRANE.

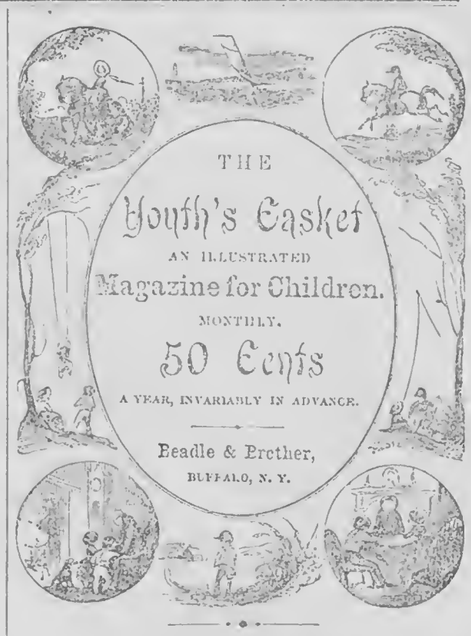
## ANSWER TO ENIGMA, &c., IN NO. 16.

Answer to Miscellaneous Enigma—*The marriage of the Empress Napoleon.*

Answer to Poetic Question—The age of the person is thirty-eight, and the number is five.

Answer to Puzzle—*Strange.*



AGENTS WANTED!

THE CASKET is now fairly established, and the success of the enterprise beyond doubt, which enables the publishers to enter with renewed vigor into measures for extending its circulation. We feel very thankful for the many flattering compliments which we are daily receiving from private letters and the press, all of which agree in pronouncing the Casket the

Cheapest Juvenile Magazine in the World.

And that all our little friends, that every boy and girl may have the pleasure of perusing our magazine, we want *Ten Thousand Agents* to canvass for, and circulate the Casket, in every school-district, town and county, in the United States and Canadas, to whom a liberal percentage will be given. Specimen numbers furnished *gratis* on application. Send for one number and circulate it among the *little folks*, and you will confer a greater blessing than distributing gold and silver. Try it.

Address, *post-paid*, BEADLE & BROTHER,
*Buffalo, N. Y.*

PROF. BROWN'S NEW STORE,
With New Goods, and Enlarged Accommodations

CITIZENS OF ROCHESTER and Surrounding Country:—Grateful for past favors, I hope for a continuance and increase of the same. The front part of the store is exclusively for the sale of Goods; the rear for Shaving and Hair Cutting; the basement is a private room, divided into two, for the purpose of Coloring the Human Hair.

GENTLEMEN'S FURNISHING GOODS.—Every article in this line. Collars of the latest make, and a larger stock than can be found elsewhere in this city.

HAIR WORK of every kind—the largest assortment made from the best materials, and shall be sold at the lowest prices. Perfumery, of my own and foreign make. Hair Oils that cannot be excelled. Brown's Antispassis and Hair Restorative, a well known article. Brown's Liquid Hair Dye, the best in the world.

A variety of Useful and Ornamental Articles too numerous to mention, at retail, but which I respectfully invite the public to examine.

FISHING TACKLE.—Sportsmen, call and see.

TO LADIES.—A lady will be in attendance in the front Store.

☞ Eight Chairs are kept in this establishment, giving that number of persons a chance to be shaved at once—Nine persons are employed, showing the popularity and success of the proprietor. PROF. BROWN,
[129-tf] No. 26 Buffalo St., Rochester, N. Y.

ROCHESTER STEREOTYPE FOUNDRY.

THE undersigned would respectfully inform the public—and especially book and periodical publishers, authors, &c.—that he has established a STEREOTYPE FOUNDRY in Rochester. His establishment is furnished with every facility for Stereotyping, in the best manner. Books, Pamphlets, Periodicals, Cuts of all kinds, (including figures of animals, implements, etc.) Patent Medicine Advertisements, &c., &c. Plates blocked in a superior style on mahogany. All work executed with promptness and on reasonable terms, and equal in style and finish to that done at any other Foundry in the country.

An establishment of this kind has long been a desideratum in this city, and now that one is in operation, it is hoped a liberal share of patronage will be awarded to the enterprise.

☞ Foundry in Talman Block, Buffalo street. All orders from a distance may be addressed to

J. W. BROWN,
April, 1852. [122-1am-tf] Rochester, N. Y.
N. B.—Old type taken in exchange for work.

Erection of Lightning Rods.

L. P. BERTHRONG & Co., offer their services to the public for this work. They assure their patrons that the work shall be carefully and faithfully done. The patronage already received demands their gratitude, and shall be fully merited in future. They will put up rods both in city and country. Orders may be left at 55 South Fitzhugh St., or at J. B. Dewey's Store, 61 Buffalo St.

L. P. BERTHRONG & Co.
Rochester, July 13, 1852. 133-tf

MONEY TO LOAN on Bond and Mortgage, on improved farms. L. A. WARD,
[169m6.] 36 State St., Rochester, N. Y.

MOORE'S RURAL NEW-YORKER:
A WEEKLY HOME JOURNAL,
For both Country and Town Residents.

PUBLICATION OFFICE,
BURNS' BLOCK, CORNER STATE AND BUFFALO STS.,
ROCHESTER, N. Y.

TERMS, IN ADVANCE:

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

Terms of Advertising

ONE DOLLAR per square (ten lines—100 words, or less,) for each insertion,—*in advance*. ☞ The circulation of the NEW-YORKER is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

THE WOOL GROWER AND STOCK REGISTER.

THIS is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals*. It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the WOOL and CATTLE MARKETS, and much other *useful* and *reliable* information which can be obtained from no other source. The Fourth Volume commenced in July last.

TERMS:—FIFTY CENTS A YEAR; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

MOORE'S
# RURAL NEW-YORKER.

VOLUME IV. NO. 18. ROCHESTER, N. Y.—SATURDAY, APRIL 30, 1853. WHOLE NO. 174.

MOORE'S RURAL NEW-YORKER:
A QUARTO WEEKLY
Agricultural, Literary and Family Newspaper

CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page.

### Progress and Improvement.

### CULTIVATION OF CORN.

THE cultivation of Indian corn is of growing importance. The increased demand for exportation, its valuable qualities as food for both man and beast, the large crops obtained under good cultivation, and consequently the profit arising therefrom, render it one of the favorite crops of the American husbandman. It is in our system of agriculture, what, perhaps, the turnip is to the Englishman's, both renovators and improvers of the soil, and hence, improvers of the herds and flocks, and their masters.

We have recently read an Essay on the cultivation of this crop, for which the first premium of the Michigan State Agricultural Society was awarded to J. F. CHUBB, Esq., one of the most successful agriculturists of Kent county, Michigan. Mr. CHUBB writes from actual experience, and that of many years standing; hence his views are the more to be relied on, as they are amply sustained by his works and the fruits thereof. Thinking the essay contains much of interest to all producers of this cereal, we propose to condense therefrom, for the benefit of the RURAL-ists.

Mr. CHUBB, says: "Although there is a greater certainty attending its production, than that of almost any other kind of grain crop, and although it will adapt itself to almost any sort of soil, both as to kind and quality, yet there are two important requisites to its *profitable* cultivation. The first is a soil adapted to its growth—the second, that the crop be well fed and cultivated.—The soil, then, should be rather light and dry, made rich with manure, if not naturally so, for, although it *will grow* on land rather poor, it nevertheless is an enormous feeder. Ordinarially it costs as little, if not less, to cultivate a good crop with suitable land properly cultivated, as it does a poor crop, under other circumstances. Thus, the man who gets 32 bushels per acre, reckoning it at 37½ cents a bushel, and the cost of cultivation and use of land at $12 per acre, (which it need not exceed,) barely gets a compensation for his labor and pay for the use of his land. Whatever, then, the product falls short of this, is an absolute loss, and whatever it may exceed, is a nett gain. Suppose then, one man gets only 25 bushels per acre, (which is too often the case,) he loses upon this estimate $11,88, upon a field of five acres; while he who raises 80 bushels per acre, (as any one may and ought to do,) realizes a nett profit of $90, or a clear profit of $18 per acre."

The soil, then, should be light and dry, which embraces those denominated sandy, gravelly, and loamy. Corn will not succeed well on wet or stiff soils. The roots extend to a great depth, and the soil must be loose to admit of their free extension. The manure used, may be of almost any kind, such as barn-yard and stable dung, plaster of Paris (sulphate of lime,) and ashes. The first two should be applied plentifully, and thoroughly mixed with the soil. The latter are usually applied as a top dressing to the crop when first up. Long, unfermented manure is to be preferred. It decomposes as the wants of the plant require, while its mechanical operation in rendering the soil light and porous, is beneficial to the crop. But this may have its exceptions on very light sandy soils, naturally inclined to be too light and dry. A farther argument in favor of unfermented manure, is that while it continues to afford fresh nutriment to the roots of the corn, till it has matured, it is in its place to benefit the succeeding crop, and is nearly as beneficial to it as if permitted to remain in the open yard. Mr. CHUBB applies with the best of success, as a top dressing, a compound of one part plaster, one of slaked lime, and two parts of good ashes, at the rate of a half gill to the hill, immediately after the corn is above the ground, or sufficiently so to follow the rows readily. The *time* when applied is not of so much importance to the growth of the crops as either of the ingredients. The best preparation for corn, he considers, is a greensward of clover or grass, well covered with long manure, neatly plowed to the depth of ten inches, and completely turned under.—He finds the best plow for this purpose, to be the double plow, the forward one cutting and inverting the turf, while the hinder one throws up the under soil and completely covers the turf with a loose and light surface of clean earth. After the plowing, a roller is passed over and followed by a harrow lengthwise of the furrows. The time for the performance of these operations must depend upon the nature of the soil.—If clay, it is advantageously done in the fall, but he prefers the spring generally, and as near the time of planting as convenient.—The harrowing, at least, should immediately precede the planting. If preceded by a tilled crop, he prefers furrowing the rows three inches deep, and for the smaller kinds 3½ feet apart. On a sod ground, the rows to be marked superficially and the corn planted at or near the surface. The rows should be carefully made straight, both ways, for on this depends much of the facility and ease, as well as the cheapness of the after culture. The old proverb of more hills growing in a crooked row should be entirely discarded.

The time of planting will vary in different districts, and in different years, in the same district. The ground must be sufficiently warm and dry to insure a speedy germination. Natural vegetation affords the surest "signs." An old rule is,

> "When oaks look grey,
> Then plant away."

Another sure guide is, when the apple bursts its blossom buds, which is from the 15th to the 25th of May. Any time in May will usually succeed, as the early varieties require but 90 to 100 days to mature from the seed. Reference must be had to the soil and latitude, in selecting the kind of seed—the small eight-rowed varieties being preferable on the heavier soils, or in frosty locations. Under other circumstances many prefer the larger and later varieties, as the Dent corn. Mr. CHUBB has himself been most successful, with what he terms the "red blaze white corn," which is an early, eight-rowed flint variety, small in growth of stalks, but under proper tillage and on proper soil, readily yielding from 75 to 100 bushels.—These have been his usual yields for a number of years.

In contrast, the writer adduces his crop of the previous year, a field of ten acres, planted on clover sod, and which, under his own management, yielded a return of 80 bushels to the acre. The field has been in cultivation 12 years without manure, but in grass a part of the time. But one crop of corn had been raised on it before, and that was planted "on shares," the plowing (poorly done,) but four inches deep, and indifferently hoed and cultivated. The cultivation was actually more expensive than on his crop the previous year, and yet the yield was but 25 bushels. A striking contrast, surely, between thorough tillage and that done only at halves.

Mr. CHUBB has tried various preparations for his seed, but has discarded them all, except that of tar, when he wishes to prevent the depredations of squirrels and birds.—The various processes, unless very skillfully done, are so apt to injure the vitality of the seed, that in his opinion more is lost than is gained, especially if the soil be in the right condition for the reception of the seed.—The cheapest method is in hills rowed straight each way, which admits of cultivating with horse power each way, thus saving nearly all hand hoeing. Enough should be planted in each hill to insure four stalks, to which number each hill should be reduced at the hoeing. The after culture is to keep the earth light and loose, and entirely free from weeds,—no hilling up, but open and smooth. In this matter, time must be taken by the forelock, and the cultivator kept passing through as often as necessary, to effect the objects just mentioned. The preparation of lime, ashes, and plaster, he has found to be very serviceable in checking the labors of the cut worm.

His plan of harvesting, is that of cutting close up by the roots, as soon as the ear is fairly glazed. But of his method and that of saving his seed, in which he has been very successful, and by which he has also increased its productiveness, we may hereafter speak when it shall be more in season.

### "TIRED OF FARMING."

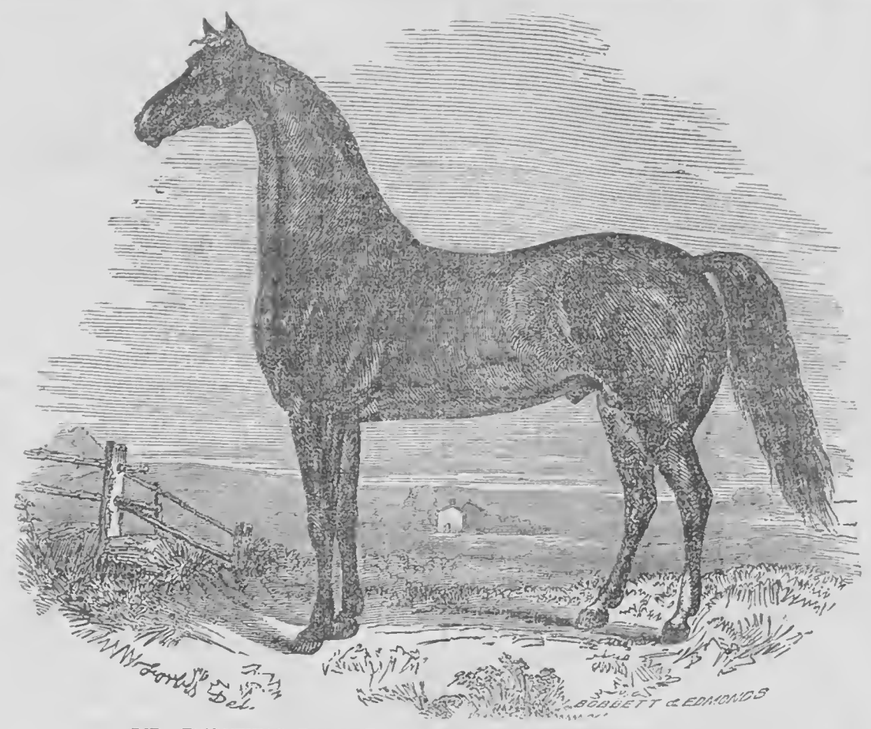
A FEW months ago, a man who had been a farmer from his early life, came to the city to buy stoves to sell again.—Said he to the stove-dealer, "the weevil begins to infest the wheat, and all things considered, I am 'tired of farming,' and so have sold my farm." The stove dealer remarked, that he thought within himself, that just as like as not the discontented farmer would find a weevil in the heart of the new business—and so it proved, for when the day arrived on which the note matured, given for the stoves, the old farmer, now turned tradesman, confessed that he had not been able to sell his stoves—that he had most of them on hand.

"Tired of farming," the most independent business a man can engage in, because, forsooth, there are disappointments, and perplexities, and trials, and vexations, attending it. Remember, you who are tillers of the soil, that your cares and troubles and anxieties are few and far between, compared with those suffered by commercial men.—If your chances to become rich are not so inviting and profitable, as those of the tradesman, bear in mind that the dangers of being very poor and destitute are far less. Famine and abject poverty seldom overtake the farmer, or haunt him in their ghostly visits. He lives on the high table-land of promise, rising far above the murky region of want and destitution. His children can say there is bread enough in our father's house, and a piece to spare to the hungry of other less fortunate callings.

"Tired of farming!" Supposing you are. What is to be done in such a case? Do you expect to find an employment without trials and perplexities? If so, you are doomed to disappointment. There is no vocation in this world that will exempt those who engage therein, from cares and fears and vexations. So if you are tired of farming, the best way is to get rested just as soon as you can, and prosecute anew the business for which you were early trained, and which, if diligently followed, will yield a good supply of all the necessaries and comforts of life, together with opportunities for mental and moral culture.—W.

PLOWING.—There is a marked difference in the work of different plows, as regards the state in which the inverted soil is left by them; whether light and porous, or compact and heavy, whether fitted for the seed, or needing much harrowing to prepare it. A plow that not only turns over the soil, but which in so doing cracks and disturbs nearly all portions of the same, evidently does the best and most thorough work. One which turns *lapped* furrows, does this, also, better than one which turns a flat, smooth furrow.

HE who encourages young men in the pursuit of agriculture is doing a good work for the morals of society a hundred years hence.



MR. BURNET'S IMPORTED STALLION, "CONSTERNATION."

### BLOOD HORSES.

WE republish this portrait in order to give a valuable article accompanying it in the Wool Grower and Stock Register for April. Besides, many thousand new readers have been added since its former appearance:

ABOVE we give the portrait of Consternation,—a splendid blood horse, owned by J. B. BURNET, of Syracuse, N. Y. Consternation was imported from England in 1845, at the age of four years; and claims in the line of his immediate ancestry, Sir Peter Teazel, High Flyer, King Herod, Flying Childers, and English Eclipse—the most celebrated and splendid horses that ever trode the English turf. In color, he is a beautiful dappled brown; in height, 15 hands 3 inches; is strong, stout, full built, and exhibits in his form the rare combination of the fineness and finish of the English blood horse, with the size, bone and muscle needed in the horse of all work. He is perfectly genteel, correct and graceful in all his movements, and fleet in all his gaits—walking at the rate of nearly five miles the hour.

We have presented him in this No., unsolicited, and without the knowledge of his proprietor, in order to recommend to the farmer who intends to raise colts, a resort to the high bred, and pure blood horse.

It is altogether a mistaken policy, for the farmer to resort to the half blood and medium quality horse, because of the comparatively low price charged for service. A resort to the blood horse, at an extra charge of five or ten dollars, will be just as likely to produce a colt worth, at four years old, one hundred and fifty dollars, as a resort to the part blood horse at a reduced price would be, to produce a colt worth $75, at the same age.—Now every item of expense, during the whole term of four years would be the same, except the small extra charge in the beginning.

The objection often made by farmers to the English and American race horses, that they have been bred for fleetness and not for work, and are consequently too light and slender, cannot be sustained in the present case. His sire and dam were large and powerful: and his own weight is 1,200 lbs. Beauty of form, vigor of constitution, with power, speed and endurance, when united in one horse, justly entitle him to the reputation of perfection in his kind. Except that the artist may have given him a greater length of neck than the original would justify, we know of no horse, in whom these traits are blended in a higher degree, than the one of whom we are speaking.—His colts will be superior; and from mares of good size will make splendid matched horses, of high value for carriage horses for the city markets. For this purpose they should be reared, however promising they may be, and not to be reserved as stallions. The product of a horse and mare, both half blood, will be as likely to be characterized by the imperfections of their dams, as by the excellencies of their sire, and perhaps more so. Half blood and three-fourth blood fillies bred to the full blood horse, may be expected to draw largely upon the valuable characteristics of the full blood sire.

It is a great error in the practice of common farmers, to neglect their colts the first winter.—They are often required to shirk in the open yards, with young cattle, on coarse and insufficient food. They are thus injured in size, in form, in the proper development of their just proportions, and never reach the mark to which they would attain, were they housed, and well attended and well fed. The greatest care should be taken of them the first winter, as their entire character afterwards will be affected thereby. They should not be suffered to eat from the ground, but should stand at the rack, thus inducing an habitual and proper elevation of the head and neck.

Every farmer should have one, if not a pair, of likely brood mares. Fine horses are valuable and will ever be so. A brood mare if prudently managed, can work nearly the whole year, and thus be a double source of profit to the owner.

In our next number we propose to speak of the beautiful and finished Morgans, as pleasure horses and roadsters.

### LIQUID MANURES.

APPENDIX TO MR. REDPATH'S ESSAY.

FRIEND MOORE:—In answer to yours of the 22d ultimo, regarding an explanation of the calculations in the report given of Mr. BELL'S farm, on page 87, of the RURAL, I have to premise that an error occurs in the printed copy which I transmitted to you.—The paragraph, when corrected, would be as follows:

"On the other hand, two acres of Italian rye grass, cut and manured six times, will support 10 cows, whose produce at £4 each, will be £40. But deduct from this the following expenses.

| | |
|---|---|
| 1. Cost of 16 cwt. of guano, | £7 12 0 |
| 2. Cutting grass for 10 cows daily, at 1s. 6d, | 13 10 0 |
| 3. Interest on capital at 7½ per cent., | 4 0 0 |
| Expenses on two acres, | 25 2 0 |
| Produce as above, | 40 0 0 |
| Profit on two acres, | £14 18 0 |

But this is not all. Some account must be had of the solid manure of the cows, which the field gets when pastured on, and which by Mr. BELL'S arrangements are appropriated to other crops. The value of this solid manure Mr. BELL estimates at 7s. to 8s. for each cow during six months, which seems a very moderate estimate, and if it be taken, the return per acre under the former system, would be only £1 16s. 6d., whilst under the system of irrigation and piping, it would be £8 7s. 9d., showing a profit of £6 11s. 3d. per acre."

Your correspondent, Mr. R. of Va., misunderstands the matter, by taking undiluted for diluted manure. The matter, as it appears to me, stands thus:

| | gallons. |
|---|---|
| Five cows give in 6 months (150X5) 2,250 gallons pure liquid, which when diluted, | 10,000 |
| Guano, diluted in water at the rate of 3,000 gallons per cwt., will give for each acre (3,000X16) | 48,000 |
| But as the experiment is made on 2 acres, therefore this must be doubled, | 48,000 |
| Total of liquid, as per report, required for manuring the 2 acres, | 106,000 |

Now let us see how this agrees with a former part of the report where it is said, that, "after each cutting the manure is poured over the ground at the rate of 3,000 gallons per acre, diluted with three or four times its quantity in water. 3,000×3=9,000 gallons diluted, which multiplied by six, the number of cuttings=108,000, which is near enough for all practical purposes, and agrees pretty nearly with the required total as given above.

Again, it is said, "There are six cuttings of the grass, and six manurings, and that 6,000 gallons are required in the course of the season. These 6,000 gallons, it is evident, are the required amount after each cutting, in an undiluted state, for the manuring of the experimental two acres.—Thus: 6,000 gallons multiplied by 3, as the rate of solution=18,000: gallons and multiplied by 6, the number of the waterings—108,000 gallons, as given above. It will be observed, therefore, that Mr. BELL gives 9,000 gallons of diluted manure, (or at the rate of 3,000 in the undiluted state,) to each acre of grass, after every cutting. This may appear, to many, an extraordinary drenching, but it will be seen by the following reports, (which we will give in a future number,) that Mr. TELFER, of Canning Park, irrigates his lands to the extent of 20,000 gallons per acre, after every cutting.

I may say, in conclusion, that there appears to be a discrepancy, however, in the account of the profits arising from the system. It will be observed that while in the body of the report 16 cwt. of guano are allowed, per acre, for solution, in the cash account only 16 cwt. are allowed for the two acres. This error is both in the misprinted and corrected copy.

Guano sells in Great Britain, from about nine to ten pounds sterling, per ton.—Trusting that these explanations may prove satisfactory to yourself, and also your correspondent, I am, &c.,

N. DAVIDSON REDPATH.

Allegan, Co., Mich., 11th April, 1853.

P. S. In page 87, the following error occurs. An English acre=6,860 square yards, instead of 4,840 square yards. In page 94: "In some places of Scotland, where dung is ever plentiful; read *even* plentiful. Also, page 94—"In July, as Columela relates," read In *Italy*, &c.

### BLACK SMUT.—("PEPPER BRAND.")

MR. EDITOR:—Two years ago last June, while on a visit to a friend in Michigan, I saw in his wheat fields, an unusual quantity of what is here called "Black smut." It appeared to be the same which, in England, is called "Pepper brand." In this country it is frequently seen in considerable quantities among oats, barley, and wheat.—Neither grain nor chaff is, however, found on the heads—indeed, nothing but the upright crooked stems, to which small parcels of black dust adhere, about the places where the chaff and grain grow on the perfect heads. This black dust, in a few days after it is formed, is blown away by the wind, or washed off by the rain.

The unusual quantity among my friend's wheat, induced me to go into the fields to examine it; on doing so, I was very much surprised to find many heads, which were *in part smutted*, (say about *one half*, more or less, however,) and the other part containing *good, sound*, and *well "filled out"* grains of wheat. And what was still more surprising, was that in all cases which came under my observation, the *lower part of the head was smutted*, and the smut nearly all blown or washed off, leaving the naked stems, supporting the *upper* part of the head, well set with chaff and good grains of the ordinary size.

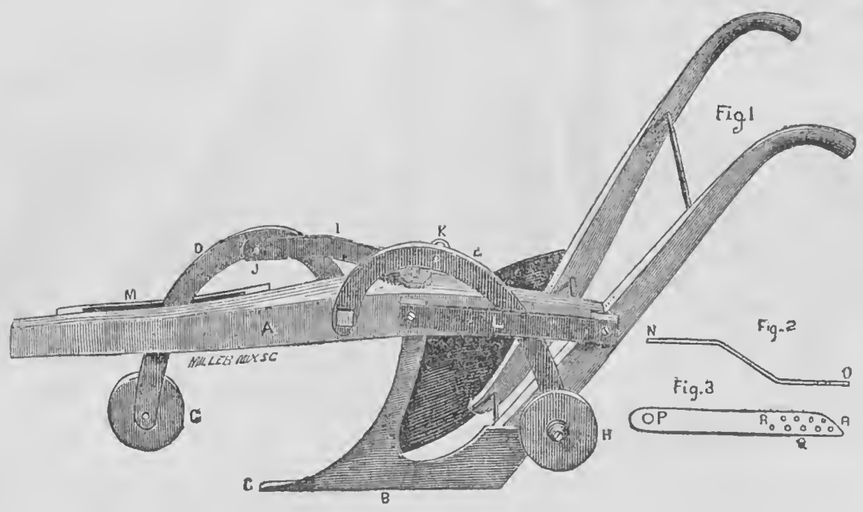
For more than *forty* years I have been observant of all the various kinds of smut found among oats, barley, wheat, and many of the grasses common in this country—and, almost every year, have made critical examinations, observations, and experiments for the purpose of ascertaining the causes which produced them. But I never before saw heads of any kind of grain, or grass, one part of which contained this kind of "black smut," and the other part bearing good seed. Nor have I ever seen a case of this particular description, excepting in the State of Michigan. I have never known it to do any positive injury to the grain among which it was found—though it necessarily caused the loss of as much of the crop as was thus smutted. That loss, however, is sometimes very considerable: as was the case with a field of "*skinless oats*," which came under my observation some years since, in which there was a loss of very nearly, if not quite, *one half of the whole crop*.

As this kind of blight, or smut, has appeared within a few years past, in much greater quantities than formerly, it may be well to endeavor to ascertain the *cause*, that we may be prepared to apply a preventive remedy, if one can be discovered.

Can any one give information in regard to it? If so, and he can give *reliable* information, (and in that case only, for incorrect information is worse than none at all.) I shall be much pleased to hear from him.

'HIEL.

REMEMBER, when the team is in the field and your hands upon the plow, that light furrows empty the pocket also. Put the plow deep down, and see what golden fruit will result.



SPRAGUE'S PLOW REGULATOR.

THE above engraving represents a new and improved Plow Regulator, recently patented by Mr. HARVEY SPRAGUE, of Riga, N. Y. The regulation of the depth of the furrow, and the steadying and carrying the weight and easing the draught of the plow, are objects of this invention. These are accomplished by attaching to the plow-beam, by means of arms, two wheels, one working on each side of the beam and rolling on the sod—the one before the point of the plow and the other at the back end of the landside. The arms are arch-shaped, and one end of each is attached by a bolt or axle to the plow-beam and connected by a regulating bar, forming a single arch or bow with a wheel at each end.

The action of the Regulator will be understood by reference to the cut. Fig. 1 is a prospective view of a plow with the Regulator ready for use. D, shows the front, and E, the back arm, F, the axle or bolt, and I, the regulating bar. Figs. 2 and 3 are separate views of the same, showing its form and the means of regulating, by shortening or lengthening the same, the depth of the furrow. By lengthening the arch also, the point of the plow may be raised entirely above the surface of the ground, when it is desired to move it from one field to another.

Several farmers who have used the Regulator, unite in the recommendation given in our advertising columns, to which we would refer the reader.

## CONDENSED CORRESPONDENCE.

### Culture of Corn.

MR. MOORE:—I once commenced working a farm, portions of which were said to be so badly worn that it would hardly pay culture. A small field of this abused land lay near the barn, so that I could conveniently move the manure to it; accordingly after the ground was settled and sufficiently dry in the spring, I cleared my barn yard of all its contents, rotted and unrotted, and placed it upon that small piece of ground, leaving it in heaps until I was ready to plow,—then I spread, as I wanted to plow, a little at a time, so that there should be no waste by evaporation, keeping a hand to fill the furrows with such parts of the manure as would not plow under without, as often as the team passed. This placed the manure evenly over the ground, at the same time taking care that no part of the straw should be seen on the top or between the furrows. I plowed the ground from eight to ten inches deep, a considerable depth below where it had been plowed before, and then rolled and harrowed thoroughly. I planted in rows but one way, north and south, hills in the row from 18 inches to two feet apart, with about three and four kernels of corn in the hill. It was but little trouble to keep it free from weeds, which I did, and the result was I had as fine a crop of corn as any man could reasonably ask, besides a very fine lot of potatoes and a large amount of pumpkins. I cannot give you the precise number of bushels, but I can say I do not remember ever to have seen more produce raised from three acres and three quarters of ground. I have often thought while passing some farms and seeing a large amount of straw and manure in the yard, that I would like to have the managing of them a little time—long enough, at least, to raise a crop of corn.—J. SIBLEY, *Ransomville, N. Y.*, April 13th, 1853.

### South-Western Wisconsin.

MR. EDITOR:—I send you a few notes on Wisconsin, which, if worth the trouble, you can prepare for publication and give to your readers. In richness of soil, as a general feature, the State is unsurpassed by any part of the North-west. The mild and salubrious climate, and pleasant air and prospect, speak of people "coming to the West," as it is called, and returning dissatisfied.—But many of these, as soon as they landed on the shores of the Badger State, got into a stage-coach, shut the doors and rode thro' a portion of the country, perhaps, that was heavily timbered, and with bad roads. In this way they took a circuit of one or two hundred miles, going in a north and west direction, and seeing or hearing nothing very encouraging in the way of getting a farm already under any sort of cultivation; and in many cases doing this, late in the season, when hurried by the necessity of return.

I would just say what is in my opinion a better way. Let them, after leaving the Lake, take a trip in other directions and they will become better satisfied. Let those contemplating a visit come in the early part of the season, that they may have time and opportunity for viewing the growth of crops. &c., for themselves, and not be carried away by foreign ideas.

The prairies are generally surrounded by burr-oak openings. These openings have a rich soil, but of a different nature from the prairies, and yield well. When the country has attained sufficient age, no one can doubt that it will prove a rich one.—Parts of the State which but a short time since were the range of the wild deer, are now producing the best of crops, and even now the plow of the farmer obliterates some deserted Indian trail, and we shall soon be in the heart of the country. The prairies are already nearly prepared for making beautiful farms, having but little comparatively to be done in the way of clearing and commencement.

Handsome locust groves are springing up in many places on the prairies, adding much to the value of the land and beauty of the scenery. The wild grass, growing so luxuriantly is killed in autumn by the frost, and is then burned over very readily, presenting a strange and majestic spectacle. Such an one I witnessed a few days ago, when the flames gained twenty rods upon two men, under full run, while going about eighty rods. But the country is coming rapidly into cultivation, and the day of such scenes will soon be over.—J. S. BLISS, *Door Creek, Wis.*

### The Basket Willow.—Prices, &c.

EDS. RURAL:—In No. 166 of the RURAL, ROBT. CRIBB, of Racine, Wis., inquires the price of basket willow, &c.

The Ozier or Basket Willow, brought from France and Germany, is sold at from $100 to $120 per ton. It is estimated that at least four millions of dollars worth of willow is imported into the United States, annually, and this quantity falls short of the demand. For further particulars, Mr. C. is referred to WATSON G. HAYNES, of Garrison's Landing, Putnam Co., N. Y., who is familiar with its growth and culture, both in this country and in Europe.—A. R. BALL, *North Clarkson*, April 12, 1853.

P. S.—The Basket Willow can without doubt be cultivated in this country, as well as in Europe. I wonder it has not attracted the attention of capitalists before this time; one hundred per cent can be realized in producing it for market.—A. R. B.

### Care of Harness.—Cordevan Leather.

EDS. RURAL:—I never wrote a word for publication in my life, but would now offer a few remarks for your paper. In No. 15 of the RURAL, I saw an extract from the "Zanesville Aurora," on the treatment of carriage harness. To pour boiling suds on leather, and let it remain in it, would *destroy it*—to say the least, would damage it very much. *Warm* soap suds would be very beneficial to cleanse, but never to boil; milk-warm will answer; as warm as you can bare the hand in, will do no harm. Never dry harness in the sun, nor begin to oil until nearly dry. I was brought up in the manufacture of leather, and think my experience is worth something. Place your own estimate upon it.

Now, I want to state what I know by experience, about harness leather, and this every tanner will acknowledge to be a fact. Farmers should select their own leather, or rather order it finished in the way called by tanners, "cordevan." A set of harness made from leather finished in this way, is worth from $5 to $8 more, to the owner.—The grain of leather has but little or no strength—the blacking used is made of vinegar and iron rust; this completely destroys the strength of the leather. Hence, every observer will see, that almost every new harness will crack and be rough like a rasp, before it has been used a year. This kind of blacking is the only kind that will take on the grain of leather. To obviate this, the grain is removed, and thus the leather will receive oil blacking, and this makes the leather more pliable and soft, and it will never crack. The reason why this kind of leather is never in market, is because farmers are ignorant about it, hence there is no call for it. All there is in favor of the old method of blacking is, it can be finished with a little more gloss, but all that shines is not gold. Let farmers be apprised of the fact, and there will be a call for the leather called "Cordevan." As I have no connection in any way, nor have had, for the last twenty years, in the manufacturing of leather, will say, if my brother farmer would get one set of harness, and wear it out, made from leather as above described, he would award truth to my statement, and order another set as soon as that first was worn out or before.—H., *Le Roy. N. Y.*, April, 1853.

### Shanghai—How Spelled.

EDS. RURAL:—A correspondent of the Boston Atlas inquires how he shall pronounce the name, so often spelled Shanghae. He has pronounced it Shang-ha, and has been laughed at, the Boston pronunciation being Shang-hi. There is no such place in China as Shanghae. The Southern Cultivator assumes the question, that the word should be pronounced Shang-high; accenting the first syllable strongly. It does this on the authority of a highly educated and intelligent gentleman of the clerical profession, who spent several years among the Celestials, was familiar with the Chinese language, and one of the first to introduce among us, the large fowls now so well known by the name we have affixed to this article.—D.

### The Osage Orange.

MR. MOORE:—Please find enclosed a dozen Osage Orange seeds. I was surprised to see it spoken of as a tropical plant, by one of your correspondents, in a late No.

The "Osaga Orange," *Maclura aurantiea*, is a native of the banks of the Arkansas river and its tributaries, as far north as Ft. Gibson. It is a large and beautiful tree, and the wood being very hard and elastic, is universally used by the Osages as the material for their bows, whence its common name here of "Bois de arc," or Bow-wood. It is said to make good furniture, and some persons in this Nation are manufacturing large numbers of canes from it, for the New York market.

Its fruit, when ripe, is of a greenish yellow color, and the size of a large orange.—It is very acid, and contains from five to one hundred and fifty seeds. The Orange is eaten by swine, horses, cattle, &c.

Though our winters are much shorter than in New York, the thermometer frequently falls to 0, and sometimes ten degrees below 0. Sufficient proof I should suppose, that the Genesee Valley is not too cold to permit its cultivation. Whether it can endure the spring months of your climate is more doubtful, and of course can only be ascertained by a fair trial with seeds from northern localities, and not from the "tropics."—W. S. ROBERTSON, *Creek Nation*, April, 1853.

WE shall be glad to hear from Mr. R. on other subjects.—EDS.

## THE AGRICULTURAL PRESS.

### Suggestions to Advertisers—Prices.

"H. S." in the *Albany Cultivator* speaks as follows on this subject:

I wish to suggest the propriety of always stating some price, to those who are in the habit of advertising property for sale. More than three-fourths of the money paid for advertising is a total loss to the advertiser, for this reason, besides failing in accomplishing the ends for which it is designed. It is annoying to take up a paper and read an advertisement of a beautiful farm somewhere for sale, without a price annexed. A would-be purchaser knows not whether it will come within his means or not, or whether it is worth as much money as he would like to invest in real estate. Nor can he know, without writing through the mail, and paying postage both ways, perhaps, and few will take the trouble to do that, and the affair is soon forgotten. The same rule holds good with implements and machinery.

I once knew three farms advertised in a monthly New York paper, and the price carefully stated. Before another month came round, every one of them had been sold for cash at the advertised price.

### Farming and Sheep Husbandry in Ohio.

THE following extract of a letter from Hon. J S. COPELAND, of Marion, Ohio, to the Boston Cultivator, is similar to many communications we have received of late from the same State:

"Our next clip of wool has all been purchased at 40 to 65 cents. We have over four million of sheep in the State, and the clip will bring in 6 to 7 million dollars. All our staple articles—hogs cattle, sheep, horses, wool, corn, wheat, flour' grass-seed, dairy products, &c., are selling at excellent profits. These, with the present and increasing facilities of transportation, have given a rise to the price of land, yet they are low enough. Good corn and grass lands can be had for $15 to 20 per acre, and *one* year's fair crop in corn will at present prices—40 cents—pay for the purchase and expense of raising the crop. In sheep husbandry, the keep of ten sheep is equal to the keep of one cow—this is $6,50 to 7,00 a year.—Ten sheep will average 3¼ lbs of wool each, or 32½ lbs., at 50 cents is $16,25—less $7,00 for keep, (equal to a profit of 100 per cent. The increase in numbers pays all care, washing, shearing, and interest invested. Lambs, pigs, calves, &c., are now receiving as much care and attention as the *children* formerly had."

### Improvement in Dairy Stock.

THE Report of the Executive Committee of the New York State Agricultural Society for 1852, gives an encouraging account of the average increase per cow in butter and cheese, in the dairies of the State. We quote the following passage on the subject:

"Our dairies have not only increased in the quantity of butter and cheese but in quality also; and what is most encouraging, while the increase in quantity of butter has been 264,361 pounds, and of cheese 12,991,437 pounds, the number of milch cows since the last State census has decreased 68,066—showing most clearly that the efforts of the Society in elevating the standard of our dairy products and in improving the character of our dairy animals, have been most gratifying. The average yield of cheese per cow, as estimated in 1845 was 110 lbs. each, and the yield in 1850, adopting the same standard of estimate, gives a fraction over 160 pounds each, showing an increase per cow at the average prices at which cheese was probably sold by the farmers, 6 cents, of about $37,50 each, amounting to $1,162,962 for the whole number of cows in the State employed in the cheese dairies alone. From the statement of one of the competitors, Mr. Albert G. Ford, a dairy farmer of Herkimer County, which will be found in the Transactions of 1851, it will be seen that his yield of cheese per cow has averaged for the last three years, upwards of 600 pounds."

### How to Judge Cattle.

"IN all domestic animals, the skin or hide forms one of the best means by which to estimate their fattening properties. In the handle of oxen, if the hide be soft and silky, it affords a proof of tendency to take meat. A beast having a perfect touch will have a thick loose skin, floating, as it were, on a layer of soft fat, yielding to the slightest pressure, and springing back towards the finger like a piece of soft leather. Such a skin will usually be covered with an abundance of soft glossy hair, feeling like a bed of moss, and hence it is ever termed a mossy skin. But a thick-set, hard, short hair, always handles hard, and indicates a hard feeder."

There is a deal of valuable information embraced in the above short extract. The handling of animals, we have always considered a most important point in selecting a good feeder, and it is too much neglected. Nothing but practice will enable one to understand the difference in this particular. We have heard capital judges say, they would prefer to buy an animal with their eyes shut, if they were allowed to handle an animal, rather than to judge by appearance only, without handling.—*Pa. Farm Journal.*

HORN AIL.—*Symptoms and Remedy.*—Mr, J. DAMON, writing to the Mass. Ploughman, says:—"When a creature is taken with the horn ail, the nose will be dry, the eyes dull, and the horns cold; the bowels irregular, according to the state of the disease. The malady is said to begin at the end of the tail. Cattle whose tails are kept well cut, are not liable to the horn ail. For a remedy, get half a pound of saltpetre; give the creature one or two oz. at a time, every other day, pounded fine and put in provender, if the creature will eat it; if not, dissolve it in warm water, put it in a junk bottle and turn it down the neck. Bore a hole in the horn with a gimlet to let in the air. The creature with proper care will soon be well; I have tried this course for years with success."

### Various Items.

AN EXPERIMENT WITH SHANGHAI EGGS.—The *N. Y. Agriculor* says: The high price of fancy poultry has set many of the speculating geniuses of Yankeedom to buying and selling eggs of the purest of the pure breed. One wight bought a lot at six dollars a dozen, expecting a breed of Shanghais worth at least six dollars a pair. He "counted his chickens before they were hatched;" for when that event happened his new breed proved to be all ducks. Another of the amateur "fancy fowl breeders," seeing a lot of eggs in the hands of a boy in market, and being assured they were of "something new in the poultry line," bought the whole, and set the old blue hen to work to bring them forth. In due time he went to look after the brood, and was quite surprised to find a nest full of turtles.

AN OX WITH A WOODEN LEG.—A Pennsylvania farmer had the following misfortune happen to a fine working ox. The animal was grazing near where the farmer was at work making a fence. The ox stepped into a post hole and broke his leg. As it was too lean to kill, the farmer consulted a physician who lived close by, and the result was that it was determined to cut off the broken leg. The ox refused food one day only after cutting off the leg. A wooden leg was substituted in proper time, and when the ox was finally killed it presented the finest beef seen in the Philadelphia market.

HE who lives only to benefit himself, gives the world a benefit when he dies.

# Orchard and Garden.

## PEARS ON QUINCES—ONCE MORE.

In our last article on this subject, we had planted our tree and left it. No farther application of the knife will be required until the succeeding spring. The trees must not, however, be forgotten. After the new side sheets have attained considerable length, examine them, and if any one pushes out beyond its fellows, and appears to be getting the advantage of the rest, and appropriating too much of the nourishment which ought to be divided fairly among the whole, nip off its head with thumb and finger and teach it better manners. If the limbs are stretching out to a great length without side sheets, pinch off two or three inches of the end. This is not to be done before July.

This mode of pruning may be practiced with advantage in after years.

But the principal pruning is to be performed early in the spring. Shorten every branch, putting in the knife opposite, and a little below, a bud, and bringing it out a little above the same. Let the instrument be keen, and do the work with one clean cut. The northermost limbs are to be left the longest, and the others cut more and more closely as you advance upwards, and the leader shortened. The sap naturally finds and nourishes the higher parts of the tree, and unless the number of buds on those portions be diminished, the bottom branches are deprived of their due share, and decline from lack of sustenance. It is, therefore, necessary to guard against this evil by a proper treatment of the tree while in its shrub-hood. This heading process must be repeated each spring.

If a tree be too upright and compact, leave the bud on the outward side, and so lead the branches away from the trunk. If it spreads too much, cut from the outside to an inward bud, and throw the shoot towards the body. If two branches diverge so as to leave a wide open space between them, then prune in such a manner as to send the new growth from the sides into this space.

These directions,—mere hints on the difficult art of pruning,—may serve to guide some learner into the right way, and lead him to examine, think and practice for himself.

Some sort of pears, on quinces, are disposed to bear fruit at an early age. This disposition ought not to be indulged. The welfare of the tree requires that the fruit be picked off as soon as it is set, or what is preferable, the blossoms clipped before they expand, and no fruit allowed to mature, or at most only a single specimen, until after three years from the planting. And we adviso to thin the fruit every year afterwards, that the tree be not exhausted by over-bearing. The thinning will have the effect to give specimens of superior life and finer quality.

Brief suggestions in another number, in relation to kinds which succeed on this stock, will conclude our remarks on this subject.

## PROPAGATION OF FINE ROSES.

It may not be known to many of our readers, that the fine roses of the China varieties, may be readily propagated by means of slips. Cut from the well ripened wood slips three or four inches in length, strip off a part of the foliage and insert them in clean white sand, placed in pots or boxes. Keep them regularly watered, so that they may not get too dry, and at a regular moderate temperature. They strike root very freely. Some practice covering them with a bell glass, but those of most experience do not consider the practice necessary.

Ladies may also propagate any of the choice roses desired, by budding in the same manner fruit trees are budded. It adds much to the beauty of the hardy climbers, to have the main trunk varegated with branches of roses, of different shades of coloring. We strongly commend the practice to those who would thus adorn the shrubbery of the homestead. †

## HORTICULTURAL ITEMS.

Early oval Rose Radish.—We found this vegetable — for seeds of which we are indebted to the kindness of Messrs. Ellwanger & Barry—very excellent last year, and shall try it again this season.

Early Bassano Beet.—This is the best beet we have tried. We have raised it for several years, and our first favorable opinion of it remains unchanged.

Stowell's Evergreen Sweet Corn—Is not only ever-green, or rather soft, but over good for nothing. If we plant it again we shall deserve, and consent, to be considered *ever-green* too.

## TRIMMING AND SETTING SHADE TREES.

Those who wish to set large trees (more especially sugar maple,) should trim them the year before they wish to set them; and the best time for that purpose is undoubtedly just before the leaves put out. The great objection against setting forest trees is, that the great height they grew in their natural state, makes them cumbersome to move and liable to die after planting out, and renders it difficult to obtain those that are of the right shape to set. This difficulty can be obviated by going into the forest with a saw, and, selecting those that can be easily moved, saw off the whole top, say from six to ten feet from the ground, or according to taste, and let them stand until the next spring. The roots not being disturbed, they will throw out vigorous shoots around the top of the stub—heal over the wound and form quite a top the same season.

If taken up and set out at the same time, one half, at least, will die in spite of all effort to save them. And those that do survive, will seldom make handsome tops, for the reason that before the roots catch sufficient to sustain and keep the stubs green, they will die down some inches from the top, and the bark separate from the wood, at the point most desired for the sheets to spring from. It is true that some will die by losing their tops alone, without being moved. But the number is small, and there is one consolation respecting such; there has been no labor expended in moving them to some other place to die.

I have practiced this method for some years and seldom lose a tree after setting. Sugar maple is considered by some, to be a slow grower, but with good ground and culture, (which they seldom have,) but few kinds can beat them. I have some that were treated as above, and set two years, this April, that have handsome tops, the branches being over six feet long. I am decidedly partial towards sugar maples for shade trees. They are second to but few as thrifty growers, and to none for beauty, for cleanliness and freeness from all kinds of insects and disease. They are second to none for durability, hardiness and long life—for their capability to withstand the tempest, and last, but not least, they are second to none for their sweetness; and I would sooner vote for a tax of fifty cents upon every man that should neglect to set out one tree a year, than I would for the same amount, for the present, or any other military system in time of peace.

A. Tanner.

Palmyra, N. Y., April 18, 1853.

## GRAFTING OLD TREES.—MAKING WAX.

Friend Moore:—Being a subscriber to your paper, I tho't to give you my method of grafting and making wax. In grafting old trees, I graft all which need it at one time, taking limbs of from one to two inches through, and leaving none to graft the next year. In this way, I have managed for the last six years, and have had good success. I trim off what limbs remain the following spring; in that way the scions take the sap and grow rapidly. The old way of grafting a little at a time, and so be two or three years before you finish a tree, in my opinion, is a bad way. You never can get so good and uniform a top. I have had tops the third year, nearly as large as before grafting, and bearing quite as well.

Now, as to my way of making grafting wax. I take six parts rosin, one part beeswax, and one pint linseed oil. This makes a wax that will spread in cool or warm weather, without the use of cold or warm water, and is far better for preserving and healing the stub. I have used other kinds, but find none so good as the above.

Verona, N. Y., April, 1853. Frank.

## THE CURCULIO.

C. Betts, of Detroit, communicates the following thro' the Albany Cultivator:

Here is a remedy for the curculio, which proved entirely successful in the garden of one of our citizens.

As soon as the fruit began to form, and the curculios were found to be about the trees, he took a barrel of air-slaked lime into the garden, and with a large shovel threw the lime among the trees, covering them completely, and to use his own expression, "making a *perfect smudge.*" At this they seemed displeased and left; he observed them crawling over the lime-covered fruit in a few instances, but they appeared restless and uneasy, and soon all left. Along in June they again made their appearance, and the liming was repeated, which was again successful in driving them away; and once again, just before the plums began to ripen, he gave the trees another dose, having observed some curculios about. His trees were loaded with fruit, while there were but few grown elsewhere in the city. A large branch, loaded, was exhibited at the August exhibition of the Detroit Horticultural Society. I have no doubt this course would prove successful if thoroughly tried, and where the trees, as in this case, are sheltered from violent winds.

## CANVASS HOUSES FOR PLANTS.

Among the modern improvements in plant-growing their summer treatment under canvass may be reckoned the greatest, and although not generally adopted, must be, and will be, by those who can afford it. It must be admitted that the most difficult period of a plant's treatment is after it has done blowing, and is making its growth.—In the house it is drawn; in the garden it suffers from sun, wet, or wind; in a pit it is little better. But having seen in an amateur's garden a canvass house, with a rolling roof, and the sides composed of canvass flaps or blinds, which could be proped out square; and in one of the most broiling afternoons of the summer, finding this house cool and airy, and the plants fresh and vigorous, I was struck with the simplicity of the contrivance and the superiority of the plan over all others for the summer treatment of plants. In this house were camellias, heaths, hard wooded Botany Bay plants, cacti out of bloom, Indian and hybrid azalias, rhododendrons, and, in short, the turn out of all the houses but the stove, and it was impossible they could be doing better. The foliage was green and healthy, every thing well set, and all that could be wished. The day was calculated to show off the excellence of the house; the rolling top was down on one side and half down on the other, the blinds were proped out horizontally, so that there was all the air that was stirring, and no sun. The paths were damp, having been watered in the morning, and the temperature was so much lower than out of doors, as to be almost incredible.

I found the treatment was nothing more than in June to turn out into this house every thing that had done flowering, to continue adding all the summer every thing as it finished its bloom according to the weather, to close or open the house, which when the roof was rolled up, and the blinds proped out, was to plant the same as out of doors, but when closed up on the sides, and the top cloth let down, was warm: in dull days and mild showers the plants had it all; no sharp cutting winds could touch them, because the blinds and roof were always kept down on the windy side in these cases, if not all round. They never required half the water, and so close was the house when shut, that, in case of being troubled with the aphides, it could be fumigated as well nearly as in a house of glass. I must say that I view this little improvement in practice as a great advance, for, although we have all our sheltered nooks and sequestered places for summering our plants, the best are poor securities against brown foliage, scorching or dripping, damage of the young wood, or disappointment at the moment of setting for bloom.—*Gardener's Chronicle.*

## DWARFING FRUIT TREES.

The French have a method of cultivating dwarf fruit trees, or trees which have been stunted by a certain process, which one of their writers describe as follows:

"Young trees are to be treated in the following manner:—If there are more than three shoots on the plant, reduce them to that number, and shorten each to three, four, or six eyes, according to their strength. The following season, reduce the number of leading shoots to six, and shorten them to three-fourths of their length, and spur in the remaining shoots. The tree should be managed in every respect in this manner, until it has attained the required size, which of course, depends upon the fancy or convenience of the owner or conducter of the garden. I make a point of letting the trees take their natural form of growth, as far as the system described will admit; for I considder it of little consequence what shape is given to the tree, provided my end is attained; that is, to make every branch, as it were a long spur, with bearing buds from the extremity to the base."

It it asserted by both French and English writers, that trees so stunted are not so much exposed to injury by high winds, that they produce better fruit, bear earlier and more abundantly, and occupy less space.—Dwarfs are also produced by inoculating on stocks of small growth. The apple is often inoculated on the Paradise or *Doucain* stock, the peach on a slow-growing plum, and the pear on the quince. We have seen large pears on trees not more than five feet high, the tops of which were not possessed of sufficient strength to sustain their weight of fruit without the assistance of props. This is a common result where some varieties of the pear are set in quince stocks. The writer above quoted says:

"Two or three years' trial of this method only might deter many from a continuance of it, in consequence of the young wood which will be produced yearly at first, and from the apparent difficulty of getting rid of the superfluity. But that inconvenience will be utterly surmounted if the foregoing instructions are attended to, and the consequence will be the possession of both healthy and fruitful trees."

Cultivate Grapes.—We cannot too strongly urge upon all who have even a small patch of ground, the importance of cultivating grapes. It can be done at very little expense of money or labor, and is sure to yield a rich return.

Sowing Oats.—We think—we are convinced—from all the information we can gather on the subject, from the best and most experienced practical farmers, that *early sown oats* always promises the *surest crop—a heavier grain*—and if a peck more of seed be sown to the acre than is usually sown in late crops, a more *productive yield.* We venture to say that the experience of nine observing farmers in every ten, will confirm these important facts.—*Germantown Telegraph.*

# Mechanic Arts, &c.

## LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE
For the week ending April 19, 1853.

Francis A. Calvert, of Lowell, Mass., for improvement in the feed motion of winnowers.

James M. Cook, of Taunton, Mass., for improvement in excluding dust from railroad cars.

Phineas Emmons, of New York, N. Y., for improvement in machines for blanking hat bodies.

James S. Hartupee and Abram Alexander, of Pittsburgh, Pa., for improvement in machines for rolling bar iron.

Alex. McPherson, of New York, N. Y., for improvement in cooking ranges.

John H. Manny, of Waddam's Grove, Ill., for improvement in cutter fingers of harvesters. Patented in England, Dec. 9, 1853.

Samuel Miller, of Washington College, Tenn., for improvement in cotton seed planters.

Thompson Newbury, of Taunton, Mass., for improvement in machines for threading screw blanks.

Amasa Woolson, of Springfield, Vt., for improvement in gig mills for dressing cloth.

Wm. Wickersham, of Lowell, Mass., for improvement in sewing machines.

Samuel L. Dana, of Lowell, Mass., assignor to the proprietors of locks and canals, of the Commonwealth of Massachusetts, for improvement in purifying resin oil.

RE-ISSUES.

Larnard F. Markham, of Cambridgeport, Mass., for improvement in machinery for trimming books, &c. Patented April 18, 1848.

Benj. Chambers, of Washington, D. C., for improvement in movable breeches for fire-arms and appurtenances of the same. Patented July 31, 1849.

Benj. Chambers, of Washington, D. C., assignor to Joanna Chambers, of same place, for improved common locks. Patented July 31, 1849.

DESIGNS.

Thomas Ball, of Boston, Mass., for design for a bust of Daniel Webster.

Edward M. Manigle and Geo. Phipps, of the County of Philadelphia, Pa., for design for a water cooler.

Chas. Chinnock, of New York, N. Y., for design for a clock-case front. Three designs.

Jacob Beesley, of the District of Spring Garden, Pa., assignor to Wm. P. Cresson, of same place, for design for a cooking stove.

Samuel H. Sailor, of Philadelphia, Pa., assignor to Chas. W. Warnick and Fred. Leibrandt, of same place, for design for a cooking stove.

## NEW METHOD OF MAKING MIRRORS.

The editor of the Prattsville Advocate has been shown by Rev. L. L. Hill, the inventor of "Hillotyping," a method of silvering glass, which he considers of great practical value in the manufacture of mirrors:

"Mr. Hill took a small glass, such as Daguerreans use for covering their pictures, and in forty seconds it was transformed into a perfect mirror—perfect in every respect. We kept an eye upon it the whole time; the process was fully explained, and the result cannot be excelled. Out of some three hundred experiments which Mr. Hill has made, he has never failed in making a perfect mirror.

"In his mode of silvering glass, there is not a particle of the usual amalgam of tin foil and quicksilver, but it is composed wholly of pure and unadulterated silver.—The discovery was made while he was experimenting on glass, with a view of adapting it to Heliochromy, never dreaming of its beautiful application to the manufacture of mirrors. The invention did not cost him an hour's study, and he has already had liberal offers for the right to manufacture, together with the knowledge of doing so. The expense of manufacturing mirrors, by this new and durable method, will not, we think, exceed half the cost of manufacturing the kind now used—besides, they are *always perfect,* and no art of man can deface them, without breaking them to pieces. We hazard nothing in predicting that it will create an entire revolution in the art of making mirrors, and that, in a few years, at most, there will not be a mirror of the kind now used, to be found in the country."

Curious Facts Relating to Gold.—Put 900 new soverigns and 900 new English shillings in average ordinary circulation, and in one year the former will be worth 899, and the latter about 804.

The malleability of gold can be carried to such an extent, that an apartment twelve feet square might be carpeted for thirty or forty dollars.

The celebrated Dr. Wollaston manufactured a piece of wire one thirty-thousandth part of an inch in thickness.—*Tribune.*

Iron Masts.—The great success which has attended the construction of tubular bridges, has induced some of the British ship-builders to take up again the question of iron masts. It is stated that tubular masts may be made of iron, stronger and lighter than those of wood, and with the additional advantage that they might slide down one into the other, telescope fashion, while they would require neither shrouds nor stays, leaving room for bracing round the yards to the outermost.

M. Appert's method of *preserving eggs,* is to put them in a jar with bran, to prevent their breaking; cork and hermetically seal the jar; put into a vessel of water heated to 200 degrees Fahrenheit, or 12 degrees below boiling. The vessel with water being taken from the fire, the water must cool till the finger may be borne in it; remove the jar. The eggs may then be taken out and will keep for six months.

## WROUGHT IRON CAR WHEELS.

Since the sad accident which resulted in the death of the son of President Pierce, the managers of the New England Railroad have endeavored, if possible, to remove the constant danger of the breakage of car wheels, and the disasters incident on such breakages. We understand that several of our Railroad Companies are now trying the experiment of using wrought-iron wheels, and others have ordered three or four sets, for the purpose of testing the possibility of discarding the cast-iron wheels now universally in use.

The wrought-iron car wheels have cast-iron hubs, wrought rims and arms, and the Lowmoor tire; whereas the cast-iron wheels have chilled iron rims. These chilled rims are very hard, and are not very easily worn out, but are very liable to be cracked and broken. The wrought tires wear very rapidly, and need to be often replaced. The problem to be solved is whether, in the long run, the wrought or cast wheels are the best; whether the wear of the one kind exceeds or not the expense of renewing the cracked and broken of the other.—*Boston Jour.*

Possibly if that respectable class of individuals known as the Traveling Public, could be allowed to say a word in regard to this matter, they might insist that the "problem to be solved" is, Which kind of wheel insures the greater degree of safety to human life?"—*N. Y. Tribune.*

A Valuable Cudgel.—The following luminous paragraph is from the *Bath* (Eng.) *Chronicle:*

"A friend of ours, whose avocations compel him to travel much in the dark, astonished us a few nights ago, by exhibiting a capital weapon of attack and defence. Taking from his pocket what appeared to be a stout constable's staff, he struck it smartly against the ground, and in an instant a blaze of light burst from the end of it, so powerful and brilliant that everything within a quarter of a mile was rendered visible, and continued so for nearly ten minutes. Had it been used as a life-preserver, and struck against the head of a man, the light would have been kindled in just the same manner; so that the instrument may be used to floor an assailant, and afterwards to identify him."

A German Custard-sauce for Plum or other Sweet Boiled Puddings.—Boil very gently together half a pint of new milk, or of milk and cream mixed, a very thin strip or two of fresh lemon rind, a bit of cinnamon, and an ounce and a half or two ounces of sugar, until the milk is strongly flavored; then strain, and pour it, by slow degrees, to the well-beaten yolks of three eggs, smoothly mixed with a *knife end full* (about half a tea-spoonful) of flour, a grain or two of salt, and a tablespoonful of cold milk; and stir these very quickly round as the milk is added. Put the sauce again into the stew-pan, and stir it rapidly until it thickens or looks creamy. It must not be placed *upon* the fire, but should be held over it, when this is done.

When to put down the "Brakes."—A freight train travelling at the rate of 24 miles an hour, requires on a level 546 2-8 yards to come to a stop, and 79½ seconds of time. A passenger train at the rate of 45 miles the hour cannot be brought up in less than 779 yards, but takes rather less time, only 68 seconds. Two trains, therefore approaching each other at a speed of twenty-four miles the hour, will experience a collision, if the brakes are not brought to bear when they are about 1100 yards, or nearly two-thirds of a mile asunder.

## WASTE.

What is there a man cannot waste? and that, too, without a single instance of lavish profligacy; but solely by those minute, scarcely perceptible squanderings, which, like the constant dropping of water upon the rock, wear away that which seems most likely to endure. He may waste his health by little indulgences of pernicious habit—by constant irregularities, slight in themselves, and their effects in single instances, scarcely perceptible, but which, as violations of the laws of his being, will work gradual, but certain inroads, upon the strongest constitution, until the energies decay, the fountains of life are dried up, and premature old age sinks like a crown of thorns upon the head of early manhood. He may waste fortune in petty squanderings—time and talents on trifles, or in listlessness and idleness. How many a giant mind has been frittered away in pursuit of the befitting objects of low ambition! How often do we see powers perishing for the lack of thought—shrivelling into insignificance for want of intelligence to feed upon, which use might have polished to the brightest brilliancy, and exercise would have made equal to achieving the noblest purposes! How many scatter, in idleness or indifference to their value, the little minute particles of time, till golden hours, and days and years are wasted, the treasures of life all scattered, and death finds nothing but a poor, naked and useless *thing* at the last.—*Kilmarnock Jour.*

Four Good Habits.—There were four good habits a wise and good man earnestly recommended in his counsels, and also by his own example, and which he considered essentially necessary for the management of temporal concerns; they are Punctuallity, Accuracy, Steadiness, and Dispatch. Without the first of these, time is wasted; without the second, mistakes the most hurtful to our own credit and interest and that of others may be committed; without the third nothing can be well done; and without the fourth, opportunities of great advantage are lost which it is impossible to recall.

# Educational.

## REWARDS AND PUNISHMENTS.

If we examine the domain of nature, and take her teachings for our guide in teaching, we shall often arrive at the solution of very intricate problems, by very simple processes. We shall observe, for instance, that her rewards are not indiscriminately bestowed, nor her punishments vindictively inflicted;—each is the natural, necessary and obvious result of certain action. Thus, if we exercise healthfully but heartily and live hopefully, nature will not take us up and fondle and caress and make us spoiled children, by over-indulgence in her luxuries; but will give us healthy bodies, hearty appetites, and cheerful spirits, as the legitimate and richest results of our good conduct. On the other hand, if we lounge inactively, eat languidly, and live aimlessly, nature will not scourge us wrathfully, and sting us spitefully; but let us become a heavy burden to ourselves, a grievous, wretched load of listless lifelessness till we *must die*, or *will live*. So let us in teaching imitate nature, and cause the rewards we bestow and the punishments inflicted, to be the natural visitation of right or wrong actions.

I will illustrate how this may be done by a case in point. Among a class of boys of from seven to ten years of age, I once had one, more than ordinarily mischievous, and vicious, and stubborn. I could not make him learn by encouragement, threats or punishment. Kindness and severity seemed equally lost upon him. He was quick, sprightly, and bright, but malicious and revengeful. Without any reference to him particularly, I had arranged that his class should recite in a given study, the last recitation but one in the day; after which, those who had their lessons well during the day, were dismissed on condition of taking a book home to prepare a lesson for the following morning. I very soon saw the effect of this arrangement on the class, and upon none more remarkably than upon this boy. To gain that extra half hour of time, he would apply himself unremittingly during the hours of study, and faithfully fulfil his engagement to get the lesson prescribed at home.

This was a tangible reward for which to labor;—it was not a promise of future greatness and good; it was not a scrap of ticket or paltry primer conveying no appreciable good; it was something real, of value, and highly prized. It was a natural result of diligence,—a gaining of time; just such a reward as nature bestows on the industrious and faithful. When the last lesson of that class was recited at night, and those named who might be trusted to get a lesson at home because they had got their lessons at school, those who went felt a manly pride in the confidence they had secured, no less than the joy to be released from the confinement of school. And those who staid, were assured that it was not for a punishment, to annoy them; but they had not done their *day's work*, and hence they must remain until school was dismissed to finish it. As they saw their industrious fellows pass out to the sports and glee of the play ground, they were told that all through life the industrious, the earnest, the active, thus gained upon the idle, the indifferent, the listless, and the next day we would see how many more we could number in the former class. This was not punishment *inflicted*—it was a deprivation of privilege;—and I have always found, that to place within the reach of children something which they may *gain*, is the surest and safest stimulus to exertion;—far preferable to imposing extra toil or pain.—*Olean Journal.*

## TEACHING GEOGRAPHY.

All teachers agree that in the pursuit of this study, the first great object is to form in the mind of the pupil a picture of the exterior of the earth, its countries, oceans, mountains, rivers, cities, etc.; also the relative position of all these, together with their size, form, and appearance. The only point at issue then, is, how can this best be done?

We know of no better way of doing it than that of requiring the pupil to describe routes from one part of the country, or from one country to another; naming the direction in which he travels, the waters on which he sails, the capes he passes, the rivers he crosses, the mountains he climbs, the cities he visits, and all other matters of interest in the journey. After becoming a little accustomed to this, he may describe his return in like manner. When still further advanced, he may be required to transport with him the principal productions of the country which he may visit. He can also name the wild beasts which he may expect to meet with there, as well as the most noted birds, also the domestic animals, and the manners, customs, and characters of the people, and many other interesting items.

This method has the double advantage of being very instructive and exceedingly interesting. The pupil thus acquires the very matter which he most needs, and that, too, in such a form that it is very easily retained. It partakes somewhat of the animation and interest of a real tour, and very seldom fails of engaging the attention of the pupil more than any other part of the lesson.

This is certainly an argument in favor of the course; for what teacher does not know that a great point, indeed the principal point, is gained when the pupil becomes interested, and that one idea which he may voluntarily and cheerfully acquire, is worth a dozen which may have been driven into his cranium with a birchen rod or an oaken rule, inasmuch as the former will almost invariably be retained, while the latter will find the difficulties of escape not to be compared with those of admittance? Give this mode a fair trial. We ask no more.—*Massachusetts Teacher.*

## BAYARD TAYLOR.

R. H. Stoddard, gives a biography of the subject of the above portrait, in the National Magazine, from which we condense the sketch below:

"Bayard Taylor was born on the 11th of January, 1825, at Kennett's Square, Penn., where he resided until his nineteenth year. Who and what his parents were has not transpired, save that they were, and we believe still are, members of the society of Friends. From his earliest years he was fond of writing verses, and of poring over books of travel and adventure. * * * His young life was full of dreams, yet he himself was not a dreamer of the old sort—bright eyed, but sickly and useless; on the contrary, he was a strong-limbed and active boy, foremost in all athletic exercises and games of strength, and much addicted to long walks. * * By-and by he enters the office of a country newspaper, to learn the art and mystery of printing; and now behold him at the "case," with his sleeves rolled up, and his quick-moving fingers dingy with the smut of mysterious bits of lead; now "setting up" a President's Message, or an account of the last mammoth turnip; and now some of his own verses, which he palms off on the unsuspecting public as Bryant's. So pass the days and the months, and he becomes a printer; but he does not give up his long walks, and his dreams of travel and adventure, nor yet his habit of writing poetry; for now he is becoming known, having scraped acquaintance with Willis and other literati."

The literary world first heard of Bayard Taylor through the "New Mirror," edited by Morris and Willis, who published and commended his poetry, as also did "Graham's Magazine." In 1844 he published his first volume, "Zimenia, and other Poems." He had now determined to travel over Europe, and in the prefatory letter to "Views-a-Foot," a volume published on his return, gives a very interesting account of his plans and their accomplishment. After speaking of the publication of his poems, and of his earnest desire to travel, he says:

"Some literary friends, to whom I confided my design, promised to aid me with their influence. Trusting to this I made arrangements to leave the printing-office, which I succeeded in doing by making a certain compensation for the remainder of my time. I was now fully confident of my success, feeling satisfied that a strong will would always make itself a way. After many applications to different editors, and as many disappointments, I finally succeeded, about two weeks before our departure, in making a partial engagement. Mr. Chandler, of the *United States Gazette*, and Mr. Patterson, of the *Saturday Evening Post*, paid me fifty dollars each, for twelve letters, to be sent from Europe, with the probability of accepting more if these should be satisfactory. This, with a sum which I received from Mr. Graham for poems published in his magazine, put me in possession of about one hundred and forty dollars, with which I determined to start, trusting to future remuneration for letters, or, if that should fail, to my skill as a compositor, for I supposed I could, at the worst, work my way through Europe like German hand-worker. Thus with another companion we left home, an enthusiastic and hopeful trio.

"I need not trace our wanderings at length. After eight months of suspense, during which time my small means were entirely exhausted, I received a letter from Mr. Pattersen, continuing the engagement for the remainder of my stay, with a remittance of one hundred dollars from himself and Mr. Graham. Other remittances, received from time to time, enabled me to stay abroad two years, during which I traveled, on foot, upward of three thousand miles in Germany, Switzerland, Italy, and France. I was obliged, however, to use the strictest economy,—to live on pilgrim fare, and do penance in rain and cold. My means several times entirely failed; but I was always relieved from serious difficulty through unlooked-for friends, or some unexpected turn of fortune. At Rome, owing to the expenses and embarrassments of traveling in Italy, I was obliged to give up my original design of proceeding on foot to Naples, and across the peninsula to Otranto, sailing thence to Corfu, and making a pedestrian journey through Albania and Greece. But the main object of my pilgrimage is accomplished; I visited the principal places of interest in Europe, enjoyed her grandest scenery and the marvels of ancient and modern art; became familiar with other languages, other customs, and other institutions; and returned home after two years' absence, willing now, with satisfied curiosity, to resume life in America."

"Rhymes of Travel," was also written during this tour. On his return he first became connected with a country newspaper, and afterward went to New York to take the post of city Editor of the Tribune."—Mr. Stoddard says:

"Working on *The Tribune* in the spring of 1849, he departed for California, where he remained eight or nine months, writing letters about men and things in the gold regions. The result of his observations there was embodied in a couple of volumes, entitled, "El Darado; or, Adventures in the Path of Empire," and published in the spring of 1850. This book was very successful, both in this country and England, where it was reprinted in cheap editions; and also in Germany, where it was translated shortly after its appearance in America. On his return to the United States, Taylor resumed his desk and duties in *The Tribune* office where he remained till the summer of 1851. But, in the mean time, a change came over the spirit of his dream; the "friend" of his early poem, the "Lillian" of his Rhymes of Travel, died. Years before, they had betrothed themselves in sincerity and truth; it was their only wish in life to call each other by the endearing names of "wife" and "husband," two of the sweetest and most holy words ever uttered on earth. For years the marriage was deferred, "perhaps," says Dr. Griswold, in an affectionate allusion to the circumstance, "for the poet to make his way in the world; and when he came back from California there was perceived another cause for deferring it—she was in ill health, and all that could be done for her was of no avail; and the suggestion came, the doubt, and finally the terrible conviction, that she had the consumption and was dying. He watched her, suffering day by day, and when hope was quite dead, that he might make little journeys with her, and minister to her gently as none could but one whose light came from her eyes, he married her; while her sun was setting he placed his hand in hers, that he might go with her down into the night. There are not many such marriages; there were never any holier since the Father of mankind looked up into the face of our mother. She lived a few days, a few weeks perhaps, and then he came back to his occupations, and it was never mentioned that there had been any such events in his life." Could the sanctity of private letters be exposed to the public eye, his grief and manliness on the occasion would shed a new lustre upon his character; but why allude to these things? It is the old, sad story; the beloved have been dying, and the bereaved have been weeping for them, ever since time began.

"In the summer of 1851, feeling in need of relaxation from work, and finding his health gradually failing, Bayard Taylor departed for Europe again, intending, before returning, to explore the Mountains of the Moon, where the White Nile is supposed to have its source, to visit Ethiopia and Nineveh, and the untraveled parts of Northern Africa generally."

His last letter from abroad is dated at Bombay, Jan. 1, 1853. He did not visit Ethiopia or Nineveh, but returned to Europe, and is now, we believe, on his way to Japan.

Of the characteristics of Mr. Taylor's writings, Mr. S. remarks a follows:

"The following sonnet will give a fair idea of Bayard Taylor's general style. The reader will notice the poet's intense exultation in the thought of such scenes, and the felicity and grandeur of his diction:

THE MOUNTAINS.

"O deep, exulting freedom of the hills!
O summits vast that to the climbing view,
In naked glory stand against the blue!
O cold and buoyant air, whose crystal fills
Heaven's amethystine bowl! O speeding streams
That foam and thunder from the cliffs below!
O slippery brinks, and solitudes of snow,
And granite bleakness where the vulture screams!
O stormy pines that wrestle with the breath
Of the young tempest, sharp and icy horns,
And hoary glaciers, sparkling in the morns,
And broad, dim wonders of the world beneath!
I summon ye, and, mid the glare that fills
The noisy mart, my spirit walks the hills!"

"Bayard Taylor's prose is by many preferred to his poetry: it is bare, concise, and direct—bare, almost barren, in its simplicity—almost wholly devoid of imagination, the chief excellence of his verse. A greater contrast than exists between the two can hardly be imagined. If each could borrow the other's strong points it would, perhaps, be better for both; his poetry losing some of its gorgeousness, and his prose some of its naked, sharp detail. In traveling, I should say that Bayard Taylor regards everything in detail, with a view to the putting it in description afterward. He seems to *see* everything, and to *feel* nothing. He presents a landscape, not as it appears to a poet, but a practical man of the world. If it gives him any feeling beyond that of form and color, he does not give the feeling to us; nay, what must he really have felt, to be able to describe it at all, is wanting; we see nothing but the most obvious facts. Had he the glowing outline and the ripe sensation of "Howadji" Curtis, he would be perfect.

"What the result of Bayard Taylor's present tour will be, remains to be seen. From the matured power of his last books, and our knowledge of the man, we predict something unusually fine."

## SHAM DIGNITY.

Among the thousand deceptions passed off on our sham-ridden race, let me direct your attention to the deception of dignity, as it is one which includes many others. Among those terms which have long ceased to have any vital meaning, the word dignity deserves a disgraceful prominence. No word has fallen so readily as this into the designs of cant, imposture and pretence; none has so well played the part of verbal scarecrow, to frighten children of all ages and both sexes. It is at once the thinnest and most effective of all the coverings under which duncedom sneaks and skulks. Most of the men of dignity, who awe or bore their more genial brethren, are simply men who possess the art of passing off their insensibilities for wisdom, their dullness for depth; and of concealing their imbecility of intellect under the haughtiness of manner. Their success in this small game is one of the stereotyped satires upon mankind. Once strip from these pretenders their stolen garments—once disconnect their show of dignity from their real meanness—and they would stand shivering and defenceless, objects of the tears of pity, or targets for the arrows of scorn. But it is the misfortune of this world's affairs, that offices, fitly occupied only by talent and genius, which despise pretence, should be filled by respectable stupidity and dignified emptiness, to whom pretence is the very soul of life. Manner triumphs over matter, and throughout society, politics, letters and science, we are doomed to meet a swarm of dunces and windbags, disguised as gentleman, statesmen and scholars. Coleridge once saw at a dinner table, a dignified man, with a face as wise as the moon's. The awful charm was not broken until the muffins appeared, and then the imp of gluttony forced from him the exclamation, "them's the jockey's for me!"—A good number of dignitarians remain undiscovered.

It is curious to note how these pompous gentlemen rule in society and government. How often do history and the newspapers exhibit to us the spectacle of a heavy-headed stupidarian in official station, veiling the strictest incompetency in the mysterious sublimity of carriage, solemnly trifling away the interests of the State, the dupe of his own obstinate ignorance, and engaged year after year, in running people after the dignified fashion! You have all seen the inscrutable dispensation known by the name of the dignified gentleman; an embodied tediousness, which society is apt, not only to tolerate, but to worship; a person who announces the commonplace of conversation with the awful precision of one bringing down to the valleys of thought, bright truth plucked on its summit; who is profoundly solid on the weather, the last novel, or some other nothing of the day; who is inexpressibly shocked if your eternal gratitude does not repay him for the trite information he consumed hour after hour in imparting; and who, if you insinuate that his calm, contented, imperturbable, stupidity, is preying upon your patience, instantly stands upon his dignity, and puts on a face. Yet this man, with just enough knowledge "to raise himself from the insignificance of a dunce, to the dignity of a bore," is still in high favor, even with those whose animation he checks and chills—why? Because he has, all say, so much of the dignity of a gentleman! The poor, bright, good-natured man, who has done all in his power to be agreeable, joins in the cry of praise, and feelingly regrets that nature has not adorned him, too, with dullness as a robe, so that he, likewise, might freeze the volatile into respect, and be held up as a model spoon for all dunces to imitate. This dignity, which so many view with reverential despair, must have twinned "two at birth," with that ursine vanity mentioned by Coleridge, "which keeps itself alive by sucking the paws of its own self-importance." The Duke of Somerset was one of these dignified gentlemen. His second wife was the most beautiful woman in England. She once suddenly threw her arms around his neck, and gave him a kiss that might have gladdened the heart of an emperor. The Duke lifting his shoulders with an aristocratic square, slowly said: "Madam, my first wife was a Howard, and she never would have taken such a liberty."—*Whipple.*

If a person delights in telling you the faults of others, be sure he intends to tell others your faults.

Wholesome sentiment is rain, which makes the fields of daily life fresh and odorous.

For the Rural New-Yorker.

## SONNET.

BY WM. EDWARD KNOWLES.

Friend of my early youth, we know the ties
That bind thy spirit here to earth are strong,
Yet thou the sorrows that to earth belong,
Shalt change for happiness which never dies.
Born for a higher sphere, thy praises rise,
In anthem with thee, to the heav'nly throng;
And sunset glory will weave here the guise,
In which thy soul will leave this world of wrong.
And though I mourn for thee, my friend, and weep,
That thou wilt leave here for a higher bliss,
Yet chide me not, for soon a wakeless sleep
Will seal those eyes, as with an icy kiss.—
Then wilt thou mount the ladder of thy faith,
Whose golden rounds will bear thee o'er the gulf of death.

Written for the Rural New-Yorker.

## CONSCIENCE.

Webster defines conscience as "internal or self-knowledge, or judgment of right and wrong; or the faculty which decides on the lawfulness or unlawfulness of our actions and affections, and instantly approves or condemns them." Some suppose that the decisions of conscience are always in favor of right and justice. But is it so? Does the conscience of every enlightened man, even, act in favor of that which *is* right and which *is* just? If so, the conscience of one individual would harmonize with that of his fellow, and there would be a unity in its decisions the world over.

Rather, is not conscience of itself blind, or does it not act only as it is educated, or as the force of circumstances that surround it imperiously dictate? Thus, if A is taught from his infancy, that certain things or doctrines are right, and that certain others are wrong and will eventually insure our ruin, will not his conscience act in unison with his belief, instilled by these teachings? If B be taught to the contrary, that what A believes is right is absolutely false and fatal, will not his conscientious scruples clash with those of A? Assuredly they will, so long as they are sincere in their respective beliefs. Who can say that the Hindoo mother is not impelled by as conscientious principles to sacrifice her only child, in the waters of her holy Ganges, as is the Christian mother, who rears her darling with all her maternal solicitude in the doctrines of the holy word of God?

This being so, we must conclude that habits, education and the influences that surround the individual, shape and control the development of the conscience of that individual, and though it may be a governing power, it is itself governed and can act only as it has been acted upon. If such be not the case, how are we to account for its antagonistical developments that meet us at almost every turn. The conscience of a professed petty salesman, is not surely to be compared to that of a virtuous judge, nor is that of a low pettifogger to be classed with that of a true divine.

But the object of this little article is not to discuss the question, but simply to throw out a few hints, that may possibly awaken the attention of some, and lead them to think how important is the matter of rightly cultivating, not only the intellect of the young, but their moral natures also, that they may be directed into the right channels, and their after lives prove them as worthy citizens of the great world we live in, and which is also a state for the proper preparation to meet the realities of the hereafter. Creeds are valueless, but truth, right, and justice, are all important. These may be learned from the good book, which is enough for the guidance of all living—if it be divested of the clashing creeds that wrest it to build up favorite ideas.

T. E. W.

## DEATH.

Death is a mystery. We know that we shall ere long close our eyes to all sublunary objects; but the time and manner of our death we cannot foresee. Here one falls in his full strength, while another has been languishing for years. The aged are passed by, and the turf is upheaped for the young and beautiful. One neighbor falleth by our side, just as we learned to appreciate his worth. A friend sinks in our arms, as we take him to our bosom. Yet these instances of mortality fail to leave suitable impressions on our minds.

We follow our friends to the grave, and turn anxious as ever to engage in the business and turmoil of life. To-morrow we forget the pleasant smile and cheerful voice, and put far away from our minds, the thought of our own mortality. Thus we are blinded; but little as we dwell upon it, the day approaches when our voices will be hushed, our eyes closed, and our lips refuse to do their office. Blessed shall we be, if we live for another world, by cherishing right feelings of heart, and living void of offence towards God and man.

The exercise of good affection is as necessary to happiness as the exercise of body is to health.

# For the Ladies.

## GOOD TEMPER.

BY CHARLES SWAIN.

THERE'S not a cheaper thing on earth,
Nor yet one half so dear:
'Tis worth more than distinguish'd birth,
Or thousands gain'd a year.
It lends the day a new delight;
'Tis virtue's firmest shield;
And adds more beauty to the night
Than all the stars may yield.

It maketh poverty content;
To sorrow whispers peace;
It is a gift from heaven sent
For mortals to increase.
It meets you with a smile at morn;
It lulls you to repose;
A flower for peer and peasant born,
An everlasting rose.

A charm to banish grief away,
To snatch the brow from care;
Turns tears to smiles, makes dulness gay—
Spreads gladness everywhere;
And yet 'tis cheap as summer-dew,
That gems the lily's breast;
A talisman for love, as true
As ever man possess'd.

As smiles the rainbow through the cloud
When threat'ning storm begins—
As music 'mid the tempest loud,
That still its sweet way wins—
As springs an arch across the tide,
Where waves conflicting foam,
So comes this seraph to our side,
This angel of our home.

What may this wondrous spirit be,
With power unheard before—
This charm, this bright divinity!
Good temper—nothing more!
Good temper,—'tis the choicest gift
That woman homeward brings,
And can the poorest peasant lift
To bliss unknown to kings.

## HOW TO DRESS.

A friend of ours, says the Portland *Transcript*, who had long been absent, returned recently, and called upon two beautiful young ladies of his acquaintance. One came quickly to greet him in the neat, yet not precise attire, in which she was performing her household duties. The other, after the lapse of half an hour, made her stately entrance, in all the primness of starch and ribbons, with which, on the announcement of his entrance, she had hastened to bedeck herself. Our friend, who had long been hesitating on his choice between the two, now hesitated no longer. The cordiality with which the first hastened to greet him, and the charming carelessness of her attire, entirely won his heart. She is now his wife.

Young ladies, take warning from the above, and never refuse to see a friend because you have on a wash gown. Be assured the true gentleman will not think less of you because he finds you in the performance of your duties, and not ashamed to let it be known. Besides, there may positively be a grace, a witching wildness about an every day dress, that adds to every charm of face and feature. Old Merrick expresses this "delight in disorder," far better than we can:

> "A sweet disorder in the dress,
> (A happy kind of carelessness;
> A lawn upon the shoulders thrown,
> Into a fine distraction;
> An erring lace, which here and there
> Enthrals the crimson stomacher,
> A cuff neglectful, and thereby
> Ribands that flow confusedly;
> A winning wave, deserving note,
> In the tempestuous petticoat;
> A careless shoe string, in whose tie
> I see a wild civility—
> Do more bewitch me than where art
> Is too precise in every part"

## TEACH THE WOMEN TO SAVE.

THERE'S the secret. A saving woman at the head of a family is the very best saving's bank ever yet established—one that receives deposits daily and hourly, with no costly machinery to manage it. The *idea* of saving is a pleasant one, and if "the women" would imbibe it once, they would cultivate and adhere to it; and thus many, when they were not aware of it, would be laying the foundation for a competence, security in a stormy time, and a shelter in a rainy day.

The woman who sees to her own house has a large field to save in, and the best way to make her comprehend it is for her to keep an account current of expenses.—Probably not one wife in ten has an idea how much are the expenditures of herself or family. Where from one to two thousand dollars are expended annually, there is a chance to save something if the attempt is only made. Let the housewife take the idea—act upon it—and strive over it—and she will save many dollars—perhaps hundreds—where before she thought it impossible. This is a duty—not a prompting of avarice—a moral obligation that rests upon all—upon "the women" as well as the men; but it is a duty, we are sorry to say, that is cultivated very little, even among those who preach the most, and regard themselves as examples in most matters. "Teach the women to save," is a good enough maxim to be inserted in the next edition of "Poor Richard's Almanac."

RECIPE FOR A LADY'S DRESS.—Let your ear-rings be attention, encircled by the pearls of refinement—the diamonds of your necklace be truth, and the chain Christianity—your bosom-pin modesty, set with compassion; your bracelets be charity, ornamented with the pearl of gentleness—your finger-rings be affection, set around with the diamonds of industry—your girdle be simplicity, with the tassels of good humor—let your shoes be wisdom, secured by the buckles of perseverance.

AT the gate which suspicion enters, love goes out.

## THE PLEBEIAN.

[*Concluded.*]

### CHAPTER SIXTH.

IT was a balmy morning in "leafy June," when Mr. Snowden set out from his residence in the forest, to visit the town of C. He had become heartily weary of the monotonous life he had been compelled to lead there. His indomitable pride was fast yielding to his irrepressible desire for society, especially the convivial circle he left. I should, thought he, have accepted some of the kind ivitations of my friends, and remained with them; and my dear Julia!—it is too bad to bury so sweet and dutiful a daughter in this wilderness. No, no, I will return. These, and similar reflections occupied his mind till he reached an eminence which commanded a view of the town.—None but those who have lived surrounded by the comforts and elegances of life, and have passed from infancy to age in daily intercourse with cogenial society, can realize Mr. Snowden's sensations, as the busy hum of a populous town fell upon his ear, after residing in a western forest just long enough to feel the full force of the unpleasant contrast. Mr. Snowden alighted at a hotel, and after taking a cursory view of the town, returned to dinner.

As the Court was then in session, its business was the principal topic at the table.

"I believe it is the general opinion that the prisoner whose trial is now pending, will be found guilty, is it not?" said a gentleman who sat at Mr. Snowden's elbow, to the one that sat opposite.

"It is to be feared, sir, that such will be the result, as there is a lamentable deficiency of evidence in his favor, though he is generally believed to be innocent of the crime for which he is arraigned," was the reply.

"I hear," said the first speaker, "that he has procured very able counsel for his defence. I believe, Mr. Darling, the lawyer is a friend of yours."

"He is, sir, and I believe if any man can save him, that man is Edward Mullet. He believes him to be innocent of the crime with which he is charged, and no effort of which he is capable, (and that is saying much,) will be wanting to prove it."

Mr. Snowden started at hearing the name of Mullet. This then, thought he, is the place where the poor fellow has taken up his residence—another good reason why I should remove mine. Poor Julia! she must not know he is here, for I fear she loves him yet.

"I have heard Mr. Mullet's eloquence so much extolled," said a lady who sat near, "that I envy you gentlemen the pleasure of hearing his plea. Defence of innocence from his lips must be convincing, and even captivating."

"What pleasure would there be in being captivated by one who is so indifferent to the whole sex?" asked a novel-reading Miss of sixteen summers, who had fallen in love with our hero at first sight, but had failed to elicit any attention. The subject of Mr. Mullet's frequent melancholy was alluded to by the ladies, without any light being thrown on the cause.

This conversation we might almost fancy was designed for Mr. Snowden's attention. It was not lost upon him, for he thought intently on all he had heard. That Edward still loved his daughter, he did not doubt. He did not wish to be recognized by him, as that would lead to a discovery of his own residence. Mr. Snowden thought he would leave his business in the hands of an attorney, and leave town immediately. But he found he could engage no lawyer till the present trial was over. Perhaps, after all, thought he, this is not Joe Mullet's son; there may be two of the same name. A court-house is always an object of interest to a Southerner, and Mr. Snowden entered it with the multitude. The large room was crowded to excess;—every breath was hushed in the intensity of interest that pervaded the audience as Edward arose, and, with a solemn dignity of manner, opened the defence.

There was no mistake—Mr. Snowden instantly recognized the man who had once stood before him under such circumstances as rendered it impossible for him to forget the features. If the sight of him did awaken some unpleasant reminiscences, they were soon lost in the deep interest aroused by the powerful and eloquent appeal, that cast a spell over all who heard. And when, in the intensity of thought, the speaker swept his hand across his expansive forehead, throwing back the clustering locks from its polished surface, Mr. Snowden mentally exclaimed, "Poor Julia! I cannot blame her; he is a man any girl might be pardoned for loving. But then, his low birth!"—and old Joe Mullet, as he had known him in his most abject condition, rose before his mind's eye, and so vivid was the impression that when he again looked upon the speaker, it seemed impossible to his mind that the man before him could be the son of that despised individual. How, thought he, would my generous friend have gloried had he lived to witness the might and majesty of the mind he rescued from ignorance and obscurity, and moulded by his own instruction to plead the cause of innocence with such irresistible eloquence—destined to be heard by admiring thousands, perhaps even in the halls of National Legislation.

Mr. Snowden closely scanned the features of the speaker, as a sudden thought seemed to strike him, and though the resemblance to his friend was not to be found, still, thought he, there is the same intellectual and benevolent cast of forehead,—the same expression of that deep blue eye; that voice, too, seemed to him like his friend's when raised in a similar cause. Mr. Snowden was incapable of appreciating the high moral excellence of the man to whom he wished to trace the speaker's origin. There are some persons who, when they chance to be favored with a new idea, congratulate themselves on having made a great discovery, and are as much elated as the navigator who discovers an island not laid down in the chart of the ocean.

There had been but little intercourse for many years between Mr. Snowden and Mr. Wells, probably owing to the disparity of their tastes and habits. They might have been privately married, for aught I know, said the former to himself. The truth was his heart warmed towards the man before him, and he wished to furnish some excuse to his pride for the feelings enkindled in his bosom. He longed to take Edward by the hand, and tell him he had wronged him by imputing to him a crime committed by another. A murmur of applause ran through the audience, and Mr. Snowden admitted to himself that *any man might be proud of such a son.*

Then came the thought of his own sons, mouldering in their untimely graves—their precious lives having been spent in idleness and dissipation. They had been cut off in the bloom of life without having performed one act to redeem their memories from oblivion. But the sorrowing father saw it not in the proper light. His sons had lived according to the customs and usages of that part of the country where they were born, and he saw not the wrong in it.

Edward closed his defence. As he seated himself and wiped the perspiration from his brow, his eye fell on Mr. Snowden. Had he indulged in any unpleasant feeling towards that gentleman, it must have vanished when he beheld the deep traces of sorrow and humbled pride that pervaded his features. It need not be denied, that Edward felt "a glow of honorable triumph," that the man who had scorned him as a "*base-born plebeian,*" should be witness to the estimation in which he was held by a people to whom, but two years before, he had been an entire stranger.

The Judge delivered his charge to the jury, and they retired to deliberate. The spectators did not leave their seats, for the little amount of evidence our hero possessed in favor of the prisoner, had been presented to the audience in so lucid and favorable a light that his innocence was tacitly admitted, and would require but a moment's consideration—and so indeed, it proved; in a short time the jury returned a verdict of "NOT GUILTY."

A crowd of friends surrounded our hero; they congratulated him so heartily on his success, that he begged them to spare him in public, gave them a cordial invitation to his room in the evening, and left the house. Mr. Snowden was an interested observer of all that passed, and did not lose sight of Edward till he entered his office and closed the door.

Alone, Edward yielded to the emotions which the scene he had just gone through was calculated to excite. There came a rap at the door—he arose and opened it; and Mr. Snowden stood before him. Bowing courteously, Edward invited him to enter.

The gentleman inquired if Mr. Mullet could command sufficient leisure to transact a little business for him, and was answered in the affirmative.

"You do not recollect me, I presume, Mr. Mullet?" remarked Mr. Snowden, interrogatively.

"Mr. Snowden, I believe," said our hero, with a respectful bow. Mr. Snowden held out his hand. Edward did not hesitate to receive it, and return its cordial pressure. Mr. S. narrated the long list of circumstances that had induced him to emigrate, at the same time acknowledging the injustice he had done our friend in accusing him of setting fire to his buildings,—adding, that he was then ignorant of his connection with Mr. Wells. Edward, quite unaware in what light Mr. Snowden viewed that connection, replied that he had not been sensible of receiving any injury, therefore had nothing to forgive.

Mr. Snowden contrived to pour out the sorrows of his pent up heart, with a freedom that astonished even himself. Again and again he spoke of the death of his sons,—the loss of his noble estate, that had descended to him from a long line of patrician ancestry. Pride had hitherto sealed his lips, and he had now unbosomed himself to a stranger. The thought struck him that the man whom he had once so grossly insulted, might exult in his humiliation. He raised his eyes—the trembling lip and starting tear that met his look, were sufficient evidence that a thought so degrading never dwelt in that noble bosom. The genial blood of the south warmed in his veins—he caught our hero's hand and pressed it with a fervor that told how highly he prized such sympathy; he could at that moment have almost forgiven the plebeian origin, if he had not already disposed of that stain to his own satisfaction.

What balm to the bereaved heart, when the cold hand of death has severed the ties which bound us to life, and the bleak winds of adversity have swept from us our wealth, and home—when that loved spot, endeared to us by a thousand happy recollection, has passed from our possession—to feel the hand pressed with the fervor of friendship, and see the tear of sympathy flow for our misfortunes!

Mr. Snowden spoke of his daughter, too—of her filial affection and her fortitude under all their affliction and privations. He watched the glistening eye and glowing cheek, as Edward lent a "delighted ear" to her praise, and was not displeased with the inference he drew. After a promise from Edward to visit him as soon as the pressure of business would allow, he took his departure.

The lapse of a few days found Edward Mullet on the road to Mr. Snowden's residence. That gentleman received him with marked courtesy and kindness. Julia made no attempt to suppress or disguise her pleasure, and there was an expression in her dark eyes that repaid him for years of suspense.

After dinner Miss Snowden dispatched old Nanny with the dessert and some rare old wine, (a relic of an ancient store,) to her favorite retreat by Bayard's brook, whither she soon followed accompanied by her father and lover. The verdant canopy formed by the interlacing boughs of the lofty trees excluded the rays of the sun, while the warm breath of midsummer, cooled by the dense shade of the forest, rendered the temperature of this spot delightful.

Seating herself on a tuft of verdent moss, with the brook rippling at her feet, Julia thought the place grew more and more lovely. Mr. Snowden rehearsed the events of their journey. "We had," said he, "no definite place in view when we set out, and left it to chance to decide for us. Learning at an inn a few miles back that this place was for sale, and a very desirable property, Julia and myself rode over to examine it.—Julia was delighted with the location and pursuaded me to purchase here. Weary of traveling, and feeling that I was already a great distance from home and friends, I consented, though I confess I should have preferred a residence in a slave-holding State.

Edward expressed his admiration of the spot, confessed his previous acquaintance with it, related the manner in which he was first introduced to it, and declared it had always been his intention to purchase it if he settled in C.

"That is a singular story of yours, Mr. Mullet," said Mr. Snowden, archly; "the subject must have been absorbing indeed, for you to allow your horse to walk off with you without your knowing whither. Pray tell us what you were thinking about?"

Edward blushed and hesitated. "Thinking of my young Missus, I'll be bound," said old Nanny, with a chuckle peculiar to her race, as she slowly stowed away in a basket the fragments of the repast, at the same time keeping an eye on all that was passing.

Mr. Snowden laughed heartily—Julia bit her lip, and tried to frown on her old nurse, and succeeded so badly that it only redoubled her father's mirth. It was the happiest day he had known for many, many months. The joy that sparkled in his daughter's eyes, together with the generous wine, had converted in his mind, a dreary wild to a terrestrial paradise. As soon as he recovered breath, he remarked that old Nan was beginning to feel the air of a free country.

"And I should say," rejoined Edward, "it must have had a favorable effect on her intellect, when she fancies she can read ones thoughts."

"You dont pretend to deny that she was right, do you?" asked Mr. Snowden, apparently not demanding an answer.

As the father gazed on the youthful pair before him, his own youth seemed renewed; how vivid was the recollection of that blissful moment when he sat beside a loved being with all a lover's hopes and fears! remembered, too, that lovers who have been a long time separated, can very well dispense with the presence of a third person. Rising, he said, "I suppose, Mr. Mullet, you are aware that in this part of the country, every gentleman is his own overseer, and you will therefore excuse me."

"O no, father, I shall not let you go," said Julia, playfully catching his hand.

"Why, not Julia?" said he as he gazed with all a father's pride on his lovely daughter; "what do you want of me?"

"You have not yet told Mr. Mullet whether you will dispose of this property!"

"Well, then," said Mr. Snowden, with a half comic air, "Know all men, and women, that I, John Snowden of ——, County of Hamilton, State of Solitude, do give, grant, and convey to Edward Mullet, all that piece and parcel of land, called by me, *Julia's Fancy,*—to have to hold the said granted premises with all appurtances thereof.—Provided the said Edward expunge from this instrument the name Mullet, and insert Snowden in its stead."

"May I go now, Julia?"

Her only reply was a pressure of her father's hand. He took his daughter's and placed it in Edward's, saying, "Heaven bless my children!"

"Bress God, young missus will be happy agin," said a low voice from a figure behind them.

We will leave them to discuss the interesting subject of changing Edward's name instead of Julia's, and bring our story to an end without describing the wedding or old Nanny's demonstrations of joy at the event.

On the same spot at this time, the passing traveler may see, through a grove of tulip trees, a remnant of the forest, embowered in a luxuriant growth of shubbery and fruit trees, a house more neat and tasteful than splendid. That house is the residence of Edward Snowden, Esq., whose voice is still eloquent in the cause of the oppressed and defenceless—his hand is ever open to relieve the wants of the destitute, and his heart yields a ready sympathy in affliction. His name is not blazoned on the lists of fashionable charities, for his gifts are dispensed like the refreshing dews of Heaven. They fall on the blighted heart like pearly drops on the parched earth and drooping flowers. His mother's prayer is still remembered, "to save from ignorance and all the vices that follow in its train." He is a great and efficient advocate and helper in the cause of Universal Education, believing it to be the basis of Moral Reform.

A pleasant circle of friends from C. and its vicinity, chosen rather for their merit than wealth or fashion, gives zest to the domestic happiness of Edward and Julia Snowden. At their hospitable board, the plain farmer and artizan receive as much attention from the kind hostess as the professional man who is often seated by his side.

Mr. Snowden is still living and evidently proud of the homage paid to the exalted worth and talents of his son; and when his heart is warmed by the happiness and plenty which surround his declining years, with the garrulity of age, he boasts of his victory over his southern prejudices—boldly tells the tale of Edward's early poverty, and his daughter's love—always adding that he never will believe he is Joe Mullet's son, for *he is a gentleman.*

There are few happier old men than Mr. Snowden when he takes the little Wells Snowden on his knee, and recounts to the listening child the former splendor of Snowden Manor. The little fellow never tires of hearing "Grandpapa" tell him about mother's frolics with the dogs and ponies. The old gentleman does not fail to impress on the child's mind the importance of becoming a man that will not dishonor his noble ancestry.

"Call you that old rebel a gentleman?" said the Earl of Balcarras, when William Pitt introduced Mr. Franklin as "*the gentleman from America.*" "Yes," "answered Pitt. "*I do call him a gentleman,* and one of *God Almighty's own make.*"

Such an one was Edward Snowden.

A STRIKING FIGURE.—Dr. HOLMES, of Boston, lately delivered a lecture wherein the genius and characteristics of BYRON and MOORE were discussed. HOLMES is himself a poet of no ordinary genius. The following figure of BYRON strikes us as new, and eminently appropriate:

"Fiery and voluptuous, and of a tropical nature, he was born out of place in foggy England. The northern partlet, thought she was incubating a common egg, but when her bantling chipped the shell, how must her feathers have risen with astonishment and horror, to behold upon it the scarlet plumage of the wild flamingo!"

WERE absolute perfection enthroned, courtiers would certainly discover some way to flatter it.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, APRIL 30, 1853.

### PUBLISHER'S NOTICES.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is ordered.

☞ ADVERTISEMENTS must be brief, appropriate to the objects of the paper, and accompanied with the cash.

ADDITIONS TO CLUBS—Are still in order. Having but few back numbers, agents and others can order additions to Clubs at $1 per copy from 1st of March or April to end of the year and volume. New Clubs, or single subscribers, can begin 1st February, March, or with the quarter—April 2d.

### Our May Premiums—Again.

THAT agents and competitors may know their relative positions in regard to our May Premiums, before the time for competing expires, we annex the names of the most prominent in the order they now (April 25) stand on our books—commencing with the person who has obtained the greatest number of subscribers:

L. D. Branch, E. R. Hughes, J. H. Stanley, S. E. Nortou, J. Van Horn, I. W. Briggs, E. W. Fairchild, G. N. Sherwood, M. Harris, J. L. Yeckley, J. L. Paine, Robt. Fulton, S. P. Chapman, J. C. Moutgomery, Jas. Cameron, C. L. Curtis, R. S. Ransom.

As we may not receive all remittances from competitors previous to the day on which our next number will be put to press, we shall defer announcing the final result uutil the succeediug week, (May 15.)

### City and Country Journals.

WE have never seen any special reason for believing that the interests of *good* City and Country Journals clashed with each other, but on the contrary have found that where the one class has readers the other is also patronized. A real *live* Country paper has news of its own—of local affairs, improvements, resources and statistics, and of matters transpiring and of interest to its own immediate neighborhood—in which no City Journal can compete with it. And, it is only from those Country Journals filled mainly with a rehash of news from City Dailies, that we hear complaints of the influence and opposition of the City Press. These, depending for their interest upon second-hand intelligence, cannot but be injured by papers which give that intelligence first and fresh to their readers.

In speaking upon this subject, the *Tribune* of a recent date gives the following just and sensible remarks, though we beg leave to add to Mr. GREELEY'S definition of Journalism. He says: "There is one mistake quite commonly made, we think, in the conduct of Country Journals.—The editor finds his patronage quite limited, and argues thence that he *cannot afford* to gather and prepare all the local news. Now we insist that in Journalism as in Agriculture and every where else, what is worth doing at all is worth doing well, and any thing that will pay for half doing will pay better for doing thoroughly. The art of Journalism consists in making a paper which a great many people *must have*, even though they don't exactly like it."

The art and aim of our Journalism is to make the RURAL, whatever the expense, such a paper as everybody *will like, must have*, and *cannot keep house without!* And, the many kind words of commendation received, and more substantial evidence, encourage us in the belief that we are attaining a measure of success.

### Prospect for Wool.—Recent Sales.

THE prospect for the coming clip is quite as flattering as the public have been led to expect. From all parts of the country we have reliable information that mills which have been standing idle are to be put in operation as soon as the necessary stock can be obtained.

Of the market in England and on the Continent the London *Times* says:—"At the late public sales nearly all the stock then in London was sold, and the warehouses consequently beginning to look very empty. The advices from the Continent represent light stock and high prices. In Germany the old stock is nearly exhausted, and the consequence is that the next clip has already been contracted for at much higher prices than those of last year."

We also find mention of an extensive and important sale of wool in New York, on the the 20th inst. The competition was quite spirited, and the prices realized were fully ten per cent higher than was generally anticipated, and in advance of rates lately realized at private sale. Lots were wanted by manufacturers to carry them on until the new clip comes in; and this, in addition to the prevalent feeling that the stock on hand is limited, tended to send up prices. The aggregate amount sold reaches $400,000. Common American fleece brought 45c; ¾ blood do 52; fine do 55@61.

☞ The People's College Association, which was chartered by the Legislature at its late session, was to have met in Brooklyn on Wednesday. This project of establishing a College embracing such a complete system of education, has been maintained in the face of much discouragement, and will now probably be carried out.

### New York Daily Tribune.

THIS capital News, Commercial and Political Journal signalizes its entrance into teenhood by an enlargement of its borders, which (says the Editor,) "will add fully one-third to its area, and require us henceforth to pay more for the white paper upon which it is printed than all we receive from subscribers." The editor further remarks, among other things, that the change adds some $50,000 per annum to the expenses of the paper, and without necessarily increasing its receipts. "Yet we encounter so many complaints of 'small type,' 'too fine print,' 'bad for the eyes,' &c., that we have resolved to risk our all on the enterprise of making a paper which will satisfy many thousands who have hitherto stood aloof, and so enlarge our Subscription and Advertising as to secure us a reward for our exertions in the future equal to that we have enjoyed in the past. If we can add one-fourth to our reading matter, and present the whole in fair, clear type of good size, we believe we may nearly double our circulation; and this, though of no direct advantage to us, secures such an increase of our Advertising as will leave us nothing to desire."

If the *Tribune* is not *the best* daily in the land, it certainly stands in the very front rank—and, in many respects, has no equal. For ability, enterprise and variety, or *completeness*, it has no superior—while the responsible Editor is known as a fearless advocate and defender of what he believes to be the Right on all questions of the day and age. Hence its popularity and unexampled prosperity. And as the *Tribune's* success has been achieved by merit and enterprise, we rejoice in witnessing such conclusive evidence of its appreciation by the public. In its new dress, and enlarged form, the *Tribune* is a model in its line, and quite Loudon Times-ish in appearance. With the continuance of former *brain power* (the old engine in a new hull,) and "ample room and verge enough" for its full scope, the *Tribune* is destined to more than maintain its present standing and popularity. It is published by GREELEY & MCELRATH, New York, at $5 a year, in advance.

### Notes from Boston.—Visit to Marshfield.

Boston, April, 1853.

MESSRS. EDITORS:—No one can visit Boston without reviving glorious recollections of early Colonial history, and struggles in the sacred cause of human freedom. Here is Faneuil Hall. Its walls and arches, now consecrated by lapse of time, heard the first public demonstrations in demanding liberty of speech, thought, and action; and rang with triumphant shouts of victory, and glad acclamations of an honorable peace. Here WEBSTER pronounced his immortal Eulogy on ADAMS and JEFFERSON. Little, perhaps, did he think then, that the same columns would be shrouded in mourning for *him*. HILLIARD, with such a subject for contemplation as the departed WEBSTER; and such remembrances, as those of olden time, could but follow in the same lofty strain of eloquence which commemorated the birth, and deplored the death of the Boston Patriot and the Sage of Monticello. True greatness is not born in a day, nor is it of mushroom growth It requires many years to lay an indestructible foundation; and death—the terminus of noble exertion—to build the monument, and hand down the precious memorial. Party strife and sectional jealousy, may asperse character and assail the honorable reputation of the living. But when death calls a great intellectual light from exertion and glory, all private animosities, as they should be, are buried in oblivion.

This afternoon I visited the homestead and tomb of WEBSTER, at Marshfield. It is 34 miles from Boston. To go there you take the Old Colony Railroad to Duxbury, which is within ten miles. Thence by stage, or private conveyance, and you are landed on the farm which WEBSTER reclaimed from barrenness, and brought to a high state of fertility and fruitfulness. WEBSTER was a model farmer. Like the Patriarchs of antideluvian time, he took heartfelt pride in numbering his flocks; and in walking over his many acres of land. Mr. FLETCHER WEBSTER was not at home, having just gone on a fishing excursion with Mr. SARGENT. I was welcomed however, by his son, DANIEL, a bright and promising boy of 12 years, and by Mr. DUDLY BAKER, superintendent of the farm and brother-in-law of "*Go a-head John Taylor*," I was taken through the Library, and room where WEBSTER said, "I STILL LIVE;" and where he died. It overlooks the family burial place and the Ocean. The bed and furniture of the room remain unchanged.

Mr. B. conducted me to the grave of WEBSTER—on the monument is the simple inscription

"DANIEL WEBSTER."

On the tomb of his son, slain in Mexico, Major EDWARD WEBSTER, is the following words,

"*A dearly beloved Son and Brother.*"

On the tomb of GRACE FLETCHER, his first wife, the passage of scripture,

"*Blessed are the pure in heart, for they shall see God;*"

and on the tomb of JULIA WEBSTER APPLETON, his daughter, the beautiful and expressive words,

"*Let me go, for the day breaketh.*"

I dined at the mansion, and was entertained by many anecdotes and sayings of the illustrious deceased. On leaving for Boston, Mr. BAKER presented me with some valuable letters in the hand writing of Mr. W., from Washington, on matters relative to farm management and fishing. Though short, they serve as a correct index to the home-habits, and private character of the man. None of them have been published in any form whatever. As memorials of WEBSTER, and Marshfield, they are invaluable. Yours, &c., W. M. H.

STAMPED ENVELOPES.—The New York *Evening Post* learns that the stamped envelopes, contracted to be furnished for the United States government, will be ready for delivery by the 1st of June.

## Literary Notices.

THE DOMESTIC ARCHITECT: comprising a series of Original Designs for Rural and Ornamental Cottages, with full and complete Explanations and Directions to the Builder, embracing the Elementary principles of the Grecian and Cottage styles, with primary rules for Drawing and Shading, and the Rudiments of Linear Perspective. Illustrated by over 200 engravins. By OLIVER P. SMITH, Architect. Buffalo: Derby & Co., 1853.

THIS is a neat and valuable work, of which we have already given an extended notice. It contains lucid directions for the practical builder, for whom it is particularly designed. Mr. M. AUSTIN, a well known and excellent Architect of this city, speaks as follows of its character and value:—"I have examined a new work entitled 'The Domestic Architect,' by OLIVER P. SMITH, designed for the use of practical builders and young students in the theory and practice of building. I think the author has sustained the title and design of the work in an eminent degree. In this well filled book, the student will find all the essential and important principles directly connected with his practice, clearly explained and illustrated. In fine, it is just such a work as is needed at the present time, to meet the wants and requirements of this age of progress." It is sold by canvassing Agents.

LIEBIG'S COMPLETE WORKS ON CHEMISTRY—Comprising his Agricultural Chemistry, Animal Chemistry, Familiar letters on Chemistry, The Origin of the Potato Disease, Chemistry and Physics in Relation to Physiology and Pathology, etc., etc. By JUSTUS LIEBIG, M. D., F. R. S., etc. Philadelphia: T. B. Peterson. 1853. Price, $1,50.

WE have here, in a good and cheap form, the complete Chemical works of this standard writer. It is a volume which needs no commendation at our hands, as its value is generally known and appreciated. For sale by MCMAHON & Co., 140 & 142 State street, Rochester.

A KEY TO UNCLE TOM'S CABIN; presenting the original Facts and Documents upon which the Story is founded. Together with Corroborative Statements verifying the truth of the work. By HARRIET BEECHER STOWE. Boston: John P. Jewett & Co. 1853.

THE readers of "Uncle Tom's Cabin" will be interested in this volume, which is even more thrilling and affecting than that world-renowned work. The title above gives a good idea of its contents. For sale at DARROW'S, Main st. Bookstore.

### Letter from California.

WE are indebted to Mr. BARNUM, of Yates, Orleans county, for the following letter from California, written, he says, "by one of his schoolmates to a brother at home." The advice given is worth heeding:

BENICIA, Cal., Feb. 22, 1853.

DEAR BROTHER:—In your letter you speak of coming to California, and when reading it, I thought I should like to have you here with me. But I presume you are better off where you are, although this is a good country to make money—but not as good as we heard it was before we left home. The mines are not what they have been, nor are wages as high. There are hundreds in the mines that are not making their board—still there are some who are doing well. I consider the mines a perfect lottery, yet think I should try them if I had no family to look to and care for. For this reason, I had rather trust my luck by the month on a farm, where I am sure of making from $50 to $100 per month the year round. I hope you will not take encouragement from this to come here, far from it; though you might perhaps make more money here in one year than in five at home, yet the difference in enjoyment would make home to be preferred. I sometimes think all California would not persuade me to leave the comforts of home. You say you have not given up the idea of coming here. If you should come, do not take the land route.

The weather here is very fine. It is now as pleasant as May at home. We have not had any rain in a month. The wild oats are ankle high. I wish I was at home to eat some apples with you this evening. This from your brother and well wisher. WM. B.

### Impressions of Western New York.

THE *New York Recorder*, has a long and interesting article under this title, from which we make the following extract. All Western New York readers, and many others, will thank us for transferring it to our columns:

Though I do not live in Western New York, I have often traveled over its smooth or gently undulating fields by the different railroad, canal, and carriage routes that chequer them, and have had my attention again and again arrested by those marks of growth and promise that distinguish few other portions of our State. In particular, a Belt, about eighty miles in length from east to west, and ten in breadth from north to south, has struck me, not only as presenting some singular geological features, but as one of the noblest theatres for the display of Anglo-Saxon enterprise, and destined at no distant day under this enterprise to stand out as one of the brightest spots of earth.

This Belt, defined as the Lake Belt, sometimes called, *par excellence*, Western New York, has a strong alluvial soil, with evidences, here and there that it was once submerged beneath the waters of the Lake. It produces large roots, the choicest fruits, and the best grains; especially the well known "Genesee wheat." On the north it is fringed by the Ontario, whose blue waters, dotted with sails and steamers, stretch away farther than eye can reach. On the south it is skirted by the Mountain Ridge, a line of hills from thirty to fifty feet high, running from west to east, and sometimes quite precipitous, with out-cropping ledges of rock, as if once a rock-bound shore. On the east, this Belt is cut off by the bed of the Genesee, and on the west by the deep and broad current of the lower Niagara. Through the whole length of it, from west to east, and nearly in the middle, passes the Lake Ridge, itself a curiosity that strikes every traveler. The surface of this Belt is almost a plain, (gently undulating here and there,) with its southern edge elevated about three hundred feet above the northern, and consequently sloping to the north by a descent of about thiry feet to the mile, thus giving a rapid current to the streams, and creating no small extent of water-power. The south half, between the Lake Ridge and the Mountain Ridge, through which the Erie Canal and the Rochester and Niagara Falls Railroad passes, is for the most part under good cultivation, with a large population. Here is the city of Rochester and the villages of Brockport, Albion, Knowlesville, Medina, Middleport, Lockport, and Niagara Falls. The same cannot be said of the north half, between the Ridge and the Lake. Some handsome villages appear in this division, but much is still forest land, and some of it wet and swampy. Yet, from ease of drainage and the exceeding fertility of the soil, this, ere long, must become one of the most productive portions of the State. It will be the great granary to supply the flouring-mills in Western New York with the finest article of Genesee wheat.

With this general view of the Lake Belt, it is not our purpose to notice the "thousand and one" points of interest that have attracted the visitor. We pass by the Niagara Falls on the west, the Genesee on the east, the rising and falling of the Lake, the forts and battle-fields, Rochester and Lockport, the magnificent locks, the costly aqueducts and bridges, the churches, schools, colleges, and seminaries, and we stop awhile at a place of comparative insignificance to complete our impressions. Do not be surprised. The very names at first may be a little repulsive. Have you or have you not heard of Jeddo, and of Wild Cat Swamp?

The little village of Jeddo is on the Ridge Road, near the centre of this Belt, two miles north of Middleport, and thirteen east of Lockport. * * It will in time be numbered among the most thriving villages on the Lake Ridge. Already you see a substantial flouring and custom mill of masonry, with three run of stone; two saw-mills; a machine-shop, with water-power; several mechanics' shops; store; post-office, and some thirty families, where a few years ago was the miasma of a swamp. The water-power at this place is highly valuable, being supplied by the middle and west branches of Oak Orchard Creek, Wild Cat Swamp, and a waste-weir on the Erie Canal. This last source in particular renders it steady and reliable, for in summer, when other streams in this region fail, this has the greater supply, as more water is then pressed down from Lake Erie, and more let out at the waste-weirs towards Lockport. Nor is the fall inconsiderable. At the Ridge, for the Ridgeway Mills, about fifteen feet are secured, and two other falls, of eight or ten feet each, may be secured near by for milling and manufacturing purposes.

Our notice of Jeddo would be quite imperfect without further allusion to Wild Cat Swamp, for all things here worthy of notice are as if the product of this. Stand on the Ridge in Jeddo and turn your face to the south. You see fields of muck, which rival in richness the far-famed Scioto Valley of Ohio. These fields, waving in summer with heavy wheat and corn, and yielding roots of enormous size, constitute by far the richest portions of Esq. E.'s and of Esq. B.'s farms. Only twenty-five years ago, when water and dense forest covered these, the wild-cat, raccoon, and deer found here a secure home, and the exhalations and sickly vapors of summer kept the dwellings of the white man away. The Lake Ridge caused this Swamp. It has been disputed whether this Ridge has or has not once constituted the Lake shore. Some able geologists maintain that it has; and our State geologist, Mr. Hall, in the Natural History of New York, favors this opinion. But the shape of this Ridge is not generally that of a permanent shore, descending as it does nearly alike on both sides. It is more that of a drift or bar in the Lake; still, a very singular one if it is such.

Now, there may have been a time when, by a different conformation of lands, the waters of the Ontario were pent up, in the direction of the Mohawk and St. Lawrence; when the Niagara Falls and the Falls at Rochester did not exist, and the level of the waters of Ontario was nearly the same as those of Lake Erie. If ever this was so, the Mountain Ridge, to all geological appearances, and not the Lake Ridge, constituted the shore.—The form of the Mountain Ridge favors this theory. What, then, was the Lake Ridge? There may have been a time when, by a partial removal of the barriers on the east, the waters tarried awhile at this level, and threw up as if a temporary shore. Or it may have been a bar formed before the waters receded. The sand, round gravel, smooth stones, and shells found in this Ridge show, at all events, that it must have been subject to great agitation by water. But whether a shore or a drift, when the Lake receded it became a dam, through which most streams at once burst; but some, being arrested by it, coursed along on its south side till able to force a passage. In this way, the West Branch, being checked, formed Wild Cat Swamp, and, after passing to the east for six or seven miles along the Ridge, in almost a dead level, was discharged into the bed of the Oak Orchard, and in this way its waters crossed the Ridge and found the Lake.

This Swamp was not only waste ground, but the seat of malaria, which drove the new settlers away. To abate a nuisance, therefore, the Ridge at this point was tapped. Some man, about twenty-five years ago, having no idea of the consequences that were to follow, gently checked the ground, and the water, once beginning to flow, moved with it the sand and gravel till a channel was cut about fifteen feet below the surface of the Swamp, passing up through it till it reached the channel of the West Branch and Middle Branch of Oak Orchard Creek. The sickly vapors were abated. The soil carried down enriched the lands below. The Swamp, with five or ten feet of muck, was left high and dry for cultivation. A new line of mil-seats was formed by the new channel, the one at the Ridge especially valuable, and a seat which was purchased by J. E. for six dollars per acre, and considered dear at that, is some of it now considered worth more nearly a hundred dollars per acre. Such is one of many illustrations that might be given of great effects from slight causes, when enterprise co-operates with natural advantages.

Much that has been said of Wild Cat Swamp may be said of others similarly formed and similarly drained, though of few has the drainage been attended with such direct results.

BULLARD'S PANORAMA OF NEW YORK CITY.—This entertaining and instructive work of Art will soon be exhibited again in this city. Those who wish to see the great Commercial Metropolis of the country—and particularly the scenes witnessed in Broadway—can do so at a trifling expenditure of time and money by visiting this Panorama.—It is a faithful and beautiful picture, as many a New Yorker has testified, and as we ourselves have observed.

## News Brevities.

——A vessel built of zinc has been launched at Nantes.

—— The winter wheat in Wisconsin looks very promising.

—— Excellent sugar is now made in the Sandwich Islands.

—— Lamartine is dying: his physicians have no hopes of him.

—— Frederica Bremer promises to publish a work on American slavery.

—— P. T. Barnum is elected to the Connecticut Legislature from Bridgeport.

—— The Mexican debt, which is clamorous for liquidation, is $129,000,000.

—— The protestants in France, attending their own form of worship, are 3,000,000.

—— Navigation opened from Montreal to Quebec on Thursday last, the 21st instant.

—— A vein of lead seven feet thick has just been opened near Mineral Point, Wisconsin.

—— M. Mannddorf, another pretended Dauphin, has enlisted as a private in the Dutch army.

—— The boilers of the ill-fated steamer Henry Clay, were recently sold in New York for $3,050.

——Wisconsin has chartered 15,000 miles of Railway, which it will cost $300,000,000 to build.

—— The Sloo Tehuantepec treaty was ratified by the Mexican Government on the 28th March.

—— The New York ice-venders propose to charge the coming season double the rates of the last.

—— The amount of money raised in New Hampshire by taxes, for schools, in 1852, was $150,527 74.

—— Hon. W. A. Graham was thrown from his carriage near Raleigh, on the 12th inst., and narrowly escaped death.

—— A Savings Bank is about to be established at Honolulu, upon the plan of similar institutions in the Atlantic States.

—— There are 484 convicts in the State Prisons of Philadelphia, and they pay by their labor the cost of their confinement.

—— Each person in the United States would be the possessor of property to the amount of $375, were it equally distributed.

—— The new government envelopes are of beautiful laid paper, with the words "P. O. Dept." water marked in the same.

—— Barnum has disposed of his interest in the Illustrated News, and has hired the Siamese Twins, at a salary of $5,000 a year.

—— Santa Ana's address commences with the words—"on placing my *foot* on the shores of my native country." He has lost one leg.

—— William Stoddard, of Litchfield, found an old almanac the other day, in a building he was demolishing, which bore the date of 1761.

—— The proposition to undermine and otherwise improve Faneuil Hall, Boston, has been vetoed by the Common Council of that city.

—— The Legislature of New York voted $25 to one of the members who had his coat stolen, while in the discharge of his legislative duties.

—— Louisiana is about to set the example of paying witnesses a fair price for their time when compelled to attend to other peoples' business.

—— The pay of Colonel in the English Grenadier Guards was reduced, some time ago, from fifteen thousand to ten thousand dollars a year.

—— The Cobourg Star sets down the value of the Woolen manufactures produced yearly in McKechnie's establishment in Cobourg, at $300,000.

—— There has been a decline in the prices of leading articles of produce in St. Louis. So says the Evening News. Pork is tending downward.

—— The Canals have not opened well this spring. An unusual amount of annoyance and delay is experienced in getting them ready for navigation.

—— Florida writers are advocating the planting of vineyards in that State for the production of wine, for which the soil and climate are both favorable.

—— The New York Day Book has employed some half dozen female compositors. The nimble fingers of the girls, it is said, kiss the type with great rapidity.

—— A colored man, who sailed for California from Newburyport, in the brig Ark, in 1849, returned by the last steamer, $10,000 better off than when he went away.

—— The city authorities of Philadelphia, in contracting for cleaning the public thoroughfares for the season, have stipulated that the streets shall be swept at night.

—— The N. Y. Tribune goes into an estimate of the cost of the dust in the streets of New York, the destruction of hats, clothes, linnen, &c., at three millions of dollars a year.

—— It appears by the census that the consumption of spirituous liquors in the U. S., reaches the enormous quantity of 86,000,000 gallons annually, equal to six gallons for every adult person.

—— It is stated that the third and fourth volumes of Macaulay's History will appear by the end of April. The period embraced in these volumes exteuds to the accession of the house of Hanover.

—— The Peru and Indianapolis Railroad is now completed to Tipton, forty miles distant. Passenger cars will soon be run to that point. There are thirty-two miles of the road yet to be completed.

—— The force of circumstances and the influx of advertisements, have caused the New York Times to grow taller by a few inches added to the length of each column. The Times achieves greatness.

—— Fifty thousand bushels of Onions were raised last season in the vicinity of Westport, Ct., within a tract of country not exceeding three square miles. The average yield per acre was about five hundred bushels.

—— The golden ingots are now the most popular celebrity in New York. The Herald describes three of them—one worth $4,361 74, another $1,171 27. They are stamped with their weight and fineness, and are tempting slugs.

——About 140,000 dead letters are annually returned from our General Post-office to the Post-office Departments of Europe, that they may again fall into the hands of the writers. The postage amounts to about $20,000 a year.

—— The Minnesota Legislature has incorporated a Railroad Company to build a road from the Falls of St. Anthony to Puget's Sound on the Pacific. The distance between Chicago and the Pacific on this route, is estimated at 1,765 miles.

—— There are 124,783 children in Wisconsin who go to school; or, nearly one-third of the whole population. Last year, there were 111,431, so that the increase is 13,442. The number of school houses in the State is 1,730; built the present year 221; volumes in libraries 11,975.

# Foreign Intelligence.

### Arrival of the Arabia.

The Steamship Arabia arrived at New York on the 20th inst., with London dates of the 7th. The Tribune mentions the most interesting items of her news as follows:

The increase of the British family by a son, which took place on the 7th inst., does not seem to have excited an excessive enthusiasm among the loyal subjects of her Majesty. Much more attention is paid to the plan of the Chancellor of the Exchequer for transforming and reducing a part of the national debt. It seems, however, that while diminishing the interest, the scheme allows of an increase of the principal of the debt, and this feature is loudly objected to. We judge that it will have to be modified, or Mr Gladstone, if not the Government with him, will suffer a defeat. D'Israeli will oppose the plan with all the force and bitterness he is master of.

Mrs. Stowe's expected arrival is spoken of in many of the English journals as a matter of great interest, and the fact that a slight indisposition delayed for a few days her sailing from this country affords the occasion for a flood of anxiety and sympathy.

In France there is no news.

From Holland we hear of active Protestant opposition to the re-establishment of the Catholic hierarchy, which has been agreed on between the Pope and the Government.

The Pope has borrowed twenty million francs of Rothschild.

Several military executions have taken place in Hungary.

There is nothing very definite from Constantinople, but it looks as though Menchikoff would have every thing his own way.

The Cotton market remains unchanged, and Breadstuffs have fallen off.

### Later—Arrival of the Humboldt.

The Humboldt arrived at New York on the 26th inst., with Liverpool dates to the 13th. The news is not of special importance.

Markets.—There was little change in breadstuffs—flour had advanced slightly. Western Canal and Canadian flour were quoted at 22s 6d. @23s. White wheat 6s. 10d.@7s. 1d. Corn, yellow 31s. 6d. Beef and pork dull. Bacon active.

# California News,

### Arrival of the United States.

By telegraphic dispatch from New Orleans dated April 23, we have two weeks' later advices from California with the distressing intelligence of the destruction on her way from Panama to San Francisco, of the steamer Independence by shipwreck and fire, with the loss of from one hundred and forty to two hundred lives. The details of the scene are most heart-rending.

The Independence grounded on the shoals of Margaretta Island, near the coast of Lower California, on the 16th of February, and subsequently took fire and exploded when the flames had reached her powder-magazine.

The calamity was sudden and heartrending.—Many of the passengers were blown into the sea by the force of the explosion, some were burned to death, but by far the largest number were carried out to sea by the strong current setting off the island, and were drowned before assistance could be rendered.

The news from California is quite important.—A large yield of gold is reported, and a little over Two and a Quarter Millions were shipped for the Atlantic side by the steamer of the 1st. The town of Marysville has again been visited by a destructive flood, causing considerable damage to porperty. The market news is quiet, operators in goods and provisions having awaited the opening of the new arrivals, which were coming in largely.

The markets at San Francisco were quiet, in expectation of a great change, owing to a large number of marine arrivals. Flour was at $12 to $13, with small sales; Mess Pork $40, and Clear Pork $44; Hams 24c.@25c.; Butter 43c.; Lard, 23c.@30c.; Rice 6c.@6½c.

### Washington National Monument.

The following rules have been adopted by the Board of Managers of the Monument Association:

Every citizen who contributes $25 shall become an honorary member; and every contributor of $100 or more, shall be eligible to the office of Vice President. Four marble panels are to be inserted in the monument; one for the names of those who contribute $500, a third for those who contribute $200, and a fourth for those who contribute $100. Each contributor of $5, and less than $8, is entitled to a large print of the design of the monument, or a large likeness of Washington. Each contributor of $8 or more, is entitled to one of each of the large prints. Contributors of $1, and less than $5, are entitled to a small sized print of the monument. All the prints have certificates attached, to be filled up with the name of the contributed. The names of all contributors will also be recorded in books which are to be classed according to States, counties, &c., and to be placed in the monument for preservation and inspection.

Agricultural Instruction in Amherst College. Mr. Samuel Appleton has added to his many generous acts, that of giving $500 for the establishment of instruction in Agriculture in Amherst College. We understand, also, that Mr. Jonathan Phillips has contributed a like sum for the same purpose. The object is a good one. It is important that the young farmer be thoroughly educated for his business. Every dollar judiciously expended in this way by our colleges, will return tens of dollars to the wealth of the State, besides advancing the intelligence and moral worth of the community.—*Boston Traveler.*

Morgan Stock.—We understand that Mr. E. B. Hastings, of New Garden, Columbiana county, O., has purchased the superior Morgan stallion, "Gifford Morgan," (four years old, sired by the celebrated horse "Gen. Gifford,") raised by J. Dorr, Esq., of Scottsville, in this county. The price was $1,000. The horse has passed into good hands,—and we are glad to learn from a friend in that section that "Gifford Morgan" is highly appreciated.—*Wool Grower and Stock Register.*

Churches in California.—There are, at present about 30 churches in San Francisco. This is about one to every thousand inhabitants, and which, judging from other cities, is about a fair average. The Methodists have four; the Episcopalians, Presbyterians, and Baptists, two each; the Congregationalists, Roman Catholics, Swedenborgians and Welsh, one each.

# News Paragraphs.

☞The Boston Journal says that a recent census of the Sandwich Islands exhibits some facts of startling interest, and which illustrate in the most unmistakable manner, the vital law that the inferior race must give way to the stronger. The present population of the seven islands forming the group is 80,641. The deaths last year were 7,943, while the births were only 1,478; an average of six deaths to one birth. The foreigners number only 1,787. This is an extraordinary state of things, and we doubt whether its parallel can be found in the history of the world. In the time of Cook the population numbered 400,000; thus in seventy years they have decreased 320,000. In 1836 they numbered 108,579; decrease in seventeen years nearly 28,000.

☞A Professorship for the benefit of those who intend to become farmers is about to be established at the Library Institute at Fairfax, Vt. There will be an effort made to endow this Professorship with the sum of $20,000, and to make its benefits available by the practical farmers of the vicinity. To this end instructions will be given in those branches of Natural Sciences connected with Agriculture, lectures will be delivered and apparatus will be furnished for experimenting.

☞At the General Post-office in Great Britain, during the last six years, the average increase amounts to no less than 260,000 letters, and 14,000 newspapers daily. It is estimated that the number of letters which will pass through the General Post-office the present year will be about 95,000,000,—the newspapers nearly 2,000,000,—over and above the numbers which passed through it in 1846, though the reduced postage law had then been in operation for some years.

☞The Michigan University announces a free course of lectures on Agricultural science, commencing April 27th and closing June 28th. Rev. Charles Fox, (editor Farmer's Companion,) will lecture on Theoretical and Practical Agriculture; Prof. S. H. Douglass on Climate, Geology, Mineralogy, Meteorology and Chemistry; Prof. A. Sager on Vegetable and Animal Physiology, &c. We trust this example will find imitators in many of our Colleges.

☞Fisheries are carried on in Sacramento river, California, quite extensively. Four hundred boats, valued at $70,000, nets valued at $80,000, and seines at $6,000, are used in them. The fishing season lasts from the first of February to the first of August, and during that period each boat averages $30 per day, and each hauling seine $100 per day.

☞An exchange says that M. Amprere, the French philosopher, in his work on this country, says:—"The Americans have calculated the water power of Niagara It is of 4,533,144 horse power—nineteen times greater than all the power of Great Britain, and more than sufficient to work all the factories in the world."

☞A pigeon roost is mentioned by the Fort Smith, Ark., Herald, as existing in that region. It commences about twenty-eight miles from Fort Smith, and extends for upwards of twenty miles on either side of the Poteura to within a few miles of Waldron, in Scott county, The number of birds is beyond computation.

☞A gentleman of some fifty years of age, who was born and had lived on the Island of Nantucket during all his life, felt a desire a short time since, to visit the main land. Taking, therefore, the steamer for Boston, he arrived there in safety on the 18th inst., and for the *first* time in his life set his foot on the Continent.

☞There are twenty-nine copper mining companies in operation around Lake Superior. From an examination into the affairs of twenty-one of them, it seems they are divided into 224,000 shares and cost $1,000,000. They are considered worth $3,360,000. Have produced 10,400 tons of copper.

☞The New York Mirror says, the prices of iron are receding again, and it is the opinion of intelligent dealers that a considerable fall must ensue. Scotch pig, which was selling there at $40 per ton, is only 53 shillings sterling, or about $12, at Glasgow.

☞The Legislature of Wisconsin has passed an act providing for the incorporation of Joint Stock Companies, under a general law. The law is a statute which has been in force in the State of Connecticut for a number of years, under which over 350 companies are now working successfully.

☞A large class of claimants for pensions will be cut off by the recent decision of the new Secretary of the Interior. There was a contested case in the Pension Office, and the Secretary decided that upon the death of a soldier's widow, the pension reverts to his children, and there stops.

Steam on the Canal.—A citizen of Rochester, Mr. Sylvester Brown, is building a water craft for the lumber trade, which is to be adapted either for canal or lake, and to be propelled by steam.—Heretofore, lumber going from the Canada shore east, has had to be trans-shipped at Buffalo or Tonawanda, and it is to avoid this inconvenience and expense, that the enterprise is undertaken.—The Rochester Union says the "steamer will be employed in running for lumber to the ports on Lake Erie, Grand River, Chippewa Creek, and all places in that section of the Province where lumber can be reached by such a craft. She will be loaded at the lake ports with about 200 tons of lumber, and come to Tonawanda, where about 80 tons will be trans-shipped to a canal scow, which will be taken in tow."

Plowing Match.—The Annual Spring Plowing Match of the Monroe County Agricultural Society, has been appointed to take place near Churchville, in the town of Riga, on the 25th day May next. A full and liberal premium list, with the necessary rules and regulations, will be published in a few days. F. P. ROOT, Pres't.
H. C. White, Sec'y.
Rochester, April 26, 1853.

# Marriages.

In Portage, N. Y., on the 8th inst., by the Rev. J. H. Green, J. BRADLEY, son of Peter Clarke, Esq, of Conesus, and Miss ELIZABETH C., daughter of David P. Lake, of Portage.

# Deaths.

At Barre Centre, N. Y., March 27th, Maj. DANIEL P. BIGELOW, of congestion of the lungs, aged 61 years and 13 days.

In Chili, on the 16th inst., CARRIE, infant daughter of John B. and Frances J. Howell, aged 8 days.

At Northport, Ind., on the 12th inst., of congestive chills and fever, ALDEN, youngest son of Hon. J. F. Brothwell, in his 20th year.

# Market Intelligence.

Rural New-Yorker Office,
Rochester, April 27, 1853.

There has been very little activity in the market during the week just passed. The rural population have given little heed to the wants of their city friends, being well occupied with the labors incident to seed time. A general feeling of confidence and stability pervades the business marts, that gives a firmness and vigor to operations which nothing else can impart. We occasionally meet with croakers who predict a revulsion, and a crisis equal to that experienced in 1836 and '37. Give no heed to their forebodings, buy prudently, manufacture all you can, and above all, keep out of debt, and there need be no fears of hard times.

Flour—No transactions of moment to note. Prices remain nearly unchanged, with little more than a moderate home demand. Millers and dealers are forwarding by canal. The stock on hand at this point is unusually light.

Grain—Wheat is in good demand for milling, and all fair samples are taken at $1,08@1,10. Very little comes in by canal, the amount in store at different points, for which supplies come to this market, is reported as being very small. It is thought farmers are holders to some extent, but not more than usual. Corn remains nominally as quoted before. Oats are in some demand at 38@40c.

Seeds—The demand for seed is less active. Clover retails at $6,75@7. Timothy $2,50@3.

Provisions—We hear of few sales. Pork has suffered a decline. Sales could not be made at over $15@15,50 for mess; $12@13 for prime. Cut meats remain without change.

In other things we find no changes to note.

### Rochester Wholesale Prices.

| | | | |
|---|---|---|---|
| Flour, bbl. | $4,88@5,25 | Butter, lb | 12@15c |
| Pork, mess, | 15,00@15,50 | Cheese, | 8@9 |

### NEW YORK MARKET.

New York, April 25, 7 P. M.—A storm prevailed which checked extensive operations.

Ashes—Market less firm. Sales $5,50 for Pearls, and $5 for Pots.

Flour—Market dull. Canadian $4,68½@4,75; common to straight State $4,50@4,56; mixed to fancy Michigan and Indiana $4,62½@4,87½; good Ohio $4,56¼@4,81. Corn meal dull.

Grain—Wheat in steady request; no sales reported.—Rye scarce at 91@92c. Barley in little demand at 63@68c. Oats plenty and rather lower, Jersey 45@46c; State and Western 48@50c. Corn more plenty with moderate demand; unsound 55@60c.; mixed Southern 61@62c.; white do. 61@63c; Jersey yellow 65c.

Provisions—Pork easier, demand fair, tendency to a decline—Mess $15,56¼@15,62½, prime $13,37½. Beef in demand at improved rates, $8,50@10,50 for country mess. Lard 9¾@10c. for good. Butter 9@15c for Ohio; State 12@22c. Cheese 8@9c.

### ALBANY MARKET.

Albany, April 25.—A storm prevented operations to any great extent.

Flour—Market very quiet, business being confined to home sales and a limited eastern demand.

Grain—In wheat, barley, corn and rye, no sales were made. Good State oats sold at 48½c. Barley was offered at 70c; no sales. Hops quiet at 19@21c.

Seed—Clover sells slowly at 12@12½ for medium, 13@13½ for large. Timothy $2,75@3,25.

Provisions—Pork, city mess, $16@16,50; prime $14@14,50; clear $18@18,50. Beef, $5,50@6 for prime; mess $10,50@11. Beef hams $15@15,50. In other things no change.

### BUFFALO MARKET.

Buffalo, April 25.—Flour—The demand for flour was good with an upward tendency. Sales of good brands of Ohio, Michigan and Indiana, have been made at $4.

Wheat—The demand is not brisk; white Michigan sold at $1, and white Ohio at 98c. Corn is in moderate demand at 50c.

Pork—Good sales of mess at $15, and prime at $12,50—market firm. Smoked hams 9½c; shoulders 6¼c; Pickled hams 8c; shoulders 6c.

Good inquiry for Clover seed with ready sales at $6,50.

Canal freights 57@58c on flour to New York.

### NEW YORK CATTLE MARKET.

NEW YORK, April 18.—At market, 2,500 Beef Cattle—2,000 South and West: remainder this State.

Since our last there has been a very fair demand; and prices if any thing, are a shade higher. The range of the market to-day, is from $8,50 to 10,50 per cwt. The latter is a higher figure than we have been able to quote for some time past. About 100 head left over unsold.

At Washington Drove Yard—Offered, 1,900 Beeves, (1,300 Southern and Western, remainder from this State.) The market is quite active and prices very firm. Sales at from 9¼@10c. per lb., as in quality. About 100 head were left over unsold.

At Browning's—The offerings of Sheep amounted to 1,000, and were all sold at from $3,50 to 4,50@7,50.

Cows and Calves—75 offered, and all but 12 sold at from $25 to $50.

At Chamberlain's—Offered, 300 Beef Cattle. Prices from 8½ to 10c. per lb.

75 Cows and Calves—$25@35 to $50.

1,100 Sheep offered; sales at $3,50@4,50 to $6@7,50.

### ALBANY CATTLE MARKET.

ALBANY, April 18.—Woolford's Bull's Head—At market, 600 Beef Cattle. Prices extra, $7,75; 1st quality $6,00@6,25; 2d do. $5,50; 3d do. $5.

Cows and Calves—20 in market. Prices, $25, 30@45.

Sheep—970 in market—Prices, $4, 5@8.

Swine—None at market.

Remarks—Cattle all sold, largest number for New York market, and a few for Brighton. Sheep all sold for New York market.

### CAMBRIDGE CATTLE MARKET.

CAMBRIDGE, April 20.—At market, 736 Cattle, about 600 Beeves, and 136 Stores, consisting of Working Oxen, Cows and Calves, yearlings, 2 and 3 years old.

Prices—Market Beef—Extra, per cwt. $8,50@9; 1st quality, $8@8,25; 2d do, $7,50; 3d do, $6@6,25.

Hides—$4,75@5 per cwt.

Tallow—$7@7,50 per cwt.

Pelts—$1@1,50.

Calf Skins 10c per lb.

Barreling Cattle—None.

Veal Calves—$2, 5@8; 210 at market, and quality inferior, as a whole.

Stores—Working Oxen—$100, 103, 104, 108, 112@171.

Cows and Calves—$24, 29, 32, 36@51.

Yearlings—$13@18.

Two years old—$29, 36@48.

Three years old—$36, 38, 41, 52@68.

Sheep and Lambs—980 at market. Quality superior and sales quick.

Extra, $7, 8, 9, 10@11,50.

By lot—$4,50, 5, 5,50, 6@6,50.

Swine—Wholesale hard fat, at 6¼c, and stores, 6¼@7c., per pound.

### BRIGHTON CATTLE MARKET.

BRIGHTON, April 21.—At market 740 Beef Cattle, 25 pairs Working Oxen, 40 Cows and Calves, 1,140 Sheep, and 3,850 Swine.

Prices—Beef Cattle—We quote to correspond with last week, about the same prices were obtained for a like quality, the supply being about equal to the demand. Extra, $8@8,50; 1st quality $7,25@7,75; 2d do, $6,75@7; 3d do. $5,50@6,75.

Working Oxen—Sales at $78, 85, 98, 110, 140, and 175.

Cows and Calves—Sales at $24, 27, 30, 35, 42, 50 and 55.

Sheep—Sales $5, 6,25, 7, 8 and 11.

Swine—Small shoats from Ohio, 7 for sows, 8 for barrows; large hogs 6¾@7¾; old hogs 6, 6¼ and 7; York hogs 7½, and 8½. At retail from 7½ to 9.

**For Sale.**—Morgan Stud "Z. Taylor;" deep bay color, (perfect figure of the old Gifford,) three years old next 8th June. Also a fast mare, (dam of "Gifford Morgan,") in foal by Morgan horse "Gen. Gifford."
March, 1853. J. DORR, Scottsville, N. Y.

**SPECIFIC PREMIUMS!**

In order to reach and reward *every one* who may lend a portion of influence in support of the Rural New-Yorker, we offer the following Premiums for subscribers obtained previous to the 1st of May next:

1st. FIVE DOLLARS, in Cash, or a copy of Webster's Unabridged Dictionary, (or $6 in Ag'l. Books,) to *every person* sending payment for fifty or more yearly copies (six month subscriptions proportionably,) according to our terms, previous to the 1st of May next.

2d. FIVE DOLLARS, in Books, or four extra copies of the Rural, to every person remitting payment for forty or more subscribers as above.

3d. THREE DOLLARS in Books, or a handsomely bound volume of the Rural for 1852, to every person remitting payment for thirty subscribers.

4th. To every one remitting payment for twenty copies, we will give an extra copy of the Rural, and four (the present and three past) volumes of The Wool Grower and Stock Register—or, if preferred, an extra copy of the Rural and $1,50 in books.

5th. To every one remitting for ten copies, an extra copy of the Rural and three volumes (past or present) of the Wool Grower—or, instead of vols. W. G., $1 in books.

6th. To every one remitting for six copies, an extra copy of the Rural and either volume of Wool Grower.

7th. To every one remitting for three copies ($5,) either volume of the Wool Grower, *and* a bound volume of Gen. Farmer for 1848 *or* '49.

8th. To every person remitting for one copy, ($2,) we will give a copy of either vol. Wool Grower, *or* the Farmer for '48 or '9, as preferred.

All competitors for Premiums are expected to adhere trictly to the following

**TERMS,—IN ADVANCE:**

Two Dollars a Year. Three Copies, one year, for $5—Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Six month subscriptions in proportion. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different post offices if desired.

☞Specimen numbers, &c., furnished free to all disposed to compete for the Premiums, or who desire to extend the circulation of the New-Yorker. Subscription money properly enclosed, may be mailed at our risk.

Address D. D. T. MOORE,
Rochester, N. Y.

**MORGAN HORSE "YOUNG TECUMSEH."**

THIS celebrated and beautiful horse, owned by Enoch Fobes, of Oakfield, Genesee Co., is a dark chestnut with a white mane and tail, and is noted as a fast trotter. He was sired by Black Hawk Morgan, his dam by an imported Canadian Horse, son of Old Tecumseh of Montreal. His muscular strength, perfect symmetry, and fine action as a trotting horse, recommend him to the public as a stock horse of great value. For references see below:

*To all whom it may Concern:*

We have known Mr. E. Fobes' horse, "The Young Tecumseh," for several years, and do not hesitate to say, that he combines more valuable qualities than any other stock horse with which we are acquainted. In regard to his color, his body is a dark chestnut, while his mane and tail are a pure white. This, united with his great speed, kind disposition, hardy constitution, and easy keeping, render him unequalled in the world.

O H Mason, Gideon Phelps, Samuel Phelps, Timothy Hutchinson, Isaac C Bowen, C W Fay, Samuel C Webb, Pavilion, Genesee Co.
E M Richards, David Richards, Towner Richards, Attica, Wyoming Co.
Alvah S Hoyt, J Lovett, Batavia.
L E Heston, Wm Gibson, Alabama, Genesee Co.
H Mc William, York, Livingston Co.
J S Walker, Covington, Wyoming Co.
Wm Shumway, Pembroke, Genesee Co.

I have known Mr. Enoch Fobes' horse "The Young Tecumseh," several years, and have seen several of his colts from one to four years old. I deem him a horse of great value for stock, and know of no horse I would prefer for a stock horse. I think he possesses in excellent combination as many desirable qualities as any horse I ever saw. [174-1t*]
C R Bond, Geneseo, Livingston Co.
Moses True, Oakfield,
Elias Allen, Batavia.
A Smith, Rochester.
Jas P Wilson, Zeno Gould, L B Crego, Pembroke.

**Imported Horse, "Consternation."**

THIS thoroughbred horse has been so often exhibited at the Fairs of the New York State Agricultural Society, and always without a rival, that it is unnecessary either to describe or praise him. Six or seven of his colts, of various ages, were shown with him at Utica last fall. Two of them received first premiums, and all of them were greatly admired. Many of them, now four and five years old, are owned in Oneida county. Any person may be convinced of their great superiority by inquiring of almost any farmer or horseman in the towns of Rome, Lee, or Western. His colts and fillies are already in demand for breeding. Several have been sold during the past winter, at handsome prices, to go out of the State.

His pedigree will be found complete in Derby & Miller's edition of Youatt, and is confirmed in every particular by breeders' a certificates and copies of the English Racing Calendar, and English Stud Book, now in possession of the subscriber.

He will stand the coming season at the farm of the subscriber, two miles west of Syracuse and adjoining the village of Geddes.

Terms.—$10 for the season, and $15 to insure; the money to be paid in advance in all cases. When a mare is insured and left at the farm of the subscriber, or regularly returned to the horse until the groom is satisfied she is in foal, a receipt will be given promising to refund the money if the mare was not got in foal. Pasturage furnished at three shillings per week. Mares to be at the risk of owners in all respects. J. B. BURNETT,
174w8. Syracuse, N. Y.

**MORGAN HORSE "GEN. GIFFORD."**

THIS justly celebrated horse will be kept the present season at Lodi Village, Seneca Co., New York.

Gen. Gifford received the 1st Premium in the class of Morgans at Rochester, in September, 1851, and is regarded by experienced horsemen as the best living specimen of this invaluable breed;—is a perfect model in form, a sharp goer, and style and action unsurpassed. Terms of insurance, twenty dollars. CHARLES W. INGERSOLL.
Lodi, April, 1853. 164w8

**TO FARMERS.—THE PLOW REGULATOR!**

WE, the undersigned, having used Harvey Sprague's Improved Plow Regulator, and tested it to our satisfaction, have no hesitation in saying that it makes the draught of a plow from one-eighth to one-fourth easier for the team, and holds one-half easier for the plowman; it being so constructed that the whole weight of the plow and the furrow resting thereon, rides wholly on the wheels. It also carries the plow much steadier on uneven ground, and does away with the difficulty, arising from the common wheel, in finishing the last furrow of the land.—Considering the durable and simple nature of this invention, with the many advantages which it possesses over other wheels, we would recommend it to all Farmers.

M Dale, M R Sprague, H Sprague, Riga.
L Bangs, Churchville.
J Richmond, D Perry, Ogden.
C Smith, Sweden.

Those wishing the "Plow Regulator," by remitting $5 to Harvey Sprague, Churchville, N. Y., will have one forwarded immediately as they may direct. All orders promptly attended to.

The subscriber will dispose of right of Patent for different parts of the United States, on reasonable terms.—Address as above, or apply personally, at his residence, one mile east of Churchville, near the Railroad.
2t174-179. HARVEY SPRAGUE.

**SPRING GRAIN AND SEEDS.**

WE have now on hand and for sale at the Genesee Seed Store, the following Field Grains:

| | | |
|---|---|---|
| 100 | bushels | Pure Fife Spring Wheat. |
| 100 | do. | Barley, 4 or 6 round. |
| 25 | do. | Do. superior new variety, 2 round. |
| 100 | do. | Buckwheat. |
| 100 | do. | Racine or Cat-tail Oats. |
| 200 | do. | Reapt Timothy seed. |
| 400 | do. | Common do. |
| 25 | do. | Large Clover. |
| 25 | do. | Red Top. |
| 20 | do. | Orchard Grass. |
| 50 | do. | Millet. |

172-tf. J. RAPALJE & CO.

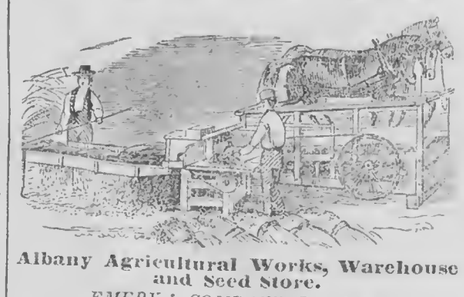
36 State St., Rochester, N. Y.



**Albany Agricultural Works, Warehouse and Seed Store.**

*EMERY & COMPANY, Proprietors.*

SOLE manufacturers of the celebrated, Premium "Emery's Patent Changeable Railroad Horse Power," Threshing Machines and Separators, &c., &c., for one and two horses—designed for Farm, Plantation or Shop use. Its construction is such, that it can be applied to the driving of all kinds of machinery, without additional expense for gearing, &c., &c. It will be recollected this Power took the first prize at the great trial of implements, by the New York State Agricultural Society, at Geneva, in July last.

Owing to the great advance in the prices of Iron, we have found it necessary to advance the prices, to enable us to manufacture a power equally good with past seasons, rather than to use a cheaper material in their construction.

*Our prices will be for the season* 1853:

| | |
|---|---|
| "Emery's Patent Changeable Horse Power," Thresher, Separator, Bands, &c., for two horses, | $158 00 |
| Emery's Patent Changeable Horse Power, Thresher, Separator, Bands, &c., for one horse, | 125 00 |
| Common Rack and Pinion Power Thresher, Separator, &c., 2 horses, | 140 00 |
| Common Rack and Pinion Power Thresher, Separator, one horse, | 115 00 |
| Emery's Patent two-horse Power alone, | 116 00 |
| " " one-horse " | 83 00 |
| Common Rack and Pinion, two-horse, | 105 00 |
| " " " one horse, | 75 00 |
| Threshing Machine with Separator and fixtures, 26 inch cylinder, | 37 00 |
| 24 inch cylinder, | 35 00 |
| Sett of Bands for Machine, with extras, &c., | 5 00 |
| Fanning mills, fitted for Power, | $26, 28, 30, 32 00 |
| Portable Circular Saw Mills, with 24 inch circular saw, filed and set in running order, for wood cutting, &c., | 35 00 |
| Extra table and saw for slitting boards and fencing stuff, and general shop use, | 7 00 |
| Upright or Felloe Saw, for wheelright's use, | 40 00 |
| Cross Cut Saw, arrangements greatly improved to attach to Power for cutting logs into any desired lengths, in the yard or forest, | 20 00 |
| Churn attachments to Power, for one or more churns, | 12 00 |
| Feed Mills, with Iron plates, | 40 00 |
| French Burr Stone Mills, for farm or mill use, | $120 to 300 00 |
| Power Corn Sheller, | $40 to 55 00 |
| Clover Huller, from | $30 to 100 00 |

Thanking the public for their past liberal patronage, we pledge ourselves anew to them, to give them a good article at a fair price.

*Terms*—Cash or approved notes or acceptances, with interest, payable within four months, in Albany, New York, Boston, Philadelphia or Baltimore, as may best suit the purchaser.

All articles warranted made of good material, and to operate as represented, or may be returned within three months, at the expense of the manufacturer for home transportation, and purchase money refunded. The purchaser being his own judge in each case. For further particulars, address the subscribers. Liberal deduction to dealers. Local agents wanted, to sell and put the above in operation, &c. Catalogues, giving full descriptions, furnished on application. EMERY & CO.,
173eow3t 369, 371 & 373 Broadway, Albany, N. Y.

**PEAS! PEAS! PEAS!**

WE most respectfully call the attention of Farmers and others to our extensive assortment of Field and Garden Peas; among the former are

| | | |
|---|---|---|
| 200 | bushels | Common Marrowfats. |
| 400 | do. | Junes. |
| 200 | do. | Golden Vine. |
| 200 | do. | Creepers. |
| 400 | do. | Common Canada. |

And among the latter are

| | | |
|---|---|---|
| 25 | bushels | Superior Early Kents, earliest grown. |
| 5 | do. | Prince Albert. |
| 100 | do. | Early Warwick—superior. |
| 200 | do. | do. Washington. |
| 100 | do. | Marrowfats, superior article. |
| 50 | do. | Black Eye Marrowfats. |
| 25 | do. | Dwarf Blue Imperial. |
| 10 | do. | Monastery Marrow. |
| 25 | do. | Blue Marrowfats. |

Also, various other choice kinds,—all of which will be sold at small profits for cash, at the Genesee Seed Store 63 & 65 Buffalo st., Rochester.
172-tf J. RAPALJE & CO.

**Woodward's Premium Corn Planter and Manure Depositor.**

THIS machine, after a thorough investigation at the Trial of Implements, near Geneva, in July last, received at the State Fair, the first premium. After several years use at the east, where it has given the most complete satisfaction, it has been introduced into this State and is in all respects a perfect machine.

For sale in Rochester by Briggs & Bro.; in Canandaigua by J. S. Cooley; and in Geneva by J. S. & H. C. Prouty, Prouty & Chew, and by the subscribers.
173w2* BRONSON & SIMPSON,
April 23, 1853. Geneva, N. Y.

**HALLOCK'S HAND SEED DRILL.**

THIS Drill is adapted to sowing carrot, turnip, beet, onion, and other small seeds in drills, with perfect regularity and without regard to their weight or shape.—The seeds are forced out by a circular brush, which revolves against a perforated tin plate inserted in the bottom of the hopper. A series of these plates accompany each drill, with holes of different sizes for regulating the quantity and kinds sown. It is a light, compact, and durable machine, and not liable to get out of order. They can be forwarded to any part of the country by railroad or stage. Remittances by mail at my risk. All orders (which should give full directions for forwarding,) promptly attended to. Price, $5. Address E. D. HALLOCK,
168eowtf. Rochester, N. Y.

**GREAT PRIZE MEDAL.**

THE WORLD'S FAIR AT LONDON, awarded us a Mammoth Silver Medal for the Best Hats.—Gents wishing the Spring and Summer style, will call. We are prepared to serve you with a superior article, and of the most becoming style.
CLARK & GILMAN, 23 State St.,
[169-3m.] Rochester N. Y.

**PROF. BROWN'S NEW STORE,**

**With New Goods, and Enlarged Accommodations**

CITIZENS OF ROCHESTER and Surrounding Country:—Grateful for past favors, I hope for a continuance and increase of the same. The front part of the store is exclusively for the sale of Goods; the rear for Shaving and Hair Cutting; the basement is a private room, divided into two, for the purpose of Coloring the Human Hair.

Gentlemen's Furnishing Goods.—Every article in this line. Collars of the latest make, and a larger stock than can be found elsewhere in this city.

Hair Work of every kind—the largest assortment made from the best materials, and shall be sold at the lowest prices. Perfumery, of my own and foreign make. Hair Oils that cannot be excelled. Brown's Antispassis and Hair Restorative, a well known article. Brown's Liquid Hair Dye, the best in the world.

A variety of Useful and Ornamental Articles too numerous to mention, at retail, but which I respectfully invite the public to examine.

Fishing Tackle.—Sportsmen, call and see.

To Ladies.—A lady will be in attendance in the front Store.

☞Eight Chairs are kept in this establishment, giving that number of persons a chance to be shaved at once—Nine persons are employed, showing the popularity and success of the proprietor. PROF. BROWN,
[129-tf] No. 26 Buffalo St., Rochester, N. Y.

**ROCHESTER STEREOTYPE FOUNDRY.**

THE undersigned would respectfully inform the public—and especially book and periodical publishers, authors, &c.—that he has established a Stereotype Foundry in Rochester. His establishment is furnished with every facility for Stereotyping, in the best manner, Books, Pamphlets, Periodicals, Cuts of all kinds, (including figures of animals, implements, etc.) Patent Medicine Advertisements, &c., &c. Plates blocked in a superior style on mahogany. All work executed with promptness and on reasonable terms, and equal in style and finish to that done at any other Foundry in the country.

An establishment of this kind has long been a desideratum in this city, and now that one is in operation, it is hoped a liberal share of patronage will be awarded to the enterprise.

☞Foundry in Talman Block, Buffalo street. All orders from a distance may be addressed to
J. W. BROWN,
April, 1852. [122-1am-tf] Rochester, N. Y.
N. B.—Old type taken in exchange for work.

**FOR SALE.**—20,000 Seedling Apples for stocks.
170w3t S. MOULSON, Rochester.

## SPRING.

BY IDA FAIRFIELD.

As bees amid the blossoms,
Or birds upon the wing,
Dancing o'er the meadow,
Comes the fairy-footed Spring.

Peeping in the vallies,
Tripping o'er the lawn,
Bounding through the forests,
Like a startled fawn.

Rippling with the streamlet,
Blooming with the flowers,
Laughing in the sunshine,
And weeping with the showers.

Following in her footsteps,
Blossoms lightly spring,
Waving o'er the brown earth,
Many a golden wing.

Singing through the wild-wood
Many a warbler flies,
Gladdened by the green boughs
And the azure skies.

Heavy hearts are lightened,
By her merry song,
Pallid cheeks are brightened,
As she trips along.

Lift me then to Heaven,
Songs of grateful love,
For the spring-time blessings,
Sent us from above.

Walton, N. Y., April, 1853.

[Written expressly for Moore's Rural New-Yorker.]

## THE PLEBEIAN.

BY KATE KOOLEY.

[*Concluded from last number.*]

### CHAPTER FIFTH.

EDWARD know that he had laid the foundation of future wealth, and that Fame was already twining a wreath for his brow,—but what cared he for wealth or fame, if not permitted to share it with her who alone could gild with the sunshine of happiness his pathway through life. Such were his reflections, as he left the noise and smoke of the town and entered the forest. The cool and fragrant breeze fanned his pale cheek, as he inhaled the rich perfume of blossoms which hung in gay garlands above his head, and fell like snow-flakes around him. It was again May—"Delightful May, o'en pale Consumption from thy balmy breath inhales delusive hope, basks in some sunny spot, and decks her half-forboding breast with flowers, which else would have survived the hand by which they were culled."

Surrounded by all these lovely and glorious things, I have dared to be miserable, (thought Edward;) because *one* fond anticipation has not been realized, I have refused to acknowledge and enjoy the many blessings which a beneficent Power has bestowed upon me. Should the result of my present journey be unpropitious to my wishes, may I never become insensible to the many sources of pleasure which Nature, with a prodigal hand, has scattered on all sides for the enjoyment of man.

During Edward's residence in C. he had frequently visited the pleasant spot mentioned in the introduction to this tale; he was again near it. I will, thought he, once more visit the place where I have spent the happiest hours I have known since my residence in the West. "Take your own course, Bayard," said he as he threw the reins over the neck of his horse, "the brook is yours by right of discovery." This thought suggested the name of the place, which is still called Bayard's Brook. All seemed unchanged; the little stream was still winding along, reflecting in its clear surface the variegated hues of the wild flowers on its banks. Seating himself in his favorite nook, he was fast losing himself in a sombre day-dream; starting up, he exclaimed,—"This is worse than useless; she may be dead; she may be married,—but this dreadful suspense is beyond endurance." He bounded into the saddle, and with a hasty motion turned Bayard's head toward the road. Just then a strain of music fell upon his ear,—he pausod,—he had never heard the voice of human being in that solatary place. The music seemed to float on the stream,—he stood on the bank and listened. The song was the same that Julia Snowden sung at Mrs. Baden's party. With undefined sensations Edward hastened in the direction from which the sound proceeded. The music ceased just as he came in sight of an old negress washing clothes on the margin of the brook. Aware that many of that class have fine voices, and supposing she was the songstress, he was about to turn back, chagrined and half angry with himself, when he perceived that he was discovered, and that she was gazing with distorted eyes in the direction where he stood. He advanced with the intention of inquiring to whom the place belonged, as it had long been his intention to purchase it. As he was about to speak, the negress uttered a wild scream and clapped her hands, exclaiming, "O missus, O missus, here's master Mullet as I live!"

A young lady emerged from behind the trunk of a beech, and was flying with all speed towards a rude dwelling which was a few rods distant, when the *name* struck her ear and arrested her flight. Our hero cleared the brook at a single bound, and reached the side of the young lady just in time to prevent her falling to the ground, for she had fainted. He seated himself with the insensible form in his arms, and gazed on the pale face with mingled emotions of joy and terror. The old servant bathed the inanimate brow of her loved mistress with water from the brook, exclaiming, "God bless her dear soul, she has been *monsus skeery like*, since we came in this wild place!" The young lady was soon restored, and as her eyes met those of her lover, she seemed unconscious of aught but pleasure. For a moment they gazed on each other in silence, when, recollecting her situation, she withdrew from his protecting arm.

"How is it possible that I find you here, Miss Snowden, and so cold, too?" he exclaimed, for her look of tenderness and joy changed to cool reserve as it occurred to her that she had not received a line from him since they parted, and he might even now be the husband of another. "Have you no word of hope or encouragement for the poor exile?—not one word in answer to the many letters I have sent to you, Miss Snowden?"

She faintly replied that she had never received a single letter.

"Never received any!" he repeated in astonishment; "is it possible that my cousin could have been unfaithful to the trust I reposed in him?"

"He died soon after you left," she replied.

"But his wife; she must have received them, and how could she keep them?"

"I have reason to believe she was a treacherous woman," replied Miss Snowden.

"Aye, was she," broke in old Nanny, as she gave her head a knowing shake. Nanny had suspended her washing operations, and was taking note of the scene before her, unheeded by the lovers.

Hearing a rustling noise, Edward turned his head and saw lying near him, Miss Snowden's book of drawings; the wind was whirling over the leaves, between which were some carefully pressed flowers, which he thought he recognized as those he had sent to Miss Snowden the morning after the party at Mrs. Baden's. All doubt on the subject was dispelled when he saw his own writing on a slip of paper, that was pinned across the stem of a flower—the very paper he had concealed in the boquet he had sent her. The heart of the lover was reassured—these withered flowers bore testimony of cherished remembrance. Miss Snowden had observed his scrutiny, and when he turned to read in her eyes a confirmation of his hopes, they were hidden beneath the dark fringes, and a crimson flush mantled her cheek. At length she looked up and said with a smile, "You have not yet told me how you happened to be here."

Edward then informed her of his residence in the vicinity, and poured into her listening ear, a brief history of the last two years—all his heart sorrowings, his hopes and fears—and ended by describing the frequented and loved spot where the ducot strains of her voice had reached his ear, and saved him from a long and fruitless journey.

"That is a beautiful spot," said she, "and I often walk there when my father or Nanny are at liberty to walk with me; I dare not wander alone in this wilderness, for I fancy every dead stump an Indian, and every clump of bushes the hiding place of some wild animal."

"Would you dare to walk with me to that delightful place?" asked Edward. Taking his arm, they soon reached the mossy seat the lover had left scarcely an hour before; and found Bayard quietly awaiting his master's return.

"Have you no curiosity," said Miss Snowden, "to learn what strange reverses of fortune have reduced us to the necessity of seeking a home in a western forest?"

"Certainly," he replied; "but the sudden transition from an irksome suspense, to the sober certainty of finding you alive and unmarried, has been so exciting you must forgive me if I have seemed indifferent in regard to the events that have been instrumental in procuring me so much felicity."

"A chain of sad and painful circumstances, which reduced my father to comparative poverty, rendered such a step necessary," said Miss Snowdon. "The night after you left the Manor," she continued, "my father's store-houses were destroyed by fire, evidently the work of an incendiary. I thought, then, I would always conceal the unworthy suspicions that were cast on you, but I will tell you all. It will be a relief,—for I know your generous heart will forgive my dear father his deep-rooted prejudices. He thought you set fire to his buildings, incited by revenge for his harsh treatment. I knew you were incapable of the act, but was compelled to hear in painful silence what I could not disprove. I will not attempt to describe my unhappiness at that time. During the year one of our slaves died. He confessed that he set fire to the store-houses at the instigation of your cousin's wife, who pursuaded him to take this method of avenging himself for a severe chastisement he had received from my father, who was deeply wounded at having accused an innocent person, and would, I believe, have begged your forgiveness had you been there.

"A few months after, my only remaining brother was brought home from the races in a state that precluded all hope of his recovery. The shock of his death nearly proved fatal to my father; and he had but just recovered from a severe illness, when bills to a large amount were presented for payment—debts contracted by my unfortunate brother. My father's high sense of honor demanded their payment. Our hereditary estate, already mortgaged for a large amount, was sold, and we were without a home. Our numerous friends, with generous hospitality, opened their doors to receive us. My father, too independent to accept their kindness, resolved with the proceeds of what remained of our once lordly domain, and the sale of our slaves, (reserving only Nanny and her two sons,) to purchase a home in the west. I did not oppose the scheme, for I acknowledge that the west had a peculiar charm; my father already regrets the change, and I will not deny that I had begun to tire of the solitude."

"Seated by your side, could I forget the past," said Edward, "I could be supremely happy. I fear the cup of pleasure may again be dashed from my lips, and all those fond hopes which now burn so brightly, again be extinguished. Allow me, my dear Miss Snowdon, to seek your father, and learn my fate at once."

Julia made no reply, and her eyes were bent on the ground. Edward gazed on her face a moment in painful silence. "Am I ever doomed to be the victim of prejudice? Is there no way I can overcome your father's aversion, and set aside the barrier he has raised between us?"

"For me to doubt you," she replied, "would be impossible, but you must remember that, to my father, you are a stranger. It is reasonable to suppose that he would wish to learn something of your character and prospects, before he would listen to any proposal. I think it would be impolitic, and I fear fatal to our wishes, to acquaint him with your visit at this time. I propose that you return immediately to C. My father will visit that place in a few weeks ——"

"Weeks!" reiterated the impatient lover—"do not imagine I can endure this suspense *weeks* longer; you must have forgotten those long years of doubt and anxiety."

"No, no," replied Julia, "but will you hear my plan?"

"Certainly,—but do not say weeks."

"Well, then, my father will *soon* visit C. to transact business which will require legal advice. He will probably learn your residence, and as his heart yearns for home, and warms towards every thing connected with it, probably his feelings will change in regard to you."

The lovers separated with the mutual understanding, that if Julia's plan did not succeed, Edward should be allowed to visit her, and plead his cause with her father.

Our hero's unexpected return to C. created surprise, as it was generally known that he expected to be absent a considerable time. Two weeks passed; the third, he traversed the streets with impatient steps, reconnoitering the hotels and public places, closely scrutinizing the face of every stranger he met.

---

"Oh, I have such sad news," said Miss A. as she was making a morning call on Miss Twiggs. "They do say Lawyer Mullet has become dorangod; how shocking!—he is so handsome!"

"I am not at all surprised," returned Miss T.; "I always thought that morbid melancholy would lead to insanity. How fortunate I did not accept his addresses."

"It was indeed," responded Miss A., with a perceptible sneer on her lip.

"I am sure, said Miss *Twiggs*, "I would never marry a man with such a low name."

The subject was again and again discussed in the round of calls Miss A. that morning made,—with the spicy addition of "that vain thing, Charlotte Twigg's presumption." A pretty fair specimen this, I fear, of the conversation of young ladies who have nothing better to do, than make calls on each other, and talk of their beaux.

The fifth week approached, when the Court would commence its session. With his usual decision and firmness of purpose, Edward, by a powerful effort, succeeded in a measure, in banishing from his mind the all-absorbing subject of his love. He had undertaken to conduct several important cases, and both duty and justice demanded that no effort should be wanting on his part to insure success.

(*See page 145, this number.*)

## A SUGGESTION FOR ARTISTS.

SOME one fond of the fine arts and gifted with the genius of a lead pencil, might find food for his exertions, it strikes us, in the vicissitudes of railroad riding. We would advise a series of cartoons illustrative of the various stages of exhaustion and the different attitudes chosen for comfort by a gentleman journeying six or eight, even three or four hundred miles continuously. The first would represent a young and spirited gentleman, elegantly dressed and careful of etiquette, entering the cars with his carpet-bag and cane. The second, after fifty miles, would exhibit his clothes covered with dust, his hat knocked a little to one side, a torn paper at his feet, and a half-read novel at his side. One hundred miles would have elevated his feet to the next seat, got the carpet-bag behind him, and converted the elegance into a very dirty and doubtful condition. The fourth cartoon would show the feet higher than the head, the hat ruined, the collar spoiled, the general beauty gone, and a very perceptable state of bad temper in its place. The plan might fill a gallery. In one sketch the feet should be upon the seat and the knees in partnership with the chin. In another, the position of the knees and chin being the same, the traveler would be lying upon his back. Now he is sleeping very uncomfortably. Anon he wakes, very angrily, with a pain in every bone and a twinge in every nerve. His condition grows worse and worse; his atitudes become more and more original, as the journey proceeds, and at the close of a thousand miles we would either draw him out in the shape of a superannuated rag-bag, or kill him off by an explosion. We don't patent our plan—only want copies of the cartoons.—*N. O. Picayune.*

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

GYMNASTICS.—THE HIGH LEAP.

THE leaping-stand is made of two upright posts, with holes bored through them, about one inch apart from each other, and in which two movable pegs—as shown in the above illustration—may be put at any height required; weights are placed on the feet of these posts, to keep them from falling, and over the projecting ends of the pegs, a line is laid, having a sand-bag attached to its ends in order to keep it straight; the leap being always taken from the side of the stand toward which the heads of the pegs are turned, if the gymnast's feet should happen to touch the cord, it is of course pushed off and drops immediately. The high leap should be practiced, first standing, and then with a short run; in the standing leap, the feet must be kept close together, and in the leap with a run—which ought not to exceed ten paces—as directed for the long leap. In all these leaps, the performer should alight on the balls of his feet, so as to deaden the shock and descent, which, if not thus broken, might occasion injury.

For the Rural New-Yorker.

## ASTRONOMICAL ENIGMA.

I am composed of thirty-one letters.

My 7, 23, 15, 1 is a star in the constellation of Delphinus.

My 9, 22, 19 is a star in the constellation of Serpentarius.

My 8, 3, 13, 19, 2 is a brilliant constellation.

My 30, 16, 10, 21, 11 is a star in the constellation of Scorpio.

My 21, 16, 6, 26, 17, 31 was the first Greek Philosopher that taught Astronomy.

My 6, 12, 27, 4, 15, 29 is a star in the constellation of Ursa Major.

My 31, 1, 21, 2, 5, 25 is one of the Planets.

My 23, 20, 13, 28, 8, 18, 10 was a constellation changed into Virgo.

My 27, 24, 13, 14 is one of the Asteroids.

My whole is what all agree to place among the unexplained wonders of Nature.

Manchester, N. Y. H. E. W.

☞ Answer next week.

## ANSWER TO ENIGMA, &c., IN NO. 17.

Answer to Charade—*New York.*

MR. MOORE:—Some five or six weeks since I sent you a "Poetical Question" signed SEBASTIAN, which appeared in the Rural of the present week. It has been applied as personating individuals, which *was not the intention of the writer.* Please state this fact in your next. S. K. MOORE.

Bergen, April 16, 1853.

### THE ACADEMY AT OVID.

THE Summer Term of this Institution, will commence on WEDNESDAY, MAY 10th. This School is open to Youth of both sexes.

Instruction is given in both the Ancient and Modern Languages, in General and Agricultural Chemistry, in Civil Engineering, in Music, and in all branches of study pursued in the most approved Schools in the country.

Lectures are given in Chemistry, Physiology, Natural Philosophy, the Science and Art of Teaching, and on morals.

The Board of Instruction consist of Rev. AMOS BROWN, Messrs. EDWIN PIERCE, W. H. BREWER and G. B. YOSE; Miss ISABELLA MEAD and Miss ANGELINA JAMESON.

*The Gentlemen are all of them graduates of some of the best New England Colleges, and the Ladies have proved themselves to be entirely competent to their stations.*

Charges to Pupils from abroad, for *Board, Tuition, room rent, Wood and Lights*, are $2.50 per week. The charge for instruction on the Piano Forte is $10 per quarter, and $4 for French, Painting, Drawing, &c. Pupils boarding themselves, or boarding with their particular friends, are charged for tuition, $4, $6, and $7 per term, of 14 weeks, according to studies. A commodious boarding house has been provided exclusively for young ladies, where the young ladies and their lady teachers constitute one family.

Application for admission to the school and for board, should be made to Rev. AMOS BROWN, the Principal.

WILSON GRAY, *Sec'y.*

Ovid, April 9, 1853. 173w3.

### MERCHANTS SUPPLY STORE.

THE Subscriber has made extensive arrangements which enables him to supply merchants with any of the tools named in the annexed list, at the lowest current rates, either in large or small quantities. The goods are ordered direct from the manufacturers, and are in every respect the best of their kinds made in the United States.

500 dozen Dunn's Grass Scythes, German, Cast and Silver Steel.
400 do. Dunn's Grain Scythes, the best in market.
100 do. Clapp's Patent Scythe Snaths.
50 do. Lamson's do. do.
50 do. Clark's Ohio Patent Snaths, Scythes to fit.
50 do. Wood's Scythe Snaths, cheap.
50 do. Brand's Manure Forks.
75 do. Do. Straw Forks.
100 do. Do. Hay Forks.

A good supply of Reynolds' Hay and Straw Forks.
100 doz. Whitlock's Solid Cast steel Hoes.
200 " Stillman's Cast steel Hoes.

Scythe Stones, Rifles, and other tools in the same line, all of which will be sold on the lowest terms. Sale rooms at the Agricultural Warehouse of E. D. HALLOCK, 24 Exchange street, Rochester, N. Y. ☞ All orders by mail promptly attended to. HIRAM C. WHITE.

### FOR SALE,

A first rate Wheat Farm, in Genesee County.

THE Subscriber offers his farm for sale, as he intends, on account of his health, to change his business.

It is located two miles North of the Village of Batavia, on Bank Street Road, and contains about 220 acres of first quality wheat land—about 185 acres under good improvement, all well fenced with stakes and caps, and about 63 acres of wheat on the ground. It is well watered by springs, on both sides of the road; and has a good frame house, with a small frame house for a hired man—two wheat barns, with sheds—a corn barn, two granaries, and a smoke house. There is a choice selection of fruit trees, embracing Apple, Cherry, Peach, Plum and Pear trees; also Nectarines and Apricots, of the best kinds. The farm might be divided so as to accommodate two families.

I intend to sell, and whoever buys, will get one of the best farms in Genesee county, under a high state of cultivation, and clear from foul stuff. Any person wishing to purchase a large farm or a part of this farm, is requested to call and examine. C. R. BRINCKERHOFF.

Batavia, Genesee Co., April 6, 1853. 172-3t*

### Pure Bred Male Stock at Private Sale,

AT MOUNT FORDHAM, WESTCHESTER CO.,

Eleven Miles from City Hall, New York.

I WILL sell and let from 10 to 12 Short Horned Bulls and Bull Calves, 4 Devon Bulls and Bull Calves, and from 12 to 15 Southdown Rams. The annual sale by Auction will be omitted this year, as I wish to reserve all the Females, having recently purchased another Farm, to enable me to increase my Breeding Establishment. My Hog Stock, including all the Spring litters, are engaged.

Catalogues with full Description and Pedigrees of the above Bulls, and Southdown Rams, with the Prices attached, can be obtained by the 15th April next, from the subscriber, or at any of the principal Agricultural Stores, or from the Editors of the principal Agricultural Journals.

March 23d, 1853. 170m3 L. G. MORRIS.

### GARDEN AND FIELD SEEDS

*From the New Establishment of Van Zandt & Bowdish,*

No. 114 State street, Rochester, N. Y.

CAN be purchased of the merchants generally throughout the country, in Papers or Packages, on the most reasonable terms. Also at the Agricultural Warehouse of E. D. HALLOCK, No. 24 Exchange street, near the Clinton Hotel, Rochester, N. Y.

The Seeds from this establishment can be relied on as being of the very best quality. They are mostly imported, or grown by the EASTERN SHAKERS, and are warranted.—Full directions for cultivation printed on each Paper and Package. VAN ZANDT & BOWDISH.

Rochester, N. Y., 1853. 170m6.

### REMOVAL!

HALLOCK'S AGRICULTURAL WAREHOUSE has been removed from No. 50 State street, to

**No. 24 Exchange St., Rochester,**

in the Store formerly occuiped by J. E. CHENEY as a Stove Store. The new store is well supplied with Implements, Seeds, &c.—comprising a larger and more complete assortment than heretofore. Former customers and farmers generally are invited to call at the new establishment and examine for themselves. E. D. HALLOCK,

169-4t. 24 Exchange St., Rochester, N. Y.

### SALE OF SHORT-HORNS.

I WILL sell by Auction, on Wednesday, 8th June next, at 1 o'clock, P. M., about Thirty of my improved Short Horned Cattle, mostly all the get of my imported Bull.—Up set price from $150 to $300. [169-9t*]

Auburn, N. Y., March, 1853. J. M. SHERWOOD.

### MOORE'S RURAL NEW-YORKER:

A WEEKLY HOME JOURNAL,

For both Country and Town Residents.

PUBLICATION OFFICE,

BURNS' BLOCK, CORNER STATE AND BUFFALO STS., ROCHESTER, N. Y.

TERMS, IN ADVANCE:

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

Terms of Advertising

ONE DOLLAR per square (ten lines—100 words, or less, for each insertion,—*in advance.* ☞ The circulation of the NEW-YORKER is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

### THE WOOL GROWER AND STOCK REGISTER.

THIS is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the WOOL and CATTLE MARKETS, and much other *useful* and *reliable* information which can be obtained from no other source. The Fourth Volume commenced in July last.

TERMS:—FIFTY CENTS A YEAR; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 19. ROCHESTER, N. Y.—SATURDAY, MAY 7, 1853. WHOLE NO. 175.

**MOORE'S RURAL NEW-YORKER:**
A QUARTO WEEKLY
**Agricultural, Literary and Family Newspaper**

**CONDUCTED BY D. D. T. MOORE,**
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page. ☜

### Progress and Improvement.

### MAY.—FARM AFFAIRS.

"MONTH of the Oriole, and rival birds,
Who out of her sweet honey-breathing mouth
Would steal or echo all its music-words
Thou'rt here again, once more from the soft South,
Where thou sojourning hast been since the time
Thou last wert banish'd from our fickle clime!
Yes! yes—thou comest again as fresh in Charms
As e'er we do remember thee invest—
The very rustling of thy pinions warms
And wakes all Nature from a sullen rest!
Thou art like Hope unto an aching heart
Which often bidden by Despair to go—
Will but awhile (and then but seem) depart—
Returning soon new solace to bestow."

THIS month is said to have been named *Maias*, by ROMULUS, in honor of the Senators and nobles of his city, who were called mayors. It is supposed by some to derive its name from *Maia*, the mother of Mercury, to whom the Romans sacrificed on the first day. By the Saxons it was called, *Trimilki*, pasturage being so abundant as to enable them to milk their cows, three times a day.

May has been denominated by some as the most cheering month of the year—and so it is usually during its last half, the first being more fickle, and like its predecessor. The temperature is variable—the mercury sometimes being down to 32°, and again rising to 80°.

May, with us, is the fruit-flowering month; hence the air is more richly fragrant with the perfume of blossoms than any other month of the season. Every landscape view improves rapidly through this month, in beauty and loveliness. Nature's attractions now are sufficient to call forth to the fields and the woods all her devout and constant admirors—whose hearts are filled with wonder, admiration, gratitude and praise.—These are some of the emotions that are awakened and sustained by May.

The pastures will soon furnish sufficient sustenance for the sheep and the cows.—They will, however, require some feeding during the first part of the month, in addition to what they get in the pastures. This care should be rendered, especially to your cows,—for if you would have them do well through the summer, you must take good care of them through May. Feed your sheep a little with turnips if you have them; if not, cut potatoes for them—they will amply reward you for paying them a little extra attention.

Ordinarily, this is the month for plowing and seeding. Having already made all your plans for plowing and sowing and planting, see that you show yourself a good executor. Do not put your hand to the plow and look back, but go right forward, perfecting every well-matured plan. Your spring wheat and rye have been sown. Oats do well sowed in May. Plant your corn as soon as the ground is warm enough to receive the seed. Potatoes may be planted much earlier than corn and furnish a good and plentiful harvest.

In selecting your seed, of whatever sort, endeavor to procure the best, in order that you may have good and thrifty plants which, if well nourished and tended, will produce a bountiful harvest.

Attend to your fruit trees and shrubs,—if attacked by insects destroy them at once—do not wait until they destroy the foliage or the fruit, either or both as the case may be. It is the diligent, careful and watchful husbandman that thrives. Let those, then, who desire to live in the midst of plenty and in the fullest enjoyment of life's choicest blessings and comforts, attend well to their Agricultural and Horticultural affairs during seed time—for he that soweth, shall in due time *reap*, if he faint not.—W.

### SPRING HINTS.—OBSERVE AND IMPROVE.

HE who would be a successful tiller of the ground, must necessarily be a man of much observation and thought, as well as one of reading and practice—in a word, a practical, theoretical man—else he is a mere machine, going through certain operations in a sort of automatic manner. If those operations are successful he counts himself a fortunate man; otherwise, the weather or a thousand-and-one casualties bear the burden of blame.

The farmer, governed by prudence and economy, may be surely successful, if he but store his mind with a knowledge of his employment, and understand well the principles that govern the vegetable kingdom, and the LAWS by which the productions of the earth are brought forth in the greatest perfection and abundance. But who is so well informed as this? We may venture to say not one in a thousand, if there be one in a hundred thousand. Yet we may all approximate to this knowledge, and trav l forward to the great consummation of the desired end, which is a perfection of human knowledge, so far as human knowledge may be perfected. Though we cannot hope to see the summit in our own "day and generation," yet we may be pleased to witness the rapid progress which earnest workers and thinkers can make. And further, we may be gratified with the more generous harvests that are sure to reward labor intelligently applied.

So, then, should we all improve each golden moment, to store some valuable thought, idea or fact, in the memory, for future use. The field of the farmer's observation is unlimited. It is circumscribed by no bounds save those of ignorance or prejudice, which may be lurking in his own mind. He may look up to the heavens, and down into the earth for matter to enlarge the mind. He may take into his view the multitudes of animal creation that buzz in the air, that make vocal the woods, that crop the herbage or crawl on and in the ground, or he may turn in and study himself. The lightning's flash, the buoyant cloud, the falling snow, the dew, fog and vapor, the unfolding leaf and flower, the maturing fruit, the autumnal changes and the falling leaf, and the protecting scales and down of the bulbs against the winters rigors, all furnish fruitful lessons for unfolding and developing the powers of man, and fitting him for a more successful prosecution of his labors.

With the farmer, the winter has been a season of a comparative cessation from his toil—a season, with long evenings, that is peculiarly adapted to the storing of the mind with knowledge from the writings of others, and of eliminating new ideas from gathered facts—of combining observations—of laying plans and figuring results, or if it be so, of theorizing from known facts, or from probabilities that are to be tested by future experience. No one, we trust, has allowed the past winter to go by without drawing from its hours much that will benefit himself and the great community of which he is an active integer.

Spring is now with us, and the quiet of the winter is changed for the busier time of seeding. The ground is to be prepared, and the seed entrusted to the genial care of mother earth, to be returned from her bosom in the gathering harvest, increased many fold. But here, emphatically, works must accompany faith.

Now, too, is the time for renewed observations in all the operations connected with good husbandry. No one should permit a single season to pass without adding largely to the stock of his available experience, which should also go into the general stock for the good of the whole; thus experience and facts gained by one, help on the good cause universally. This is the time to prepare for harvest, and as the preparation is, so will be the gathering in. For we are most assuredly informed, that as we sow so shall we reap, which is equally as truthful temporally as spiritually. The farmer must then, rightly manage the beginning of his crops, else all will go wrong after it. Just as if one gets on the wrong road—the more he travels the farther he is from his destination. But there is this difference, though he retrace his steps, with his crop there is not much mending the matter. He may learn—for it is a dear lesson—and profit thereby, when the vernal season comes again. Hence it is that the thinking farmer understands best what is suited for the development of his particular crop, and he plants and sows without any guess work, but with the full assurance that his labors will be crowned with fair, if not abundant success. He adapts his grains and roots to the soil best suited for their condition, understands the nutriment necessary to be applied, and when to feed it, when and how to till and care for them, and does it all when it should be done, and as it ought to be, and the grand result is, he is successful and prosperous in the highest degree; whilst the shiftless man looks on with envious eyes, and frowns at Providence. How wide the difference.

### ROAD MAKING.

GOOD ROADS, I put down among "the cardinal virtues." Honest men are *always* in favor of them, and so are politicians as a general thing. Why then don't we have good roads? That is the question. It is because the science and practice of road-making is not generally understood, and because there is no efficient, thorough and uniform system adopted throughout the country. A lazy and dishonest practice obtains of *shrinking* as much as possible when working on the road: as a general thing, men do not do more than half a day's work in a day. That little is more than half thrown away by want of skill in the overseer. Muck and turf are frequently deposited in the road, in a very rough state, so that holes and horrible chasms immediately follow.

I understand that in some of the old countries a different practice prevails. The surface soil is removed and a layer of stones is deposited, then smaller stones are applied, and still smaller, *well packed*, and perhaps some of the surface stones broken,—the whole covered with gravel, the coarser the better. A few years ago, when it happened to be my turn to serve the public as pathmaster, a part of the labor of the district was not expended till the rains of autumn were setting in, and one of the road commissioners of the town, advised that it was now too late to work with profit: I thought otherwise; selected the worst part of the district, called out men and teams, and commenced depositing cobble stones in the road, putting the largest at the bottom and smoothing off with the smaller ones; these were covered with gravel, making the whole deposit about a foot in thickness. For more than ten years the road so administered to, has required no repair and is hard and dry at the worst season of the year. A neighbor gave the stones cheerfully and was glad to get rid of them. We have expended labor enough in our district to fix all our roads in this manner *twice* over, but a great part of it has been thrown away. I will sum up briefly:

1st. Make it a point to do a good day's work on the road, and as many of them as you are taxed, and more if necessary.

2d. A good foundation is indispensable. Get stones, or at least good coarse gravel, even though you have to draw a great distance and pay a good price. There is generally a supply of stones on somebody's farm in every district, or at least a gravel hill, which it is or ought to be lawful to seize for the public use.

3d. Finish thoroughly, whatever is begun. Leave the road smooth and well rounded up in the centre, so that the water can run off.

4th. Watch a new road closely and fill up the holes before they get large, so that it will settle evenly.

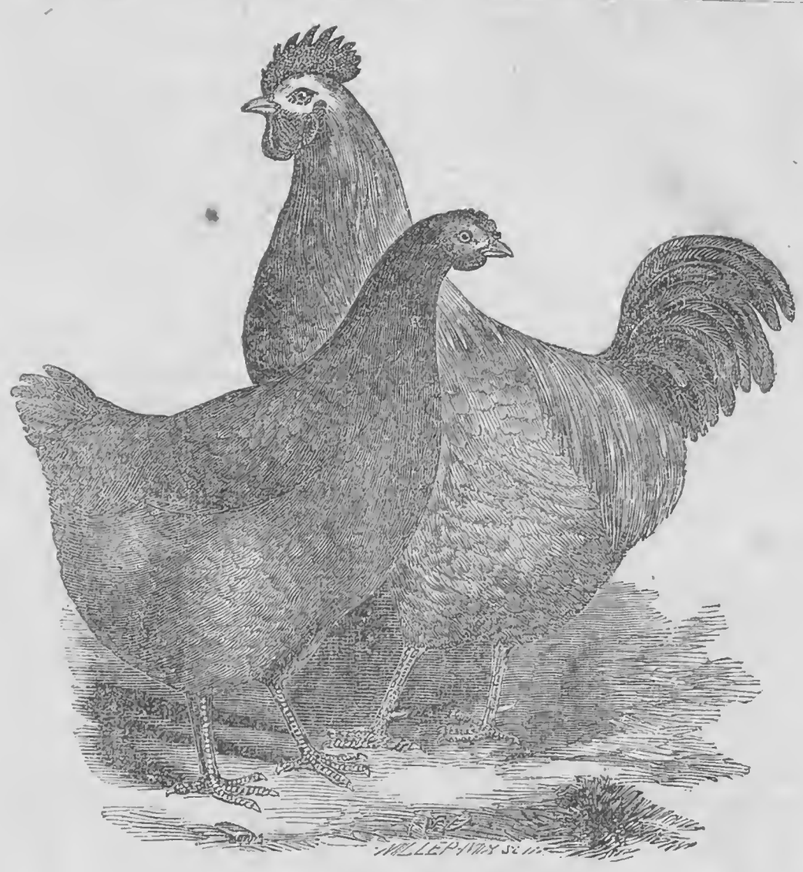
5th. Don't patch up for the present when it can be avoided, but do conclusively every year as much as possible.

6th. Make it a Christian duty to strive for good roads, and many a weary and worn traveler will bless you on his dying bed.

Before closing, I would recommend the scraper for smoothing off roads in the spring. It is a very useful instrument.

N. T. BROOKS.

Pearl Creek, Wyoming Co., N. Y.



MR. ADAMS' COCHIN CHINAS.

THE above engraving is a correct representation of a pair of Chochin China Fowls owned by RODNEY L. ADAMS, of Lyons, N. Y., who has in addition one cock and five hens, so nearly like the engraving that an alteration to show the difference would be a matter of unnecessary nicety. Two of the number have feathers on the legs. The cock, now twelve months old, when erect is 27 inches high, and the hen 23 inches.—Their color is a deep golden-yellow. The pair weighed, when ten months old, 17¼ lbs. As they will not attain their full size until 20 to 24 months old, it is not unreasonable to expect them to gain three to five pounds, a weight fully equal to the average of any variety of domestic fowls in the country.

MR. ADAMS informs us that he has taken great pains to obtain the finest specimens, and that he is not aware that his Cochins are excelled. If not the best, the Cochin Chinas, in the estimation of many, have no superiors, while a considerable number of fanciers prefer them to all others. Their excellencies, as enumerated by those partial to them, as are follows:—Great size, elegance of form, beauty of plumage, delicacy of flesh, superiority as layers, hardiness, tender nurses, quietness, &c. They do not require as much food as some other large varieties. Mr. G. P. BURNHAM, of Boston, the original importer, thus expresses his estimate of them:—"For all the purposes of a really *good* Domestic Fowl—whether I speak of productiveness, easy keeping, laying qualities, size, disposition, beauty of form and plumage, or hardiness, (in this climate,) after a careful trial, I deem the Cochin China *the best*.—This is saying much in their favor, I know; but you ask my real opinion and I give it honestly. To my fancy they have no equals among the varieties now known in America."

### MY EXPERIENCE.—NO. 4.

#### Wheat and Chess.

IN my former numbers I have given a series of facts in regard to the changes of varieties in *corn*, *potatoes* and *wheat*, which are, to my mind, conclusive proof that grains and vegetables do frequently change from one variety to another, without any apparent, or as yet, discoverable cause. Now, if wheat changes from one variety to another, totally distinct, different in color, and form of straw and head, why not suppose that it may be possible for it to advance one step further, and turn into chess, which it is admitted is a species, or variety of the same *genus?*

I confess it appeared to me that nature turned a very short corner in effecting the change of my Hutchinson *white chaff bearded*, and *white grained* variety, into *Red chaff bald*, and *Red chaff bearded* wheat, of much darker hue, as was the case with at least nineteen-twentieths of the produce of the field mentioned in my third number. But if she turns a short corner in one case, why not in another, somewhat analogous, at the least?

For many years, (like other theorizers,) I was entirely skeptical in regard to this matter—believing that "like would produce like:" that "as we sowed, so we should reap," &c. And I am still reluctant to give up my preconceived opinion. But a long course of observations has convinced me that we have no right to deny the actual existence of a thing, because we cannot penetrate the mystery of its conception and progression. If we do so, we shall soon doubt the existence of matter, in any form. It is, however, more my present business to give *facts* and let others judge for themselves.

About fifty-five years ago my father, as usual, during the winter season, had the timber [chiefly basswood and maple,] "chopped off" of about four acres of land. The logs and brush were left on the ground until the following month of September, when two of my brothers and myself, burned the brush, and piled and burned the logs. We then, without any previous tillage, or other preparation, sowed it with first rate clean seed wheat, of the "Red chaff bald" variety, and thoroughly "dragged it in."

We had a very good crop of as clean and excellent wheat as any one need wish to see. The use of the grain cradle being then almost impossible because of the stumps, the wheat was cut with the sickle. As usual, in the early settlement of the country, the stubble was burned. The land being very rich, and in fine order, my father concluded to sow it again with wheat. There was upon the ground sufficient grain, which was "shelled out" in harvesting, to have served

for seed. But the clear white color of the upper sides of the grains having been changed by the heat, to a reddish, or "fox" color, it was deemed unsafe to rely upon it; and the field was again sown with clean good seed, of the same variety. And it was again "dragged in." The wheat grew well and appeared to promise a tolerably good crop. But when the plants "headed out," there did not appear to be one-fourth part of them that were wheat; the rest were *chess*, and of the *largest and best quality*.—So little wheat was there in the field, that my father had the whole crop mown, and made into *hay*; there not being sufficient wheat to pay for harvesting and threshing.

In my next number I will state the facts of another instance of nature's legerdemain, equally strange and inexplicable. 'Hel.

### FARMER'S CLUB OF THE AM. INSTITUTE.

Eds. Rural:—I do not know of any body of men in this country who present so much scientific agricultural knowledge, for investigation, as the Farmer's Club of the American Institute. I have frequently attended their regular weekly meetings, on Tuesday, and have always been decidedly instructed as well as interested.

At a recent meeting, Judge Meigs, their very learned Secretary, presented as usual, valuable Transactions from Agricultural Journals in England, among which was an account of a gentleman who collected some of the seeds of the wild and troublesome weed from the shores of the Mediterranean, called Egylops, and gave them high and careful cultivation, the product of which seemed to him, so much to resemble wheat as to induce him to continue its cultivation until at last it has arrived at perfect and well formed wheat. All this of course opened a wide and interesting discussion among the members, some contending that no one plant ever changed into another. This opened wide the question of wheat and chess, &c.; Mr. Robinson asserting that when in Illinois, he plowed up some twenty acres of prairie land, that had not been disturbed for centuries, and sowed it to pure wheat and the proceeds of which developed at least one hundred heads of chess to one of wheat. Prof. Mapes said innumerable seeds of chess might have been in the ground for an indefinite time, which when brought in contact with light and air, germinated. To which Mr. Robinson replied, that no chess was to be seen on adjoining acres, sowed to other crops. All this left their controverted subject in a very unsettled state, but a few days after I met with another member of the Club, who was then absent, Mr. R. L. Pell, who remarked that the decaying matter of wheat, or similar matter, in its process of germination was necessary to give germinative life to the dormant seeds of chess. Oats possessed in a less degree the same properties, while with other grains no chess would spring into life, although the pabulum surrounding the seeds of the chess, would protect them from decay when buried in the soil below the action of sun and air, for thousands of years.

This throwing off the matter by the decay of one plant, for the quickening into life of another, was observable in the pine and oak—for instance, where a fire or hurricane has prostrated thousands of acres of old pine trees—where the matter adapted to the growth of the pine has become absorbed from the soil—you will see the oak springing into life in innumerable quantities, although the soil is full of the seeds of the pine; and then again, after the pine seeds have lain for ages and the oak has used up all its appropriate element in the soil, then the soil has so far recovered in an adapted state, that the pine seeds will germinate and for ages again, the pine will flourish.

I do not know that I have reported this thought intelligibly, but I acknowledge this conversation with Mr. Pell, unfolded to me more insight into the chess question, than all I have known before.

The Club then proceeded to the order of the day, which was the preparation of the soil for vegetation, &c. Prof. Mapes said the first thing to be done was to thoroughly drain the soil and then plow gradually deeper, and subsoil until the soil was worked thoroughly to the depth of 18 inches. From this, the Professor branched off into a vast amount of information connected with the whole subject of sub-soiling and draining. For instance, in regard to drains, he said the mouth of the drain should always be left open, so that the air could circulate its entire length, for the air thus brought into contact with the subsoil, was almost as important as the removal of the surplus water. Again, the subsoil plows now in use raise the soil about six inches, and thus 100 pounds for every foot, or 100,000 pounds of earth are raised six inches, unnecessarily by one ordinary subsoil plow. The Professor gave us the form of a plow raising the earth only two inches, and which could be drawn by one horse, that would accomplish every thing desirable in the soil, and save a vast amount of team strength.

From this very imperfect sketch you see something of the value, of this parent of our Farmers' Club. R. G. P

Geneva, N. Y., April 15, 1853.

SEYMOUR AND MORGAN'S NEW YORK REAPER.

This valuable machine—a Western New York invention—is got up by Messrs. Seymour & Morgan, of Brockport, in this county. It has been somewhat extensively used at the west, and also introduced in the wheat growing districts of this State. We have heretofore commended it to our readers, since which it has been somewhat improved. A large number of machines are in process of manufacture. For particulars relative to construction, operation, price, &c., see advertisement in this paper.

## AGRICULTURAL INTELLIGENCE.

### N. Y. State Fair for 1853.

The Fair of the State Agricultural Society is to be held this year at Saratoga.—The Journal of the Society gives the following

#### ARRANGEMENTS FOR THE FAIR.

Rail Roads.—The Central Line of railroads from Buffalo to Albany; Watertown and Rome railroad; Hudson River, Harlem, Troy and Schenectady, Troy and Saratoga, Schenectady and Saratoga, Saratoga and Whitehall, and the roads north, will bring to the Fair, as heretofore, articles and stock *for exhibition* FREE, (requiring pay for stock and articles when received on board cars and *on return with certificate of exhibition*, the amount paid, *in all cases to be refunded*.) It is expected also that the same facilities will be furnished over the roads from Boston, and several other roads in this State.

As an impression exists that stock and articles, and visitors cannot reach Saratoga expeditiously, from the Central roads at Schenectady, it is proper to state, that the road from Schenectady to Saratoga is now laid with the *heavy rail, and is in the very best condition*, and that in connection with the *Albany and Schenectady road* it is run with as much speed and efficiency as any road in the country; and that the most positive assurances have been given that engines of the highest power and speed, and cars in abundance, both for stock and visitors shall be furnished, and taken over the road as rapidly as over any of the other roads.

From New York, by the Hudson River and Harlem roads, cars will run through to Saratoga, with stock and articles for exhibition, and visitors will be carried with great expedition. The Hudson River boats will also afford every facility for the transportation of articles and passengers.

From the northern parts of the State, Vermont, New Hampshire and Canada, the facilities will be such as to enable exhibitors and visitors to reach Saratoga without delay, and will afford to them facilities that have never before been enjoyed for attending the Exhibitions of the Society.

#### SHOW GROUNDS.

The Show Grounds will be located near the village, and will be arranged in the most convenient manner for the accommodation of exhibitors and visitors. Covering will be provided for all the stock exhibited, to protect from the weather; and every exertion will be made to have the preparations superior to any that have heretofore been made for the exhibitions of the Society.

The keepers of public houses have entered into an engagement that their prices shall be only those charged to ordinary visitors; and from the large number of houses, and the range of prices from 75 cents to $2 per day, during the Fair, there can be no doubt persons securing accommodations, both as to price and fare, that will be satisfactory.

The Executive Committee will endeavor, in every respect to have the Exhibition such as will, in all its characteristics, sustain the well-earned reputation of the Farmers, Breeders and Mechanics of the State; and they have assurances, which they can not doubt will be realized, that they will be most cordially sustained by the citizens of the State. B. P. Johnson, Cor. Sec.'y.

State Ag.'l Rooms, Albany, April, 1853.

## THE AGRICULTURAL PRESS.

### Challenge to Stock Breeders.

The April No. of the *Wool Grower and Stock Register* contains the following Challenge to breeders of improved stock:

Mr Editor:—I take your papers, the Rural New-Yorker and Wool Grower and Stock Register, carefully peruse their contents, and find some of your correspondents are laboring hard to bring to notice certain favorite breeds of improved cattle. They seem to take great pains to extol the Devons, Herefords and Scots. So far as I can judge from what they say, they appear to think that the Short-horns are not worth notice in connection with the above named breeds, or some of them. But I beg leave to differ with some of your correspondents. I have made stock breeding a study for the last thirty years, and my intention was, and still remains, to breed cattle that would pay me best. I have tried many experiments with almost all the improved breeds of cattle, and long since came to the conclusion that I could make two dollars on the Short-horns where I could make one with any other breed. It is true I have not had the advantage that some writers have. I never have been to London markets, but judge from our American markets.

Now I am disposed to test the difference in a fair way. I propose to put in competition five Short-horn Cows with their calves against the same number of any one man's breed of Herefords, Devons or Scots—to decide as to the size, fineness of form, quality and quantity of milk and butter, fineness of touch, together with their five calves; to be tested by good judges, any time the coming summer or fall, for any sum that I can raise, or at least a sufficient sum to fairly test the stock. My opinion has long been that newspaper communications were of but little use *without some fair test*. Now, Gentleman Stock Breeders, what say you? Will you accept my offer, and discontinue those notices that have been going the rounds for some considerable time?

My residence is at Avon Livingston Co., N. Y. David Brooks.

March, 1853.

P. S.—Some gentleman may wish to test bulls, steers and heifers. If so, I am willing.

D. B.

The following response to the challenge of Mr. Brooks, was intended for publication in the May No. of the *W. G. & S. R.*—but as it was not received in time, we give in the Rural in order that those interested may profit thereby:

Ed. Stock Register:—I am glad to see your correspondent, Mr. David Brooks, come out in the way he has done. I will cheerfully meet him at Saratoga at our next State Show, with five cows and their calves. There can be no better way to "*test*" the milking qualities of cows than the one he proposes; the calves will be the *very best proof*, and one in which there can be no deception; they will show where the "*cream*" lies. I will also meet him with yearling and two-year old heifers; the number shall be named by Mr. Brooks. The bull shall also be included in competition.

I have no steers, having sold them to Hon. Allen Ayrault, of Genesee, but these being bred by myself, he kindly says they shall be shown; also a three year old twin heifer bred by me that will be grass fed the coming summer. He will give a true account of their keeping since he purchased them, accompanied with his affidavit. I propose from two to five two-year old steers, and a pair of three-year olds.

There is only one objection in Mr. Brooks' "*challenge*," and that is "*size*." I propose that word be altered to *weight*, as I consider an overgrown animal a curse to his breeder, and always much lighter than he appears—a point that leads breeders astray more than any thing else. *Large size* is generally one-third paunch, standing on "*long, large legs*," two very great evils, and such bad points never come alone. I deprecate such kind of animals, for they are notoriously deceitful.

I hope Mr. Brooks' "*challenge*" will bring more Short-horn breeders into the field with us,—the more the better: and I do hope the Devons will be well represented, for it will have the tendency to show the *uniformity* of breeders' herds, which is a very important matter, and one into which the Society ought to look much more closely; it is a sure sign of a good and early origin. If the Executive Committee do not see fit to give a corresponding premium for this trial, which I think is of more importance to the community than all their cattle premiums put together, I propose that each of us pay a sufficient entrance fee to defray all expenses of the number of cattle he brings to the Show. I go for the *true merit* of the animals, not for the man, and the money. The judges shall be named by the Society or in any other "*fair way*" Mr. Brooks may suggest. An affidavit shall be given showing how the animals have been kept the past winter, and the coming summer they shall be kept on *grass only*, and that no calf shall suck more than one cow. I have frequently proposed a trial of this kind to Executive Committees both verbally and by letter, but the *numerous* Short-horn men generally belonging to that committee, have always *opposed* it, with the pretence that the different breeds could not *contend* against each other. This, in my opinion, looked more like *fear* than reason or justice; but now a Short-horn breeder has given the "*challenge*" they cannot *object* to it.

There is one thing in Mr. Brooks' letter which I am sorry to see, as I always took him to be a very thorough, practical man. He says he can make two dollars on the Short-horns where he can make one on any other breed; this is like the other statements of Messrs. Youatt and Hudson, "*too broad*," and I think is more than any man can do practically, though he may in a visionary point of view. If he had said ten per cent, and *proved it*, it would have been sufficient to have warranted him $100 each for his bull calves. I have heard Mr. Brooks say he never saw a Hereford until he saw mine, so he cannot have had much *experience* in that breed; nor can he have *proved* anything by his *experiments*.

I send you the weight of Mr. Corwin's heifer, just as I received it from Mr. Johnson, also the letter of the former to me, from which you may be able to take some extracts respecting her. I ask either Short-horn or Devon men to show less *shrinkage*, greater weight on circumference of bone or better quality of meat, of any breed. I ask Mr. B. whether "*those notices that have been going the rounds for some considerable time*" have not been ten Short-horn *notices* and *portraits* to one Hereford? But more of this hereafter. I think I can *prove it* in another communication if desirable. I shall always *defend* the Herefords as long as I can hold my pen; and feel positive they will pay ten per cent on a "*fair test*" more than the Short-horns, for which I am always ready to "*try*." I know their *true value*. I never *commenced a controversy*.

I cannot recognize W. C. S., but I hope if he is a friend of mine he will be "*on hand*" at Saratoga with five Devon cows and calves, and as many of the others as he can conveniently show. I will let my calves suck the cows for that purpose.

Yours, &c., Wm. H.'y Sotham.

*Pittford, Livingston Co. N. Y., April*, 1853.

Note.—We make the following extract from the letter from Erastus Corning, Esq., refered to above:

——"I wish you could have seen the heifer as she was before killed. She was a splendid animal and very fat, considering the short time she had been fed, and the cheapness with which she was fattened—not costing, considering *everything*, $50 from the day she was put up till she was shown. I received $200 cash for her—the butcher afterward told me that he would have given $250 rather than not have had her. * * * *

| | | |
|---|---|---|
| The live weight of the heifer was | | 1,710 lbs |
| Weight of carcass, | 1,245 lbs. | |
| " Fat, | 140 " | |
| " Hide, | 94 " | |
| | | 1,479 lbs |

The circumference of the bone below the knee was 4 7-16 inches."——

### Mr. Cone's Farming—Thorough Culture.

The following article, though rather long, will well repay perusal. It shows how success is attained and the information it gives is of wide application. We copy from the *Farmer's Companion* for April:

Last summer we paid a visit to Mr. Cone's farm, and we here give for the consideration of our readers some of the observations made at that time. It was just after wheat harvest, and we found Mr. C. in his barley—a rather unpleasant time to see visitors it may be thought—but we found the latch string out, and as our object was to peep into the *practical affairs* of the establishment, a better time could not have been chosen.

Mr. Cone has acquired much notoriety, both in this and neighboring States, for his uniform success in farming, through the last 15 years, having never failed during that time to obtain good and remunerating crops of wheat, corn, barley, oats, turnips and hay. Fruit is raised in abundance in favorable seasons. The system by which this has been accomplished is quite simple, and may be adopted by every farmer whose motto is "Improvement." We will remark in the outset, that Mr. Cone commenced here when quite a young man, with nothing but his hands to help himself with, and has *created* the capital with which he has effected the improvements in farming we now see. Let no young man then excuse himself on the ground that he has no means. If he have head, hands and health, he needs little more. His progress will be slow perhaps, but it will be a sure, sound and healthful progress.

Nearly all the tillable part of Mr. Cone's farm lies upon a ridge, running north and south. The soil is a clayey loam mixed with gravel; the sub-soil is much the same, tho' a little more tenacious perhaps. This land was heavily timbered with oak, elm, basswood, black-walnut, butternut, ash, &c.—Boulders, or fragments of rock were quite numerous over the fields, but they have all been removed as they obstructed tillage.—The stumps also, have nearly all been taken out. The most efficient stump machine over used on the place, was three men with good levers and spades, and a good yoke of cattle with plenty of chain. In this way a great many stumps could be turned out in a day. The farm has been pretty thoroughly underdrained, and some of it subsoiled. It has required several years to accomplish all this, but Mr. C. says the time and money thus expended, has proved a most profitable investment.

The distinctive features of Mr. Cone's practice, and the principles upon which he has proceeded, we will now enumerate; and we respectfully claim for them the sober consideration of our readers.

*Deep Plowing.*—From much reading and reflection, Mr. Cone was induced to *plow deep—much* deeper than usual, and to mix thoroughly the upper and lower portions of the soil. For this purpose a team, equal to 3 yoke of heavy oxen, was attached to Mason's No. 5 plow, (we think,) and the furrow gauged to about a foot in depth. The experiment proved so satisfactory that he determined to make it a rule in his farm practice, never to plow less than about one foot. In this practice he is supported by leading farmers in every part of the world; for it is found that the roots of plants extend as deep as the soil is loosened and pulverized. Hear what Mr. J. J. Mechi, the great English farmer, says:—"Before a Mangold Wurzel leaf is six inches long, its tap root will be 18 inches below the surface, and when well advanced in growth, 3 to 4 or more feet deep. Wheat and other grains are very deep rooted. In double trenching some vile soil after a wheat crop, I found every foot of the sub-soil occupied by the roots of the wheat at considerable depths. In fact a young wheat plant at Christmas is searching the soil from 9 to 18 inches. A friend of mine excavating some soil *that had been once moved*, found the roots of a crop of parsnips, growing along side at the time, at 13 feet six inches below the surface." If the earth is made loose, or cultivated to a great depth, the plant is enabled to extend its roots freely in search of food, and thus deep cultivation answers the same purpose as a supply of manure, by enabling the plant to obtain a sufficient amount of food. Mr. Cone, is so well satisfied with the advantages of deep plowing that nothing could induce him to abandon it. He has nearly doubled his crops by the practice, and we hope that his uniform success will induce others to try it.

*Draining.*—Mr. C. thinks this a necessary accompaniment of deep culture; or that unless a soil be dry, naturally, or is made so artificially, that deep tillage will avail but little. This is an established fact, both in this country and England. At the commencement of his system the land was thrown into ridges 30 or 40 feet wide, and the dead furrows were plowed and dug out to the depth of 16 or 18 inches. This was *invariably* done, to convey off the surplus water. Since that time he has laid down under-drains in various parts of the farm, so that now it is pretty well drained by these. He however keeps his dead furrows open to assist in carrying the surface water into the drains. He plows in one direction, always making the dead furrow this year where the ridge was last year. These two operations combined, have rendered this soil—naturally tenacious and heavy—loose and light freely admitting air and warmth to a great depth. He never uses less than two heavy teams in plowing for a crop, and he seldom plows more than once, believing that he can mix and pulverize the soil more effectually with cultivator, harrow, and roller, than by repeated plowings. His teams, a noble span of horses and yoke of cattle, are among the heaviest used for farm work in this country—he is not obliged to get them into a trot in order to keep the plow in motion. That such teams are the most profitable, we think no good farmer will dispute. They may consume a little more food, but the readiness with which they perform heavy work counterbalances all extra expense of keep. We see the opinion is gradually gaining ground among farmers, that heavy teams are most profitable for the farm.

*Subsoiling.*—This Mr. Cone has tried, but not extensively. A field with a surface *quite descending*, was subsoiled 20 inches deep when the ground was dry and sown to wheat. The straw on this was lighter, but the yield of grain was greater, and of better quality. Last season this field was in grass and owing to the drouth, a good opportunity was given to test the value of subsoiling. A part of the grass had been left for seed, and consequently was standing when we visited the farm. The yield of this entire field was *over three tons of cured hay to the acre*. An adjoining field, *lying lower*, did not produce one quarter this amount. Thus a single crop, in an unparalelled dry season, twice paid for the expense of subsoiling! When will our farmers see the importance of this simple and inexpensive operation? When will they cease to be penny wise? How long will they fear to expend a few dollars in improvements which will doubly repay them in a single year? Here is a simple process, which on dry soil *never* failed to produce the most gratifying results, and yet *no farmer subsoils!* The implement is not costly, and one strong team will do the work very well, and yet, *nobody subsoils!* Who will try it this season? We hope many.

*Thorough Cultivation.*—It is not deep plowing—it is not draining, nor sub-soiling, nor any other operation *alone*, that has enabled Mr. Cone, for the last 15 years to raise uniformly good crops; but by uniting with all these, a *thorough cultivation of the soil*, his crops have withstood the drouth, the wet, insects, rust, and all other casualties, which for the period spoken of, have played such devastation among crops on ordinarily cultivated land. By *thorough cultivation*, in Mr. Cone's practice, is meant, 1st, removing every thing out of the way of the plow, such as stones, stumps, roots, &c,; 2d, a *complete pulverization* of the soil, to the depth of 10

or 11 inches, rendering it as fine and mellow as an onion bed; 3d, manuring—saving everything that will add fertility to the fields, allowing no waste, plastering—ashing—turning under clover; clover is sown with every wheat, and often with other grain crops; even if the ground is to be turned over for a crop the next spring after harvest, Mr. Cone thinks that the fall feed afforded by the clover, and the roots and stalks left to decay in the soil, amply repay for seed and sowing, as the fields thus treated are from year to year, it is plainly observable, improving in fertility.

Mr. Cone is particularly careful to save everything which will add to the manure heap. The contents of the privy, and all the wash from the house are carefully preserved. For saving this latter a tank is sunk a short distance from the kitchen, and a duct made of boards conveys the wash, soap suds, &c., into it. Muck or rich earth is kept to soak up this liquor, and into this tank all small animals which are killed, or die upon the farm, and all animal refuse, are deposited. Plaster is thrown in now and then, which renders it inodorous. This Mr. Cone thinks the most valuable manure he makes upon his farm. It is mostly applied to the garden, and produces an astonishing growth of vegetables. It has the advantage of being free from all foul seeds. A box holding 3 or 4 bushels, is filled with finely broken and powdered charcoal, and placed in the wood house, and upon this the urine from the chambers, (which is saved with scrupulous care,) is poured. When it becomes completely saturated it is thrown into the tank or applied directly to the soil. Charcoal, it is well known, is a powerful absorbent; that is, it will take up and hold within itself more of the gases and watery vapor than any other known substance. It will take up 95 times its own bulk of ammonia, and will absorb so much of watery vapor as to increase its weight 10 to 20 per cent. Thus, urine poured upon it never emits an unpleasant smell, until it is completely saturated with it. We earnestly recommend this practice to every farmer.—He who looks only to his barn-yard to supply the fertility of the fields, neglects a very important source of wealth and profit. We refer to human excrements. We know there is a *false delicacy* existing, which would always make it improper to allude to this subject, but there is no good reason for it, and we shall therefore "ever pray" our farmers to adopt some convenient mode of saving these enriching materials. When they are well preserved they are equal to the so much prized guano.

Keeping the cultivated fields entirely free from weeds and grass. At the time of our visit, scarcely a weed was to be found in garden or field, and every good farmer can imagine that it was in fact, *a real satisfaction*, to behold the true system of farming so nicely and thoroughly carried out. In truth, we were surprised—we asked but few questions—every thing was as intelligible as a book, and if any thinks we are straining a point, he can go and see himself—our word for it, he will not regret the time spent.

Well, all the operations enumerated are *systematically* carried on. Every thing is done in season, and the work is thus not allowed to get behind-hand. In harvesting, or haying, as fast as the crop becomes properly cured, it is housed; by this mode, Mr. C. says he has often saved an entire crop from driving storms. The barley crop is found to be a very profitable one, but whether it will continue to be if the "Maine Law" is adopted we can hardly predict.

Mr. Cone uses a large plow with a "*jointer*," or *small plow*, attached to the beam as a coulter is attached. This "jointer" runs about two inches deep, and turns half the width of the furrow nearly over on to the other half—the main plow follows, bringing up the lower stratum of the soil, and turns the whole under, grass, weeds—every thing out of sight. A plow thus rigged does the work nearly as well as the Michigan double plow, and is not so heavy or expensive.—The double plow, (which is sometimes erroneously called a *subsoil plow*,) has thus far given entire satisfaction wherever it has been used, and Michigan ought to be proud of so useful an invention by one of her own hard-working sons, Aaron Smith, Esq., of Birmingham, in Oakland county. This plow will come into general use when its merits are better known. The cost of the jointer is $2, or $2,25. They may be had at Pontiac. We can recommend their use with entire confidence.

Last season being so very dry, some may be anxious to know how the crops and the pastures and garden vegetables "*stood it.*" The wheat crop had been taken in, but Mr. C. informed us that it was very heavy, and we should judge from the appearence of the stubble that it would yield from 30 to 35 bushels per acre—perhaps more. The wheat crop on this farm for many years past, has been too heavy for the cradle—the cutting has been mostly done with the sickle. The grass crop has been alluded to. The oats and barley were heavy; the corn showed no signs of drouth, was of a dark green color, and very stocky. The pastures were as green as in spring almost, and afforded a full bite. There was *no* suffering in the garden either—not a wilted or a curled leaf did we see. The ground has all been trenched 18 inches deep, and consequently there is no cause for suffering. There are many other things in Mr. Cone's practice to which we would like to call attention, but must delay them to some future time. His example is indeed a useful one. It proves that most of the failures in raising crops, are the result of *improper* or *negligent cultivation*; that *deep plowing, draining, subsoiling*, and a *complete pulverization* of the soil, and *clean culture*, will be as surely followed by *heavy* crops, as that harvest follows seed-time.—Who does not believe this to be the *true system* of farming?

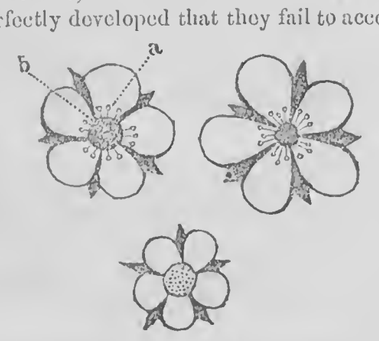
# Orchard and Garden.

## STRAWBERRY CULTURE.

While the Strawberry plant is found growing wild all over the country, it must be admitted that it is not from want of adaptation of our soil and climate, that this delicious fruit is not found in every garden. The cultivated varieties are of much the same character, and every requisite to their growth which Nature can supply is abundantly furnished. Neither is it want of appreciation of the merits of this delicacy, nor, in many cases, from lack of attempts to grow them, but their neglect has resulted rather from wrong management, or from the idea that they were very difficult to produce in perfection. And it does seem, sometimes, that their growth is a matter of mystery hard to understand, since plants taken from a bearing bed, and set in another garden, though the vines grew luxuriantly and flowered abundantly, yet not a single perfect strawberry rewards the labor and care extended upon them. Why? those versed in theories of pistillate and staminate plants, will give us their solution.

The requisites for success in the cultivation of the strawberry are chiefly, according to Thomas, a good soil,—such as will grow corn and potatoes well,—mellowed very deeply and well manured; clean cultivation, which is a very essential requisite; a renewal of plants as often as every three years; and the selection of suitable varieties. Here, "as the productive qualities of strawberies depend so essentially on the presence of *stamens* and *pistils*, some attention to this part of the subject is indispensable to their successful culture."

"Modern cultivators," continues Thomas, "divide all strawberries into two distinct lasses, one being termed *staminate*, or 'male,' in which the stamens are fully developed, and possess the power of fertilizing the germ, and the other being termed *pistilate*, or 'female,' in which the stamens are imperfectly developed that they fail to accomplish fertilization." The accompanying cut represents, first, the staminate or perfect fruit bearing flowers, (*a*, referring to the stamens and *b*, to the pistils;) second, the staminate barren,—and third, the pistillate, which is fruitful if near staminates. By the use of a microscope it will be seen that the stamens are abundantly supplied with pollen or fertilizing dust, while the pistil is nearly or totally destitute. Hence a pistillate variety can never or but very imperfectly fertilize its own flowers, and the impregnation must be derived from a staminate sort. The two sorts should be planted near each other, though in separate beds, about one-fourth staminate being thought the right proportion.



Those who did not, last autumn, or already this spring set a strawberry bed, should lose no time in doing so. In such a soil, and prepared as we have described, strike out rows three feet apart, with a line. Set the plants about one foot apart in the rows—they will soon send out runners, which should be allowed to fill the space between every other row, the other strip being kept bare for an alley. Keep them clear from weeds and gather the fruit when it ripens,—rejoicing as well you may in strawberries of your own raising.

Black Knot on Plum Trees.—*Inquiry.*—We have a valuable Plum Orchard, and most of the trees are affected with the *black scab*. Now what shall we do? We have cut off the parts affected, and let them grow out again, but this takes about three or four years. Now, is there not some remedy that can be applied to the trees, and effect a cure? The scab keeps coming on, as the new branches come forth, and to one who is not very well posted up in this matter, it looks discouraging. Perhaps some of your correspondents can impart the desired information. If they will do so, through the columns of the Rural, they will confer a favor.—W., *Walpole, N. H., April 27, 1853.*

Plum Grafts Bearing the First Year.—A correspondent, R. J. A., sends us an account of plum grafts bearing full grown plums, the same season they were set, and asks an explanation of the phenomena.—There is nothing very singular about it—the scions set had blossom buds upon them, and growing thriftily, produced fruit.

## THE GARDEN.

It was only last summer that a friend from the city, affecting for the moment a taste for horticulture, sought admission to our little garden. We took him thither, and he rushed through it as if a railway whistle had pierced the tympanum of his ear, or as if he had been bent on "proving by his heels the prowess of his head." We waited at the door until his return, and had not long to wait, when, taking the adjoining border as our text, we proceeded to descant upon its inhabitants.

The first was a Peruvian novelty, which had never flowered benorth the Tay, and for whose inflorescence we were waiting in high expectancy. The second was a *hybrid Veronica*, the gift of an early-cherished friend, and most accomplished floriculturist—a child from a marriage of his own making; for our friend's voice is highly potential in commanding parties to join hands—in manipulating those quaint clandestine marriages, for which nature does not provide—in tying those mystic hymenial knots among Flora's children, the progeny whereof does oftentimes give a pleasant surprise at once to the parents and the priest. The third was a rose—the *Geant de Battailles*—a gift from another friend, who varies his exercitations in the gloomy province of criminal law by frequent recreations amongst the innocent and lovely denizons of his exquisite *Rosarim*. We were making slow progress in our descriptive narrative—for, indeed, to us a flower border is not a mere border of flowers, but an unrolled volume of many-coloured history.—Each plant has its pedigree and its parentage—its peculiarities of habit and education—its biography. One brings to our recollection dear friends in a distant land; another transports us to its native home among the snowy Himalayas. Every plant forms a nucleus of kindly association, and "on every bough we have learned to hang gentle thoughts and pleasant memories."

To number three in the border we had only reached, when, accidentally looking into the face of our friend from the city, we saw depicted there blank ignorance, and a cold negation of all sympathy with our floricultural enthusiasm. It was enough; we were throwing words away. We conducted Mr. Urban out of the garden; but not before he had cropped, with most rash and profane fingers, the flowers of an antir-rhinum of such perfect symmetry, and of such clean and brilliant stripes, that we had severed it from its compeers for the purpose of seeding! Smothering our indignation, we led the gentleman back to our parlor, and put into his hands an Edinburgh newspaper!—We have made up our mind on the subject. A man that can walk rapidly through a garden is an undoubted barbarian. He ought to keep to the highways—or the boards of the Parliament House; or, if he must enter a garden, let it be a large one, where he may take an airing, and pedestrianise, at his pleasure.—*Blackwood's Magazine.*

## STRAWBERRY CULTIVATION.

Those who know anything about the magnificent strawberries, and the immense quantities of them raised on a bed about 30 feet by 40, for several years past, in the garden formerly owned by me in King-street, may like to know the process by which I cultivate them.

I applied once a week, for three times, commencing when the green leaves first began to start, and making the last application just before the plants were in full bloom, the following preparation of nitrate of potash, glauber salts, and sals-oda, each one pound; dissolved in 30 gallons of rain or river water. One-third was applied at a time, and when the weather was dry, I applied clear soft water between times of using the preparation—as the growth of the young leaves is so rapid that unless well supplied with water, the sun will scorch them. I used a common watering pot, and made the application towards evening.—Managed in this way, there is neither any necessity of digging over the bed, or setting it out anew. Beds ten years old are not only as good, but better than those of two or three years of age. But you must be sure and keep the weeds out.—*Northampton Gazette.*

## ON SOWING FLOWER SEEDS.

The Ohio Cultivator, which is excellent authority, gives the following directions for sowing flower seeds, which may prove of great value at this season of the year.

"Rich Mellow Soil is the first requisite for a good flower bed. Not a few inches of mucky earth spread over a bed of clay originally dug from the cellar—but good deep garden soil well pulverized, and enriched if necessary with well rotted manure. If at all clayey, so as to bake after rain, the surface should be covered with a mixture of wood, earth and sand, well mixed and raked fine. In this sow the seed as early as you please after this time, taking care to cover the fine seeds, such as petunia, portalacca, campanula, &c., very slightly; while the large kinds, as balsamine, aster, larkspur, &c., may be covered, say 1-4 of an inch deep; cypress vine seeds should be soaked in milk kept nearly blood warm 48 hours before sowing. Care must also be taken to shade the ground where the fine seeds are sown, until the young plants are strong enough to bear the hot sun. This may be done by placing a shingle or bit of thin board over the spot, supported an inch or two above the ground by sticks or small stones; or strong paper may be fastened directly on the surface, and held there by pegs till the plants begin to appear. Water occasionally in dry weather, before and after the plants appear, and keep the ground clear of weeds, and mellow, by frequent stirring.

Most of our list of flowers are annuals of easy culture, and quite showy. The *Asters*, especially, will be found very beautiful—embracing more than *twenty* distinct varieties or colors, most of them very double, and some of greater size than ever before seen in this country. (Give these very rich ground, and plenty of water in dry weather, then look out for *premiums* at the fair next fall.) Other kinds, as the Balsamine, Larkspur, Marigold, Zinnia, &c., are of greatly improved and showy varieties, and quite a number have never before been introduced in this country. The Canterbury-bell, and Pinks, are the only *perennials*—those do not flower till the second year. The Heart's ease and Snap-dragon are classed with *annuals* because they flower the first year from seed, although they live two or more years."

## TO RAISE CUCUMBERS OR SQUASHES.

Take a large barrel, or hogshead, saw it in two in the middle, and bury each half in the ground even with the top. Then take a small keg and bore a small hole in the bottom. Place the keg in the centre of the barrel, the top even with the ground, and fill in the barrel around the keg with rich earth, suitable for the growth of cucumbers. Plant your seed midway between the edges of the barrel and the keg, and make a kind of arbor a foot or two high for the vines to run on. When the ground becomes dry, pour water in the keg in the evening—it will pass out of the bottom of the keg into the barrel, and rise up to the roots of the vines, and keep them moist and green. Cucumbers cultivated this way will grow to a great size, as they are made independent both of drought and wet weather. In wet weather the barrel can be covered, and in dry, the ground can be kept moist by pouring water in the keg.

Profitable and Skilful Culture.—The late S. W. Cole, stated that Moses Jones, of Brookline, Mass., set 112 apple trees, two rods apart, and peach trees between, both ways. These trees received the best cultivation and attention, and bore the eighth year, 528 barrels of apples, that is two barrels as an average to each tree. A "few years," from the setting of the trees, he says, the peach trees bore $400 worth of fruit in one year. During this period, the vegetables on the ground, nearly paid for the manure and labor. Many of the apple trees produced four or five barrels the tenth year. We have known results equal to this, on a smaller scale, where the best cultivation was given.—*Albany Cultivator.*

# Mechanic Arts, &c.

## LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending April 26, 1853.

Henry Bessemer, of Baxter House, England, for improvement in sugar drainers. Patented in England, Feb. 24, 1852.

Samuel Cook, of Brockport, N. Y., for improvement in smut machines.

Ezra Coleman, of Philadelphia, Pa., for improvement in machines for folding envelopes.

Reuben Daniels, of Woodstock, Vt., for improvement in straw cutters.

Wm. P. Merriam, Norman C. Harris, W. Wheeler and E. N. Merriam, of Poultney, Vt., for improvement in the construction of iron candlesticks.

Jas. Bolton, M. D., of Richmond, Va., assignor to Chas. D. Yale, of same place, for improvement in hot air furnaces.

Stephen F. Palmer, of New York, N. Y., for improved towing apparatus for canal boats.

Thos. J. Sloan, of New York, N. Y., for machine for pointing and threading screw blanks.

Thos. B. Stout, of Key Port, N. J., for improvement in potato diggers.

Samuel D. Tillman, of Seneca Falls, N. Y., for improvement in radiators for stoves.

Alfred J. Watts, of Utica, N. Y., for improvement in processes for preparing gold.

David Marsh and Bennet Whitney, of Fairfield, Conn., for improvement in rice hullers.

Chas. Ludwig Gran, of Hamburg, Germany, assignor to Conrad Poppenhusen, of Brooklyn, N. Y., for improvement in cementing materials for ornamental compounds. Patented in Germany, Dec. 18, 1847.

John E. Crane, of Lowell, Mass., for improved chain cable stoppers.

RE-ISSUE.

W. F. Ketchum, of Buffalo, N. N., for improvement in reaping machines. Patented July 10, '47. Re-issued Oct. 21, 1851.

DESIGNS.

Jeremiah Hills, of Newtown, Conn., for design for ladies' hair combs.

Garrettson Smith and Henry Brown, of Philadelphia, Pa., assignors to North, Chase & North, of same place, for design for a portable range.

Samuel H. Sailor, of Philadelphia, Pa., assignor to Chas. W. Warnick and Fred. Leibrandt, of same place, for design for a cooking stove.

John C. Smith, of Philadelphia, Pa., assignor to Chas. W. Warnick and Fred. Liebrandt, of same place, for design for a portable range.

## NEW CLOVER THRESHER.

Friend Moore:—I see in your valuable "Rural" a notice of an "*improved* Clover Thresher;" and I will describe for you my Thresher—home-made by my brother. It is a Conical Cylinder 22 inches long, about 7 inches in diameter at the small end, and 21 inches at the large end, and laid up of folloes in the same manner as Hildreth's best wheat thresher. It is spiked or toothed similar to a wheat thresher, and the teeth are then cut ragged. The concave to fit the cylinder is of wood, lined with good sheet iron punched full of holes from outside in, similar to a horse-radish grater, and also full of teeth. The teeth in the cylinder are in three rows in the form of a screw around the cylinder, giving a powerful suction from the small end to the great end at which is a hole 1½ inches wide and four inches high at the side of the concave. The feeding hopper is at the small end on top—when under full motion it keeps one man "*on the jump*" to keep the hopper full, and it throws the seed and chaff six feet from its discharge hole.

I have threshed and cleaned 15 bushels of clover seed in one day—have owned it some five or six years. It could be much improved by having spikes or teeth shorter towards the large end, and also spikes in the upper half of the concave—mine has only the sheet iron on the top as described.—For power I use my eight horse-Power, but often attach only four horses to thresh clover seed. I feel confident that any one intending to make clover threshers would be benefited by seeing this one. I am sure it could be modeled so as to thresh 40 bushels clover seed per day. The cost of its construction is the same as a good common wheat thresher. The cylinder lies horizontal the same as a wheat thresher.

Were the Messrs. Daniel, of Hanover, Pa.—(as per No. 11 of the present Vol. of the Rural) to see this machine in operation, they would take improvements from it.—The conical shape of the cylinder gives it so great a suction or draught that it is easier to tend than any other machine with which I am acquainted. Any mechanic shall be welcome to take pattern from it, and to any information I can impart concerning the same. Yours, C. H. Witmer.

Suspension Bridge, Niag. Co., April, 1853.

## ATMOSPHERIC TELEGRAPH.

We see it stated that subscription books have been opened in New York to construct a line of Atmospheric Telegraph between Boston and that city. If any confidence can be placed in the opinion of scientific gentlemen deemed fully competent to judge in the matter, all difficulties of a mechanical nature have been obviated, and the invention is bound to prove highly successful Thus, probably, the day is at hand when letters, newspapers and packages can be sent over the country in no time at all, as well as words or messages. The Boston Advertiser gives a description of the new invention, from a model exhibited there.

"The apparatus of the invention consists of a tube connecting the places between which communication is to be maintained, in which a sort of piston, called the "plunger," is fitted, with a loose leather packing. The matter to be sent is inclosed in a bag attached behind this plunger. Its propulsion is secured by the pressure of the Atmosphere of ordinary density behind it—that in front being rarified by means of an air pump, producing a partial vacuum. This propelling power is so great as to produce an apparently instantaneous motion of the plunger, with its load, from one end of the model tube, on exhibition, which is about thirty feet long and 1½ inches in diameter; indeed, the plunger issues forth with so much force, when not confined, as to knock down violently a heavy billet of wood placed opposite the end of the tube if it is left open. The speed is estimated at about one thousand miles in an hour."

The apparatus is so arrnged that there can be intermediate stations upon the line, at which the progress of the "plunger" can be arrested, or if preferred it can pass directly through to its terminus. It will be a cheaper mode of conveyance than any other, besides being twenty times as fast.—It is estimated that the cost of the tube for the New York and Boston line, two feet in diameter, would be $2,000 per mile. If a sufficient amount of matter was presented, it is claimed that the actual cost of transportation would not be more than half that of any other method. The line need not be straight, but can be curved so as to follow the face of the ground or under-lie the channel of a river.

Stone Hewn by Steam.—Many people who are accustomed to the slow process of *pecking* with chisel and mallet, will be astonished when they are told that rough stone can be hewn down, smoothed, and polished by the power of steel and steam.

There is in this city a large building devoted to stone-cutting in this modern fashion, situated on the banks of the canal, a short distance south of the Capitol. It has been under trial three years in New York, and if some of the splendid new blocks on Broadway could speak they might tell an interesting story of their birth. The cost of elegant and substantial building materials must be greatly reduced by this innovation upon the old and slow process; and unless the price of pressed brick is greatly cheapened by some invention yet to be announced, we do not see but they will be obliged to go to the rear.—*National Intelligencer.*

Preserving Eggs.—M. Appert's method of preserving eggs, is to put them in a jar; put into a vessel of water, heated to 200 degrees Fapronheit, or 12 degrees below boiling. The vessel with water being taken from the fire, the water must cool till the finger may be borne in it; remove the jar.—The eggs may then be taken out, and will keep for six months.

# Educational.

## RESPONSIBILITY OF EDUCATORS.

How beautiful it is when the youthful mind, as it grows up to maturity, is nourished in all those virtues that are most conspicuous in the formation of a noble and generous character. Happy are the memories of those who have been thus effectually trained, as well as of those who have cared for their training. There can be no more responsible calling than that of forming the youthful mind; for as the *child* is taught, so the *man* walketh through this world to eternity.

The growth of the mind is gradual and constant, and so must the instruction and culture be that is to keep it in its proper place, and give to it a vigorous and healthy tone. As no excess of sensibility is desirable in the man, so the youth who is to make the man, should be taught to govern his feelings, and with manly independence control all his actions.

It is not our intention to instruct; but to encourage all to endeavor to feel the responsibility of their position in society, as rational and accountable beings. Where this is really felt, how much care there will be to do no evil, but by good example and precept to try to do much good. When the teacher feels the full force of his or her responsibility, great will be the anxiety that will attend their every effort, as they take the comparatively infant mind and mould and fashion it for maturer years; when it may have to act with great care and manly decision on many noble and important subjects. Instructors of the young, who feel such a responsibility, are generally the most successful in training children in the way that they should go. On the contrary, those instructors who feel little or no anxiety about the youthful charge committed to their trust, more than to hear them repeat the studied task; and who feel (if they feel at all) that their *moral* culture must be left to chance, or entirely to the parents care, are always unsuccessful. Surely we can but say to such, you have mistaken your calling; while mind is immortal, and your feelings remain as they are, it is your duty to flee from the presence of children, lest you incumber their tender minds with the same insensibility that rests as an awful cloud upon your own.

But the virtues of the rising generation—the cultivation of their minds—is not confined to parents and teachers alone; for while these are exerting an influence for good or evil, almost without limitation, there is a general influence in society, in the formation of which every member has something to do, or in other words, owns a share. While youth are exposed, as they unavoidably must be, and are permitted at an early age to mingle more or less in society, it is not to be supposed that their quick and observant minds will not see and in a great measure imbibe the spirit of the multitude.—Let us not forget when children look out upon those around them, they see us individually—and do they not watch us with a keen eye, and try to do as we do? Are they not watching us as examples, and do not our actions have an influence on them, either for good or evil? Most certainly they do. Then do we not see that not only parents and teachers, but every member of society have something to do in the proper cultivation of the youthful mind?

How necessary it is that we try at all times and in all places to exert such an influence as will have a tendency to make those who come within its reach, cheerful, innocent and happy. J.

## SCHOOL ATTENDANCE.

The following from one of Mr. Barnard's Reports, is important here, not less than where it was first put forth:

"After an efficient organization by which public schools can be instituted, and after healthy, attractive and convenient school-houses are provided, the next step is to secure the school attendance of all children of a proper school age, of both sexes, and in every condition of life. There are differences of opinion, not only as to what is attainable, but as to what is desirable in respect to the school attendance of children; and particularly as to the age, when it should commence. The family circle and the mother, are unquestionably the school, and the teacher of God's appointment,—the first and the best, for young children. Were every home surrounded by circumstances favorable to domestic training, and had every mother the requisite leasure, taste and ability to superintend the proper training of the feelings, manners, language and open faculties of the young, their early school attendance would not be an object of great importance. But whatever may be the fact, in a few homes, and with few mothers, there can be no doubt, that in reference to many homes, so unfavorable are many surrounding circumstances—so numerous are the temptations in the street, from the example and teaching of low bred idleness—so incessant are the demands on the time and attention of the mother of a family, that it is safe to say, that with the large majority of children, their school attendance should comence when they are five years old. In the densely populated sections of large cities, and in all manufacturing villages, provision should be made for the attendance and appropriate care and instruction of children, two and three years younger. No one at all familiar with the deficient household arrangements and deranged machinery of domestic life, of the extreme poor and ignorant, to say nothing of the intemperate,—of the examples of rude manners, impure and profane language, and all the vicious habits of low-bred idleness, which abound in certain sections of all populous districts, can doubt, that it is better for children to be removed as early and as long as possible from such scenes and such examples, and placed in an infant or primary school, under the care and instruction of a kind, affectionate and skilful female teacher.

The primary object in securing the early attendance of children, is not so much their intellectual culture, as the regulation of the feelings and dispositions, the extirpation of vicious propensities, the pre-occupation of the wilderness of the young heart with the seeds and germs of moral beauty, and the formation of a lovely and virtuous character by the habitual practice of cleanliness, delicacy, refinement, good temper, gentleness, kindness, justice and truth. The failure of much of our best school education in reference to moral character, is to be attributed to the pre-occupation of the ground by idle, vicious, and immoral habits acquired at home and in the street, before the precepts, example and training of the school commenced.

Until children are ten or twelve years of age, they should be subject to a regular, systematic and efficient school training thro' the year, with such vacations as the health and recreation of the teacher may require. Except during the very hot days of summer, and the most inclement weather in winter, and the established or occasional holy-days, children should never require vacations on their own account. The daily exercise of the school should not in any case overtask the brain, or weary the physical strength, beyond the power of the playground and the light slumbers of childhood to restore. They should leave the school, day after day, in the radiant health and buoyant spirits which nature associates with their years, when spent in obedience to her laws.

After the age of ten or twelve, a portion of each year spent in the discharge of domestic duties at home, or in healthy labor in the field, the mill, the counting-room, or the workshop, under the direction and supervision of parents, or natural guardians, will prove of more service to the physical training of most children, and the formation of good practical habits of thought, feeling and action, than if spent over books in the school-room; and especially, if spent in such school-rooms, and under such teachers as are now in too many districts in this and other States provided.

Every child should attend the best school, be it public or private; but other things being equal, a public school of the same grade will be found to be the best school; and if it is the best school, in all the essential features of a school, the social and indirect benefits resulting to the individual and to the community, from the early school association of all the children from the families of the poor and rich, the more and the less favored in occupation and outward circumstances, are such, that as far as practicable, all the children of a neighborhood should attend regularly and punctually, from the commencement of the term to the close, and during the school hours of each day. If the children of either sex are to be withdrawn early from school, this deprivation should fall on the boys, rather than the girls; for the former can more easily supply the deficiencies of school education by improving the opportunities of self and mutual instruction which their occupation, and access to books, lectures, and the daily intercourse with educated men, afford; and the latter, by improving for a longer period the privilege of good schools, will, in the relations of mothers and teachers, do more to improve and bless society, and determine the civilization of the next and all future generations, than the male sex can do, however well educated, without the co-operation of women."

Remember.—Every loathsome inmate of Penitentiaries and States Prisons, was once a gentle, inoffensive, and prattling child; and every criminal who has expiated his crimes upon the gallows, was once pressed to a mother's breast, and drew from her bosom his life-giving nourishment. Bad moral training, wrong influences, and debasing examples do their work, and transform endearing offsprings to ferocious men, who shock humanity by the foulness of their guilt, and the monstrous audacity of their crimes. Yet how seldom has one of these direful transformations been effected without the aid of strong drink!

How to do it.—"How shall I raise myself above the rabble?" is a question often asked by ambitious young men. Franklin, by his earthy-philosophic code, advises him to rise early, to work without ceasing, and to remember that a pin a day is a great a year. Thus are preambulating purses manufactured. We advise him to rise early, also, but to search for truth without ceasing, and never swerve from the path of rectitude. Thus are living souls created. Do always right, and you will soon find yourself far removed from the rabble.

The progress of the world is continually converting virtues into vices.

We cannot escape the evils of life by shrinking from its duties.

# For the Young.

For the Rural New-Yorker.

## VARIETY A GREAT SOURCE OF PLEASURE.

We find that all persons, of every grade and condition, are seekers of pleasure; and from such a source, it would seem that every one might find enough wherewith to be satisfied. The wants of men are so various, and minds so unlike; hence the necessity for variety.

The mathematician may take delight in studying from day to day, for the solution of some problem, and, when he has obtained it, feel amply repaid. But he may wonder at the taste of another who takes just as much delight in pursuing the natural sciences, and think really the naturalist gains nothing after all. The philanthropist may sacrifice his own interest for the welfare of his fellow men, and be happy in making others so; while another's thoughts never go beyond himself, which is the measure of his desire. The toiling missionary who wears out his days in laboring for the salvation of the heathen, is happy; and he who sinks to the lower depths of vice and degredation, may possibly find the measure of the happiness which he seeks.

And what is there from which pleasure may not be derived? The mind may find it by soaring to the worlds above, or by examining the minutest insect beneath our feet. From books we learn of men in past ages, and thus, as it were, have the pleasure of living with them and looking on their acts and deeds.

How well every thing is designed for man's best enjoyment, and yet how often is he far from being happy. But is not the consciousness of doing right in all things the greatest real pleasure? Pleasure has been compared to a rose, near which grows the thorn of evil, and "it is wisdom's work so carefully to cull the rose, as to avoid the thorn, and let its rich perfume exhale to Heaven in adoration of Him who gave the rose to blow." E. H. W.

Pioneers.—There are none more worthy of the smiles of fortune, or the praise of their fellow men, than the first settlers of a new region—those who go forth from comfort and ease to tame the wilderness amidst privation and suffering. Were it not for such an adventurous spirit, improvement would stop always at home, and the time never come for the desert to blossom with the rose. It is well, then, that people are possessed of an anxiety to better their fortunes, in the wilds of our noble forests.—Republican institutions are strengthened, whilst their base is made broader and firmer,—for no one can take to the wilderness without breathing its air of freedom, and in some measure catching its spirit of eternal liberty. All honor, then, to the Pioneer.

T. E. W.

## THE WEST INDIAN PAPAW-TREE.

Our readers will recognize, in the subjoined description, a different kind of papaw-tree from the one which grows so numerously in the western forests of the United States:

The papaw-tree shoots up to the height of twenty feet, a hollow, straight stem, so soft that a common knife might cut it down. It is naked till within two feet of the top, where it bears a round head, not of branches, but of leaves of an immense size, deeply cut in many irregular lobes, having very long foot-stalks. At the axles of these grow the fruit, forming a gigantic cluster at the top of the tree. This fruit is oblong, sometimes a foot in length, and five inches in diameter. When ripe, it is of a beautiful orange-yellow, the inside being of the same hue. It resembles a melon when cut open, with a profusion of little black seeds in the hollow centre, each seed being closed in a thin transparent membrane of the size of a pepper corn. The ripe fruit is almost mawkishly sweet, but being full of cool juice is very refreshing in a warm climate. Before it is fully ripe, it makes a very agreeable vegetable for the dinner-table, being pared, boiled, and mashed like turneps, which it then somewhat resembles in taste. In its green state, it also forms an important ingredient in the beautiful West Indian pickles. Slices of it, with the green skin carved in fantastical figures, are carefully arranged, with red bonnet peppers, chillies, and white mountain-cabbage, so as to show to the best advantage through the sides of the square pickle-bottles. It is sometimes, also, preserved in sugar, and sent to Britain as a treat to West Indians, but is not generally admired in that form, being quite deficient in acid.

Every part of the papaw-tree abounds with a milky sap, which it gives out freely when cut. It possesses the strange quality of making meat tender—very valuable in a country where the heat of the climate obliges all animal food to be cooked and consumed within thirty hours of its being slaughtered. If the negro cook is doubtful about the age and tenderness of her poultry, she hangs it, after killing and plucking, half an hour in the papaw-tree, or wraps her beefsteaks in its leaves a short time before cooking. If a pig, in fattening, gets too many papaws, or if it be tied to the root of the tree, the pork becomes so tender and soft that it falls off the spit in roasting. This quality is so well known, that jockeys, when desirous of bringing down the flesh of a racer rapidly, for some reason only known to the initiated, give him daily a wine-glass of the juice for a week, when he looks as lean and emaciated as could be wished. From this useful property of the papaw-tree, it is planted near every dwelling. It springs from the seed, requires no cultivation or care, and produces fruit in less than twelve months. Its rapidity of growth is such, that the writer of these notes saw one, chance-sown, eight feet high, and loaded with fruit, within the space of eleven months growing on what had been the threshold of a dwelling-house, which was thrown down by the fearful hurricane of the 11th of August, 1831. Close by the spot where the master of the house, with two helpless children in his arms, had been overwhelmed by the falling of the wall, and sending its roots to seek nourishment among the broken bricks of the foundation, it flaunted gayly its yellow blossoms and fast-ripening fruit.

## AN INDIAN COMPOSITOR.

His fingers are small, and he picks up the type from his case with a rapidity truly astonishing. I have never seen it equalled in an English printing office. But his day's work over (and he will get it done, sometimes, in two or three hours,) he is the most indolent and dissipated creature in existence. He is never out of debt, and never without a dun at his heel; but he invariably disputes all claims upon him, and never pays unless he does so by order of some court. I required ten of these compositors, and engaged them at exactly double the rate of pay they received in Calcutta. "Look at the distance," they would say; "to be so far off from your families to whom you must send money, sir!" The compositors said they should require five distributors. In India a compositor never distributes his matter. He would consider it beneath his dignity. Besides, it seems to soothe his feelings to have some one under him—a human being at his beck and call—somebody whom he may bully with impunity, and strike, if it pleased him. These native distributors do not know a single word of English; many cannot tell you the names of the letters; but they will fill a case as speedily and as accurately as any European.—*Dickens' Household Words.*

## RECIPE FOR GOOD HEALTH.

We can safely recommend the following directions for attaining habitual good health to all our friends:

For a clear complexion—Rise early, use plenty of fresh water, observe the strictest moderation in diet, and take plenty of exercise in the open air. The same plan will be found beneficial in other respects.—Those who regularly pursue it, generally posess coral lips, white teeth, and pure breath.

To give brilliancy to the eyes—Shut them early at night, and open them early in the morning; let the mind be constantly intent on the acquisition of useful knowledge, or on the exercise of benevolent feelings.—This will scarcely ever fail to impart to the eyes an intelligent and aimable expression. To preserve the forehead from wrinkles—Cultivate contentment, calmness and benignity of spirit; and never, on any account, indulge a murmuring, and resentful, or a malevolent feeling. By constant adherence to the above simple rules, many females have preserved their attractions even to the age of fourscore years and upwards.

## COURTESY.—THINK OF THIS.

The power of diffusing happiness is not the exclusive power of the rich. All are capable of it. The poorest man can cheer me by his affection, or distress me by his hatred or contempt. Every man is dependent on another. A piece of neglect, even from the lowest and most contemptible of men, is fit to ruffle the serenity of my happiness; and a civil attention, even from the humblest of our land, carries a gracious and exhilarating influence along with it. Let me never hear, then, that the poor have nothing in their power. They have it in their power to give or withhold kind or obliging expressions.—They have it in their power, to give or withhold the smiles of affection and sincerity of a tender attachment. Let not the humble offerings of poverty be disregarded. The man of sentiment knows how to value them; he prizes them as the best deeds of beneficence. They lighten the weary anxieties of this world, and carry him on with a cheerful heart to the end of the journey.—*Dr. Chalmers.*

Channing at School.—There was a beaming beauty about the boy Channing; his eye brilliant, his cheek glowing, his light brown hair falling in curls upon his shoulders.—In the dame's school, where he received the first elements of his education, he was distinguished for his goodness. "I wish in my heart," said his mistress to an unruly companion, "you were like William Channing." "Oh" exclaimed the poor child, "I can't be like him; it is not half so hard for him to be good as it is for me."

A little boy, the other day, who was hopping, skipping, and twisting, and wiggling, and jiggling himself in every imaginable shape, without an evident object, was asked what in the world he was doing? "Oh," said he, "*I am so chuck full of teter.*"

Nutmegs grow spontaneously in the mountains of California, longer and more tapering in shape than the nutmegs of commerce, and superior in their pungent flavor.

## SONNET.

BY J. E. MCPHERSON.

How swiftly speed the little moments by,
As if to try their wing in airy flight!
Though silently they move, 'tis with a might
That cannot be resisted; on they fly,
And upward, to the registry on high,
Each with its precious burthen, each doth bear
Thither its thought, or good or bad, its sigh,
Its tear, its smile,—all are recorded there.
There, too, *we'll* answer for the use we've made
Of all these golden moments, there will we
Our recompense receive, when time shall fade
Away into a long eternity.
O, let us then our minutes well improve,
As onward, swiftly, silently they move.

Written For the Rural New-Yorker.

## WHAT IS CONSCIENCE?

Coleridge says, Conscience is neither reason, religion nor will, but an *experience* (*sui generis*) of the coincidence of human will with reason and religion. It might, perhaps, be called a *spiritual sensation*; but that there lurks a contradiction in the terms, and that it is often deceptive to give a common name to that which, being unique, can have no fair analogy. Strictly speaking, therefore, the conscience is neither a sensation nor a sense; but a testifying state best described in the words of our liturgy, as The Peace of God that passeth all Understanding."

Who, that hath turned aside from his conviction of right, or what he felt that he ought to do, be he Pagan or Christian, has not felt a deep "testifying" within for having done so? Multitudes there are, who have felt this inward testimony who know little or nothing of metaphysics, so called by the School-men. When the mind is directed to the study or consideration of morals, the words Right and Wrong or their equivalents are almost immediately introduced as indicative of two ways or courses that may be pursued. All are desirous of securing the greatest good—that which shall produce the highest degree of enjoyment—but all do not seek this good in such a way as to meet with the approval of conscience, the inward testifier that no outward thing or person can silence or bribe. Its whispers are always for right as understood by the individual—and never for the wrong. If a person be taught error, and it be received as truth, conscience is no less severe in case of departure from the convictions of the mind than if there were really right.

From this view of conscience all will at once see the necessity of right instruction. Hence knowledge that is founded on truth or things as they are, whether objective or subjective, is all-important, to every one who has a conscience, and a soul as well as an intellect or mind. A man's creed, therefore, is what he believes—a summary of his Christian faith, as made from Holy Scripture. It matters not whether the words embodying his faith were framed together by himself, or a better man eighteen hundred years ago, if they contain a summary of what he now believes to be essential to the Christian life.

Every Christian and moralist has his summary of faith or belief, ergo, his creed.—Without it no man can be a free man. With it, every intelligent person can give a reason for the faith, or hope, that is in him. This is freedom from the chains of ignorance and superstition. He that is afloat upon the sea of probation without a creed, is like the mariner upon the ocean without chart or compass. Having a creed, embracing all that is deemed essential to believe, then is reason directed how to go forward, and the office of the will is to execute the purposes of reason, while conscience is ever ready to testify when the least departure is made from the right way. In the child, the Reason and will are weak, while conscience is quick and powerful. The former of these is greatly strengthened by discipline and education while the latter is often weakened—aye seared—so that it loses its infant power.—Let parents and all teachers remember that every human mind has a conscience which is either accusing or else excusing for every action having in it the moral or religious element. Were all educated with reference to this, then would wisdom, which is the fear of God, and understanding which is to depart from evil, be found walking hand in hand through life.—W.

Goethe has written few passages more beautiful than the following:

"The year is going away like the sound of bells. The winds pass over the stubble, and finds nothing to move, only the red berries of that slender tree, which seem as if they would fain remind us of something cheerful; and the measured beat of the thresher's flail calls up the thought that in the dry and falling ear lies so much nourishment and life."

Patience bears sweet fruit.

# Miscellaneous.

## TWILIGHT.

BY WM. SYDNEY THAYER.

As dimmer grows the sinking light of day,
A thousand shapes, by nimble fancy brought,
Float from mysterious regions far away
Upon the rising tide of peaceful thought.

All that gives glory to our childish years
All that unto the past the heart can bind,
Youth's fleet winged visions, thronging joys and fears,
Glide through the ghostly labyrinths of the mind.

Now Aspiration, near the breaking morn,
Raises triumphant her rejoicing psalm;
And Hope, long sailing over seas forlorn,
Is kissed by gales that tell of endless calm.

Now, from the opening skies upon the earth,
Descends the bloom primeval; now appear
The visions that do have immortal birth,
The thoughts that make our human life more dear.

## ABOUT POVERTY.

BY ALICE CAREY.

I WISH that more of us had the courage to be poor; that the world were not gone mad after fashion and display; but so it is, and the blessings we might have, are lost, in the effort to get those which lie outside of the possible.

We are as one who sees the bright top of a mountain, and climbs and climbs till his strength is gone and the noontide heats burn him up, and then sees too late the cool deep shadows at the base.

And what is it after all that we want?—What is this reaching and working and complaining all about? What is there that we really need, which by a little honest endeavor we may not attain? In the little and limited experiences of my life, how many sorrowfully-tinted pictures I have seen—pictures that might just as well have been turned towards the sunshine as not.

Let me show you the first that rise in my mind. It is of an old-country-house—the roof all green with moss, the window broken, and the paint washed from the walls. The trees that grow about it are upturned, and the weeds in the door-yard have choked out the flowers, if there were ever any flowers there: everything looks ruinous.

The well-curb is shattered, and leaning to one side, the sweep broken, but in its useless condition, standing yet; so that the water is drawn by means of a milk-pail, and the clothes-line, a few stunted currant bushes, and a bunch of wormwood, indicate the spot where the garden has been. The fences are down, and the briars are up. In short, it looks thriftless and comfortless, and why?—it was not always so.

I can remember when all the farm and the house were neat and trim, as you can imagine—when the household was astir at daybreak, and the dozen sleek cows where milked, and turned into the pasture before sunrise. Now the four or five scrawny creatures are sometimes neglected till near the noonday, and stand lowing and switching the flies about the milk-yard, in place of chewing the cud in the maple shadows.

The housewife that used to look so tidy, as she stood churning under the cherry trees, at the door, is rarely to be seen now, and when she is, it is in a slovenly dress, and with melancholy air. The doors are close shut, and I suspect the spiders work in and about the old place, at pleasure.—Sometimes at ten o'clock in the morning the owner of those premises is seen yawning about the door, with uncombed hair, and in languid spirits, seemingly.

He used to be plowing when the larks began to sing, and whistling as they. And what has wrought all this change? Why are the children, that used to be skipping to the free school, with face so round and so merry, kept at home now to roam wild thro' the woods, and forgot all they ever learned at school?

This, and simply this, is the reason of it all. A rich man has come to the neighborhood, and the shadow of his fine house falls across the dooryard of farmer D., as we call the person of whom we are writing.

"Our neighbors don't milk a dozen cows, and make butter," says Mrs. D. "Suppose we sell ours, and try some other way of doing?" The farmer demurs a little, but one after another the cows are sold: "it makes the hands of the children so big and awkward to milk," says Mrs. D., "and if we want them to be like any body, (meaning the rich neighbors,) we must not have them milk."

They don't try anything else however, in the place of butter-making, and before long the dresses of the children are too old and too worn to wear to school; there is nothing with which to make new ones, and Mrs. D. thinks it a small difference whether they go at all, as it is as well to stay at home, if they can't do any more like other folks; referring, of course to the rich neighbor, whose children go to the Academy.

The weeds grow up in the door-yard.—"Bless me," says Mrs. D., "our hollyhocks and sunflowers don't look much like the beautiful flowers some people have. I don't care whether they are planted or not."—And so things go.

Sabbath morning comes, and the wagon in which they used to ride to church is not drawn from beneath the shed. Mrs. D. thinks people that can't have a carriage may as well stay at home and read a sermon; besides, she noticed when she went last, that her bonnet didn't look like some ladies bonnets. And the rich neighbor goes by in his carriage, and the farmer wanders about the fields, looks at the colts and cows, diminishing in numbers and excellence, and at last gone home dissatisfied with himself and the world. Because they can't do all their rich neighbors can do, they will do nothing, when, if they had kept evenly and steadily forward, they might have enjoyed many things for which they are now vainly sighing.

True, their door-yard might not have been enclosed with a stone wall, but a white-washed picket-fence they could have made, and that, with the hollyhocks and the roses gleaming through, would have been pretty if not grand. They might not have driven a fine coach, but, a neat and comfortable carriage might have been theirs, and their children might have been educated at the free school as well as at the Academy.

As it is, the parents are unamiable, envious, jealous, while their family are growing up in idleness and ignorance, and with proud and ambitious notions, too, that they will never be likely to have the means of indulging.

Again, I say, I wish we were not so much afraid of being poor, or that we were less discontented at the opulence of others.—Suppose our neighbor looks down upon us, or that our roof is low—well, and what of it? does the storm beat through because of his proud looks? if not, I see not that we are the worse. If my dress be of one cloth, and the gown of my friend be of another and costlier one, shall we cease to be friends because of it? Not if she be one whom I care to be my friend.

If I have not much gold and silver, I can narrow my wants if I will, and after all the best things are the free gifts of God. The fresh air and the sunshine are mine as well as the rich man's, and though he may have a luxurious house, he may be blind to the splendor of the sunset, and the glory of the stars. Under my low cottage roof, at midnight, I have had visions that wealth could not buy; from the simple wood-flowers, and the hum of the bees, and the songs of birds, I have gathered pleasures that the walls of a palace would have shut out. And now, as I feel the sunset-light slant against me, and see the black March boughs giving out their fresh buds in the softening air, I am content, even though my lot be humble and my portion small.

I remember of talking with a neighbor lady of ours, years ago, it is now, about the good fortune that had come to her, for she and her husband had suddenly become rich.

They had lived in an unpretending little house, in the midst of thick woods, when I first visited them, and were poor. Naturally enough, I alluded to our first acquaintance and to one of its many seasons of enjoyment.

"O, it was a dear, old place, that house in the woods," she said, with a sigh. "Such sweet flowers we had there, such a nice garden, and when we had little Freddy, a baby, it was the happiest year of my life. We were not long married and my husband was always at home."

She stept within the gorgeous drapery of the window as she spoke, and, wiping her eyes, gazed long and sadly towards the woods that hid the old house away. She had Freddy still, and she had more flowers now than then, together with many stylish things undreamed of there, but alas! she was less happy.

Wealth had brought with it a train of dissipations, and before their false glitter the young love had faded, and the charm of life was lost.

No more the sunset brought her tired husband from the field, and she looked at the old house and wept.

## THE SINGING OF THE TELEGRAPH WIRES.

WILLIS writes from "Idlewild," his country seat on the Hudson, as follows:

With a November blast, as with a June breeze, the news passes to music! Whether the country folks or city belles listen, the Eolian harps strung along upon the telegraph poles, play perpetually the same.—To the strange beauty of the music (little noticed or valued) I have become quite wedded, in my life out of doors for the last winter. It is more varied and beautiful than people think. You can always hear it—if not as you walk upon the road, at least by laying your ear against the poles—and, by selecting one that stands near a running stream, you may hear a duet of breeze and brook, a capricious out-singing, of each other alternately by wind and water, that is as heavenly, to muse by, as a voluntary of nature well could be. The poles differ very much, both in the quantity and quality of sound—partly, perhaps, from difference of size, or kind of wood, or tightness with which the wire is pressed by the leaning—but, by stopping in your walks, you get to know those with their variations, and you may thus choose your standing place and have music fainter or louder, to suit your mood.

There is one telegraph post, by a little bridge which crosses Idlewild brook, where I have heard a great deal of waking-dream accompaniment. Stopping there with the glow of exercise in the blood, there seems a kind of fellowship in the instruments being, like oneself, independent of the wintry air. The invalid's nerves, too, (as much more susceptible to pleasure as to pain) are ready for harmony in its most delicate caprices.—What news was going past on those wires—what death or marriage, love or business, was being told in those vibrations—I did not lose romance by trying to guess or discriminate. The same tune seldom carries the same language to any two hearts. But there it was murmuring day by day, in changeful contention with the brook, always somewhat audible when closely listened for, and often as loud as a love whisper and as changefully expressive—and I must own to have grown habituated to it as a luxury.—How many good things we may have in this mercenary world, after all, without paying for them! "Telegraphing is expensive," but here are its greatest advantage (per *my* use) and nothing to pay. I trust the stockholders will take the hint, however, and put sentry boxes around the posts, to be let out for roadside operas!

WHEN you set about work do not rest till it is completed.

## A GOOD PLACE FOR SPORTSMEN.

A LETTER dated Brownsville, Texas, published in the New York Spirit of the Times, contains the following information:

In these chapparals are found countless numbers of rabbits, of the ordinary gray species, as well as a large gray rabbit, much resembling the English hare in shape, but far larger, with enormous ears; the zoological name I do not know, but they are vulgarly called the "jackass rabbit."

They are fine eating, and I have shot them weighing fifty pounds. Vast flocks of wild turkeys, some of them very large, and all of them fat, inhabit these forbidden haunts—quails, pigeons, &c., and it must be added, no small quantity of rattlesnakes and tarantulas find here a safe and inviting abode.—In all parts of this region, deer, in fine condition, abound; also the peccary, or Mexican hog, one of the most game-blooded animals that exists. They will fight anything man or beast, and some amusing stories are told of their driving hunters "up a tree," and there besieging them for hours.

We have also a peculiar bird, denominated the "chachlacha," about half the size of an ordinary game cock, which is well worth describing. It is shaped much like a wild pigeon, of ash color, black legs, black shining back, strong and sharp—and with eyes of great brilliancy. In its native state it is wild and shy, but when caught, is easily domesticated, and becomes especially fond of those who feed and camp it.

At daylight in the morning whether wild or tame, they commence a furious reveille, repeating in loud, dismal tone, a chaunt, from the sound of which they derive their name. This is prolonged for about half an hour—the woods all around you appear to be alive with these invisible songsters, when suddenly they stop, and not another sound breaks from them during the whole day.

The Chachlacha will cross breed with the common game fowl, and produce not only a beautiful bird, but one of the greatest value for its game qualities. Their crosses are a little under size, but in spirit, endurance, activity, and vigor, they are unmatched.—They are the best fighting cocks on earth. This is no fancy sketch; they have been tried frequently, and never known to skulk or yield; they can, like the Old Guard, "die, but never surrender."

They are difficult to catch, and have generally to be reared from the eggs—I have known, even there, twenty dollars to be paid for a pair, so highly are they esteemed.—I have often been surprised that breeders of game fowls have not turned their attention to these birds, to renew and improve their stock. Perhaps they were not aware of their high and valuable qualities. Let them try this gallant little hero, and they will find a full confirmation of all I have urged in his behalf.

## SKETCHES OF HOMES AND FIRESIDES.

THERE is Moss-side, with its verdant slopes and flowering meads, its fresh green pastures and its brooks of azure hue, caught from sunny skies above, its fertile vales and towering hills, its well cultivated fields and its neat snug little home, with the "dairy-house nigh it," inside and out in perfect order, "Heaven's first law" pervading all.—There is a garden of herbs and flowers, of fruits and vegetables. A happy pair, a merry group of children, cheerily laboring through the day, and when twilight comes, a rich reward they reap for all their toil; a social, intelligent, and intellectual group surrounds the board, engaged in pure and elevating conversation, or reading that which shall improve the mind and give health to the heart.

There is another home—a huge unfinished farm house, without any out-buildings, save a dilapidated barn. A garden fence in a bankrupt condition, with Canada thistles adorning most of the unshaded walks, and a hard-baked soil running in front of the street door, where the children had in vain planted the marygold and china-aster, for they would'nt come up. The back ground, a complete "slough of despond," where Betty has from time immemorial thrown the wash, fish-bones, mop-rags, etc. Here is the home of seven intelligent children, eager to learn and ready to do, but with what encouragement or inducement? Too poor to take a paper, save political, which furnishes matter for evening wrangling with neighbors of different creed, too busy to do aught that would tend to give more leisure.—*Country Gentleman.*

## TRIADS.

THREE things to love—courage, gentleness, affectionateness.

THREE things to admire—intellectual power, dignity, gracefulness.

THREE things to hate—cruelty, arrogance, ingratitude.

THREE things to reverence—religion, justice, self-denial.

THREE things to delight in—beauty, frankness, freedom.

THREE things to wish for—health, friends, a cheerful spirit.

THREE things to pray for—faith, peace, purity of heart.

THREE things to like—cordiality, good humor, mirthfulness.

THREE things to suscept—flattery, puritanism, sudden affection.

THREE things to avoid—idleness, loquacity, flippant jesting.

THREE things to cultivate—good books, good friends, good humor.

THREE things to contend for—honor, country, friends.

THREE things to govern—temper, impulse, the tongue.

WE carry our neighbor's crimes in sight, and throw our own on our shoulders.

# For the Ladies.

Written for Moore's Rural New-Yorker.

## THE HUNGARIAN WIFE.

BY WM. EDWARD KNOWLES.

PALE was her cheek, and weak her trembling form,
As back against the door-way she reclined;
While from above, and in the sunbeams warm,
The ivy drooped, and swayed upon the wind.

A tender infant smiled its smile of love,
And the sad mother clasped it to her breast,
As came a mountain-echo from above,
And roused the valley from its dreamy rest.

Ah, she had heard the nation's echoing call,
The call to battle, and the clash of arms;
And seen the patriots leave their homes, and all,
And arm for battle at the first alarms.

Louder, and louder, rose the battle-cry,
And sharper clashed the polished sabre-blades—
"*On to the rescue! Conquer now, or die!*"
Rung from the mountain-tops, and from the glades.

'The young wife heard the shout; and stronger grew
Her trembling frame. Her cheek flushed with the glow
Of patriotic pride. She only knew
Whose step was heard adown the walk below.

And when his strong arms drew her to his heart,
And he had fondly kissed her crimson'd cheek,
A strange, wild light, which seemed of her a part,
Shone in her eye, and would not let her speak.

'Twas but a moment; and the words came fast,
And from a heart that felt when tongues have ceased;
But with too hurried utterance long to last—
"*Behold, the tyrants at the vulture's feast!*

"Away, my husband, with thine armor on,
Thou oft hast wished that I would let thee go,—
Rush to the battle with thy sword undrawn,
And make thy pathway o'er a fallen foe.

"Strike for your country, and your sacred home,
Where mountain-streams their threads of amber wind;
And for your God, who, from a higher dome,
Will safely guard thy dear ones left behind."

One parting kiss, and one long, long embrace,—
Once more he brushed the ringlets from her brow;
Then winding up the pathway from the place,
He from the summit waved a linden bough.

And where the sounds were loudest, and the smoke
Rolled like the black clouds of Egyptian night,
The tyrants fell beneath a sabre's stroke,
Uplifted by the strong man in his might.

An earnest voice, and crimson'd cheek, gave strength,
The voice of her whom he could call his own;
And thrilled the deep voice through the nation's length,
And seemed like freedom's voice upon her throne.

And though the tyrants have all foes subdued,
And have re-linked again the iron chain;
Yet these sad voices from the cabins rude,
Shall echo back in thunder tones again!

For Moore's Rural New-Yorker.

## THE OLD HOMESTEAD.

A STRAY LEAF — BY KATIE DIDD.

——ALONE in my chamber — the stars glowing in the blue sky, and the lamp burning dimly in my room.

The shadows are abroad. The shadows that all the long day have chased the sunbeams from under trees, and around the corners of tall buildings; and the shadows that have all day slept in the forest, are gathering with noiseless footsteps about me. Now they are out in the still night — in the corners of my dimly-lighted room — behind my chair; and a murmur comes up through the scented lilac beneath my window, that may be the whispering of the shadows under it.

There is a shadow on my heart to-night, which the morning sunshine will not dispel. It grows out of a letter which tells me, that *the old Homestead is sold.*

Aye, the spot where I was born, and my "brave brothers and gentle sisters,"—where we lived and loved together — and where one bright May morning, years ago, our father gave us his blessing and died,— has passed into the hands of the uncaring stranger!

Many months I have been absent from the old place, and my weary, homesick heart does *so long* for its beautiful country home — the pure air, green fields, and the birds whose songs were once familiar as the cradle-hymns my mother sung.

Ah! the memories that interweave themselves into the chain binding me to the old Homestead! Every room in the house has its peculiar associations,—from the cellar, where in huge bins were stowed the apples, round and rosy as our own cheeks, and in autumn, great golden pumpkins, to the mysterious garret, to which we children paid stealthy visits in mother's absence; ransacking among old cast off clothing, or time-discolored papers; or playing at "hide-and-seek" among the empty boxes; or dragging from its hiding place some antiquated relic of our grandmother's ward-robe, or more frequently, a faded suit of uniform with tarnished epaulets, worn by our father when he went to militia training.

Even now, in spite of my sadness, I almost smile when I remember Ned's grotesque appearance, arrayed in the old "regimentals" which swept the floor, and with a rusty sword dragging by his side, he charged gallantly up and down the old garret with Charlie, Nell and myself at his heels, making tremendous havoc among the enemy, which, by the way, usually consisted of sundry superannuated chairs, broken-legged stands and empty barrels, led on by a venerable spinning-wheel.

A little way back of the house is the maple grove, where we gathered the earliest spring flowers. Ah! many a sturdy trunk is scarred with rude initials carved by childish hands, and one old tree bears the name of my father, cut in the bark many years ago, when he was a boy; but twisted, and sadly out of shape, are the letters now.

—And my father's grave on the green hill-side — we must leave *that, too.* Who, now, will keep the noisome weeds from choking out the delicate violets above it? Will his spirit rest quietly when the home of his fathers and of his children becomes the stranger's possession?

God knows the new city *home* will be no home to me! for "the home is where the heart is," and my heart is far away, to the fairy land of its childhood — the old Homestead.

For the Rural New-Yorker.

## ELLEN'S THREE FRIENDS.

ONLY three! Poor child of desolation! daughter of sorrow! What shall I say unto thee, O ELLEN? How shall I minister comfort in thy sore necessity? Methinks I see yo stand, O yo four flowers of loveliness, in the midst of a barren and withered field, or on the side of some bleak mountain, kissed by the storm-cloud, and rocked by the tempest. Yet,

"There *we* stand
Leaning our cheeks against the thick-ribbed ice."

Thank you, for my "*character.*" Let me see,—qualification 1st, 2d, etc.

"KATE," has had another "dream;" so she said at breakfast, but it is not "for the press;" and so has your "sober minded HELEN;" one of *duties*, I presume. But I, poor child, "have seen nothing" of the "hill of science," or "the Temple of Fame," since you wrote *last.*

But thou, O, my friend ELLEN! Would that I could comfort thee in this, thy day of destitution! That I might cheer thy lone and benighted path—and raise thy crushed and drooping spirits! The voice of thy wailing has penetrated my "heart's core," with sorrow and astonishment.

"*How* sadly on the soul,
Like tidings from another sphere,
Its tones of wildness roll!"

Think, dear reader, of a world with only three flowers. A sky on whose wide-spread wings of blackness, there glimmers but three stars, and you can imagine to yourself the deep anguish that palls the grim, forsaken path of my ELLEN, as she wanders over the thorny thoroughfare of life, utterly destitute of friends, save "three broken reeds!"

Now that the summer is coming, with its bright hours of light and melody, and the winter has fled away, to commune with *his* friend, the "polar star;" while the streams send up a song of thanksgiving, and the flowers break their fetters of frost, let *your heart*, my ELLEN, receive the light of innocent Joy, and many a fair bud of happiness will blossom there, and the visions of gloom and sadness, that have too long dwelt within it, will fade away.

ELIZA.

Albion, N. Y., 1853.

## A BEAUTIFUL THOUGHT.

A FRENCH paper relates the following:—Monsieur D—— and wife were rich to luxuriance; but they had a daughter, the eldest, in whom their pride had once centered, who, by a sad dispensation of providence, was rendered a cripple for life. No marriage fete and no gay betrothment lay before her desolate and widowed maidenhood. But the parents, with a tenderness worthy of all emulation, atoned for the lack of wooers by the constancy and delicacy of their devotion; and as her age drew on to majority, they determined to surprise their unfortunate child with such show of splendor and such token of their love as should keep the smiles upon her pale face, and lend such relief as friends could lend to the desolation of her lot.

A new suite of apartments was added to their rooms, unknown to her, and furnished with the richest of Parisian decorations.—New jewels were purchased and displayed upon the delicately wrought toilet-tables; a new portrait of her pale face, done at the hands of the most distinguished artist, hung upon the wall; and chairs, and lounges, rich with brocade, invited to repose and languor. Garlands and vases of orange flowers perfumed the air; gifts from scores of friends were scattered around; and every thing bespoke the apparel and the pleasures of a bride.

Upon the expected birthday all the dearest friends of the poor girl were invited to a fete; and, by magic, as it seemed, the new apartments were thrown open to her bewildered gaze, and every article of luxury was blazoned with her cipher.

The child turned inquiringly to her parents, and by their caresses was taught that this was her bridal day; since now she was wedded anew, by all those tokens, to her father's and her mother's love, which would watch over her in the new and brilliant home always. Here, too, she could invite, when and as she chose, the friends of her girlhood; and if fate had made her let one of maidenly retirement, it was yet quickened with all the luxuries of wealth, and the better wealth of parental tenderness.

Say what we will of the French, there is very much in their domestic relations to be zealously admired. Not any where in the whole world does a son so cling to the father, or the father to the son.

MOORE'S RURAL NEW-YORKER

ROCHESTER, MAY 7, 1853.

### PUBLISHER'S NOTICES.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is ordered.

☞ ADVERTISEMENTS must be brief, appropriate to the objects of the paper, and accompanied with the cash.

ADDITIONS TO CLUBS—Are still in order. Having but few back numbers, agents and others can order additions to Clubs at $1 per copy from 1st of March or April to end of the year and volume. New Clubs, or single subscribers, can begin 1st February, March, or with the quarter—April 2d.

## Events of the Week.

THE WEEK which has passed since the issue of our last paper, has been a sad one to many hearts. A railroad Collision, an Extensive fire, and a Steamboat disaster—each accompanied with lamentable loss of life—have startled the country and borne sorrow and bereavement to many homes and firesides.

THE MICHIGAN CENTRAL RAILROAD ACCIDENT.

The Express which left Chicago at 9 o'clock on Monday evening on the Michigan Southern Railroad, came in collision, at the crossing, about eight miles out, with an emigrant and freight train coming into Chicago on the Michigan Central Railroad. The locomotive of the express train struck the sixth car filled with passengers, and in a moment the locomotive, tender, baggage car and one second class car of the express, together with three emigrant cars of the Michigan Central train, were a heap of ruins. Fifteen pursons were killed on the spot, and fifty to sixty seronsly injured,—one of these has since died from his wounds. The greater part of those killed were foreigners, but their lives were no less valuable on that account. From a careful examination of the facts, the coroners jury came to the conclusion expressed in the following verdict:

"The persons killed came to their death by the collision which took place between the Michigan Southern and Michigan Central Railroads, on the night of the 25th day of April, A. D. 1853, caused by the gross carelessness and neglect of Moses M. Tyler, conductor on the Michigan Central Railroad; and Thomas Rackham, engineer on Michigan Central Railroad; also, Herbert L. Whiting, conductor on the Michigan Southern Railroad, and Edward Davis, engineer on said Michigan Southern Railroad. We find and consider them guilty of gross carelessness, and hold them as the cause of the death of the named persons whose bodies have been laid before us. We likewise hold Mr. Jurat, superintendent of the machine shop at Michigan City, to the public as censurable, in not furnishing the engineer of the freight or emigrant train of the Central Railroad, now in question, with proper materials for lights on his engine, and deem him unfit for the station he now occupies."

Both trains were behind time and no proper care was used to avoid the collision. The head light on the engine on the Michigan Central was not up and would not burn, and this fact had been reported to the Superintendant of the road.

BURNING OF THE ROCHESTER HOUSE.

This fire, the most fatal which ever occurred in Rochester, took place on Friday morning. We condense from the Daily Democrat, the following account of the conflagration:

Shortly before 1 o'clock at night, the washroom of the Rochester House was discovered to be on fire, and the flames had already made such progress that they caught the stone wing on Spring street, and involved the inmates of that part of the House in imminent danger. Mr. E. W. Bryan, one of the proprietors of the Hotel, slept in this part with his family, and when aroused was so closely beset by the thick smoke, and advancing flames, that he barely escaped, bearing out his wife in his arms.

Four of the domestics employed in the kitchen slept in the upper part of the wing, all of whom were burned to death. Their charred remains, burned beyond the possibility of recognition, and reduced to shapeless masses, were taken out after the whole interior of the building was destroyed. The smoke, which was very thick, doubtless suffocated them in their beds, as only one seemed to leave the part of the house in which they were sleeping. The names of the persons burned were: Catharine Conline, Susan Perkill, Mary O'Brien, and James Ferney a boy aged 14 or 15 years.

The loss of property was considerable. There were from 90 100 people sleeping in the house and every available room was occupied. Several families were boarding in the Hotel, and had well furnished rooms located in the south part of the building, immediately fronting the wing where the fire commenced. Most of these persons were aroused after the house was full of smoke, and escaped in their night clothes, without saving their effects. Their loss in clothing and furniture was serious, and many were uninsured. The grocery stores in the basement were also losers to some extent. The loss to the keepers of the Hotel is estimated at $2,500. The origin of the fire is unknown. The building was insured to the amount of $10,000.

BURNING OF THE "OCEAN WAVE."

The Lake Ontario Steamer "Ocean Wave" was destroyed by fire on Saturday Morning about fifty miles above Kingston. The passengers and crew numbered fifty—of whom but *twenty-two* were saved. These were picked up by a boat from the Schooner "Georgiana." In two minutes after their rescue the boat went down. She had drifted eight miles from the shore, before she sunk. When the fire was first discovered she was abont a mile and a half from the shore, which she was immediately headed for, but so intense was the heat that the machinery gave out, and she drifted to sea. The upper cabin was consumed in about 15 minutes, and in about two hours the hull went down. The progress of the flames was so rapid, that it was impossible to launch any of the boats which were on board.

THE NEWS BY THE BALTIC.

The last Liverpool Steamer, brought some interesting intelligence, of which we give an abstract in another column. Among the items not particularly noted there, we observe that KOSSUTH has recently had his house searched by the police, who found a quantity of rockets, and, some say, powder. This is explained by his friends, very satisfactorily. Mrs. STOWE was at Glasgow. A soiree or banquet has been held in her honor, at which over two thousand persons were present. Many able speeches were made, and much enthusiasm prevailed. We hope the rumor will not prove true, that Mrs. STOWE has been receiving contributions of pence from her English admirers.

RELIGIOUS ANNIVERSARIES.

Commencing with the 2d inst., the May Anniversaries of the different Benevolent Societies, are held in New York. The Missionary Societies of the different churches, the Bible and Tract Societies, the Temperance, Anti-Slavery, and other reforms all congregate, by their representatives from different parts of the country, the first fortnight in May, within the ever-thronged city of Gotham. It is an occasion of much interest, and many most important enterprises are then and there set afoot for the benefit of humanity.

## New York Correspondence.

NEW YORK, April, 1853.

FRIEND MOORE:—I took passage at Albany for this city, on the evening of the 21st, on the steamer Hendrick Hudson, with the anticipation of reaching here the next morning at 6 o'clock, A. M., but we were compelled by a dense fog, to cast anchor and await the morning sunshine. When we got under weigh again, we found ourselves a short distant above Newburgh—alas, that so many melancholy recollections should be associated with the name!—and as we passed down the river, we enjoyed a beautiful view of the majestic scenery alnong the banks of the Hudson—the Narrows, the Palisades, and the many flourishing villages and beautiful country seats, which are interspersed along its banks, "like diamonds upon the brow of beauty," and render it justly celebrated as one of the most beautiful landscapes in the world. To one who can appreciate the beauties of nature and art combined, there can be no richer treat than a passage down the river from Albany to this city.

"Sunny Side" and "Laurel Hill," the summer seats of WASHINGTON IRVING and EDWIN FORREST attracted considerable attention from the passengers. The former is an unobtrusive Gothic structure, almost concealed by the surrounding shrubbery—the latter stands in bold relief upon the river's bank, and is one of the most unique (not pleasing nor beautiful in aspect,) buildings that I ever saw. Each is a faithful representation of the character and taste of its owner.

I have just returned from a visit to the Crystal Palace—that is to be. The iron frame work is mostly up, and the workmen, (400 in number,) are busy with the glazing, laying the floors, &c. The din from the clanking of hammers and the grating of saws, is almost deafening. It is now advertised to be ready for opening on the first of June, but they must have better weather, and go ahead with the work much faster than they have of late, to get it completed by the time specified. It will be a most magnificent structure when completed, and will of itself be worth visiting.

The Croton Reservoir, situated just east of the Crystal Palace, (the Palace is built upon Reservoir Square,) is another object of interest. The walls are of solid masonry, 22 feet thick at the top and sloping on the inside, 40 feet high, and it covers an area of about 30 rods square, or more than five acres. It is supplied with water by the Croton Acqueduct, (which is over 40 miles in length,) and the water is carried from the Reservoir by means of pipes to all parts of the city.

I also visited the Foundry and Machine Shop of Messrs. HAGG & DELEMATER, the manufacturers of "Ericsson's Caloric Engines." They have just completed, (or nearly so,) the engine ordered by the proprietors of the Evening Post, of this city, and I saw it in operation on trial. It seemed to operate perfectly, and to entire satisfaction, without the machinery attached, and, if it only possesses the requisite power, I see no reason why it will not supercede steam. It is very simple in its construction, and occupies but little space.—They are not yet prepared to receive orders, or to set any price upon the engines, but Mr. DELEMATER informed me, that they would be prepared in about a month to receive orders and answer all inquiries.

I am stopping at the Merchant's Hotel, No. 41 Courtlandt st., and although its gentlemanly proprietors, Messrs. MUIRHEAD & CLARKE, may be more unpretending than some of their neighbors, they do not pay less regard to the comfort of their guests It is one of the very best houses in the city.

R. B. W.

MR. CONE'S FARMING.—Every agricultural reader should carefully peruse the article on our second page, under this heading. It is a capital epitome of the practice of one of the most thorough farmers in the land. Those who have read the articles contributed to the pages of the RURAL and other journals by Mr. C., will be interested in reading this account—and will observe that LINUS CONE'S *practice* is as orthodox as his *preaching*.

## Letter from Philadelphia.

PHILADELPHIA, April 26, 1853.

MESSRS. EDITORS:—To travel from New York to the city of "Brotherly Love," gives pleasure to all who delight in surveying the most momentous Battle-fields of the Revolution. We pass through Princeton and Trenton, and cross the Delaware where WASHINGTON, amidst the frost and gloom of a winter's night, aroused the hopes of freedom, and conquered an army, flushed with recent success and rendered overbearing by unlimited license to pillage, burn and destroy.

Who can visit these hallowed spots without reviewing the struggles and dangers which found the States feeble, and without resources—distracted by internal dissensions, and subject to despotic authority—and left them united at home and respected abroad, the wonder and admiration of the world. Let desponding Patriotism visit them; it will give it new life. Let factional strife and sectional spirit pay the tributes of appreciation and grateful remembrance; it will tell them that the North and South here fought and bled together, to accomplish the same ends, and teach them that "Liberty and Union, now and forever," are, and ever will be, "one and inseperable."

Philadelphia boasts of romantic and beautiful scenery. The majestic Delaware gives it commerce and life. Around Philadelphia cluster many associations of early colonial history. Here is the old Independance Hall. It heard the first discussions, which gave America to the Revolutionary issues, and to Independence. Its walls heard the lofty eloquence of ADAMS, of HANCOCK, and of JEFFERSON. When the fullness of the time had come, it saw the sublime faith—the heroic resolution—of those men who gave the Declaration of Independence to the world, and their names to immortality. Here is the bell which rung the notes of freedom abroad to the world.—Here is the chair which WASHINGTON occupied, and all around the room are memorials and associations which linger around the heart and can never be forgotten. It is natnral when one visits a scene like this, that his imagination should be roused, and his patriotism receive new life. Whoever would visit the cradle of American liberty without emotions of more than an ordinary nature, has not an American heart, and is less than a man, if more than a brute.
